The much vexed question of alternate rule, which caused much dissension in the religious orders, moved Pope Innocent XI to decree that in the provinces of such religious in America as had Europeans and creoles in the communities, the prelacies should be conferred alternately, some years on the one and some on the others. When the king heard that the papal order was not being carried out in Mexico, he required the viceroy, D. Antonio Sebastian de Toledo, Marqués de Mancera, by official decree of 28 November, 1667, to investigate the matter thoroughly, and to have the orders of the Holy Father carried out. Although at first owing to the scarcity of secular priests, the kings permitted religious to hold parishes, later, learning that it was the cause of relaxed discipline among them, of exemption from episcopal visitation, and sometimes of unfairness and abuse of the Indians, they did everything within their power to have these religious replaced by secular priests. As to the intervention of the viceroys in the chapters of the religious orders, it is known that the part taken by the Conde de Revillagigedo, viceroy from 1746-55, in the chapter of the Carmelites, to settle the question of admitting a visitor, was most beneficial, as well as other regulations among the Franciscans, Augustinians, and Brothers of St. John of God. In the instructions given by Ferdinand VI, in 1755, to D. Agustín de Ahumada y Villalón, Marqués de las Amarillas, who was leaving for his post as Viceroy of New Spain, the following is found: "See that the bishops, the secular and religious clergy, receive all the support they need from the civil courts, to uproot idolatry; that those having Indians, negroes, or mulattoes in their homes as servants send them daily to the Christian doctrine classes, and that those working in the fields be given the same opportunity on Sunday and other days of precept, not occupying them in other things until they have learned the catechism; and if they do not comply they shall be fined. All priests who are to work among the Indians should know their languages, and it is necessary that they should study these languages. The condition of the Indians in all New Spain should be investigated to see if they are oppressed by those whose duty it is to teach them, and in case such conditions are found to exist, they are to be reported to the bishop, and with his help measures must be taken to eradicate the evil."

(6) The Inquisition in New Spain.—For some writers the Spanish Inquisition in Mexico has always been a particularly alarming subject, the exaggerated accounts of its atrocities and the number of its victims verging on the ridiculous. It has even been said that if the Spaniards abolished the human sacrifices of the ancient Aztec régime, they more than replaced them with the bonfires of the Inquisition. Fray Martín de Valencia, when he arrived in Mexico in 1524, bore the title of Commissioner General of the Inquisition in New Spain, but judgment of offences of a grave nature was reserved to the Inquisitor of the Islas y Tierra Firme, who resided in the Island of San Domingo. Fray Martín was to hold this office until some Dominican on whom the official charge of inquisitor had been conferred should arrive in Mexico. And in fact, when the first Dominicans reached Mexico in 1526, their superior, Fray Tomás Ortiz, became commissioner of the Inquisition. He returned almost immediately to Spain, and Fray Domingo de Betanzos succeeded him. In 1528 the new superior of the Dominicans, Fray Vicente de Santa María, succeeded to the title. At the time of the second Audiencia, of which the eminent D. Sebastian de Fuen Leal was president, a meeting was held, attended by Bishop Zumárraga, Cortés, and several of the most influential men of the

CHURCH OF SAN JUAN DE LOS LLANOS, JALISCO, MEXICO

light to govern wisely the universal Church. For this the bishop was reproved by the royal decree of 10 June, 1652. As regards the second, it must be admitted that, in the beginning at least, the Spanish monarch made wise selection of the men appointed to the episcopal sees of Mexico. It suffices to mention such men as Fray Julian Garces, first Bishop of Tlaxcala, Fray Juan de Zumárraga, first Bishop of Mexico, D. Vasco de Quiroga, first Bishop of Michoacan; in general, with few exceptions, the bishops of New Spain were scholarly men, zealous for the salvation of souls. Notwithstanding the many formalities attending the establishment of religious houses in Mexico, there were very many, both men and women, belonging to the contemplative and active orders who succeeded in securing the necessary authorization. Among the religious orders of men established in Mexico during the Spanish occupation may be mentioned the Franciscans, Dominicans, Augustinians, Carmelites, Brothers of St. James (*Dieguinos*), Jesuits, Mercedarians, Bethlehemites, Benedictines, Oratorians, and Brothers of St. John of God; among the women, the Poor Clares, Capuchines, Carmelites, Conceptionists, Cistercians, Augustinians, Dominicans. In another section of this article an account will be given of all the dioceses erected during the colonial period. If, also, account is taken of the almost innumerable hospitals, churches, convents,

capital, at which it was decided "that on account of the intercourse with foreigners, and because the many privateers that cruised along the coasts might introduce evil customs and habits among the natives and the Spaniards, who by the grace of God had been preserved from the taint of heresy, it was necessary to establish the Holy Office of the Inquisition".

It was no doubt in consequence of this resolution that on 27 June, 1535, Bishop Zumárraga was appointed inquisitor, with ample faculties, including that of turning over the offender to the secular arm and of establishing the Holy Office. He did not establish the tribunal, but it is known that he tried and condemned to be burnt a Texcocan noble accused of having sacrificed human beings. After this it was forbidden by the royal decree of Charles V, of 15 October, 1538, to try cases against the Indians before the Holy Office, and that in matters of faith the bishop should be their judge. Since then there is no record of a single Indian having been tried before the tribunal of the Inquisition. In 1554, Archbishop Montúfar, a Dominican and qualificator of the Inquisition in Granada, though not bearing the title of inquisitor, proceeded as though thus empowered, no doubt because of the ordinary jurisdiction possessed by the bishop in matters of faith, and passed the *autos* of 1555 and 1558. Cardinal Diego de Espinosa, Bishop of Sigüenza, and Grand Inquisitor of Spain, appointed as inquisitor for Mexico D. Pedro Moya de Contreras, also two lawyers, Juan Cervantes and Alonso Fernández de Bonilla. Their jurisdiction extended over all of New Spain, Guatemala, and the Philippines. The royal decree of 16 August, 1570, commanded that the City of Mexico was to aid and respect the inquisitors, and on 2 November, 1571, the tribunal was established with all due solemnity. It exercised its authority in Mexico until 8 June, 1813, when the decree of the Spanish Cortes suppressing it was published. On 21 January, 1814, it was re-established, and in 1820 definitively abolished.

In New Spain the Tribunal of the Inquisition was composed of three Apostolic inquisitors and a treasurer, each with a salary of three thousand pesos, paid three times a year in advance by the canopies of the cathedrals of their respective districts. There was also a head constable, a trustee, treasurer, three secretaries, several consultants, qualificators, and lay officials. The tribunal had authority to pass general and particular *autos de fe*. What the viceroys of Mexico thought of this tribunal may be gathered from the many instructions which by order of the king each viceroy had to leave for his successor in the government of the colony. And it may be noted that these instructions, coming from men who were laying down the reins of government, speak with perfect freedom, not hesitating to censure what was considered worthy of censure. From these instructions it is evident that the authority of the tribunal was not as absolute as is generally supposed. The Marqués de Mancera, in the instructions left 22 Oct., 1673, for his successor the Duque de Veragua, after saying that the Tribunal of the Inquisition "has been and is feared and respected with all due reverence in these provinces, knowing full well that, owing to its uprightness and vigilance, they find themselves by the grace of God free from the errors and abominations which at different times the common enemy has sought to sow in their midst", adds, "but, as its jurisdiction is so absolute, the tribunal does not always keep as it should within its proper limits, nor do the viceroys, governors, or Audiencias take it upon themselves to hold it within bounds, except in cases of the most urgent necessity; nevertheless, when the excesses are notably prejudicial to the respect due the royal representation, to its jurisdiction, or its exchequer, or when the delay causes irreparable damage, there is special authority for applying a suitable remedy, and I made use of this faculty at the close of

the year 1666", etc. The Duque de Linares says in his instruction to the Marqués de Valero, in 1716, speaking of the inquisitors of his time: "Of the inquisitors I should inform Your Excellency that I am indebted to them not only for a just respect, esteem, and appreciation for my official character, but their mildness and prudence have been such that when the apparent zeal of some of the ministers has attempted to enkindle some sparks, I have been able to extinguish them owing to the consultations and the mutual confidence which have always existed between us".

For the sake of clearness, the persons condemned by the Inquisition may be placed under three heads: *relajados* (delivered to the secular arm for execution of sentence) in person or effigy, *reconciliados* (reconciled), and *penitentes* (penitents). The *relajados* in

CATHEDRAL OF CHIHUAHUA
Begun 1711; completed 1789

person were burnt, either alive or first garroted. On the way to the place of execution they were clothed in the *samarra*, a sort of scapular of cloth or cotton, yellow or red; upon which dragons, demons, and flames were painted, among which could be seen the picture of the criminal. The head was covered with a species of mitre called *coroza*, covered with the same devices. The *relajados* in effigy were those who, having escaped or died, were burned in effigy, sometimes together with their bones and bodies. This was done with those who died or who committed suicide during the process. It sometimes happened that a criminal attempted to commit suicide; if before dying he begged pardon and retracted his errors, he was reconciled in effigy. Such was the case of the French physician, Etienne Morel, whose *auto de fe* was carried out 9 August, 1795. The *reconciliados* were those who, recognizing their offences and errors, retracted and asked pardon. They were not condemned to death, but were obliged to submit to various punishments. One was, to wear the *San Benito*, called *fuego revolto* or *revuello*, a garment similar to that worn by the *relajados*, with a corresponding *coroza*, only that in this the flames pointed downwards to show that by their repentance they had escaped the capital punishment. Other forms of punishment were inflicted according to the gravity of the offence—exile, the galleys, whipping, imprisonment, certain

prayers and psalms to be recited on certain days of the year, carrying green candles, confiscation of property, etc.

The ordinary penitents were those whose faults did not merit the death sentence. They wore the plain San Benito, that is, similar in form to the other, but decorated with the cross of St. Andrew, and they wore no *coroza*. Various punishments were imposed on them, always less than those of the *reconciliados*, and at times almost grotesque, e. g., the case of the criminal condemned on 7 December, 1664, of whom it is recorded, "The sentence having been read, he was taken out into the court of the convent, placed on a scaffold, and stripped to the waist. Indians then smeared him with honey, feathered him, and left him in the sun for four hours." From the list made by D. José Pichardo of the Oratory of St. Philip Neri, who copied every tablet in the transept of Mexico cathedral, we see that the crimes usually condemned by the Inquisition were heresy and Judaism. Many were condemned for blasphemy, bigamy, perjury, forgery, and witchcraft, as idolators, Illuminati, Freemasons, and apostates; for having heard confessions and said Mass without Holy orders, for having, with intent to deceive, received Holy orders before attaining the prescribed canonical age, for rebaptizing, abetting polygamy, and feigning revelations (*autos de fe* 21 June, 1789 and 8 August, 1795).

A résumé of the *autos de fe* from the figures of Fr. Pichardo, supplemented by others, gives the following result:—

	RECONCILED	RELAJADOS IN PERSON	RELAJADOS IN EFFIGY
Auto of Fray Martín de Valencia	2	1	0
Fray Juan de Zumárraga	2	1	0
Fray Alonso de Montúfar (1555-82)	12	0	0
The Inquisition (1574-1803)	774	49	109
Total	790	51	109

The list published by J. García Icazbalceta, including only the *autos* providing for capital punishment, is somewhat different:—

	RELAJADOS IN PERSON	RELAJADOS IN EFFIGY
Fray Martín de Valencia	1	0
Fray Juan de Zumárraga	1	0
Inquisition Auto of 1574	5	0
" " " 1596	8	10
" " " 1601	3	18
" " " 1635	0	5
" " " 1649	13	65
" " " 1659	7	1
" " " 1678	1	0
" " " 1688	0	1
" " " 1699	1	0
" " " 1715	1	0
" " " 1795	0	1
Total in 277 years	41	99

This number can be increased, as the *autos* from 1703 to 1728 (except 1715) are not included, although during this period cases were rarely turned over to the secular arm. And even allowing for this it is evident that the number of victims commonly attributed to the Inquisition of New Spain is greatly exaggerated.

From this it may be seen how erroneous it is to denounce the Inquisition as one of the greatest blots of the Spanish domination in Mexico. The Inquisition existed in Spain, and it was natural that it should be established in the new colonies. As the Indians were exempt from its jurisdiction, the full measure of its severity fell upon the Spaniards and heretics, pirates

or otherwise, of other nations who infested the coasts of New Spain. In fact, in the *autos de fe* the greater number of the condemned were Portuguese, for Judaizing, and then, in order, Englishmen, Frenchmen, Germans, Spaniards, Mexican creoles, and Swedes. To say that the victims of the Inquisition in New Spain exceeded the number sacrificed by the Aztecs is a gross perversion of the facts. The Aztecs sacrificed thousands of victims in one festival alone; the Inquisition, covering a period of three hundred years, and extending its jurisdiction far beyond the confines of the Aztec empire, barely reached fifty victims. The Inquisition pardoned readily, and those who recognized their errors and repented it easily reconciled. When it found or thought it found (for this tribunal like every other human tribunal made its mistakes) a criminal, he was turned over to the secular courts of justice, which passed and executed the sentence. In fact the Inquisition did no more nor less than the jury of to-day. It is true that it made use of the torture, but this was a practice common to all tribunals of that time. It also made use of the secret process—a method not unlikely to be productive of error—but it was easy to set aside the punishment or at least to mitigate it by repenting if one were guilty, or by frankly professing the Catholic Faith if one were not.

Nor can the Inquisition be blamed for judging heresy a crime punishable by death; it was so held by all the civil courts of the times, and not without reason, because the heretics of those days were the initiators of rebellion in Catholic countries. At that time in England to be a Catholic was a crime punishable by death (see PENAL LAWS). Judged impartially, the Inquisition in New Spain appears as a tribunal which shares, it is true, the defects of contemporary methods, subject to mistakes like all other human institutions, more merciful than any other court under similar circumstances, above all if the relatively small number of death sentences and the large number of reconciled be taken into consideration, as well as the glory of having accomplished at the cost of a small number of lives, what the nations of Europe could not achieve even through the medium of long, bloody, fratricidal wars, the unity of religion and the preservation of the faith. As regards the *auto de fe* of 27 November, 1815, which condemned D. José María Morelos, the principal leader of the war of independence, see MORELOS.

(7) The Spanish Government and the Colony.—Mexico having been conquered, Cortés, in virtue of the famous election of Vera Cruz and through force of circumstances, became the ruler. When, however, Charles V realized the importance of the conquest, without deposing Cortés, he began sending over other officials who, it may be said, were not very wisely chosen. Cortés, though outwardly complying, did not receive them well, doubtless because he foresaw that they would be a disturbing element in the recently conquered territories. When, however, he started on his famous expedition of the Hibueras, he showed equally little tact in selecting the men he left to fill his place. In the selection of the first Audiencia (1528-31), composed of Nuño de Guzmán, Juan Ortiz Matienzo, and Diego Degadillo, the emperor was even more tactless. The excesses and injustices of these judges were innumerable, and the entire colony suffered. Everything changed under the government of the second Audiencia (1531-35), composed of Bishop Sebastian Ramírez de Fuen Leal, D. Vasco de Quiroga, D. Francisco Ceinos, and D. Juan Salmerón. Beginning the work of reconstruction with zeal and perfect integrity, they met at the very outset with an obstacle that greatly hampered them. The ancient legislation destroyed by the conquest had not been replaced by any other, while the Spanish code was entirely inadequate for the new dominions. To meet this situation, Spanish kings began formulating and

sending over a multitude of royal decrees, applicable sometimes to only one province or relating to some particular question, frequently conflicting and contradictory because the sovereigns were working in the dark, deciding questions as they presented themselves, often without having formed an exact opinion of the matters involved. So numerous were the decrees that the collection formed a library of documents, notwithstanding which many cases remained unprovided for, and could only be settled by special decisions. These, however, ran the risk of royal disapproval, and the viceroys and governors rarely cared to assume the responsibility. To understand the baneful effects of such a system it is only necessary to picture a people ruled by the changeable mind of a sovereign 2000 leagues away, and requiring years to investigate and report on questions submitted. When reference is made to the famous "Recopilación de Indias", many imagine that it was some code of very early date, probably of the sixteenth century, whereas it did not go into effect until the end of the seventeenth century, about midway in the period of Spanish domination. Whatever honour redounds to Spain from this code is diminished by the tardiness of its execution.

The Spanish Government is reproached for having isolated Mexico and hindered foreign commerce. The immense extent of the colony of New Spain, the extensive sea coasts on both sides, the scanty population, the fatal and insupportable climate in certain sections, the deserts, the impenetrable forests, the gigantic mountain ranges, made communication and defence against foreign aggression extremely difficult. The envy and covetousness of other nations, chafing under the sting of having rejected the offer of the discovery, were a constant source of menace to these over-sea possessions. Strangers could select her weakest point of attack; Spain had to defend all sides. Means of communication, established with difficulty, were constantly being interrupted; foreign nations, without distinguishing between times of war and times of peace, kept up a continuous piratical warfare, sacked the coasts, and seized the cargoes of the ships. While this state of continual aggression and menace delayed and impeded the development of the colony, those responsible for it were the very ones to bring forward this charge against Spain. To allow such people to enter freely, even under the pretext of trade, was very dangerous. A foothold once established, it would not have taken long to spread over the entire country, and it was precisely to avoid this that it was necessary to wage incessant war. This is amply proved by the results attending the concession granted the English to cut timber in Yucatan, which ended in the absorption by the English Government of the entire strip of Mexican territory now known as British Honduras. It was therefore imperative to isolate the colony in order to keep it, without, however, for this reason oppressing it.

One cannot brand as stupid and blind a state policy that without any great armed force maintained for three hundred years, submissive and peaceful, extensive distant territories, the object of universal envy. It is true that during the colonial period there was no liberty of the press, but this was the case also in many European countries, and notwithstanding this, in Spain as well as in Mexico and through all America, the writings of Las Casas, which almost questioned the legitimacy of the conquest of the Indies, circulated freely. The first printing machine was brought to the New World not through the personal interest or for the personal advantage of any individual, but through the paternal solicitude of Bishop Zumárraga and the Viceroy D. Antonio de Mendoza. Public instruction, good or bad, according to individual opinion, was on an equality with that of Spain, and to the universities founded in Mexico, which were of the same rank as those of Spain, many noted professors were sent. The

taxes were not onerous, and if at times these were excessive it did not arise from insupportable exactions, but from the methods of administration. Many of the mistakes noted to-day, and so easily censured, were due to the impossibility of one man alone attending to all the details of so complicated a piece of machinery, above all to the great distance of the central government. Scattered through all the ancient documents may be found complaints attributing many of the troubles affecting the Indies to "the cursed distance that prevents their enjoying the presence of their king". The truth, though sought in all earnestness, came to the royal knowledge late and after many difficulties; it was therefore natural that the remedies for evils should be almost always late.

The motives and intentions of the Spanish kings

CATHEDRAL OF CHIHUAHUA
Showing transept door

could not have been better; at times they bordered on the Utopian, but it was humanly impossible that among so many officials all should have been exemplary. As the king was obliged to act through them, it was unavoidable that his wishes should often be either intentionally or unintentionally ignored. The wealth of the country excited envy; and its great distance mitigated fear. The Juicio de Residencia, totally unknown to-day, did not always prove efficacious, yet its establishment shows the earnest desire of restricting the prerogatives of the administration, and at times it proved a strong controlling force that made itself felt. It is, therefore, a vulgar error to believe that the Spanish Government was merciless towards the Colony of Mexico. Like all nations, Spain sought revenue from her colony (disinterestedness and charity are not governmental virtues), but she did not exhaust its resources. If at times special restrictions were imposed, they were the outcome of circumstances and of the not unnatural desire to retain possession of the colony.

Foremost among the public works undertaken by the vice-regal Government was the draining of the Valley of Mexico. The decree authorizing this work is dated 23 October, 1607, and the funds for the work were raised by a tax of 1 per cent. levied on all the

residences of the city, seeing that their owners would profit most directly by the improvement. The Indians engaged upon this work were paid 5 reales (63 cents) and an almud (7 quarts) of corn per week, and a daily ration of 1 pound of meat, peppers, wood, and other provisions. A hospital was founded at Huehuetoca for the benefit of disabled workmen, ground being broken on 28 November, 1607, by the Viceroy D. Luis de Velasco, who dug the first sod, after Mass had been said in the village of Nochistongo. Father Juan Sánchez, S. J., and the cosmographer, Enrique Martín (Martínez), were placed in charge of the work. Later Father Sánchez retired, leaving Martín in full charge. This vast work employed the labour of 471,154 men. The Nochistongo tunnel measured over four miles long, with a section measuring 11 feet 6 inches by 13 feet 7 inches. The work was finished on 7 May, 1608, and in a report made by order of the Viceroy Velasco it is stated that only 50 of the workmen had died, and of these 10 were accidentally killed. It is true that this great work did not give the expected results, but it nevertheless remains to the credit of the Government that undertook it for the welfare of the people. Finally, it may be noted that in examining the list of the viceroys who governed Mexico, the desire of the Spanish monarchs that the persons entrusted with this charge should be persons of importance, is very evident, and if there were someone who proved unworthy of the duty entrusted to them, oppressing the people and furthering their own private interests, there were many others, like Mendoza, Velasco, Payo de Rivera, Juan de Acuña, Bucareli, the second Conde de Revillagigedo, and others who proved themselves upright and prudent governors, and merited the gratitude of the colony.

Independent Mexico.—The revolt of the English colonies in America, the principles of the French Revolution, the proclamation of Joseph Bonaparte as King of Spain, the uprising of the Spaniards against Napoleon, and old racial antipathies, are the causes to which the independence of Mexico is usually attributed. This was doubtless precipitated by the fact that Miguel Hidalgo y Costilla, parish priest of Dolores, discovered that his plot was on the point of being betrayed, and on 16 September, 1810, raised the standard of revolt against Spain. From the little city of Dolores he marched with an ill-assorted, badly armed company of Indians to the very capital itself, but, not daring to attack it, retraced his steps to Guadalajara. At the bridge of Calderón he was defeated, and pursued as he fled through Acatitla de Bajan; he was captured and executed at Chihuahua, 30 July, 1811. His work was taken up and continued by José María Morelos, parish priest of Carácuaro, and upon his death by the Spaniard Mina. When Mina was captured and put to death, almost all hope of gaining independence seemed lost. D. Vicente Guerrero, entrenched in the mountains, kept up a desultory warfare until negotiations were opened with the royalist general, D. Agustín de Iturbide, who had been sent to subdue the insurgents. These negotiations issued in the plan of Iguala, by which Mexico was to be independent, its government a constitutional monarchy, and the Roman Catholic religion the only one recognized and tolerated. Ferdinand VII was chosen as sovereign or, in his default, one of his brothers or some member of the reigning house who should be chosen by the Congress. The secular and regular clergy were to be maintained in all their former privileges and pre-eminence.

Gradually both royalists and insurgents began to support this plan, and on 24 August, 1821, by the Treaty of Córdoba, even the Viceroy D. Juan O'Donóju, who had just landed at Vera Cruz, signified his concurrence. On 27 September of the same year the army of *las tres garantías* (three guarantees), as it was called, entered the City of Mexico. At the beginning of 1822 it became known that the Spanish

Government refused to ratify the treaty, and the partisans of Iturbide, taking advantage of this, proclaimed him emperor. Owing, however, to the difficulties and the opposition he encountered, he resigned the following year, and withdrew to Leghorn, Italy. In 1824, hoping once more to be of service to his country, and without knowing that he was under sentence of death by the Government, he returned to Mexico. He was arrested on his arrival, condemned, and put to death on 19 July, 1824. Freemasonry, so actively promoted in Mexico by the first minister from the United States, Joel R. Poinsett, began gradually to lessen the loyalty which, in accordance with the plan of Iguala, both the rulers and the governed had manifested towards the Church. Little by little laws were enacted against the Church, curtailing her rights, as, for example, in 1833, the exclusion of the clergy from the public schools, notwithstanding the fact that at the time the president, D. Valentín Gómez Farias, claimed for the Republican Government all the privileges of the royal patronage, with the power of filling vacant sees and other ecclesiastical benefices.

General Antonio López de Santa Anna dominated the scene for almost fifty years, but he was a man without principle, and his policy was weak and vacillating. Whatever services he rendered his country were more than outweighed by the many evils of his administration. From 1824 to 1846 the nation was embroiled in an interminable series of revolutions, having to face at the same time some serious national issues. Guatemala, which had cast in her lot with Mexico, separated from her forever; the French invaded the country; Yucatan separated from the central government for several years, and the independence of Texas brought on the war with the United States. The North American troops were in possession of the capital, and to establish peace it was necessary to cede to the conquerors all the territory situated north of the Rio Grande, besides California, Arizona, and New Mexico. And then, when peace was most necessary for the healing of the nation's wounds, there came, instead, civil wars and bloodshed. In 1851, Pius IX sent Monsignor Luis Clementi to settle some religious questions. He was officially received by the president, Señor Arista, but was finally obliged to withdraw and return to Rome without having accomplished anything. Dissensions continued, and in 1857 the famous Constitution, which is still in force in the republic, was promulgated by the president, Ignacio Comonfort. His successor, Benito Juárez, issued a series of laws against the Catholic religion. At this time an attempt was made to carry a schismatical movement into effect. Plans were made by the secret societies, as well as other anti-Catholic associations of reformers, to induce President Juárez to declare that the Mexican nation separated herself from communion with Rome, and establish a national religion whose first pontiff, named by the Government, should be Sr. Pardo, formerly parish priest of Zotuta in Yucatan, who had fraudulently obtained a Bull from Gregory XVI consecrating him titular Bishop of Germanicopolis and auxiliary to D. José María Guerra, Bishop of Yucatan. The sudden death of Sr. Pardo, in May, 1861, ended this absurd attempt.

This was followed by the French intervention, the empire, and the tragedy of Cerro de Las Campanas in June, 1867. In 1864, while Maximilian was emperor, the papal nuncio, Monsignor Meglia, visited Mexico, but he did not obtain anything from the emperor, as Maximilian declared that the "Reform Laws", with regard to laicization of church property, would be upheld. Juárez died in 1872, and was succeeded by D. Sebastián Lerdo de Tejada. The latter was overthrown by Porfirio Díaz, who became president. He has filled this office until the present time (1910), with the exception of one term from 1880 to 1884. His concilia-

tory policy, the encouragement, protection, and support of industries, the opening of ways of communication, have developed the rich resources of the country, and given Mexico an epoch of much needed peace.

CONSTITUTION OF 1857 AND LAWS OF REFORM.—From 4 July, 1822, when the law was issued permitting the Government to take possession of the Philippine mission property, and of revenues from pious foundations which were not to be spent within the limits of the Mexican Republic, to the law of 23 November, 1855, Article 42 of which abolished all ecclesiastical jurisdiction in civil matters, a series of laws were enacted by Congress and the legislatures of the states clearly showing the anti-religious spirit of those who framed them. This spirit was at its height from 1857 to 1874. During the presidency of D. Ignacio Comonfort the famous Constitution of 1857, decreeing the separation of Church and State, was promulgated, and in the years following Benito Juárez framed innumerable laws systematizing the provisions of the Constitution and enforcing the separation, and in 1874 President D. Sebastián Lerdo de Tejada raised many of the Reform Laws framed by Juárez to constitutional statutes.

(A) *The Church and her Privileges.*—Law of 11 August, 1859, Art. 3.—All laws, circulars, and ordinances of any kind whatsoever, established by public authority, by last will and testament, or by custom, which require officials to attend public religious functions, in a body are hereby repealed. Law of 4 December, 1860: Art.

8.—Right of asylum in churches is abolished, and force may and should be employed in whatever measure it may be deemed necessary to arrest and remove according to law a declared or suspected criminal, without the ecclesiastical authorities having a right to intervene. Art. 17.—Official recognition formerly given to various ecclesiastical persons and corporations is withdrawn. Art. 18.—The use of church bells is to be regulated by police ordinance. Art. 24.—Public officials are forbidden in their official capacity to assist at any religious ceremony, or entertainment in honour of a clergyman, however high in rank he may be. Troops of soldiers are included in the foregoing prohibition.

Law of 13 May, 1873, only article.—No religious rite or demonstration of any kind whatsoever may take place outside of the church building in any part of the republic. Law of 14 December, 1874, Art. 3.—No official, official corporation, or body of troops may attend in an official capacity religious services of any kind whatsoever, nor shall the Government recognise in any manner whatsoever religious solemnities. All days, therefore, that do not commemorate some exclusively civil event cease to be holidays. Sundays are set apart as days of rest for offices and public institutions. Art. 5.—No religious rite may take place outside the church building, neither shall the ministers of religion or any individual of either sex, of any denomination whatsoever, wear in public a special dress or insignia which would characterize him in any way, under penalty of a fine of ten to two hundred dollars.

(B) *Religious Orders.*—Constitution of 1857, Art. 5.—The State cannot allow any contract, pact, or agreement to go into effect that has for its object the im-

pairment, loss, or irrevocable sacrifice of a man's liberty, whatever the cause may be, work, education, or religious vow. Consequently the law does not recognize monastic orders, nor can it permit their establishment, whatever be their designation or object. Art. 27.—Religious institutions or corporations, whatever their character, name, period of existence, and object, and such civil institutions as are under the patronage, direction, or administration of these, or of the ministers of any religious denomination, shall have no legal right to acquire title to or administer any property, but such buildings as are destined for the immediate and direct use of said corporations and institutions. Neither shall they have the right to acquire or manage revenues derived from real estate.

Law of 12 July, 1859, Art. 5.—All the male religious orders which exist throughout the republic, whatever their name or the purpose of their existence, are hereby suppressed throughout the whole republic, as also all archconfraternities, confraternities, congregations, or sisterhoods annexed to the religious communities, cathedrals, parishes, or any other churches.

Art. 6.—The foundation or erection of new convents of regulars, archconfraternities, confraternities, congregations, or sisterhoods, under whatever form or name is given them, is prohibited, likewise the wearing of the garb or habit of the suppressed orders. Art. 7.—By this law the ecclesiastics of the suppressed orders are reduced to the condition of secular clergy, and shall, like these, be subject as

MEXICAN LABOURER'S BRUSH-SHACK
In the *tierras calientes* of the coast

regards the exercise of their ministry to the ordinaries of their respective dioceses. Art. 12.—All books, printed or manuscript, paintings, antiquities, and other articles belonging to the suppressed religious communities shall be given to museums, lycæums, libraries, and other public establishments. Art. 13.—All members of the suppressed orders who fifteen days after the publication of this law in their respective localities shall continue to wear the habit or live in community shall forfeit the right to collect their quota as assigned by Article 8, and if after the term of 15 days designated by this Article they should reunite in any place and appear to follow their community life, they shall immediately be expelled from the country. Art. 21.—All novitiates for women are perpetually closed. Those at present in novitiates cannot be professed.

Law of 26 Feb., 1863, Art. 1.—All religious communities of women are suppressed throughout the republic. Law of 25 September, 1873, Art. 5.—The law does not recognize monastic orders, nor can it permit their establishment, whatever their name or the object for which they are founded. Law of 4 Dec., 1873, Art. 19.—The State does not recognize monastic orders nor can it permit their establishment, whatever their name or the object for which they are founded. Any orders that may be secretly established shall be considered unlawful assemblies which the authorities may dissolve should the members attempt to live in community, and in all such cases the superiors or heads shall be judged criminals, infringing on individual rights according to Article 973 of the Penal Code of the District, which is declared in force in all the republic.

(C) *Church Property*.—Law of 12 July, 1859, Art. 1.—All property which under different titles has been administered by the secular and regular clergy, whatever kind of property it may be, taxes, shares, or stocks, or the name or purpose it may have had, becomes the property of the State. Law of 5 February, 1861, Art. 100.—The Government hands over all parochial residences, episcopal palaces, and dwellings of the heads of any denomination, declaring them inalienable and free from taxation as long as they are reserved for their own specific purpose. Law of 25 September, 1873, Art. 3.—No religious institution may acquire property nor the revenue derived from property. Law of 10 Oct., 1874, Art. 16.—The direct ownership of the churches nationalized according to the law of 12 July, 1859, and left for the maintenance of Catholic worship, as well as those which have since been turned over to any other institution, continues to reside in the nation; but their exclusive use, preservation, and improvement, as long as no decree of consolidation is issued, remains with the religious institutions to which they have been granted. Art. 17.—The buildings mentioned in the preceding article will be exempt from taxation, except when they have actually or nominally passed into the hands of one or more private individuals who hold the title without transmitting it to a religious society; in such cases the property shall be subject to the common law.

(D) *Legacies and Wills*.—Law of 14 December, 1874, Art. 8.—Legacies made in favour of ministers of religion, of their relatives to the fourth degree, or of persons living with said ministers when they have rendered any spiritual aid to the testators in their last illness, or when they have been their spiritual directors, are null and void.

(E) *Civil Marriage and Divorce*.—Law of 23 July, 1859, Art. 1.—Marriage is a civil contract that can licitly and validly be contracted before the civil authority. It suffices for its validity that the contracting parties, having complied with the formalities of the law, present themselves before the proper authority, and freely express their desire of being united in marriage. Law of 4 December, 1860, Art. 20.—The civil authorities shall not interfere in the religious rites and practices concerning marriage, but the contract from which this union proceeds remains exclusively subject to the laws. Any other marriage that is contracted in the republic without observing the formalities prescribed by these laws is null, and therefore ineffectual to produce any of the civil ends which the law grants only to a lawfully contracted marriage. Law of 10 December, 1874, Art. 23.—All decisions regarding nullity, validity, divorce, and other questions relative to the marriage state, must be tried before the civil tribunals which will determine the law without taking into consideration any resolutions on this subject that may have been provided by the ministers of religion.

(F) *Cemeteries and Graves*.—Law of 31 July, 1859, Art. 1.—The intervention of the clergy, secular or regular, in the management of cemeteries, vaults, and crypts, which up to the present time has been in force, ceases throughout the republic. Law of 4 December, 1860, Art. 21.—The governors of states, districts, and territories shall exercise the strictest vigilance for the enforcement of the laws in regard to cemeteries and burial grounds, and in no place shall decent burial be refused the dead no matter what may be the decision of the priests or their respective churches.

(G) *Hospitals and Charitable Institutions*.—Law of 2 February, 1861, Art. 1.—All hospitals and charitable institutions which up to the present time have been under ecclesiastical authority and managed by religious corporations are secularized. Law of 5 February, 1861, Art. 67.—Charitable institutions that were managed by ecclesiastical corporations or committees independent of the Government are secularized and

placed under the immediate supervision of the civil authorities. Law of 28 February, 1861, Art. 1.—All hospitals, asylums, houses of correction, and charitable institutions which exist at the present time, and which shall be founded in the Federal District, shall be under the protection of the Government. Law of 27 August, 1904, Art. 25.—The ministers of any form of religion cannot act as the directors, administrators, or patrons of private charity; neither can officials, dignitaries, or religious corporations, nor anyone, delegated by them, act in the same capacity.

(H) *Oaths*.—Law of 25 September, 1873, Art. 21.—The simple promise to speak the truth and to fulfil the obligations it entails, shall take the place of the religious oath with its consequences and penalties.

(I) *Instruction*.—Law of 4 December, 1874, Art. 4.—Religious instruction and the exercises of any form of religion are prohibited in all federal, state, and municipal schools. Morality will be taught in any of the schools when the nature of their constitutions permits it, but without reference to any form of religion. The infraction of this article will be punished by a fine of from 25 to 200 pesos, and dismissal from office if the offence is repeated.

(J) *Military Service*.—Law of 4 December, 1860, Art. 19.—The ministers of all forms of religion are exempt from military and coercive personal service, but not from the taxes which the law imposes for this privilege of exemption.

(K) *Public Office*.—Constitution of 1857, Art. 56.—No member of the ecclesiastical body can be elected a congressman. Law of 13 November, 1874, Art. 58.—Nominations for senator are subject to the same conditions as those for congressman.

ECCLESIASTICAL ORGANIZATION.—There is no doubt that the See of Yucatan, with the title of *Carolensis*, under the patronage of Nuestra Señora de los Remedios, was the first bishopric erected in Mexico; the Bull of Leo X, "Sacri Apostolatus ministerio", issued January, 1518, proves this. The erection of this diocese followed the first reports of the discovery of the peninsula, and by the Bull we see that Yucatan was still thought to be an island. However, as soon as more definite information was received concerning Mexico after the conquest, establishing the fact that Yucatan was part of the mainland, the proceedings for the erection of the diocese were suspended, especially as the Spaniards, diverted by other enterprises, gave little thought to Yucatan, and when it was abandoned by D. Francisco de Montejo, in 1527, they did not return until 1542. It may also be noted that when Clement VII named Fray Julian de Garces first Bishop of New Spain in 1526, the title *Episcopus Carolensis* was still used, and the Emperor Charles V, using the faculties granted him by the popes of assigning the limits of new dioceses, says in the royal decree which accompanied the Bull: "We declare, assign, and determine as the limits of the Bishopric of Yucatan and Santa María de los Remedios the following lands and provinces; first, the Province of Tlaxcala, inclusive, and S. Juan de Ulúa", etc. As Tlaxcala had a greater population and was nearer the capital, Bishop Garces established the episcopal residence there, from whence it was afterwards moved to Puebla.

Up to 1544 the dioceses in New Spain were:—Puebla, erected in 1526 at Tlaxcala, translated to Puebla, 1539; Mexico, 1530; Guatemala, 1534; Oaxaca, erected with the title of Antequera in 1535; Michoacan, erected in 1536 at Tzintzuntzan, translated later to Patzcuaro, and from there to the new city of Valladolid, now Morelia; Chiapas, 1546. They were all suffragans of the Archdiocese of Seville in Spain. Yucatan, though erected first, never had any resident bishop until 1561. On 31 January, 1545, at the solicitation of Charles V, the Holy Father, Paul III, separated these dioceses from the metropolitan See of Seville and erected the Archdiocese of Mexico, with

the above-mentioned dioceses for suffragans. Before the end of the sixteenth century the ecclesiastical Province of Mexico included, besides those already mentioned, the Diocese of Comayagua in Honduras, erected 1539; Guadalajara, 1548; Verapaz in Guatemala, erected in 1566, suppressed 1605; Manila in the Philippine Islands, erected 1581.

At the close of the eighteenth century all the dioceses situated outside Mexican territory had been separated to form new ecclesiastical provinces, and Chiapas, which from 1743 had belonged to the Archdiocese of Guatemala, was not reunited to the ecclesiastical Province of Mexico until the middle of the nineteenth century. Other new dioceses had been founded: Durango, 1620; Monterey, with the title of Linares, 1777; Sonora, 1779 (the episcopal residence in different cities at various epochs, Arispe, Alamos, Culiacan, and at Hermosillo when the Diocese of Sinaloa was erected). In the nineteenth century, Mexico being still the only archdiocese, the Dioceses of S. Francisco de California, erected 1840, and S. Luis Potosí, erected 1854, were added. Pius IX, in the secret consistory of 16 March, 1863, established the Dioceses of Chilapa, Tulancingo, Vera Cruz, Zacatecas, León, Querétaro, Zamora, and the Vicariate Apostolic of Tamaulipas (created a bishopric in 1869), and raised to archiepiscopal rank the episcopal Sees of Guadalajara and Michoacan. From 1869 to 1891 the Vicariate Apostolic of Lower California (1872), the Dioceses of Tabasco (1880) and Colima (1881), were established. In 1891, Leo XIII, by the Bull "Illud in primis", erected the new Dioceses of Cuernavaca, Tepic, Tehuantepec, Saltillo, and Chihuahua, and raised the Sees of Oaxaca, Monterey, and Durango to archiepiscopal rank. In 1895 the Diocese of Campeche was erected, and in 1899 that of Aguas Calientes. In 1903 the new Diocese of Huajuápan was created, and Puebla raised to the rank of an archdiocese, and in 1907 Yucatan was made an archdiocese. At the present time the ecclesiastical provinces of Mexico are constituted as follows:—

PROVINCES	SEES
Mexico	Mexico, Vera Cruz (epis. residence, Jalapa), Tulancingo, Chilapa, Cuernavaca.
Guadalajara	Guadalajara, Zacatecas, Tepic, Colima, Aguascalientes.
Michoacan	Michoacan (epis. residence, Morelia), Zamora, León, Querétaro.
Antequerá	Antequerá (epis. residence, Oaxaca), Chiapas (epis. residence, S. Cristóbal las Casas), Tehuantepec.
Linares	Linares (epis. res., Monterey), S. Luis Potosí, Saltillo, Tamaulipas (epis. res., Ciudad Victoria).
Durango	Durango, Sonora (epis. res., Hermosillo), Sinaloa (epis. res., Culiacan), Chihuahua, Vic. Apos. of Lower California (res., La Paz).
Yucatan	Yucatan (epis. res., Merida), Campeche, with the Territory of Quintana Roo, Tabasco (epis. res., S. Juan Bautista).
Puebla	Puebla, Huajuápan.

CAMILLUS CRIVELLI.

Mexico, ARCHDIOCESE OF (MEXICANA).—The boundaries of the Diocese of Mexico were at first not well defined. When Cuba was discovered three sees were erected, but when the prelates arrived, their episcopal sees had been destroyed, and the inhabitants had fled. In order to avoid such mistakes, the Holy See allowed the kings of Spain to fix the boundaries of the new dioceses erected on the American continent, still considered a part of Asia. From 1500 to 1863 the Diocese of Mexico extended from the Atlantic to the Pacific, namely from Tampico to Acapulco. At present it is confined to the Federal District, the States of Morelos, Mexico, and part of Hidalgo. The first bishop, Zumarraga, came to Mexico when Clement VII had just been released from the prison in Castel Sant' Angelo, where he was kept by Charles V for several months after the sack of Rome by Bourbon's army. Strange as it may seem, he was allowed, and even obliged to come with only the emperor's nomination, governed the diocese without any papal appointment, and styled himself "Omnimoda potestate Antistes". He returned to Spain, received his Bulls, and was consecrated six years after his first arrival on the American continent. He has been falsely accused of having destroyed most valuable monuments; he ought not to be blamed for having burnt the idols, temples, and hieroglyphics which prevented the conversion of the aborigines. In his time the Blessed Virgin, according to Mexican tradition, appeared to the neophyte Juan Diego, and became the patroness of America. He introduced the first printing office in the New World, published many books, founded many schools and colleges, and was a saintly man, a faithful follower of St. Francis of Assisi, to whose order he belonged. He ruled over the diocese, raised before he died to the rank of an archdiocese, from 1528 to 1548.

Five provincial councils have been held in the city of Mexico. The first and second under the second archbishop, Alonso de Montufar. The third was presided over by the third archbishop, Pedro Moya de Contreras. The twenty-fourth archbishop, Francisco Antonio de Lorenzana assembled and presided over the fourth provincial council in 1770. Prospero Alarcon, thirty-second archbishop, was the president of the fifth and last provincial council in 1896. The most important of all was the third council, which has been for centuries the code of ecclesiastical law for the Mexican Church. Archbishops Moya de Contreras, García Guerra, Palafox, Osorio, Ortega, Haro y Peralta, and Lizana y Beaumont were also viceroys and captains-general of New Spain, and were as able to brandish the sword as to wield the crosier. Archbishop Labastida was regent of the short lived empire of Maximilian. He was the last prelate to be invested with any political authority. The most distinguished of the line was Francisco Antonio de Lorenzana, transferred to Toledo, and created cardinal by Clement XIV. He published several important books.

founded many institutions both in New and Old Spain, helped with his own means Pius VI when he was sent to France as a prisoner by Napoleon, and largely contributed to the support of the cardinals assembled in Venice, in the conclave that elected Pius VII. A few years after the conquest, viz., in the beginning of the sixteenth century, the Archdiocese of Mexico already possessed over fifty convents of nuns, a university, equal to that of Salamanca, several colleges, and numberless schools. Their number went on increasing, until all religious progress was stopped by the War of Independence and the civil wars that followed. All were destroyed by law and in reality under President Juárez. President Díaz has treated the Church better; but the penal laws have not been repealed. The present archbishop, Mgr Mora y del Rio was born at Pajuarcán, 24 Feb., 1854; studied at Zamora and Rome; was ordained, 22 Dec., 1877; consecrated Bishop of Tehuantepec, 19 Jan., 1893; and promoted to the See of Mexico, 2 Dec., 1908 in succession to Mgr Alarcon. The population almost entirely Catholic is about 780,000.

J. MONTES DE OCA Y OBREGON.

Meiser, FRANCIS, JOSEPH, AND PAUL, three brothers, learned Benedictines of the monastery of St. Peter in Salzburg, and professors at the University of Salzburg.

FRANCIS, the oldest of the three, b. at Ingolstadt, 25 October, 1632; d. at Salzburg, 11 December, 1701. He took vows in 1651; was ordained priest in 1657; taught philosophy at the University of Salzburg in 1659; became regent of the convicts and secretary of the university in 1661; taught philosophy again from 1663 to 1665; and then moral theology until 1668. From 1669 to 1688 he taught various branches at the Bavarian monastery of Ettal and at his own monastery. From 1688 until his death he was master of novices and director of clerics at his monastery. He wrote the following philosophical treatises: "Philosophia rationalis rationibus explicata" (Salzburg, 1660); "Anima rationibus philosophicis animata et explicata" (ib., 1661); "Philosophia naturalis rationibus naturalibus elucidata" (ib., 1661); "Manuale philosophicum" (ib., 1665); "Homomicrocosmus" (ib., 1665). The following are some of his translations: "Philosophia sacra" (ib., 1678), from the French of the Parisian Capuchin Ivo; "Heiliges Benediktiner-Jahr" (2 volumes, Munich, 1690), from the Latin; "Diotra politicae religiosae" (Salzburg, 1694), and "Exercitia spiritualia" (ib., 1693), both from the French of the Maurist Le Contat; "Succinctæ meditationes christianæ" (4 vols., ib., 1695), from the French of the Maurist Claude Martin; "Via regia studiosæ juventutis ad veram sapientiam" (Frankfort, 1699), from the Italian; and a few others of less importance.

JOSEPH, b. 5 September, 1635, at Eichstätt; d. 26 October, 1683, at the monastery of St. Gall, while on a pilgrimage to Einsiedeln. He took vows at the same time with his brother Francis in 1651; was ordained priest in 1659; taught poetry in the gymnasium of Salzburg in 1660; was master of novices and sub-prior in his monastery in 1661; taught philosophy at the University of Salzburg, 1662-4; apologetics and polemics, 1665-7; canon law, 1668-73; he was prior of his monastery and taught hermeneutics and polemics, 1673-8, when he was appointed vice-chancellor of the university. He was an intimate friend of Mabillon, with whom he kept up a constant correspondence and who in his "Iter Germanicum" calls him "Universitatis Salisburgensis præcipuum ornamentum" (Vetus Analecta, I, xi). His chief work is "Historia Salisburgensis" covering the period from 582 to 1687, of which work he, however, had written only the first four books (582-1585) when he died, leaving the

remainder to be completed by his two brothers. In 1664 he published at Salzburg his four philosophical treatises: (1) "Considerationes de scientiis et de modis sciendi in genere"; (2) "Axiomata physica questionibus problematicis distincta"; (3) "Quatuor gradus naturæ: esse, vivere, sentire, intelligere"; (4) "Unitas et distinctio rerum questionibus philosophicis explicata". His other works are: "Tabula bipartita successione ecclesiasticæ tam ex testamento quam ab intestato" (Salzburg, 1670); "Panacea juris" (ib., 1673); "Lapis mysticus et cornu parvulum Danielis" (ib., 1677, 1682); "Institutiones in sacram scripturam" (ib., 1680); "Assertio antiquitatis ecclesiæ metropolitanæ Salisburgensis et monasterii S. Petri, O. S. Ben." (ib., 1682).

PAUL, the most celebrated of the three brothers, b. 23 November, 1637, at Eichstätt; d. 12 April, 1702, at Salzburg. He took vows in 1653; was ordained priest in 1660; taught at the gymnasium of Salzburg, 1660-4; was master of novices and director of clerics, 1664-6; taught philosophy, first at the University of Salzburg, 1668-70; then at the monastery of Göttweig, 1671-2. Returning to the University of Salzburg, he taught theology, 1673-88; exegesis and polemics, 1689-1700. In 1683 he had succeeded his deceased brother Joseph as vice-chancellor. His chief production is: "Theologia scholastica secundum viam et doctrinam D. Thomæ" (4 volumes, Augsburg, 1695, 1719), probably the best work on dogmatic theology that has been produced by a German Benedictine. It is especially noteworthy that the author's treatment of the immaculate conception and of papal infallibility is in exact accordance with the definitions of 1854 and 1870. His other works are: "Somnia philosophorum de possibilitibus et impossibilitibus" (Salzburg, 1670); "Contemplationes philosophicæ magnæ urbis cœlestis et elementariæ" (ib., 1670); "Mercurius logicus" (ib., 1671); "De gratia Dei" (ib., 1675); "Allocutiones de mediis pietatis Mariæ" (ib., 1677); "Orationes partheniæ, miscellaneæ, sacroprofanæ, problemata inauguralia seu orationes academicæ" (ib., 1699-1700); "Sacra historia de gentis hebraicæ ortu" (Dillingen, 1700; Augsburg, 1715).

Concerning all three see SÄTTLER, *Collect.-Blätter zur Gesch. der ehemaligen Benedictiner-Universität Salzburg* (Kempten, 1890), 212-218; LINDNER, *Professbuch der Benedictiner Abtei S. Peter in Salzburg* (Salzburg, 1906), 53-58, 65-68. For Joseph and Paul see STRAUB, *Viri scripti, eruditione ac pietate insignes, quos genuit vel aluit Eichstadium* (Eichstätt, 1790), 326-331.

MICHAEL OTT.

Mezzofanti, GIUSEPPE, cardinal, the greatest of polyglots, b. 19 September, 1774; d. 15 March, 1849. He was the son of a poor carpenter of Bologna. In the Scuole Pie, besides the classical languages, he learned Spanish, German, Mexican, and some South American dialects from ex-Jesuits who had been exiled from America. To his great love of study he added a prodigious memory, so that at the age of twelve years he was able to begin the three years course of philosophy, which he closed with a public disputation. His theological studies were completed with no less distinction, at an age at which he could not yet be ordained; consequently he devoted himself to the study of Oriental languages; and in 1797 he was appointed to the chair of Hebrew at the University of Bologna, and ordained a priest. When the Cisalpine Republic was established, he refused to take the oath of allegiance to it, lost his chair at the university, and was compelled to give private lessons in order to support himself. After the battles of 1799 and of 1800, the hospitals of Bologna were crowded with wounded and sick of almost all the nationalities of Europe, and Mezzofanti in giving religious assistance to the unfortunate seized the opportunity of perfecting his knowledge of the languages which he had already studied, as well as of learning new ones. In 1803 he was appointed assistant in the library of the Institute, and later, professor of Hebrew and Greek at

the university, which relieved him financially. In 1806, he refused an invitation of Napoleon to establish himself at Paris. In 1808, the chair of Oriental languages was suppressed, and Mezzofanti received, in compensation, a pension of 1000 lire; but, in 1815, he became librarian of the university, and occupied his chair once more. Besides the study of languages, to which he gave many hours of the day and night, he devoted himself to the study of ethnology, archaeology, numismatics, and astronomy. Moreover, he performed the offices of his holy ministry, and was commonly called the confessor of foreigners. In 1831 he was among the deputies who went to ask the pope's forgiveness, in the name of the city of Bologna, for the rebellion of that year, and the pope, repeating Pius VII's invitation of 1814, requested Mezzofanti to remain at Rome and place his learning directly at the service of the Holy See, an invitation which the modest priest, this time, accepted, after long resistance; soon he received the title of Domestic Prelate, and a canonry at Santa Maria Maggiore, which was changed, later, for one at St. Peter's. At Rome, also, he took advantage of opportunities to practice the languages that he had acquired, and to master new ones and in order to learn Chinese he went to the Capodimonte college for foreign missions, at Naples. In 1833, he was named Custodian-in-Chief of the Vatican Library, and Consultor of the Congregation for the correction of the Liturgical Books of Oriental Rites, of which he became Prefect. On 12 February, 1838, he was created cardinal under the title of St. Onofrio al Gianicolo; he was also a member of the congregations of the Propaganda, of Rites, of the Index, and of the Examination of Bishops. The events of 1848 undermined his already enfeebled health, and a combination of pneumonia and gastric fever put an end to his life. He was buried without pomp in a modest tomb of his titular church, over which a monument was raised in 1885.

According to Russell, Cardinal Mezzofanti spoke perfectly thirty-eight languages, among which were: biblical and rabbinic Hebrew, Arabic, Chaldean, Coptic, Armenian, ancient and modern, Persian, Turkish, Albanian, Maltese, Greek, ancient and modern, Latin, Italian, Spanish, Portuguese, French, German, English, Illyrian, Russian, Polish, Bohemian, Magyar, Chinese, Syriac, Geez, Amharic, Hindustani, Guzerati, Basque, Wallachian, and Californian; he spoke thirty other languages, less perfectly, and fifty dialects of the languages mentioned above. His knowledge of these languages was intuitive, rather than analytic, and consequently he left no scientific works, although some studies in comparative linguistics are to be found among his manuscripts, which he left, in part, to the municipal library, and in part to the library of the University of Bologna.

U. BENIGNI.

Miami Indians, an important tribe of Algonquian stock formerly claiming prior dominion over the whole of what is now Indiana and western Ohio, including the territories drained by the Wabash, St. Joseph, Maumee, and Miami rivers. They were closely connected, both linguistically and politically, with their western neighbours, the Illinois, the two tribe-groups speaking dialects of the same language. The Miami, however, were of more independent and warlike character. The tribal name, properly pronounced as in Latin, Me-ah-me (whence Maumee), and in the full plural form Ou-miami-wek, is of uncertain meaning and derivation. They were called by the early English writers Twightwee, a corruption of their Iroquois name, intended to imitate the cry of a crane. About 1685 the French recognized six bands, or subtribes, in the tribe, consolidated at a later period into three,

namely: Atchatchakangouen, "crane people", or Miami proper; Ouiaatanon, "whirlpool people", or Wea; and Pianquichia, "separators" (?), or Piankishaw. By the United States Government these were recognized as three distinct tribes. Altogether they may have numbered originally over 4000 souls. It is possible that Nicolet in 1634, and Radisson and Groseilliers in 1658-60 may have met in their Wisconsin journeyings the Miami, but this is not known. They are first mentioned by the Jesuit Dreuilletes in 1658 as a tribe recently discovered, under the name of Oumamik, living south-west from Green Bay, Wis. The estimate of 24,000 souls is an evident exaggeration. About 1668 and again in 1670 they were visited by Perrot. In the latter year the Jesuit Father Claude Allouez found them, or a part of the tribe, living with the Mascoutens in a palisaded town, in which he established the mission of Saint-Jacques, about the head of Fox river in south-east Wisconsin (see MASCOUTENS). He describes them as gentle, affable, and sedate, while Dablon, his companion, calls them more civilized than the lake tribes. Apparently these were only a part of the tribe, the main body being farther south, although all the bands were represented. They listened eagerly to the missionary's instruction and to satisfy them Allouez was obliged to set up a large cross in their section of the village as well as in that occupied by the Mascoutens.

In 1673 Allouez, who had learned the language, reports good progress, and that they now hung their offerings upon the cross instead of sacrificing to their heathen gods, chief among which was the Sun. There was however a strong opposition party. In June of this same year the noted Fr. Jacques Marquette stopped at the village and procured Miami guides for his voyage down the Mississippi. He describes the Miami as the most civilized, liberal, and shapely of the three tribes then assembled in the town. They wore their hair in two long braids down their breasts, were accounted brave and generally successful warriors, lived in cabins covered with rush mats, and were so eager to listen to Fr. Allouez that they left him little rest even at night. The cross was decorated with Indian offerings, and one chief who had recently died at a distance had asked to have his bones brought for interment beside it, which was done. But despite their willingness the mission languished and was soon afterwards abandoned, partly on account of lack of missionaries and partly on account of the disturbed conditions growing out of the inroads of the Iroquois, who, having destroyed the Hurons and others in the east, had now turned upon the Illinois and others of the west, and latterly (1682) upon the Miami. The missionary Lamberville, then stationed at Onondaga, gives a graphic account of the wholesale butcheries and horrible tortures of prisoners of which he was witness. The Iroquois, it must be remembered, were well armed with guns from Dutch and English traders, while the remote western tribes had only the bow. Shortly after the building of La Salle's temporary fort on the St. Joseph river, near the present South Bend, Ind., a band of Miami moved down and formed a village near to the same spot, while some Potawatomi also settled near them. Allouez followed them and, probably about 1685, established the mission of Saint Joseph, where he continued until his death in 1689. In 1692-3 Fr. Gravier wintered with the Miami, probably in Illinois. In 1694 we find the Wea in a village where Chicago now is. In 1721 Fr. Charlevoix visited the St. Joseph village, where he found nearly all of both tribes nominally Christian, but, from long absence of a missionary, "fallen into great disorders". Soon afterwards this matter was remedied and in 1750 the mission was in flourishing condition. At the same time Fr. Pierre du Jaunay was among the Wea, then residing at Wea creek on the Wabash, near the present Lafayette, Ind. A third Jesuit mission ex-

isted among the Piankishaw, who had their principal village lower down the Wabash, adjoining the present town of Vincennes, founded in 1702. After the suppression of the Jesuits in New France in 1762, the missionaries continued their work, as seculars, as well as was possible, until their deaths, Father Pierre Potier, "the last Jesuit in the west", dying at Detroit in 1781.

Through the influence of English traders a large part of the tribe had become hostile to the French and under the head chief "La Demoiselle" had removed about 1748 from the neighbourhood of the French post at the head of the Maumee (now Fort Wayne, Ind.) to a point on the Miami near the present Piqua, Ohio, and established there a town called Pickawillany, which grew rapidly in size and importance and became a centre of English trading influence. After repeated refusals to return, a party of northern Indians, led by a French trader, Langlade, in June, 1752, attacked and burned the town, killing and eating La Demoiselle, and carrying the traders to Canada. By this time the whole tribe was settled along the Wabash and the upper Maumee. They generally sided with the French in the French and Indian and Pontiac's wars, and with the English against the Americans in the later wars. Their great chief, Mishikinakwa, or Little Turtle (1752-1812), led the allied Indian forces which defeated Harmar in 1790 and St. Clair in 1791, but was himself defeated by Wayne in 1794, resulting in the famous Treaty of Greenville in the next year, by which the Indians surrendered the greater part of Ohio. After the close of the war of 1812, in which again they fought on the English side, the Miami began a series of treaty sales culminating in 1840, by which they sold all their territory excepting a small tract of about ten square miles, agreeing to remove west of the Mississippi. The final removal to Kansas was made by the main Miami band under military pressure in 1846, the Wea and Piankishaw having preceded them by a number of years. The main emigration in 1846 numbered about 650. The small reserved tract in Indiana was allotted in severalty to its owners in 1872 and their tribal relations were dissolved. In 1854 the united Wea and Piankishaw were officially consolidated with the Peoria and Kaskaskia, the remnant of the ancient Illinois, and in 1867 they removed altogether to their present lands under the Quapaw agency in north-east Oklahoma (Indian Ter.). In 1873 the remnant of the emigrant Miami, having sold their lands in Kansas, followed their kindred to the same agency.

After the withdrawal of the Jesuits various secular priests ministered as best they could to the Indians within reach of the frontier settlements, notably Fr. Gibault about Detroit and Fort Wayne, and Father Rivet at Vincennes (1795-1804), the latter devoting himself particularly to the Piankishaw, Wea, and Kaskaskia. In 1804 the Friends established an industrial farm on the upper Wabash, where for several years they instructed Miami, Shawnee, and others until forced to withdraw to Ohio by the opposition of the Shawnee prophet, brother of Tecumtha. In 1818 the Baptist minister, Rev. Isaac McCoy, began a work among the Wea and Miami which continued for four years and was then discontinued. In 1833 another Baptist minister, Rev. Jotham Meeker, assisted by Rev. David Lykins, began work among the Wea and Piankishaw, already in Kansas for some years, and built up a flourishing school with corresponding good effect upon the tribe. The main body of the Miami in Indiana throughout this period and for some years after their removal in 1846 were entirely neglected; without either religious or educational work, they sank to the lowest depths through dissipation, and were rapidly and constantly diminishing by intemperance and drunken murders. In 1841 their agent reports that "more than half the

adults who die perish by the hands of their fellow Indians." A notable exception was their chief, Richardville, of mixed blood, who died in the same year, a consistent Catholic, whose "stern honesty and strict punctuality, as well as dignified bearing, commanded universal respect". In the meantime the restored Jesuits had again taken up the western mission work in 1824. In 1836 Frs. Charles F. van Quickenborne and Hoecken began a series of missionary visits among the Kickapoo, Wea, Piankishaw, Potawatomi, and other removed and native tribes in Kansas which resulted in the establishment of a successful mission among the Potawatomi (St. Mary's) to which the other tribes were contributors. In 1847 a mission was started among the removed Miami, who had made official request for Catholic teachers, but it was discontinued two years later, probably because of the utter unworthiness of the Indians, who are officially described in the same year as "a miserable race of beings, considering nothing but what contributes to the pernicious indulgence of their depraved appetites for whiskey". The picture in 1849 is in even darker colors—"destroying themselves by liquor and extensively murdering one another", the lowest in condition of all the removed tribes, and reduced in three years by more than one half. In 1855 we hear of the first improvement, through the temperance efforts of the French half-breeds in the tribe. The Quapaw mission of St. Mary's, Okla., in charge of a secular priest assisted by five Sisters of Divine Providence now cares for 276 Indians of the associated remnant tribes, including about 40 of Miami kinship. Of an original 4000 or more there are left now only about 400, namely—Indiana, 243; Miami in Okla., 128; Wea and Piankishaw, with Peoria, in Okla., about 40.

Very little has been recorded of the customs or general ethnology of the Miami. They were organized upon the clan system, with, according to Morgan, ten *gentes*. One of their dances has been described, the feather dance, in which the performers, carrying feathered wands, imitated the movements of birds. They had a cannibal society—or possibly a clan—upon which devolved the obligation of eating the body of a prisoner upon occasion of certain great victories. Such ceremonial cannibalism was almost universal among the northern and eastern tribes. Their chief deities seem to have been the Sun and Thunder. They buried in the ground, under small log structures upon the surface of the ground, or in large logs split and hollowed out for the purpose. Of the language nothing of importance has been published beyond a Wea Primer, by the Baptist mission in 1837, although considerable manuscript exists with the Bureau of American Ethnology. It is still spoken by a large proportion of the survivors.

Michael, MILITARY ORDERS OF SAINT.—(1) A Bavarian order, founded in 1721 by Elector Joseph Clemens of Cologne, Duke of Bavaria, and confirmed by Maximilian Joseph, King of Bavaria, 11 Sept., 1808. Pius VII, 5 February, 1802, granted to priests decorated with this order all the privileges of domestic prelates. Under Louis I it was made an order of merit (1837), and under Otto I was reorganized (1887).

(2) An order founded in 1469 by Louis XI, the chief military order of France until the institution of the Knights of the Holy Ghost, after which the two together formed the *ordres du roi*, the reception of the

cross of the former being made a condition to membership in the latter. After the Revolution the order was revived, in 1816, as a distinction to be conferred on those who had accomplished notable work in art or science, or who had performed extraordinary services for the state. In 1825 there was a solemn reception into the *ordres du roi*, which did not, however, survive the Revolution of 1830.

(3) Knights of St. Michael's Wing, founded in the Cistercian monastery of Alcobaza, about 1171, by Alfonso I, King of Portugal, in commemoration of a victory over the Moors, in which, according to tradition, he was assisted by St. Michael in person. The knights were placed under the jurisdiction of the Abbot of Alcobaza and were pledged to recite the same prayers as Cistercian lay brothers. The order was in existence but a short time.

ΗΕΛΥΟΣ, *Ordres religieux* (Paris, 1859).

FLORENCE RUDGE MCGAHAN.

Michael Cærularius (Κηρουλάριος), Patriarch of Constantinople (1043-58), author of the second and final schism of the Byzantine Church, date of birth unknown; d. 1058. After the reconciliation following the schism of Photius (d. 891), there remained at Constantinople an anti-Latin party that gloried in the work of that patriarch, honoured him as the great defender of the Orthodox Church, and waited for a chance of renewing his quarrel. The only explanation of Michael Cærularius's conduct is that he belonged from the beginning to the extreme wing of that party, and had always meant to break with the pope as soon as he could. Belonging to one of the great families of Constantinople, he held in his youth some place at the Court. He began his public career by plotting with Constantine Monomachus, the future emperor, to depose Emperor Michael IV (1034-1041). Both conspirators were banished, and, in their exile, formed the friendship to which Cærularius owed his later advancement. Cærularius was known as a dangerous person, so the Government tried to stop his political career by making him a monk. At first he refused; then suddenly the suicide of his brother caused his conversion, and he voluntarily entered a monastery. In 1042 Monomachus became emperor peaceably by marrying Zoe, a descendant of Basil the Macedonian (Basil I, 867-86) and widow of both Romanus III (1028-34) and Michael IV. He remembered his old friend and fellow-conspirator and gave him an ambiguous place at court, described as that of the emperor's "familiar friend and guest at meals" (Psellus, "Enkomion", I, 324). As Cærularius was a monk, any further advancement must be that of an ecclesiastical career. He was therefore next made syncellus (that is, secretary) of the patriarch, Alexius (1025-34). The syncellus was always a bishop, and held a place in the church second only to that of the patriarch himself. In 1034 Alexius died, and Constantine appointed Cærularius as his successor. There was no election; the emperor "went like an arrow to the target" (Psellus, *ibid.*, p. 326). From this moment the story of Cærularius becomes that of the great schism.

The time was singularly unpropitious for a quarrel with the pope. The Normans were invading Sicily, enemies of both the papacy and the Eastern Empire, from whom they were conquering that island. There was every reason why the pope (St. Leo IX, 1048-54) and the emperor should keep friends and unite their forces against the common enemy. Both knew it, and tried throughout to prevent a quarrel. But it was forced on them by the outrageous conduct of the patriarch. Suddenly, after no kind of provocation, in the midst of what John Beccus describes as "perfect peace" between the two Churches (L. Allatius, "Græcia orthod.", I, 37), Cærularius sent a declaration of war against the pope and the Latins. His

agent was Leo, Metropolitan of Achrida in Bulgaria. In 1053 this latter sent a letter to Bishop John of Trani in Apulia, complaining of certain Latin customs, especially fasting on Saturday and the use of *asyme* (unleavened) bread for the Holy Eucharist. He says that the letter is meant for "all the bishops of the Franks and for the most venerable pope" (published by Will, "Acta et scripta", 56-60). There is no doubt that it was dictated by Cærularius. John of Trani sent the letter on to Cardinal Humbert of Silva Candida, who translated it and showed it to the pope. Cærularius then sent to the other patriarchs a treatise written by Nicetas Pectoratus (Niketas Stethatos in Greek), a monk of Studion, against *asyme* bread, fasting on Saturday, and celibacy. Because of these "horrible infirmities", Nicetas describes Latins as "dogs, bad workmen, schismatics, hypocrites, and liars" (Will, *op. cit.*, 127-36). Cærularius's third move made it plain that he meant war to the knife. Still entirely unprovoked, he closed all the Latin churches at Constantinople, including that of the papal legate. His chancellor Nicephorus burst open the Latin tabernacles, and trampled on the Holy Eucharist because it was consecrated in *asyme* bread.

The pope then answered the letter of Leo of Achrida. Knowing well whence it came, he addressed his answer in the first place to Cærularius. It is a dignified defence of the customs attacked and of the rights of the Holy See. He points out that no one thought of attacking the many Byzantine monasteries and churches in the West (Will, *op. cit.*, 65-85). For a moment Cærularius seems to have wavered in his plan because of the importance of the pope's help against the Normans. He writes to Peter III of Antioch, that he had for this reason proposed an alliance with Leo (Will, 174). Leo answered this proposal resenting the stupendous arrogance of Michael's tone, but still hoping for peace. At the same time he wrote a very friendly letter to the emperor, and sent both documents to Constantinople by three legates Cardinal Humbert, Cardinal Frederick (his own cousin and Chancellor of the Roman Church, afterwards Stephen IX, 1057-58), and Archbishop Peter of Amalfi. The emperor, who was exceedingly annoyed about the whole quarrel, received the legates with honour and lodged them in his palace. Cærularius, who had now quite given up the idea of his alliance, was very indignant that the legates did not give him precedence and prostrate before him, and wrote to Peter of Antioch that they are "insolent, boastful, rash, arrogant, and stupid" (Will, 177). Several weeks passed in discussion. Cardinal Humbert wrote defences of the Latin customs, and incidentally converted Nicetas Pectoratus (Will, 93-126, 136-50). Cærularius refused to see the legates or to hold any communication with them: he struck the pope's name from his diptychs, and so declared open schism. The legates then prepared the Bull of excommunication against him, Leo of Achrida, and their adherents, which they laid on the altar of Sancta Sophia on 16 July, 1054. Two days later they set out for Rome. The emperor was still on good terms with them and gave them presents for Monte Cassino. Hardly were they gone when Cærularius sent for them to come back, meaning to have them murdered (the evidence for this is given in Fortescue, "Orthodox Eastern Church", 186-7). Cærularius, when this attempt failed, sent an account of the whole story to the other patriarchs so full of lies that John of Antioch answered him: "I am covered with shame that your venerable letter should contain such things. Believe me, I do not know how to explain it for your own sake, especially if you have written like this to the other most blessed patriarchs" (Will, 190).

After the schism Cærularius became for a time the strongest man at Constantinople. He quarrelled with his former patron, Constantine IX, who appeased him

tion of Moses (Origen, "De principiis", III, 2, 1). St. Michael concealed the tomb of Moses; Satan, however, by disclosing it, tried to seduce the Jewish people to the sin of hero-worship. St. Michael also guards the body of Eve, according to the "Revelation of Moses" ("Apocryphal Gospels", etc., ed. A. Walker, Edinburgh, p. 647). (d) Apocalypse, xii, 7, "And there was a great battle in heaven, Michael and his angels fought with the dragon." St. John speaks of the great conflict at the end of time, which reflects also the battle in heaven at the beginning of time. According to the Fathers there is often question of St. Michael in Scripture where his name is not mentioned. They say he was the cherub who stood at the gate of paradise, "to keep the way of the tree of life" (Gen., iii, 24), the angel through whom God published the Decalogue to his chosen people, the angel who stood in the way against Balaam (Numbers, xxii, 22 sqq.), the angel who routed the army of Sennacherib (IV Kings, xix, 35), etc. Cf. P. Bonaventura da Sorrento ("Michael", Naples, 1892).

Following these Scriptural passages, Christian tradition gives to St. Michael four offices: (1) To fight against Satan. (2) To rescue the souls of the faithful from the power of the devil, especially at the hour of death. (3) To be the champion of God's people, the Jews in the Old Law, the Christians in the New Testament; therefore he was the patron of the Church, and of the order of knights during the Middle Ages. (4) To call away from earth and bring men's souls to judgment ("signifer S. Michael representet eas in lucem sanctam", Offert. Miss. Defunct. "Constituit eum principem super animas suscipiendas" Antiph. off. Cf. "Hermas", Pastor, I, 3, Simil. VIII, 3). Regarding his rank in the celestial hierarchy opinions vary; St. Basil (Hom. de angelis) and other Greek Fathers, also Salmeron, Bellarmine, etc., place St. Michael over all the angels; they say he is called "archangel" because he is the prince of the other angels; others (cf. P. Bonaventura, op. cit.) believe that he is the prince of the seraphim, the first of the nine angelic choirs. But according to St. Thomas (Summa, I, Q. cxiii, a. 3) he is the prince of the last and lowest choir, the angels. The Roman Liturgy seems to follow the Greek Fathers; it calls him "Princeps militiæ celestis quem honorificat angelorum cives". The hymn of the Mozarabic Breviary places St. Michael even above the Twenty-four Elders. The Greek Liturgy styles him Ἀρχιεργάτης, "highest general" (cf. Menæa, 8 Nov. and 6 Sept.).

VENERATION.—It would have been natural to St. Michael, the champion of the Jewish people, to be the champion also of Christians, giving victory in war to his clients. The early Christians, however, regarded some of the martyrs as their military patrons: St. George, St. Theodore, St. Demetrius, St. Sergius, St. Procopius, St. Mercurius, etc.; but to St. Michael they gave the care of their sick. At the place where he was first venerated, in Phrygia, his prestige as angelic healer obscured his interposition in military affairs. It was from early times the centre of the true cult of the holy angels, particularly of St. Michael. Tradition relates that St. Michael in the earliest ages caused a medicinal spring to spout at Chairtopa near Colossæ, where all the sick who bathed there, invoking the Blessed Trinity and St. Michael, were cured. Still more famous are the springs which St. Michael is said to have drawn from the rock at Colossæ (Chonæ, the present Khonas, on the Lycus). The pagans directed a stream against the sanctuary of St. Michael to destroy it, but the archangel split the rock by lightning to give a new bed to the stream, and sanctified forever the waters which came from the gorge. The Greeks claim that this apparition took place about the middle of the first century and celebrate a feast in commemoration of it on 6 September (Analecta Bolland., VIII, 285-328). Also at Pythia in Bithynia and elsewhere in Asia the

hot springs were dedicated to St. Michael. At Constantinople likewise, St. Michael was the great heavenly physician. His principal sanctuary, the Michaelion, was at Sosthenion, some fifty miles south of Constantinople; there the archangel is said to have appeared to the Emperor Constantine. The sick slept in this church at night to wait for a manifestation of St. Michael; his feast was kept there 9 June. Another famous church was within the walls of the city, at the thermal baths of the Emperor Arcadius; there the synaxis of the archangel was celebrated 8 Nov. This feast spread over the entire Greek Church, and the Syrian, Armenian, and Coptic Churches adopted it also; it is now the principal feast of St. Michael in the Orient. It may have originated in Phrygia, but its station at Constantinople was the Thermæ of Arcadius (Martinow, "Annus Græco-slavicus", 8 Nov.). Other feasts of St. Michael at Constantinople were: 27 Oct., in the "Promotu" church; 18 June, in the Church of St. Julian at the Forum; 10 Dec., at Athæa (Maximilian, Liturgia Orientalis, Freiburg, 1908).

The Christians of Egypt placed their life-giving river, the Nile under the protection of St. Michael; they adopted the Greek feast and keep it 12 Nov.; on the twelfth of every month they celebrate a special commemoration of the archangel, but 12 June, when the river commences to rise, they keep as a holiday of obligation the feast of St. Michael "for the rising of the Nile", ἐσχὲς εἰς τὴν ἀναμύμητον ἀνάβατον τῶν ποταμῶν ὁδῶν (N. Nilles, "Kal. man.", II, 702, Innsbruck).

At Rome the Leonine Sacramentary (sixth cent.) has the "Natale Basilicæ Angeli via Salaria", 30 Sept.; of the five Masses for the feast three mention St. Michael. The Gelasian Sacramentary (seventh cent.) gives the feast "S. Michaelis Archangeli" and the Gregorian Sacramentary (eighth cent.), "Dedicatio Basilionis S. Angeli Michaelis", 29 Sept. A manuscript also here adds "via Salaria" (Ebner, "Miss. Rom. Iter Italicum", 127). This church of the Via Salaria was six miles to the north of the city; in the ninth century it was called *Basilica Archangeli in Septimo* (Armellini, "Chiese di Roma", p. 855). It disappeared a thousand years ago. At Rome also the part of heavenly physician was given to St. Michael. According to an (apocryphal?) legend of the tenth century he appeared over the Moles Hadriani (Castel di S. Angelo), in 950, during the procession which St. Gregory held against the pestilence, putting an end to the plague. Boniface IV (608-15) built on the Moles Hadriani in honour of him, a church, which was styled *St. Michaelis inter nubes (in summitate circi)*.

Well known is the apparition of St. Michael (a. 494 or 530-40), as related in the Roman Breviary, 8 May, at his renowned sanctuary on Monte Gargano, where his original glory as patron in war was restored to him. To his intercession the Lombards of Sipontum (Manfredonia) attributed their victory over the Greek Neapolitans, 8 May, 663. In commemoration of this victory the church of Sipontum instituted a special feast in honour of the archangel, on 8 May, which has spread over the entire Latin Church and is now called (since the time of Pius V) "Apparitio S. Michaelis", although it originally did not commemorate the apparition, but the victory.

In Normandy St. Michael is the patron of mariners in his famous sanctuary at Mont-Saint-Michel in the Diocese of Coutances. He is said to have appeared there, in 708, to St. Aubert, Bishop of Avranches. In Normandy his feast "S. Michaelis in periculo maris" or "in Monte Tumba" was universally celebrated on 18 Oct., the anniversary of the dedication of the first church, 16 Oct., 710; the feast is now confined to the Diocese of Coutances. In Germany, after its evangelization, St. Michael replaced for the Christians the pagan god Wotan, to whom many mountains were

sacred, hence the numerous mountain chapels of St. Michael all over Germany.

The hymns of the Roman Office are said to have been composed by St. Rabanus Maurus of Fulda (d. 856). In art St. Michael is represented as an angelic warrior, fully armed with helmet, sword, and shield (often the shield bears the Latin inscription: *Quis ut Deus*), standing over the dragon, whom he sometimes pierces with a lance. He also holds a pair of scales in which he weighs the souls of the departed (cf. Rock, "The Church of Our Fathers", III, 160), or the book of life, to show that he takes part in the judgment. His feast (29 Sept.) in the Middle Ages was celebrated as a holy day of obligation, but along with several other feasts it was gradually abolished since the eighteenth century (see FEASTS). Michaelmas Day, in England and other countries, is one of the regular quarter-days for settling rents and accounts; but it is no longer remarkable for the hospitality with which it was formerly celebrated. Stubble-geese being esteemed in perfection about this time, most families had one dressed on Michaelmas Day. In some parishes (Isle of Skye) they had a procession on this day and baked a cake, called St. Michael's bannock. (Hampson, "Medii Ævi Calendarium", London, 1841, I, 348 sqq.)

Michaud, JOSEPH-FRANÇOIS, historian, b. at Albans, Savoy, 1767; d. at Passy, 30 Sept., 1839. He belonged to an ancient family of Savoy. Educated at the College of Bourg at Gresse, in 1786 he entered a publishing house at Lyons, but left it after a few years to take up journalistic work at Paris, where, during the Revolution, he defended warmly and not without risk the royal cause. Arrested on 13 Vendémiaire, 1795, he succeeded in escaping and resumed the journalistic war. Under the Con-

JOSEPH-FRANÇOIS MICHAUD

sulate he wrote several pamphlets in which appeared criticisms of Napoleon that led to his imprisonment in the Temple for a time. After his release from prison he decided to abandon politics for literature. In 1808 he published the first volume of the "History of the Crusades". In the same year he founded with his brother the "Biographie Universelle". Elected to the French Academy in 1814, he was, under the Restoration, deputy editor of "La Quotidienne", and then lecturer to Charles X. In May, 1830, he undertook a voyage to the East and the Holy Land in order to study phases of Eastern life and thus impart more realistic colour to the accounts of his "History of the Crusades". He was unable to complete the final edition.

Michaud's most important work is his "History of the Crusades" (1st ed., 3 vols., Paris, 1812-17; 6th

ed., Poujoulat, 6 vols., Paris, 1841). In his choice of the subject and the manner in which he treated it Michaud was an innovator; his work was one of the first productions of the historical school which, inspired by the works of Chateaubriand, restored the Middle Ages to a place of honour. To-day the value of this work seems open to question; the information appears insufficient and the romantic colour is often false. It was none the less the starting point of studies relating to the Crusades, and it was under the influence of this publication that the Academy of Inscriptions in 1841 decided to publish the collection of Historians of the Crusades. Michaud had accompanied his work with a "Bibliothèque des Croisades" (Paris, 1829, 4 vols., 12°), which contained French translations of the European and Arabic chronicles relating to the Crusades. Besides, he directed the publication of the "Biographie Universelle" (2nd ed., 45 vols., Paris, 1843), and in collaboration with Poujoulat that of the "Collection des Mémoires pour servir à l'histoire de France depuis le 13^e siècle jusqu'au 18^e" (32 vols., Paris, 1836-44).

SAINT-EUVE, *Causeries du lundi*, VII, 20-41.

LOUIS BRÉHIER.

Micheas (MICHAS).—In Hebrew the complete form of the name is Mikhāyāhū or Mikhāyehū (contracted into Mikhēhū? II Paral., xviii, 8, *kethibh*) or Mikhāyah (who is like Yāhū, Yehū, Yah?); the shortened form is Mikhah. Among the O.-T. bearers of this name three especially deserve notice.

I. The Book of Judges (xvii-xviii) contains the history of a certain Michas (Hebr., xvii, 1 and 4: Mikhāyehū; elsewhere Mikhah), a resident of the hill-country of Ephraim who founded an idolatrous sanctuary. As he restored to his mother the 1100 pieces of silver which he had stolen from her, she devoted 200 wherewith to make an idol which was set up in the house of Michas. In addition, Michas made an *ephod* and *teraphim*. He first appointed as priest his son, but afterwards engaged a Levite of Bethlehem, Jonathan, a descendant of Moses by Gersam. The Danites, passing by whilst on a migration, took with them the Levite Jonathan and the objects of the idolatrous worship belonging to Michas, in spite of the latter's protests, and set them up in the sanctuary which they established in the town of Dan, so called after their name. See the commentaries on Book of Judges, by G. F. Moore (Edinburgh, 1903); Budde (Tübingen, 1897); Hummelauer (Paris, 1888); Lagrange (Paris, 1903); etc.; cf. A. Van Hoonacker, "Le Sacerdoce Lévitique" (London and Louvain, 1899), 225, 227, 230, 239, 244, and 372.

II. Micheas, son of Jemla (Hebr. Mikhāyehū; II Paral., xviii, 14: Mikhah; *ibid.*, verse 8: Mikhēhū? *keth.*), a prophet of the Kingdom of Samaria, contemporary with Elias and Eliseus. It is related in III Kings, xxii (cf. II Paral., xviii), that Achab, King of Israel (c. 873-852 B. C.), allied to Josaphat, King of Juda, having obtained from 400 prophets an assurance that his intended expedition against Ramoth-Galaad, a town which he wished to recover from the Syrians, would succeed, summoned at the earnest request of Josaphat the Prophet Micheas, son of Jemla; although the latter, he asserted, had always proved to him a prophet of evil. Micheas, in his first answer, foretold the success of the enterprise, but his words were probably spoken in an ironical tone, for Achab adjured him in the name of the Lord to speak the truth. Micheas then announced the defeat of the two kings. He added that he had seen in a vision a spirit promise Yahweh to deceive Achab by his prophets. Whereupon one of these prophets, Sedecias, son of Chanaana, struck him on the face. Achab ordered the imprisonment of Micheas till the day when he should return in peace. "If thou return in peace," said Micheas, "the Lord hath not spoken by

me." In the ensuing battle Achab was severely wounded by a chance arrow and died the same day. See the commentaries on the Books of Kings by Skinner in "Edinburgh Century Bible"; W. E. Barnes (Cambridge, 1908); Kittel (Göttingen, 1900); Klostermann (Munich, 1887); cf. W. R. Harper, "Comm. on Amos and Hosea" (Edinburgh, 1905), lv sq.

III. Micahs (Hebr. Mīkha; Jer., xxvi, 18: Mīkhāyah *keḥ*), the author of the book which holds the sixth place in the collection of the Twelve Minor Prophets, was born at Mōrēshēth (Mich., i, 1; Jer., xxvi, 18), a locality not far from the town of Geth (Mich., i, 14). Jerusalem was the scene of his ministry, and it occurred, as we learn from the title of his book, under the Kings Joatham (c. 740-735 B. C.), Ahas (735-727?), and Ezechias (727-698?). We do not, however, appear to possess any of his addresses prior to the reign of Ezechias. He was thus a contemporary of the Prophet Isaias. His book falls into three parts: (1) The first part consists of chapters i-iii. Micahs begins by announcing the impending destruction of Samaria as a punishment for its sins, and Jerusalem also is threatened. In chapter ii the prophet develops his threats against the Kingdom of Juda and gives his reasons for them. In chapter iii he utters his reproaches with greater distinctness against the chief culprits: the prophets, the priests, the princes, and the judges. Because of their transgressions, Sion shall be ploughed as a field, etc. (iii, 12). This passage was quoted by the defenders of Jeremias against those who wished to punish with death the boldness with which the latter had announced God's chastisements: Micahs of Morasthi was not punished with death, but, on the contrary, Ezechias and the people did penance and the Lord withdrew his threat against Jerusalem (Jer., xxvi, 18 sq.). There is a general consensus of opinion to attribute to the Prophet Micahs the authorship of this part of the book; serious doubts have been expressed only concerning ii, 11 and 12. Chapters i-iii must have been composed shortly before the destruction of the Kingdom of Samaria by the Assyrians (722 B. C.).

(2) In the second part (iv-v), we have a discourse announcing the future conversion of the nations to the law of Yahweh and describing the Messianic peace, an era to be inaugurated by the triumph of Israel over all its enemies, symbolized by the Assyrians. In v, 1 sq. (Hebr., 2 sq.), the prophet introduces the Messianic king whose place of origin is to be Bethlehem-Ephrata; Yahweh will only give up his people "till the time wherein she that travaileth shall bring forth", an allusion to the well-known passage of Is., vii, 14. Several recent critics have maintained that chapters iv-v, either wholly or in part, are of post-exilic origin. But their arguments, principally based on considerations inspired by certain theories on the history of the Messianic doctrine, are not convincing. Neither is it necessary to suppose that in iv, 8, the comparison of the citadel of Sion with the "tower of the flock" alludes to the ruinous condition of Judea and Jerusalem at the time of the composition of the address; this comparison merely refers to the moral situation held towards the rest of the country by the capital, whence Yahweh is presumed to keep watch. The connexion of ideas, it is true, is interrupted in iv, 10, and in v, 4-5 (Vulg. 5-6), both of which may be later additions. A characteristic trait of Micahs's style in chapter i is found in the puns on the names of localities, and it is noticeable that an entirely similar pun can be seen in v, i (Hebr., iv, 14), particularly when the LXX version is taken into account. The reading supposed by the LXX suggests a very satisfactory interpretation of this difficult passage: "And now, surround thyself with a wall (*gādhēr*), Beth-Gader." The difference of tone and contents clearly show that iv-v must have been composed in other circumstances than i-iii. They probably date from shortly after the fall of Samaria

in 722 B. C. In i-iii Micahs had expressed the fear that after the conquest of Samaria the Assyrian army would invade Judea; but Yahweh withdrew His threat (Jer., xxvi, 19), and the enemy left Palestine without attacking Jerusalem. Chapters iv-v have preserved us an echo of the joy caused in Jerusalem by the removal of the danger.

(3) Chapters vi-vii, which form the third part, are cast in a dramatic shape. Yahweh interpellates the people and reproaches them with ingratitude (vi, 3-5). The people ask by what offerings they can expiate their sin (vi, 6-7). The prophet answers that Yahweh claims the observance of the moral law rather than sacrifices (vi, 8). But this law has been shamefully violated by the nation, which has thus brought on itself God's punishment (vi, 9 sq.). The present writer has suggested ("Les Douze Petits Prophètes", Paris, 1908, 405) that the passage vii, 11b-13, be so transposed as to follow vii, 6; in this way the justification of the punishments assumes a connected form in vi, 9-vii, 6 + 11b-13. The rest of chapter vii (7-11a + 14 sqq.) contains a prayer in which the fallen city expresses hope in a coming restoration and confidence in God.

The opinions of critics are much divided on the composition of these chapters. Several consider them a mere collection of detached fragments of more or less recent origin; but the analysis just given shows that there is a satisfactory connexion between them. The chief reason why critics find it difficult to attribute to Micahs the authorship of chapters vi-vii, or at least of a large portion, is because they identify the fallen city of vii, 7 sqq., with Jerusalem. But the prophet never mentions Jerusalem, and there is no proof that Jerusalem is the city intended. On the contrary, certain traits are better explained on the supposition that the city in the prophet's mind is Samaria; see especially vi, 16, and vii, 14. According to this hypothesis, the prophet in vi-vii, 6 + 11b-13, casts a retrospective look at the causes which brought about the fall of Samaria, and in vii, 7-11a + 14 sqq., he expresses his desires for its return to the Lord's favour. As in the historical situation thus supposed there is nothing which does not exactly tally with the circumstances of Micahs's time, as there is no disagreement in ideas between Micahs i, sqq., and vi-vii, as on the contrary real affinities in style and vocabulary exist between Micahs i, sqq., and vi-vii, it seems unnecessary to deny to the Prophet Micahs the authorship of these two chapters.

A. VAN HOONACKER.

Michel, JEAN, a French dramatic poet of the fifteenth century, who revised and enlarged the mystery of the Passion composed by Arnoul Gréban. There are three Michels mentioned in connexion with this work. Some consider Bishop Jean Michel of Angers as its author, but this opinion can hardly be maintained. None of his biographers speak of his contributions to the mystery of the Passion; moreover, he died in 1447 and therefore could not have revised the work of Gréban, which first appeared about 1450. A catalogue containing the names of the counsellors of the Paris Parliament mentions a "Maistre Jehan Michel", first physician of King Charles VIII, who was made a counsellor in 1491. We also read in "Le Verger d'Honneur" by André de La Vigne, a contemporary poet, "On 23 August, 1495, there died at Chieri (Piedmont) Maistre Jehan Michel, first physician of the king, most excellent doctor in medicine". The third Jean Michel, also a doctor, was the physician

of the young dauphin, son of Charles VIII. His name appears several times in the cartulary of the University of Angers, and in the books of the medical faculty in that city. He died in 1501. Since the *Passion* was produced for the first time in its new shape at Angers in 1486, it is probable that its author was the third Jean Michel, but the fact has not been proved.

Besides his contributions to Gréban's *Passion*, Jean Michel composed another mystery, a *Resurrection*, which was played at Angers on the occasion of King René's visit to that city. Jean Michel has not the dryness of his predecessor; on the other hand he lacks his accuracy. He incorporates into his mysteries the most extravagant legends and the fantastic information found in the apocryphal writers. He delights in pictures of low city life in the fifteenth century, and his language is often realistic in the extreme.

Michelangelo Buonarroti. See BUONARROTI.

Michelians, a German Protestant sect which derives its name from "Michel", the popular designation of its founder Johann Michael Hahn, b. of peasant parentage, 2 February, 1758, at Altorf near Stuttgart; d. at Sindlingen near Herrenberg in Würtemberg, 20 January, 1819. Naturally of a deeply religious disposition, he claimed to have been favoured at the age of seventeen with a vision lasting for the space of three hours. From that time on he led a strictly retired life and was a regular attendant at the meetings of the Pietists. His peculiarities drew forth the energetic disapproval of his father, who even resorted to physical violence against him. But as parental opposition resulted in driving the son from home without changing his manner of life, it was soon abandoned as useless. After a seven weeks' vision, alleged to have occurred in 1780, Hahn began to proclaim his beliefs through speech and writing. Large audiences flocked to his preaching and both the ecclesiastical and the civil authorities instituted proceedings against him. He sought quiet in foreign lands, notably in Switzerland, where he met Lavater. From 1794 until his death, he devoted his time, undisturbed, to religious propaganda, living on the estate of Duchess Frances at Sindlingen. While he entertained for some time the idea of establishing a distinct community, a plan which was realized at Kornthal near Stuttgart, after his death, neither he nor his followers ever separated completely and permanently from the state Church. The Bible, interpreted not in a literal but a mystical, allegorical sense, occupies, in his religious system, the position of supreme guide in matters of faith. The Trinity of Persons in God is replaced by a threefold manifestation of one and the same deity. A double fall of man is admitted, for Adam fell first in seeking a consort for the multiplication of the human species, and again in yielding to her suggestion of disobedience. Hence the necessity of redemption by Jesus Christ, a redemption which is understood mainly in a physical sense, in as much as the Redeemer exudes, in his bloody sweat, the coarse, sensual elements in man to whom he restores a spiritualized body. A second and proximate advent of Christ is taught; also the ultimate universal salvation of all beings, the fallen angels included. Among the sources of his belief Hahn mentions only the Bible and special personal illumination; his ideas, however, are undoubtedly related to the views of the theosophists Böhme and Öttinger. His followers, found chiefly among the rural population, are scattered over Würtemberg, Baden, and the Palatinate. Their approximate number is 15,000 souls divided into 26 districts, each of which holds semi-annual conferences. The works of Hahn, comprising 15

volumes, were published posthumously at Tübingen, 1819 sqq.

N. A. WEBER.

Michelis, EDWARD, theologian, b. in St. Mauritz, 6 Feb., 1813; d. in Luxemburg, 8 June, 1855. After his ordination, in 1836, he was appointed private secretary to the Archbishop of Cologne, Clemens August von Droste-Vischering, whose imprisonment he shared, first in the fortress of Minden (1837), and later at Magdeburg and Erfurt. On his release in 1841 he returned to St. Mauritz, where, the following year, he established the Sisters of Divine Providence, whom he placed in charge of an orphanage he had also founded. In 1844 he was made professor of dogmatic theology in the seminary at Luxemburg, where he remained until his death. Among his published writings are: "Völker der Südsee u. die Geschichte der protestantischen und katholischen Missionen unter denselben" (Münster, 1847); "Lieder aus Westfalen", edited by his brother Friedrich in 1857; "Das heilige Messopfer und das Frohnleichnamfest in ihrer welthistorischen Bedeutung" (Erfurt, 1841). He was also the founder of the "Münstersche Sonntagsblatt" and co-founder and editor-in-chief of "Das Luxemburger Wort" (1848).

LAUCHERT in *Buchberger, Kirchliches Handlex.; Konversationslex.*

FLORENCE RUDGE MCGAHAN.

Michelozzo di Bartolommeo, architect and sculptor, b. at Florence c. 1391; d. 1472. He exercised a quiet, but far-reaching, influence during the early Renaissance, and for more than a decade worked with Donatello, to whom several of Michelozzo's works have been erroneously attributed. The Aragazzi monument in the cathedral at Montepulciano and the Brancacci tomb at Naples are the work of Michelozzo alone, whilst he assisted Donatello in the execution of the tomb of John XXIII. He also modelled several pieces in brass for Donatello, with whom he collaborated on a pulpit for the cathedral of Prato. Ghiberti received important assistance from him on his "Matthew" and on the bronze sacristy door of the cathedral of Florence. Later on, he made bronze casts of some of Luca della Robbia's designs. Among other works at Florence, a silver figure of St. John, a larger replica of which was afterwards made in clay, is certainly the work of Michelozzo alone, while others again are ascribed to him with more or less probability. In San Giorgio Maggiore, at Venice, there is still preserved a wooden crucifix by him. That Michelozzo was influenced by Donatello in his plastic work, cannot be denied; but his own style was not devoid of originality.

As an architect, it is sufficient to say of him that he was certainly worthy to be compared with Brunelleschi. Being court architect at Florence after 1435, he built the Medici chapel in the church of Santa Croce and undertook the rebuilding of the convent of San Marco, in which the cloister and the hall of the library are his work. He also built the façade of the church of Sant' Agostino in Montepulciano. In these buildings he manifested a certain preference for antique forms, though there are also traces of the Gothic influence which was then passing away. Probably his greatest work was the palace of the Medici (afterwards in the possession of the Riccardi), which lost much of its fine balance of mass when it was enlarged. Between this edifice and Brunelleschi's Pitti Palace there is a great resemblance, though the Pitti may be a work of later date. Still Brunelleschi retains the superiority by virtue of his Palazzo di Parte Guelfa. A peculiarity of the Riccardi (Medici) Palace is the gra-

datation of bossage from the base upwards through two stories, after which come smooth stone blocks. The plan, moreover, was afterwards generally imitated. Not very large, but imposing in effect, it presents, below, a colonnade, above, between bold cornices, a wall decorated with antique reliefs, and then an upper story with semicircular, double-light, windows similar to those of the façade. The composite capital used here was afterwards generally adopted as a decorative element. To Michelozzo are also due a court in the Palazzo Vecchio and another in the Corsi Palace, as well as a palace built for the Medici in Milan, of which only a small part has been preserved. In this, as also in a palace at Ragusa by the same master, the upper floor had windows with the pointed arches of an earlier style. At Milan his Portinari chapel is still to be seen in Sant' Eustorgio. As compared with Donatello and Brunelleschi, Michelozzo is given the higher place by some critics, though others rank him lower.

G. GIETMANN.

Michigan.—The State of Michigan is bounded on the north by Lake Superior, on the east by Canada, Lake Huron and Lake St. Clair, on the south by Ohio and Indiana, and on the west by Lake Michigan and the State of Wisconsin. It has an area of 58,915 square miles.

GEOGRAPHY.—Michigan consists of two distinct parts separated by the Strait of Mackinac and known

SEAL OF MICHIGAN

respectively as the Lower and Upper Peninsula. The Lower Peninsula, the most important part, consists of agricultural lands including the "Fruit Belt" about thirty miles wide, extending along the shore of Lake Michigan, in which all fruits of the northern states flourish and all the general farming crops of the northern states are grown. Some large tracts, formerly covered with pine, are sandy and of small value, but the greater part of the land is fertile. There are salt works and gypsum mines and some coal fields in this section, as well as brick-clay. The Upper Peninsula is mountainous and rocky, interspersed with level tracts of good soil. It is rich in iron and copper, furnishing seventy per cent of all the iron produced in the United States and fourteen per cent of the copper of the world. There are still large tracts of virgin forest, and the land suitable for agriculture has not yet been fully settled.

STATISTICS.—The population as shown by the last State census taken in 1904 was 2,530,016, of which 2,253,938 were in the Lower Peninsula. It is estimated that the population has increased at least 20 per cent since that time. **Agriculture.**—The agricultural produce for the year 1908 is estimated at 60,420,000 bushels of corn, 15,732,000 bushels of wheat, 41,847,000 bushels of oats, besides large quantities of beans, sugar-beets, potatoes, and other crops. The value of its wool was \$2,732,000. It had 2,130,000 sheep, 704,000 horses, 2,451,000 neat cattle, and 1,388,000 swine. **Mining.**—The value of the output of the mines is estimated at \$106,514,000 for the year 1907. **Manufactures.**—The value of the manufactures for the last statistical year, 1905, is estimated at \$429,039,778, consisting of iron works, furniture and other woodworks, salt works, automobiles, and manufactures of many other descriptions. **Fisheries.**—Michi-

gan has the largest fresh water fisheries in the United States, the catch for the year amounting to \$686,375 in the Great Lakes in the last statistical year 1903. **Commerce.**—Is carried on by water as well as by rail-road, and its volume is very extensive. **Means of Communication.**—Steam vessels and vessels of all kinds navigate the Great Lakes, except during two or three of the winter months. There are 8723 miles of steam railroads and 930 miles of electric roads exclusive of city street railroads.

EDUCATIONAL SYSTEM.—*University of Michigan.*—Founded at Detroit (1817) with Rev. John Monteith and Father Richard as its entire faculty. Its present organization and location at Ann Arbor, date from 1837. It has a collegiate staff of 409 professors, instructors, assistants, and administrative officers and (1908) had 5,188 enrolled students. Besides the classical course it has schools of medicine and law. Students of both sexes are admitted and residents of Michigan have tuition free. It is supported by three-eighths of a mill tax on all property in the state and interest on original endowment fund and students' fees and appropriations by legislature, and is governed by a board of eight regents, two being elected every second year who hold office eight years. *State Agricultural College*, founded in 1855, located at Lansing, besides scientific and practical agriculture has technological classes. It has 90 instructors, had 1191 students in 1908, and is supported by interest on endowment fund, one-tenth of a mill tax and appropriations from U.S. Treasury and by state Legislature, students' fees, and receipts for produce. *College of Mines*, opened in 1886, located at Houghton in the Upper Peninsula in the midst of copper mines, has 32 instructors, had 266 students in 1908, and is supported by legislative appropriations and students' fees.

Normal Schools.—There are four in the state, located at Ypsilanti, Mount Pleasant, Marquette, and Kalamazoo. They employ in all 170 instructors, have an average attendance of 6,281 pupils, and are supported by legislative appropriations and students' fees.

Special Schools.—A school for the deaf, established in 1854, located at Flint, has 48 instructors, an average attendance of 320 pupils, and is supported by legislative appropriations. A school for the blind was established (1831) at Lansing, and has 15 instructors, an average of 131 pupils, and is supported by legislative appropriations. The Employment Institute for the Blind, established 1903, located at Saginaw, has 7 instructors and 102 pupils, and is also supported by legislative appropriation. The State Public School for Destitute and Ill-treated Children was opened in 1874 at Coldwater. Instruction is given in manual labour and primary school grades. It has 5 teachers, 8 cottage managers, average of inmates 526, average age of children 6½ years. Supported by legislative appropriation.

Public School System.—Each township and city is divided into school districts of convenient size, each of which has its school house and teacher or teachers. In cities, villages, and such townships as so determine by vote, graded and high schools are maintained as well as the primary schools, and all are supported by taxation of the property in each school district. There are 17,286 teachers in the public schools and 743,630 pupils, the total appropriation from all sources was \$19,202,449.61 in the last fiscal year. This does not include the private or denominational schools. All children between the ages of seven and fifteen years are compelled by law to attend some school, either public, parochial, or private at least four months in each year, unless shown to be properly taught at home.

HISTORY.—The first settlers in Michigan (about 1641) were the hardy and adventurous French Canadians who established trading posts at Sault Ste. Marie and Michillimackinac (now "Mackinac"), which they reached by way of the Ottawa River, thence

by portage to Lake Nipissing and so by Georgian Bay to their destination. This route was evidently selected through fear of the Iroquois, usually hostile to Canada, on the shores of Lakes Erie and Ontario. These pioneers were soon followed and aided by the Jesuit Fathers Allouez, Marquette, and others. Detroit was first settled by Antoine De La Motte Cadillac (1701), and the French Canadians who followed him formed the earliest farming population, settling on the shores of Detroit River. Until the country fell into the hands of the British (1760) there were no settlers of any other nationality, and during the British occupation and afterward, until after the close of the war of 1812, there were but few. Indian troubles and the unsettled state caused by war were so prejudicial to immigration that when Michigan was organized as a territory (1805) its population did not exceed 4,000 persons. But when the public lands were offered for sale (1818) a tide of settlers at once set in from New England, New York, Ohio, and other states, besides emigrants from Ireland, Great Britain, and Germany. Later there was also large emigration from Holland, and later still from Poland, Sweden, Italy, and in short from every European nation, as well as some from Turkey, Syria, Armenia, and China. Michigan was admitted as the twenty-sixth state of the Union, 26 Jan., 1837. It adopted a constitution on being admitted as a state. In 1850 a second constitution materially changing the former one was framed and adopted, and (1899) a third constitution, better suited to the needs of the state, was prepared, adopted by popular vote, and went into effect Jan., 1910. Formal possession of the entire region was taken in the name of the King of France at Sault Ste. Marie (1672). In 1701 Antoine De La Motte Cadillac founded Detroit, naming it Fort Pontchartrain. In 1760 Michigan came under British rule. In 1796 the United States took possession, and Michigan became a part of the Northwest Territory. Michigan (without the Upper Peninsula) became an organized territory in 1805. Father Gabriel Richard of Detroit was elected territorial delegate to Congress (1823), being the only Catholic priest who ever had a seat in that assembly.

There arose a dispute with Ohio as to the boundary line near Toledo. Michigan adopted a constitution and took all necessary steps for admission into the Union, but was prevented from doing so by reason of the Ohio dispute, which was settled by the boundary line being determined in favour of Ohio, and by Michigan obtaining instead the Upper Peninsula. It was then allowed to enter the Union (1837). The capital was removed from Detroit to Lansing (1847), then a small village in a dense forest, now a city of 24,000 inhabitants. A colony of Mormons took possession of Beaver Island in Lake Michigan, from which they were forcibly expelled by armed fishermen from the mainland in 1856.

The Republican party was organized "under the oaks" at Jackson, Michigan. Up to that time the Democratic party had been in power in the state, but ever since the Republicans have had a large majority of the voters. This state sent 93,700 men to the Civil War, of whom 14,855 died in the service.

Michigan furnished five regiments, of 1026 officers and men each, for the Spanish War (1898), of which three regiments went to Cuba.

LAWS AND RELIGION.—The constitution provides that "Every person shall be at liberty to worship God according to the dictates of his own conscience. No person shall be compelled to attend, or against his consent, to contribute to the erection or support of any place of religious worship, or to pay tithes, taxes, or other rates for the support of any minister of the gospel or teachers of religion. No money shall be appropriated or drawn from the treasury for the benefit of any religious sect or society, theological or religious seminary; nor shall property belonging to the state

be appropriated for any such purpose. The civil and political rights, privileges and capacities of no person shall be diminished or enlarged on account of his religious belief." The statutes prohibit under penalty of a fine of \$10 the keeping open of any workshop or place of business; transaction of any business; all work and labour; attendance at dance, public diversion; show or entertainment; taking part in any sport, game, or play, on Sunday: works of necessity and charity are excepted. All persons are also prohibited from attending any public assembly, except for religious services or concerts of sacred music. The sale of intoxicating liquors on Sunday is made a misdemeanour, punishable by fine and imprisonment. Disturbing religious meetings on Sunday is made a misdemeanour, punishable by fine and imprisonment. Oaths are administered by the person who swears holding up his right hand, except in cases where the affiant has any particular mode which he considers more binding. The form in general use is "You do solemnly swear that . . . So help you God." Blasphemy and profanity are punished by fine and imprisonment. There are no laws concerning the use of prayer in the Legislature. The custom is that at the first session of each house some minister of the Gospel is invited to offer prayer. Christmas Day and New Year's Day are recognized as holidays, but business and work are not prohibited on those days, which are on a par with Independence Day, etc.

Seal of Confession.—"No minister of the Gospel or priest of any denomination whatsoever shall be allowed to disclose any confessions made to him in his professional character, in the course of discipline enjoined by the rules or practice of such denomination." And all ministers of the Gospel are exempt from serving on juries, and from military duty.

Church Property.—Any five adult persons may become incorporated as a religious society by executing and acknowledging Articles of Association in triplicate, stating the name and purpose of the corporation, the names and residences of the original incorporators, and the period for which it is incorporated. One of the triplicates must be filed with the Secretary of State, and one with the County Registrar of Deeds. Such corporation may make its own by-laws, which must be recorded by the Registrar of Deeds, and is entitled to receive and hold real and personal property by purchase, gift, or bequest and may sue or be sued. There is no restriction as to number or nomenclature of officers. Religious bodies such as dioceses, synods, conferences, and the like may obtain corporate powers to hold property, sue and be sued, etc., by electing not less than three or more than nine trustees and filing certificates of such election and the corporate name by which they are to be known with the Secretary of State and County Clerk. Religious corporations organized without capital stock are not limited as to duration of time. All houses of public worship with their furniture and pews and parsonages owned by religious societies are exempt. Also all property occupied by charitable, educational, and scientific institutions incorporated under laws of the state.

Sales of Liquor.—A tax of \$500 per year is imposed. Dealers must furnish bonds in not less than \$3000. Selling to minors, intoxicated persons, or habitual drunkards is prohibited, also selling on Sundays, holidays, and election days. Dealers and their bondsmen are liable to wives and families for injuries caused by intoxication by liquors furnished by them. Saloons must be closed at certain hours. Heavy penalties are provided for infraction of the law. Any county may by a majority vote absolutely prohibit the manufacture and sale of liquor within its limits.

Wills and Testaments may be made by any one of full age and sound mind, must be in writing and executed in presence of two witnesses who must sign at request and in presence of the testator. Bequests to a witness are void. A widow may elect to take her

statutory allowance and dower instead of a bequest. There is no limitation as to charitable bequests.

PUBLIC INSTITUTIONS.—Aside from the state institutions already mentioned, there are four insane asylums, a home for the feeble-minded and epileptic, and a sanatorium for tuberculosis. Every county has its poor farm for the indigent, and all charities are under the supervision of the State Board of Corrections and Charities.

Prisons and Reformatories.—There are two state prisons, at Jackson and at Marquette, a reformatory for male offenders at Ionia, and a house of correction for males and females at Detroit. The Industrial School for Boys at Lansing and the Industrial School for Girls at Adrian are reformatories.

Cemeteries may be established by municipalities or by private corporations or private citizens. The only limitation as to locality is in cases where it would create a nuisance.

Marriage and Divorce.—Marriage is a civil contract in law; males of the age of eighteen and females of the age of sixteen are competent to contract. First cousins as well as nearer relatives are forbidden to marry. Females under eighteen must have the written consent of one parent or of a guardian. A licence is required which is issued by the county clerk. Marriages may be solemnized by justices of the peace, judges of probate and of municipal courts, and by resident ministers of the Gospel. All marriages must be recorded by the county clerk. No particular form is prescribed, but the parties must take each other as husband and wife. Two witnesses are required besides the magistrate or minister. Divorce from the bonds of matrimony is granted for adultery, impotency, imprisonment for three years or over, desertion for two years, habitual drunkenness. Divorce "from bed and board" is granted for extreme cruelty, and where the husband being of sufficient ability fails to provide a suitable maintenance for his wife; but the court may grant an absolute divorce for either of these causes. A sentence to the state prison for life dissolves the marriage without any judicial divorce.

ECCLESIASTICAL STATISTICS.—This state comprises the Dioceses of Detroit, Grand Rapids, Sault Sainte Marie, and Marquette. It has 3 bishops, 466 priests, 412 ecclesiastical students, 306 churches, 193 missions, 208 stations and chapels, 2 seminaries, 8 orphan asylums, 1 infant asylum, 48,059 young people under Catholic care as pupils, orphans and dependents, 2 industrial schools for girls, 13 hospitals, 1 home for feeble-minded, 1 home for aged poor, and a Catholic population of 489,451. Michigan was under the control of the See of Quebec until the formation of the Diocese of Baltimore (1789), under which it remained until it was included in the Diocese of Bardstown (1808), and later, when the new Diocese of Cincinnati was created, Michigan was made a part of its territory. The descendants of the original French Canadians are numerically inferior to the descendants of the later Irish immigrants, who form the largest part of the Catholic population. There are also many Germans, Poles, some Lithuanians, Bohemians, Flemings, Italians, Syrians, and a few Indians. When Bishop Fenwick of Cincinnati visited Michigan in 1832 he confirmed 142 Indians at L'Arbre Croche. These now belong to the Diocese of Grand Rapids, which contains in all eighteen Indian missions with a population of 378 families, and three schools, two of which are taught by religious, the third by a lay teacher. The Diocese of Sault Sainte Marie and Marquette contains about 2000 Catholic Indians in 12 Indian missions, attended by the Jesuit Fathers at Sault Sainte Marie, L'Anse, and elsewhere. There are few Catholic Indians left in the Diocese of Detroit. About thirty families of the once powerful Pottawatomes at Rush Lake in Berrien County are all that remain of the old mission of St. Joseph.

Catholics distinguished in Public Life.—Reverend Gabriel Richard and Timothy E. Tarsney were representatives in Congress. The following were members of the Territorial Legislative Council: Laurent Durocher, Henry Connor, John McDonnell, Charles Moran.

State Senators: Edward Bradley, Laurent Durocher, John McDonnell, Bernard O'Reilly. Circuit Judges: O'Brien J. Atkinson, James B. McMahon, and Robert J. Kelley.

Prominent Members of the State House of Representatives were: John Atkinson, Theodore J. Campau.

Catholics at present living who have distinguished themselves publicly are: Thomas Weadock and John Corliss, both of whom were members of Congress; James Caplis, Peter Doran, Joseph Nagel, and Michael Moriarty, state senators; Circuit Judge Alfred J. Murphy; members of the state House of Representatives John C. Donnelly, John Donovan, Nicholas Whelan; and William T. McGurrin, Brigadier General of the Michigan National Guards; also Judge of Recorder's Court in Detroit, James Phelan, and Probate Judge of Ottawa County, Edward P. Kirby.

FRANCIS A. STACE.

Michoacan, ARCHDIOCESE OF (MICHOCANENSIS), in Mexico.—The Diocese of Michoacan was established in 1536 by Pope Paul III at the instance of the Emperor Charles V, its boundaries to coincide with those of the ancient Kingdom of Michoacan. In 1863 it became an archdiocese, with Léon, Querétaro, and Zamora for suffragans, its limits being at the same time greatly reduced. Its population is about one million, and the principal cities are Morelia, Zitácuaro, Maravatío, Pátzcuaro, Puruándiro, and Piedad in the State of Michoacan, and Acámbaro, Salvatierra, Celaya, Salamanca, and Pénjamo in the State of Guanajuato. The first bishop was the eminent Spaniard D. Vasco de Quiroga (1538-65), one of the greatest missionaries to the Mexican aborigines. Among other bishops of the Spanish period, the following were distinguished for their learning and virtue: Ramírez del Prado, who has been compared to St. Charles Borromeo; Sánchez de Tagle, who founded the conciliar seminary (*seminario tridentino*) for the diocese in 1770; Fray Antonio de San Miguel, builder of the great aqueduct of Morelia and commonly spoken of as the father of his people. Of the bishops who have governed the Diocese of Michoacan only two have been natives of Mexico, Portugal and Munguía. The latter was named archbishop in 1863. Portugal was the first American ecclesiastic to be named a cardinal by the pope, although he died before receiving the cardinal's hat. Munguía was the author of some very excellent books on law and philosophy, and lived up to his motto: "Lose wealth, but save principles". D. Ignacio Arciga and D. Atenogenes Silva succeeded Archbishop Munguía and, in the epoch of peace which the republic has since enjoyed, have achieved some notable results.

The library of the Seminary of Morelia numbers 76,000 volumes; there is also a physical laboratory and valuable astronomical apparatus. In every one of the 64 parishes and the 18 succursal parishes of the archdiocese there is at least one school for boys and another for girls. At Morelia the schools are very numerous, the attendance being over three thousand, boys and girls. Celaya, Salvatierra, and Piedad have four parochial schools each, and several other parishes have two. Several charitable institutions are admirably maintained by the clergy. In times of scarcity, when the price of corn goes up, the diocesan authorities follow the example of the great Bishop San Miguel, who, in 1785, with the consent of the cathedral chapter, expended

280,000 pesos for the relief of the people—an enormous sum for those days. During the two last episcopates the improvement has been notable, the number of priests increasing to 348. Hidalgo, Morelas, Iturbide, heroes of the war of Independence, the learned Munguía, the poet Navarrete, and the philosopher Abarca were all born within the limits of the Archdiocese of Michoacan. Morelia, the capital, has some notable buildings, among which may be mentioned the beautiful cathedral, the government buildings, the seminary, the art school (formerly a Jesuit college), and the college of the Teresianas. In the same city the Christian Brothers, the Salesians, and the Servants of Mary conduct institutions. The classes in the various schools are taught principally by French and Italian professors and Spanish nuns.

FRANCISCO ELGUERO.

Mickiewicz, ADAM, b. near Novogrodek, Lithuania, 1798; d. at Constantinople, 1855. He studied at Novogrodek until 1815, when he entered Vilna

ADAM MICKIEWICZ

University. Here he studied German and English romantic poetry with the greatest zeal. A thwarted passion for Marya Wereszcka aroused rather than quenched his genius; and, soon after becoming a professor in Kovno (1819), he published his first poetical creations in two volumes (Vilna, 1822-3). These included: (a) "Dziady" (The Ancestors), which, besides its

artistic lyricism, marks the first appearance of romanticism in Poland. His hero Gustav is rather of the morbid Werther type; (b) many ballads and romances, setting forth Lithuanian folk-lore with great power and skill; most, though not all, of these are visibly influenced by Goethe, Schiller, and Bürger; (c) "Grasyna", in form like the lyric epics of that period, but, unlike these, full of real epic simplicity, majesty, and objectivity. To the same period belongs his celebrated "Ode to Youth", though it appeared somewhat later. The current of his genius was then changed by persecution. While at the university he belonged to a society of students, with which he afterwards continued to correspond; he was now most unjustly thrown into prison with the other members, since none of them had ever dreamed of insurrection. The keynote of his poems was no longer disappointed love, but suffering patriotism. Sentenced to exile in Russia, he left Lithuania forever (1824), and went first to Odessa and thence to the Crimea, where he wrote his "Sonnets" (Moscow, 1826). These are gloomy but extremely picturesque, and most effective by the infinite sadness which repeatedly appears in them with striking unexpectedness. Sent afterwards to Moscow, Mickiewicz wrote there his famous "Konrad Wallenrod", published later in St. Petersburg (1828). This poem is unequal; its hero is too Byronic, and it seems to preach revenge by treachery. But its wonderful patriotism, inspiration, and artistic finish raised it as a whole above anything he had yet written.

In 1829, after a stay at St. Petersburg, Mickiewicz obtained his great desire—leave to go abroad. On his way to Rome he passed through Weimar, and visited Goethe, who, we are told, was greatly impressed by him. When in Italy he wrote very little, but returned to the fervent practice of the Catholic religion, which he had before neglected. In 1831 the Polish insurrection broke out; Mickiewicz attempted to return to Poland, but was stopped at the Prussian frontier. He then went to Dresden, where he wrote the third part of the "Dziady". It deserves special notice as containing, besides the expression of that revolt against God which some Poles felt after the loss of their independence, a mistaken attempt to explain their country's fate as that of a Christ-like victim slain for the sins of other nations; it offers also a key to Mickiewicz's own spiritual life. In 1832 he went to Paris, and there wrote (in Biblical prose) his "Book of the Pilgrimage", in which he treats the Polish refugees as apostles and sowers of the Word among the nations. Later, in 1834, he published his long poem "Pan Tadeusz", a marvellously lively and faithful portrait of Lithuanian life in the first years of the nineteenth century. Plot, development, characters, episodes, every passage, and almost every line are excellent: it is a high-water mark in Polish poetry, one of the world's masterpieces. After this achievement Mickiewicz gave up poetry: his sole aim was henceforth to work out Poland's regeneration by serving God. "An order of Poles", he said, "was needed to bring the nation back to God." From this idea, which he advocated widely, the Order of the Resurrection may be said to have sprung.

In 1835 he married, and was afterwards in constant pecuniary straits. For some time he gave lessons in Latin literature at the Academy of Lausanne (1838-9); he was then named professor in the Collège de France, and his French work, "A Course of Slav Literature", is very good. But in the third year of his teaching he began to abandon literature for certain philosophical and religious ideas. Towianski had won him over to his wild theory of Messianism, already foreshadowed in several of Mickiewicz's poems. He eagerly embraced the idea of a faith that should be to Christianity what the latter was to Judaism. Such a change, though readily accounted for, had melancholy results. Messianism was condemned; Mickiewicz became the apostle of a false doctrine, and lost his chair of literature. He subsequently submitted (1848), but still continued to dream of a great regeneration of peoples, brought about by revolution. When the Crimean War came, he hoped for an invasion of Poland, and even went to Constantinople to form a Polish legion, but died there of cholera. His body was taken to Paris, and thence (1890) to the cathedral of Krakow, where it now reposes. Mickiewicz has much in common with Schiller; he is also like Byron, but above him both in moral tone and in objectivity, in which he recalls Goethe. But he rose superior to all of them as a fervent believer in Christ. Since Mickiewicz, Poland can boast of having one of the world's great literatures, while of all Polish poets he is the most talented, the most intensely patriotic, and the most potent factor in the national life of Poland.

His *Master Thaddeus*, tr. Biggs, was published in 2 vols. (London, 1886). See the *Lives* by TRETYAK (3 vols., Lemberg, 1884); CHMIELEWSKI (2 vols., Cracow, 1898); MICKIEWICZ, Fr. tr. (Paris, 1888).

S. TARNOWSKI.

Micmacs (*Souriquois* of the early French), the easternmost of the Algonquin tribes and probably the first visited by a white man, formerly occupied what is now Nova Scotia, Prince Edward Island, and Cape Breton, as well as part of New Brunswick, Quebec, and south-western Newfoundland. According to their traditions they held third rank in the original distribution of land among the confederation of the

eastern Algonquins. The first place belonged to the "father" of that nation, namely, the Ottawa tribe, which received as its share the "land of origins"; the second, called Wapanakiag, the "country of the dawn", fell to the lot of the Abenakis, while the third province, known as Migmagig, was allotted to the Micmacs. Until the arrival of the white men, an annual

Who made you the Great God indeed made me
 What for the Great God made you He wanted
 indeed that I know Him
 I pray to Him I love Him I serve Him so that
 to Heaven
 I will go were they created men (Indians) they were created
 indeed all perhaps to Heaven will go such as
 indeed are baptized are wise those only to Heaven
 will go who then is wise he that indeed
 greatly loves the Creator moreover also tries
 to fulfil as he is commanded and his neighbour
 he loves him

MICMAC IDEOGRAMS FROM FATHER KAUDER'S
 "CATECHISM"

ceremony long recalled this compact. There is a probability that the Micmacs were visited by Sebastian Cabot (1497) and by Cortereal (1501). They welcomed the French and their religion, preached to them by secular priests and Jesuits, as well as by Recollects and Capuchins. Father Biard (1611) has left us an interesting account of this tribe, which he characterized as mild and peaceful in temperament. He estimated its numbers at three thousand or three thousand five hundred. The Capuchins even opened for it and the white settlers the first high school within the limits of New France, and a report of the Micmac missions sent to Rome (1633) located one of them in Portu Regio. Father Leclercq, a French Recollect who did much for their instruction, called them Gaspeians, probably because he had first landed (1675) on the Gaspé peninsula, where he successfully laboured for about twelve years. It was not until 1693 that these aborigines became officially known under their true name. Quick to appreciate the religion of the French, the Micmacs were no less faithful to the flag which to them symbolized it. Though not given to the cruel practices of the Iroquois and other eastern tribes, they proved their bravery by their active share in the French and English wars, and their lasting hostility to the colonization schemes of England. The erection of forts on the coast, especially the one at

Halifax, exasperated them, but on the fall of Canada, Abbé Maillard (1735-62) succeeded in reconciling them to the new order. Several chiefs made their formal submission (1761), and ever since, though more in sympathy with the French, the Micmacs have remained loyal to the British Crown. In 1778 the United States endeavoured to incite them to revolt, but Father Bourg, at the request of the colonial authorities, restrained them from the war-path.

The Micmacs originally dwelt in the ordinary conical wigwams common to most Algonquin tribes; their garments were of dressed leather and ornamented with an abundance of fringe; their government resembled that of the New England aborigines; and their main occupation was fishing. Except in the case of the chiefs, polygamy was not general. There is an old tradition, related by an Abenaki of Oldtown (Nicolar, "Life and Traditions of the Red Men", 1893), that the Indians came from the West while the white men originated in the East. The Micmacs are remarkable for the fact that they are the only Canadian tribe which ever used hieroglyphs, or ideograms, as a means of acquiring religious and secular knowledge. These were invented in 1677 by Father Leclercq, who took the idea from the rude signs he one day saw some children draw on birch bark with coal, in their attempt to memorize the prayers he had just taught them. They consisted of more or less fanciful characters, a few of which, such as a star for heaven and an orb for the earth, bore some resemblance to the object represented. A number of manuals were composed which remained in manuscript until 1866, when Father Kauder, a Redemptorist who for some time ministered to them, had type bearing the ideograms cast in Austria, with which he printed a catechism and prayer book. Though the hieroglyphics are still known by the Micmacs, for all general purposes Roman type has been substituted, in which a little newspaper is published monthly in their own language at Restigouche, Quebec. In the autumn of 1849 the Protestants formed a Micmac Missionary Society, which commenced work the following year and made a few proselytes in the vicinity of Charlottetown. Rev. Silas Rand, a great linguist and prolific writer, was the principal agent. The Indians, almost without exception, have remained steadfast in their fidelity to the Church of their first

FORT OF PORT ROYAL
 Where the first Micmacs or Souriquois were baptized
 24 June, 1610

missionaries. Another point for which the Micmacs may be said to be remarkable is the manner in which their population holds its own in spite of many difficulties, such as the bad example given by the whites and the facility with which they can procure intoxicants. In 1891 they had increased to 4108; and later, a careful census taken by one of the Capuchins, living among them since 1894, showed that they numbered 3850 in Canada and 200 in Newfoundland. The Blue Book of the Canadian Government for 1909 sets down their numbers at 3961 within the Dominion alone, practically all of whom are Catholics. All the

Indians of Nova Scotia and Prince Edward Island (respectively 2073 and 274) are Micmacs.

A. G. MORICE.

Micrologus either a "synopsis" or a "short explanation", and in the Middle Ages used as an equivalent for "Manual". The best known of several is "Micrologus de ecclesiasticis observationibus", an explanation of the liturgy of the Holy Sacrifice of the Mass, and of the ecclesiastical year; first edited at Paris, in 1510, and handed down in a number of manuscripts (P. L., CLI sqq.). This comprehensive work, of importance for both the history and the adequate understanding of the liturgy of the Mass and of the ecclesiastical year, is divided into three parts. The author treats first of the Mass (chap. i-xxiii) in relation to its historical development; second, of the liturgy of the ember days (chap. xxiv-xxix); and third, of the whole of the ecclesiastical year, with observations of the offices of the feasts and holidays (chap. xxx-lxii). In chapters xxiv-xxv the writer emphasizes the authority of the Apostolic See in liturgical questions, and mentions Gregory VII in such a manner as to show that he was an adherent of that pope, although Gregory was dead at the time the author wrote; he also refers to Anselm of Lucca in such a way as to infer Anselm's being still alive at that time (chap. xvii), hence we may conclude the work to have been composed between 23 May, 1085, date of the death of Gregory VII, and March, 1086, the death of Anselm of Lucca. Ivo of Chartres was generally held to be the author of the "Micrologus", but investigations of Dom Morin and Dom Bäumer point to Bernard of Constance, a monk of the abbey of St. Blasien (d. 1100), as the author.

Another well-known treatise, edited under the title "Micrologus de disciplina artis musicae", is by the famous Guido of Arezzo, and is one of the most important writings of that teacher of ecclesiastical music (P. L., CXXI, 379 sqq., ed. Hermersdorff, Trier—1876).

J. P. KIRSCH.

Middendorp, JAKOB, theologian and historian; b. about 1537 at Oldenzaal, or, according to others, at Ootmarsum, Overijssel, Holland; d. at Cologne, 13 Jan., 1611. He calls himself Ottersensis on the title-page of his work, "De celebrioribus Academiis". He studied the humanities at the Fraterherren gymnasium of Zwolle, philosophy and jurisprudence at Cologne University, where he became doctor of philosophy and both branches of law, and also licentiate of theology; he also taught peripatetic philosophy at the Montanum gymnasium there. He remained in Westphalia during the troubles in the Archdiocese of Cologne in the time of Archbishop Gebhard Truchsess von Waldburg, and was professor at various foreign academies; afterwards he returned to Cologne, where he passed the greater part of his life. In 1580 he became dean of St. Maria ad gradus, Cologne, in 1596 dean of St. Andreas, and in 1601 canon of the cathedral chapter. Rector of Cologne University 1580-81 and 1602-04, he was appointed vice-chancellor by the coadjutor, Ferdinand of Bavaria, in 1602. He lies buried in the church of St. Andreas. As an author he was best known by his "De celebrioribus universis orbis Academiae, libri II" (Cologne, 1567, 1572, 1594, and lastly 1602), considerably enlarged, in two volumes,

under the title "Academiarum celebrium universi terrarum orbis libri VIII locupletati". He also published: "Officiorum scholasticorum libri duo, quorum prior tam iuventutis quam populi Christiani magistrorum, qui divinas et humanas literas publice privatimque docent, munus edisserit, posterior vero praecepta auditorum populique officia complectitur" (Cologne, 1570); "Historiam Aristotele versae per LXX interpretes Scripturae sacrae ex MS. codicibus Graecis et Latinis restituit et commentario illustravit" (Cologne, 1578); "Imperatorum, regum et principum clarissimorumque virorum questiones theologicae, iuridicae et politicae cum pulcherrimis responsionibus" (Cologne, 1603); "Historia monastica, quae religiosae et solitariae vitae originem, progressionem, incrementa et naturam ex Scriptura Sacra, ex pontificio et Caesareo jure, ex antiquissimis historiis, ex veterum Patrum et librorum scriptis demonstrat" (Cologne, 1603).

FRIEDRICH LAUCHERT.

Middle Ages.—A term commonly used to designate that period of European history between the Fall of the Roman Empire and about the middle of the fifteenth century. The precise dates of the beginning, culmination, and end of the Middle Ages are more or less arbitrarily assumed according to the point of view adopted. The period is usually considered to open with those migrations of the German Tribes which led to the destruction of the Roman Empire in the West in 375, when the Huns fell upon the Gothic tribes north of the Black Sea and forced the Visigoths over the boundaries of the Roman Empire on the lower Danube. A later date, however, is sometimes assumed, viz., when Odoacer deposed Romulus Augustulus, the last of the Roman Emperors of the West, in 476. Others, again, begin the Middle Ages with the opening years of the seventh century and the death (609) of Venantius Fortunatus, the last representative of classic Latin literature. The close of the Middle Ages is also variously fixed; some make it coincide with the rise of Humanism and the Renaissance in Italy, in the fourteenth century; with the Fall of Constantinople, in 1453; with the discovery of America by Columbus in 1492; or, again, with the great religious schism of the sixteenth century. Any hard and fast line drawn to designate either the beginning or close of the period in question is arbitrary. The widest limits given, viz., the irruption of the Visigoths over the boundaries of the Roman Empire, for the beginning, and the middle of the sixteenth century, for the close, may be taken as inclusively sufficient, and embrace, beyond dispute, every movement or phase of history that can be claimed as properly belonging to the Middle Ages.

A great part of THE CATHOLIC ENCYCLOPEDIA is devoted to the movements, ecclesiastical, intellectual, social, political, and artistic, which made up European history during this period so fertile in human activities, whether sacred or profane. Under the titles covering the political divisions of Europe, past and present (e. g., ALSACE-LORRAINE; ANHALT; AUSTRO-HUNGARIAN MONARCHY; BADEN; BAVARIA; BELGIUM; BOHEMIA; BREMEN; BULGARIA; CASTILE AND ARAGON; CROATIA; DENMARK; ENGLAND; FRANCE; GERMANY; GREECE; HAMBURG; HESSE; HUNGARY; IRELAND; ITALY; KARINTHIA; KRAIN; LEÓN; LIPPE; LÜBECK; LUXEMBURG; MECKLENBURG; MONACO; MONTENEGRO; NAVARRE; NETHERLANDS; NORWAY; OLDENBURG; PAPAL STATES; PORTUGAL; REUSS; ROMANIA; RUSSIA; SAXE-ALTEMBERG; SAXE-COBURG AND GOTHA; SAXE-MEININGEN; SAXE-WEIMAR; SAXONY; SCHAUMBURG-LIPPE; SCHWARZBURG-RUDOLSTADT; SCHWARZBURG-SONDERSHAUSEN; SCOTLAND; SERBIA; SICILY; SPAIN; SWEDEN; SWITZ-

IRELAND; VENICE; WALDECK; WALES; WÜRTEMBERG), are given in detail their respective political and religious developments throughout the Middle Ages. Under articles of a wider scope (e. g., EUROPE; CHRISTENDOM; POPE) is found a more general and synthetic treatment. Particular aspects and movements peculiar to different portions of it are found in such articles as CHIVALRY; CRUSADES; ECCLESIASTICAL ART; FEUDALISM; GOTHIC ARCHITECTURE; INQUISITION; INVESTITURES, CONFLICT OF; LAND-TENURE IN THE CHRISTIAN ERA; MONASTICISM; MUSIC, ECCLESIASTICAL; PAINTING; PILGRIMAGES; SCULPTURE; in the articles upon the great religious orders, congregations, and institutions which then came into existence; in the biographies of the popes, rulers, historical personages, scholars, philosophers, poets, and scientists whose lives fall within this period; in the accounts of the universities, cities, and dioceses which were founded and developed throughout Europe from the fall of the Roman Empire to the time of the Reformation, and in innumerable minor articles throughout the work.

Middlesbrough, DIOCESE OF (MEDIOBURGENSIS).—In medieval history it was known as Myddilburga or Middilburga, with many other variations of form.

WHITBY ABBEY, YORKSHIRE, ENGLAND

There is an old tradition that a church in honour of St. Hilda was dedicated by St. Cuthbert at Middlesbrough about 686, but the earliest positive reference to Middlesbrough in ecclesiastical history goes to show that in the beginning of the twelfth century it was the site of a church dependent on the Abbey of St. Hilda at Whitby. At that time the church of "St. Hilda at Middlesbrough" was given by Robert de Brus of Skelton Castle, founder of Guisborough Priory, to the Black Monks of St. Benedict at Whitby, on condition that there should always be some monks at Middlesbrough serving God and St. Hilda; and there seems to have been a clause binding the monks to distribute twelve pence per week in alms to the poor of Middlesbrough for the soul of the said Robert de Brus. In the plunder of the religious houses the "Cell of Middlesbrough" was granted by Queen Elizabeth to one Thomas Reeve on 4 February, 1563. From that date there is no evidence to show that Mass was ever celebrated there, until in 1848 a private room in North Street was used for this purpose. A little later a modest chapel was erected and a resident priest placed in charge. Two causes concurred in the formation of a large Catholic congregation, namely, the Irish immigration and the rapid development of the ironworks in the Cleveland region.

In 1872 Rev. Richard Lacy was entrusted with the charge of the Middlesbrough Mission. In August, 1878, St. Mary's church (replacing the original modest chapel) was opened with great solemnity by Cardinal Manning and Bishop Cornthwaite of Beverley. In December of the same year, St. Mary's became the

cathedral of the new Diocese of Middlesbrough. The Diocese of Beverley, conterminous with Yorkshire, was, by Apostolic Letters of Leo XIII, dated 20 December, 1878, divided into the Dioceses of Leeds and Middlesbrough, Bishop Cornthwaite (formerly of Beverley, henceforth of Leeds) being *ad interim* named administrator of the new Diocese of Middlesbrough. It was not until 11 December, 1879, that the papal Brief was received notifying the appointment of the new bishop in the person of the Rev. Richard Lacy, whose consecration took place in his own cathedral on 18 December, 1879, at the hands of Cardinal Manning, assisted by Bishop Cornthwaite of Leeds and Bishop O'Reilly of Liverpool. The chapter of the new diocese, consisting of a provost and ten canons, was erected by a decree of Leo XIII on 13 February, 1881. Our Lady of Perpetual Succour is the chief patroness of the diocese and titular of the cathedral; Sts. Wilfrid and John of Beverley are its secondary patrons. Besides these there are many others who have shed the lustre of their sanctity on northern Yorkshire: St. Hilda, Abbess of Whitby (scene of the famous Synod of Whitby in 664); St. John of Bridlington; St. William of York; St. Everilda; Blessed John Fisher; Blessed Thomas Percy, Earl of Northumberland; the Venerable Nicholas Postgate, and many others.

Notwithstanding the fact that the ecclesiastical division of Yorkshire met with adverse criticism at the hands of several leading members of both clergy and laity, moved by sentiment rather than a profound knowledge of the needs of religion, the following statistics demonstrate both how groundless were the fears then entertained, and how accurately the situation had been gauged by the ecclesiastical authorities. In 1839 the Catholic population of Yorkshire was 13,000; in 1909 it was 167,027. In 1839 there could hardly be 3000 Catholics in what is now the Diocese of Middlesbrough; in 1909 they numbered 50,344. In 1879 the total number of priests in the Diocese of Middlesbrough was 54; in 1909 they numbered 113 (76 seculars and 37 regulars). In 1879 the churches and chapels were 38; in 1909 they were 67. In 1879 the school-children numbered 3135; in 1909 they numbered 10,060. In 1879 there were 17 elementary schools; in 1909 there were 43. There are 23 elementary schools and 14 middle-class schools conducted by religious; two orphanages, one for boys under the Sisters of Charity of St. Vincent de Paul at Hull, and the other for girls under the Poor Sisters of Nazareth at Middlesbrough; one reformatory for boys under the Fathers of Charity at Market Weighton; two pupil teachers' centres, one under the Sisters of Mercy at Hull, and the other under the Faithful Companions of Jesus at Middlesbrough; one training college for teachers, under Sisters of Mercy, at Hull; two colleges for boys, one under the Marist Fathers, at Middlesbrough, the other under Benedictine monks, in connexion with the well-known Abbey of Ampleforth.

Bishop Lacy was born at Navan, Meath, Ireland, 16 January, 1841, studied at Ushaw College (Durham) and at the English College in Rome, where he was ordained 21 December, 1867.

Midrashim.—The term commonly designates ancient rabbinical commentaries on the Hebrew Scriptures. It is the plural form of the word מדרש, *Midrash* which is found only twice in the Old Testament (II Par. [Chronicles], xiii, 22; xxiv, 27), where it is rendered by *liber* (book) in the Vulgate, and by

"commentary" in the Revised Version. In rabbinical parlance, Midrash has the abstract and general sense of *study, exposition of Scripture*, while Midrashim are primarily the free and artificial explanations of the Sacred Text given by its ancient expositors, and secondarily the collections of such explanations in the shape of commentaries on Holy Writ.

ORIGIN AND KINDS OF MIDRASHIM.—After the return from Babylon, the Law was the centre of the life of the Jews at home and abroad. Henceforth, the one concern of the Jewish authorities was to make sure that the Mosaic precepts be accurately complied with by all, and under all circumstances, and it is from this practical standpoint that the Scribes and after them the Rabbis studied and expounded the contents of their sacred writings. A part of these contents, viz., the enactments of the Mosaic Law, made of course directly for the purpose of promoting legal righteousness in Israel; yet, as these laws had been framed in view of concrete circumstances of the past, they had to be explained in a more or less artificial way to make them fit the altered circumstances of Jewish life, or serve as a Scriptural basis or support of the various traditional observances which made up the oral law. All such artificial explanations of the terms of the Mosaic legislation are legal, or Halachic, Midrashim. Distinct from this general kind of Midrashim are those called homiletical, or Hagadic, which embrace the interpretation, illustration, or expansion, in a moralizing or edifying manner, of the non-legal portions of the Hebrew Bible. As the object of this latter kind of Midrashim was not to determine the precise requirements of the Law, but rather to confirm in a general manner Jewish bearers in their faith and its practice, Hagadic explanations of the non-legal parts of Scripture are characterized by a much greater freedom of exposition than the Halachic Midrashim; and it may be truly said that Hagadic expositors have availed themselves of whatever material—sayings of prominent Rabbis (e. g., philosophical or mystical disquisitions concerning angels, demons, paradise, hell, Messias, Satan, feasts and fasts, parables, legends, satirical assaults on the heathen and their rites, etc.)—could render their treatment of those portions of the Sacred Text more instructive or edifying. Both kinds of Midrashim were at first preserved only orally; but their writing down commenced with the second century of our era, and they now exist in the shape chiefly of exegetical or homiletical works on the whole or parts of the Hebrew Bible.

PRINCIPAL MIDRASHIM.—The three earliest and in several respects most important Midrashic collections are: (1) the *Mechilta*, on a portion of Exodus, and embodying the tradition mainly of the School of Rabbi Ishmael (first century); (2) the *Siphra*, on Leviticus, embodying the tradition of Rabbi Akiba with additions from the School of Rabbi Ishmael; (3) the *Siphre*, on Numbers and Deuteronomy, going back mainly to the schools of the same two Rabbis. These three works are used in the Gemaras. (4) The *Rabboth* (great commentaries), a large collection of ten Midrashim on the Pentateuch and Megilloth, which bear the respective names of: (a) Bereahith Rabba, on Genesis (mainly from the sixth century); (b) Shemoth Rabba, on Exodus (eleventh or twelfth century); (c) Wayyiqra Rabba, on Leviticus (middle of seventh century); (d) Bamidbar Rabba, on Numbers (twelfth century); (e) Debbharim Rabba, on Deuteronomy (tenth century); (f) Shir Ashshirim Rabba, on Canticle of Canticles (probably before middle of ninth century); (g) Ruth Rabba, on Ruth (same date as foregoing); (h) Echa Rabba, on Lamentations (seventh century); (i) Midrash Qobeleth, on Ecclesiastes (probably before middle of ninth century); (j) Midrash Esther, on Esther (A. D. 940). Of these Rabboth, the Midrashim on Exodus, Leviticus, Numbers, and Deuteronomy are chiefly made up of

homilies on the Scripture sections for the Sabbath or festival, while the others are rather of an exegetical nature. (5) The *Pesiqta*, a compilation of homilies on special Pentateuchal and Prophetic lessons (early eighth century); (6) *Pirke Rabbi Eliezer* (not before eighth century), a Midrashic narrative of the more important events of the Pentateuch; (7) *Tanchuma* or *Yelammedenu* (ninth century) on the whole Pentateuch; its homilies consist of a Halachic introduction, followed by several poems, exposition of the opening verses, and the Messianic conclusion; (8) *Midrash Shemuel*, on the first two Books of Kings (I, II Samuel); (9) *Midrash Tehillim*, on the Psalms; (10) *Midrash Mishle*, on Proverbs; (11) *Yalqut Shimeoni*, a kind of *catena* extending over all the Hebrew Scriptures.

IMPORTANCE OF MIDRASHIM.—At first sight, one might think that such farrago as the Midrashic literature could be of interest and value only to a Jew as Jew, inasmuch as the Midrashim are thoroughly steeped in the spirit of Judaism, bear distinct witness to the laws, customs, doctrines, aspirations of the Jewish race, and record the noblest ideas, sayings, and teachings of the Jewish sages in early times. The more, however, he examines the contents of these ancient expository works, the more he discovers that they are an invaluable source of information to the Christian apologist, the Biblical student, and the general scholar as well. In this body of ancient literature, there is much in the line of ideas, expressions, reasonings, and descriptions, which can be used to illustrate and confirm the inspired records of Christianity and the traditional teachings of the Church, notably concerning the passages of the Old Testament to be regarded as Messianic. The Biblical student will at times notice in the oldest parts of the Midrashim, Scriptural readings anterior to those embodied in the Massoretic text. Again, "when it is borne in mind that the annotators and punctuators of the Hebrew text, and the translators of the [most] ancient versions, were Jews impregnated with the theological opinions of the nation, and prosecuted their Biblical labours in harmony with these opinions . . . the importance of the Halachic and Hagadic exegesis to the criticism of the Hebrew text, and to a right understanding of the Greek, Chaldee, Syriac, and other versions, can hardly be overrated" (Ginsburg, in Kitto's "Cyclop. of Biblical Liter.," III, 173). Lastly the philologist, the historian, the philosopher, the jurist, and the statesman, will easily find in the Midrashim remarks and discussions which have a direct bearing on their respective branches of study.

FRANCIS E. GIGOT.

MIDWIVES come under the canon law of the Church in their relation towards two of the sacraments, baptism and matrimony. As regards marriage, their testimony is frequently required in cases *de non consummato matrimonio*, whether owing to the impediment of impotency or because a dispensation is asked *super matrimonio rato tantum*. In such cases, the testimony of three midwives is held sufficient in practice, since the number seven mentioned in the "Corpus Juris Canonici" (c. 4, de Probat.) is not considered to be obligatory in law, though some older canonists insisted on the necessity of having the testimony of seven midwives. As regards the sacrament of baptism the office of midwives is of the highest importance. On them frequently devolves the duty of conferring this sacrament, under circumstances where

no other person's ministration is possible. Hence, the Church has always been most solicitous concerning the character of midwives and their instruction in this religious duty. Canonists teach that women who undertake the office of midwife are bound under mortal sin to learn the methods and requirements of valid baptism, as in case of necessity this duty frequently devolves upon them. There has been much legislation on this subject in various diocesan synods, whose canons place special obligations on parish priests and midwives. The former are reminded that, as midwives in conferring baptism act in place of the parish priest, he is strictly bound to inform himself whether they have sufficient knowledge to administer the sacrament validly. Some diocesan synods require that midwives, before being approved for duty, take an oath that they will labour to procure the spiritual safety of infant and mother. When a new-born child has been baptized by a midwife, the parish priest must inquire carefully whether she had the proper intention and administered the rite according to the prescriptions of the Church. If there is any reason for doubt, the baptism is to be repeated conditionally (Catech. Rom., II, ii, § 43); but if it be certain that the sacrament was properly conferred it may not be repeated (c. Majores, 3 de bapt; Conc. Trid. Sess. VI, can. ix), and only the other ceremonies are to be supplied by the parish priest. Finally, it is likewise necessary that midwives be well informed on the Church's teaching concerning the performance of abortion.

WILLIAM H. W. FANNING.

Migazzi, CHRISTOPH ANTON, Cardinal, Prince Archbishop of Vienna, b. 1714, in the Tyrol, d. 14 April, 1803, at Vienna. At nine years of age he entered the school for pages at the residence of Prince Bishop Lamberg at Passau, who later proposed him for admittance to the Collegium Germanicum in Rome. At the age of twenty-two he returned to the Tyrol and devoted himself to the study of civil and canon law. Cardinal Lamberg took him as conclave to the Conclave of 1740, whence Benedict XIV came forth pope, and to him Cardinal Lamberg earnestly recommended his favourite Migazzi. The latter remained at Rome "in order to quench my thirst for the best science at its very source". By this he meant philosophy as proved by his words spoken about this time; "Without a knowledge of philosophy wit is merely a light fragrance which is soon lost, and erudition a rude formless mass without life or movement, which rolls onward unable to leave any mark of its passage, consuming everything without itself deriving any benefit therefrom." In 1745 he was appointed auditor of the Rota for the German nation. Owing to the special friendship of Benedict XIV, he was able to conclude several difficult transactions to the entire satisfaction of the Empress Maria Theresa, who in return appointed him in 1751 coadjutor to the aged Archbishop of Mechlin. Thereupon consecrated bishop, he was soon removed to Madrid as ambassador. A treaty which he concluded pleased the empress so much that she appointed him coadjutor of Count Bishop Althan of Waitzen (1756); but as Althan died before his arrival, and six months later Prince Archbishop Trantson also died in Vienna, the empress named Migazzi his successor. In 1761 Maria Theresa made him administrator for life of the See of Waitzen, and at the same time obtained the purple for him from Clement XIII. It is true that Migazzi was now in possession of two sees, the revenues of which he applied to their improvement. In Waitzen he erected the cathedral and episcopal palace and founded the "*Collegium pauperum nobilium*" and the convent. Indeed he built almost an entire new

quarter in that town; it was therefore, to say the least, hard and mortifying when, after twenty-five years of administration the "*Concilium locum tenens regium*" asked him if there was any priest in his diocese in possession of two benefices or offices, as in that case it was the emperor's pleasure (Joseph II) that one of them should be given up. Migazzi was forced to resign from Waitzen.

As Archbishop of Vienna time brought him many sorrows. Pious and devoted to the Church as Maria Theresa undoubtedly was, yet during her reign in Austria the so-called Enlightenment era (*Aufklärung*) developed inevitably. Its followers imagined that they could remedy all the evils of the time and promote in every way the prosperity of mankind. The representative and the literature of the new movement were everywhere in evidence. Its opponents were denounced as stupid obscurantists and simpletons. "The Masonic lodge of the Three Canons" was printed at Vienna in 1742, and at Prague in 1749 that of the "Three Crowned Stars and Honesty". In a memorial to the empress written in 1769 the archbishop designated as the primary causes of current evils the spirit of the times, atheistic literature, the pernicious influence of many professors, the condition of the censorship, contemporary literature, the contempt of the clergy, the bad example of the nobility, the conduct of affairs of state by irreligious persons, and neglect of the observance of holy days. Upon each of these disorders he spoke in noble terms of profound truth. The situation was all the more critical for the Church since while her means of resistance were diminished, her enemies were gaining adherents. Meanwhile Clement XIV suppressed the Society of Jesus, but Migazzi endeavoured to save it for Austria. He wrote to the empress, "If the members of the order are dispersed, how can their places be so easily supplied? What expense will be entailed and how many years must pass before the settled condition broken up by the departure of these priests can be restored?" Just twenty years later the cardinal wrote to Emperor Francis, "Even the French envoy who was last here, did not hesitate, as I can prove to your Majesty, to say that if the Jesuits had not been suppressed, France would not have experienced that Revolution so terrible in its consequences." The archbishop opposed as far as they were anticlerical, the government monopoly of educational matters, the "enlightened" theology, the "purified" law, the "enlightenment" literature, "tolerance" and encroachment on purely religious matters. He also founded the "Priesterseminar", an establishment for the better preparation of young priests for parochial work. At Rome he was influential enough to obtain for the Austrian monarch the privilege of being named in the Canon of the Mass. Migazzi lived to see the election of three popes. Maria Theresa and Kaunitz took a lively interest in his accounts of what transpired in the Conclave (23 Nov., 1775-16 Feb., 1776) which elected Pius VI, who subsequently visited Vienna during the reign of Joseph II. He owed his election to Migazzi, leader of the Royalist party. How the empress appreciated Migazzi is sufficiently proved in a letter she wrote to him during the Conclave, "I am as ill-humoured as though I had been three months in Conclave. I pray for you; but I am often amused to see you imprisoned."

When Frederick II heard of the death of the empress he wrote, "Maria Theresa is no more. A new order of things will now begin." Joseph II during his ten years' reign published 6200 laws, court ordinances, and decrees affecting the Church. Even what is judicious in them generally bears the stamp of haste. The first measures levelled against ecclesiastical jurisdiction, created dissatisfaction as encroachments on the rights of the Church. The number of memorials addressed by Cardinal Migazzi to Joseph

II and the government was astonishingly large. He opposed all the Josephist reform decrees injurious to the Church. The "simplified and improved studies", the new methods of ecclesiastical education (general seminaries), interference with the constitutions of religious orders, the suppression of convents, and violations of her rights and interference with the matrimonial legislation of the Church, called for vigorous protests on the cardinal's part; but though he protested unceasingly, it was of no avail. To be sure, matters did not culminate in a rupture with Rome, and by his visit to Vienna Pius VI made some impression on the emperor, and the Holy See pronounced no solemn condemnation of Josephism. On 12 March, 1790, Leopold, Grand Duke of Tuscany, arrived in Vienna, as successor of his brother Joseph, and as early as 21 March, Migazzi presented him with a memorial concerning the sad condition of the Austrian Church. He mentioned thirteen "grievances" and pointed out for each the means of redress: laxity in monastic discipline, the general seminaries, marriage licenses, and the "Religious Commission", which assumed the position of judge of the bishops and their rights. Finding his wishes only partly fulfilled, Migazzi repeatedly expressed his dissatisfaction.

Emperor Francis II, a Christian whose faith and conscience were sincere, ruled his people with fatherly care. In spite of this he confirmed the Josephist system throughout his reign. For nearly a generation the French was absorbed his attention, during which time the aforesaid "Religious Commission" paid little heed to the representations of the bishops. The cardinal insisted on its abolition. "I am in all things your Majesty's obedient subject, but in spiritual matters the shepherd must say fearlessly that it is a scandal to all Catholics to see such fetters laid upon the bishops. The scandal is even greater when such power is vested in worldly, questionable, even openly dangerous and disreputable men". Age did not diminish his interest even in matters apparently trivial, nor lessen the virile strength of his speech. "The dismal outlook of the Church in your Majesty's dominions is all the more grievous from the fact that one must stand by in idleness, while he realizes how easily the increasing evils could be remedied, how easily your Majesty's conscience could be calmed, the honour of Almighty God, respect for the Faith and the Church of God be secured, the rightful activities of the priesthood set free, and religion and virtue restored to the Catholic people. All this would follow at once, if only your Majesty, setting aside further indecision, would resolve generously and perseveringly to close once for all the sources of so great evils". The emperor in fact made henceforth greater and more numerous concessions, each of which was greeted by Migazzi with satisfaction. When the pilgrimage to Maria Zell, the most famous shrine in Austria, was once more permitted, the cardinal in person led the first procession. During his long life Migazzi strove with unceasing activity for the welfare of the Church; and he died full of years and of merits. He lies buried in the church of St. Stephen.

C. WOLFGRUBER.

Mignard, PIERRE, French painter, b. at Troyes, 7 November, 1612; d. at Paris, 30 May, 1695. Though destined for the medical profession, Pierre gave early signs of his true vocation. For one year he studied at Bourges, under a teacher of the name of Boucher, then for two years at Fontainebleau, where, thanks to the works of Primaticcio and Rosso, and the collections formed there by Francis I, there had been for sixty years a sort of national school. The Marshal of

Vitry, after Mignard had painted the chapel of his country seat at Coubert, took him to Paris and obtained for him admission to the most celebrated atelier of the time, that of Simon Vouet. But the one place which more than all others attracted painters was Rome, where a throng of foreign artists were at that time living, among them Poussin and Claude Lorrain, who had settled there for life. Mignard was a member of this colony for twenty-two years. Here he found Dufresnoy (1611-65), who had been his comrade at Vouet's and with whom he formed a close friendship, and together they copied Caracci's famous frescoes in the Farnese Palace. But Dufresnoy was before all things a critic, and his best known work is not a painting, but a book, "De arte graphica", a manual written in extremely elegant Latin verse, published after his death with notes by De Piles, and reprinted for a hundred years as a masterpiece. This rare amateur wielded a great educational influence over Mignard, and made him acquainted with Venice and its incomparable school, which our classic art had professed to despise. Mignard was above all an

adroit, industrious workman, who knew well how to flatter public taste and thus secure his own advancement. He soon made for himself a position as portrait-painter unique in Roman society; his patrons were princes, cardinals, and three successive popes—Urban VIII, Innocent X, and Alexander VII.

At the same time he produced many religious works, countless oratory pictures, chiefly those Madonnas which came to be known as "mignardes". That name, intended at the time to be eulogistic, seems to us the best possible criticism of a type of work marked by a certain conscious grace and preciousness. One feels a delicacy about saying positively that these Madonnas are not devotional, since they satisfied the pious instincts of whole generations of devout persons; but it is impossible in our time not to perceive in them a singular meanness, artificiality, and puerility of feeling. But in the midst of all these labours, the artist found time for such large compositions as the frescoes in the church of S. Carlo alle quattro fontane. He thus attained an unquestionable eminence in fresco painting, that pre-eminently Italian medium so little employed by French painters.

Under these three forms his works were widely exhibited in Rome, where he was compared to Guido and to Pietro da Cortona. During his travels through Upper Italy (1654) he was everywhere received with the greatest distinction, and painted Cardinal Sforza's portrait and those of the Princesses Isabella and Maria of Modena. On his return to Rome (1655) he married Anna Avolara, an architect's daughter, whose beauty was perfect and who posed for his Madonnas. The reputation of "Mignard the Roman", as he was called, to distinguish him from his brother, "Mignard of Avignon", had spread to France, where Louis XIV was beginning his personal reign, inaugurating that system which relied upon the glory of the arts no less than the glory of arms for the exaltation of the monarchy. Mignard was summoned back to France,

and reached Paris (1658), where he met Molière, and formed his famous friendship with that poet.

He found awaiting him in France the same exceptional position that he had enjoyed in Italy. Hardly had he arrived when he executed portraits of Louis XIV and other members of the royal family. His reply to detractors, who questioned his talent for great works, was the decoration of the Hôtel d'Epemont, soon followed by that of the cupola of the Val-de-Grâce. The latter, said to be the largest frescoed surface in the world, comprising two hundred colossal figures, represents Paradise. In pursuance of a formula dear to the Roman decorator, the throng of celestial personages is here displayed around the Blessed Trinity—the Virgin, the Apostles, the Evangelists, virgins, and confessors, founders of orders, holy kings like Constantine, Charlemagne, and St. Louis, and, finally, Anne of Austria, kneeling, offering the model of the church dedicated by her to *Jesu Nascenti Virginitate Matri*. This style of apotheosis, already trite in Italy, still possessed the merit of novelty in France. The immense composition, having cost its author only eight months' work, suffers the penalty of its hurried creation. The composition lacks inspiration, the colouring is feeble and neutral rather than bright, yet it was a very celebrated work in its time, because it flattered the megalomania and the chauvinism of the public; France no longer need envy Italy; Rome was no longer at Rome, it was in Paris. In this way Mignard's cupola took on the character of a national victory, as Molière said in his famous poem "La Gloire du Val de Grâce"; thus this very mediocre, though ambitious, piece of painting was honoured at its birth by the most popular and "national" of French writers. Whether from policy or from inclination, Mignard belonged to the social circle of Racine, Boileau, and La Fontaine, at a time when artists in France associated but little with any but their professional brethren. Thanks to these connections, he is the artist of whom seventeenth-century literature has most to say. Scarron and La Bruyère acclaimed his greatness, and as he had the knack of turning his literary friendships to good account, he was able to maintain for thirty years his curious squabble with the Academy. This body, after a series of difficulties, had been definitely organized by Colbert under the presidency of Le Brun, whose authority Mignard would not recognize. The whole of the court faction which opposed Colbert naturally took sides with Mignard, who, without any official position, was clever enough to keep up his reputation as "premier painter", and to add to it that spicy opposition which in France always serves to carry an artist's reputation farthest. The list of portraits executed by Mignard in the second period of his life includes all French society of that time. The young queen, the Duc d'Enghien, the Princess Palatine, Chancellor Séguier, the Duc de Beaufort, Bossuet, le Tellier, Turenne, Villacerf, la Reynie, the Comtesse de Grignan, the Duchesse de Châtillon, Molière, the famous Ninon de Lenclos, all sat to him. He painted Louis XIV ten times, and on the last occasion the king said to him, "Mignard, you find me changed". "True, sire", said the painter; "I see a few more campaigns on Your Majesty's brow". He used for his women models a rather gaudy style, in which the draperies were somewhat overdrawn, and a system of half-mythological emblems and allusions which faithfully reflect the ideals of the court of Louis XIV. Hence these portraits have the same historical value as those of Lely or Kneller at the court of James II, while some of them possess an unquestionable attractiveness. But this was only one part of Mignard's work. He decorated many residences, public buildings, and churches, but all that remains of these works is the "Apollo" ceiling in the castle of Balleroy (Manche). However, we know by engravings that these works

were good, according to the taste of the period, imitated from Caraccio and from Guido's mythologies, artificial, pleasing, facile, somewhat heavy and weak in style. The best of his religious pictures is the "Visitation" in the Museum at Orleans.

At last, Le Brun having died (1691), Mignard, at the age of eighty, succeeded to all his offices, was solemnly received into the Academy, and in one session elected to all its degrees, including that of president. Louvois having consulted him on the project of decorating the cupola of the Invalides, the veteran painter saw an opportunity of crowning his career with an exceptional performance, but Louvois died, the work was delayed, and the artist lost all hope of realizing his last dream. He died, it may almost be said, with his brushes in his hand, at the age of eighty-four. His last work is a picture in which he himself appears as "St. Luke painting the Blessed Virgin".

LOUIS GILLET.

Migné, JACQUES-PAUL, priest, and publisher of theological works, b. at Saint-Flour, 25 October, 1800; d. at Paris, 24 October, 1875. After completing his college courses, he devoted himself to the study of theology in Orleans, and while a student there filled, for a time, the position of professor in the fourth class of the college of Châteaudun. He was ordained priest in 1824, and in the following year was made pastor of Puiseaux, in the Diocese of Orleans. He published a pamphlet: "De la liberté", which brought him into conflict with his bishop, Brunault de Beaugard, in consequence of which he resigned his parish, and went to Paris, where, in the same year, he founded "L'Univers Religieux", later "L'Univers"—a journal intended by him to be free from any political tendency, and concerned with Catholic interests alone. He edited this paper until 1836, and contributed to it a very great number of articles. Meanwhile, he had conceived the plan of publishing for the use of the clergy a series of important, older and newer, theological works, at so moderate a price that they might meet with a wide circulation, and thus further an earnest and scientific study in ecclesiastical circles. For this purpose he founded in the suburb Petit-Montrouge a large printing house, with all the necessary departments, the Imprimerie Catholique, where he employed more than three hundred workmen. From 1836 he devoted his energies exclusively to this great and important undertaking, which made him universally known. Within a relatively short time he succeeded in publishing many volumes of the older theological literature, and partly because of the moderate cost, he obtained for them a wide circulation. We may mention here: "Scripturæ Sacræ Cursus Completus" (28 vols., 1840-45), with excellent commentaries of older and newer writers on each of the Books of Scripture; "Theologiæ Cursus Completus" (28 vols., 1840-45), with treatises of many earlier writers supplementing the main articles; "Démonstrations Évangéliques" (20 vols., 1842-53), in which are gathered together the apologetic writings of over one hundred authors from every epoch of church history; "Collection Intégrale et Universelle des Orateurs Sacrés" in two series (102 vols., 1844-66), containing the works of the best pulpit orators of the preceding centuries; "Summa Aurea de Laudibus Beatæ Mariæ Virginis, coll. J. J. Bourassé" (13 vols., 1866-68); "Encyclopédie Théologique", an extensive collection of works of reference, alphabetically arranged, and not confined to theological matters

alone, but including a number of auxiliary sciences, such as philosophy, geography, history, natural history, bibliography, three series, containing altogether 171 vols., 1844-66. Several of the dictionaries of the collection are of unequal value, and may be considered as out of date.

The most important and meritorious of his publications is the "Patrologia", in two collections: "Patrologiæ Latinæ Cursus Completus", in two series (217 vols. in all, 1844-55), with four volumes of indexes (vols. 218-221, 1862-64), and "Patrologiæ Græcæ Cursus Completus", of which one series contains only Latin translations of the originals (81 vols., 1856-61). The second series contains the Greek text with a Latin translation (166 vols., 1857-66). To the Greek Patrology there was no index, but a Greek, D. Scholarios, added a list of the authors and subjects, (Athens, 1879) and began a complete table of contents (Athens, 1883). The Patrologia Latina contains all the attainable published writings of Latin ecclesiastical authors from the earliest known to Pope Innocent III (d. 1216). The Patrologia Græca includes the printed works of Greek Christian writers down to the Council of Florence (1438-39). The intention was to choose for the new issues the best editions of each author, with suitable introductions and critical additions, which plan, unfortunately, was not always realized. The printing, too, was frequently unsatisfactory, and in most of the Migne reprints we find a number of misprints and errata. The great value of the collection lies in the fact that at a moderate cost and in a handy form a great work of reference was produced, and a whole series of rare and scattered writings were gathered together, and made easily accessible to the learned world. The collections had a large circulation, and are widely used as works of reference. Besides these great collections, Migne printed a large number of the writings of single important theological authors, in complete editions, e. g. Saint Thomas Aquinas, Saint Teresa, Cardinal Bérulle; the great pulpit orators Bourdaloue, Bossuet, Massillon, Fléchier; the writers Lefranc de Pompignan, de Pressy, Régnier, Thiébaud, du Voisin, de Maistre, and others. Up to 1856, Migne was also proprietor of a journal "La Vérité", which gathered articles from papers of every tendency, and republished them as aids to a comprehensive induction on current ideas and facts. In connexion with his Imprimerie Catholique were established workshops for the production of religious objects, such as pictures, statues, and organs. In 1868 a great conflagration broke out in the printing house, which extended to the entire Montrouge establishment, destroying almost entirely the work of years, and the valuable stereotype plates of the Patrologia. The loss was over six million francs, but Migne did not lose courage, and began at once to rebuild. But difficulties accumulated. The Archbishop of Paris was averse to the commercial elements in the work, forbade the continuance of the business, and, finally, suspended the publisher from his priestly functions. The Franco-German war of 1870 inflicted great losses; then from Rome came a decree condemning the misuse of Mass stipends for the purchase of books, and Migne was especially named in connexion with this abuse. He died without ever having regained his former prosperity, and his business passed into the hands of Garnier Frères.

J. P. KIRSCH.

Migration.—The movement of populations from place to place is one of the earliest social phenomena history records. The earliest migration recorded in the Bible was when, after the confusion of tongues, men wandered over the face of the earth (Gen., xi, 8) under conditions only vaguely known to-day. The

Book of Exodus more clearly describes the withdrawal of the Hebrew tribes from the land and rule of ancient Egypt. A typical illustration of tribal migration was the separation of Abraham and Lot, when the latter gathered his substance and set his face towards Sodom, while Abraham took his way to the plains, founded a nation, and went into history as the Father of the Mighty. Of the Greeks, too, it may be said that the dominant fact of their leading epoch was the wandering of the race, until its narrow borders widened out into Magna Græcia. Throughout early Latin literature runs the same story of the migrations and conquests of the Latin race, reaching a climax in the colossal structure of the Roman Empire. Modern writers have discussed the fall of that structure and the building of that strange conglomerate of Asiatic and European, of Germanic and Romance elements, till a new, and greater, Europe arose from the old.

General movements of population are termed *migrations*. It is a general term indicating a permanent change of habitat, i. e. a more or less serious intent to take up permanent residence in the new country. The terms *immigration* and *emigration* denote respectively the entry into and the departure from any given country. Generally speaking, immigration presents more serious problems than emigration, though certain dangers do arise from an excess of emigration. Many problems grow out of immigration, and to these, legislators and rulers have turned their attention.

Migrations have taken place under a variety of conditions. In general they have been voluntary: peoples have come and gone of their own free will. But forced migrations have not been unknown in history, as when a conquering people has expelled, killed, or sold the conquered into slavery. The rule, however, has been to leave the population on the soil under conditions more or less severe. The latest principle, dominant among Western nations, is to disturb the population as little as possible, either in their person or property. The right to exile a people has been abandoned, and the noted case when England transported the Acadians in 1755 marks the date when sentiment turned against it and practice rapidly followed; transferred to a new authority, as the Filipinos were, the people do not migrate. Indeed, in the treaties transferring territory to new hands, the inhabitants are sometimes expressly guaranteed against expulsion, as in the Louisiana Purchase Treaty of 1803. Enforced migration has taken other forms. It has shown itself in the organization of criminal colonies, as seen in Tasmania. It has been practised by Russia in the attempt to settle Siberia. While compulsory migration has not played a great part, assisted migration has been a large factor in either inducing or directing the movement of population. Assistance may be given either by the land which gives or that which receives the emigrant. An illustration of the former is the aid given to emigrants from Prussia to Argentina and to the Kamerun region. In times of colonial expansion this method has been especially effective. Prospective colonists have been given bonuses in the form of tax-exemptions and liberal grants of land; the last mode is best illustrated in the grants in the London charter of 1809-12. Liberation from civil and criminal prosecution was also an effective means to induce migration; this was used in England when the jails were emptied, and debtors flocked to Georgia, and when the courts offered the choice of self-imposed exile to accused and condemned persons. Cases are not wanting where countries have attracted immigrants to themselves in various ways. Conspicuous as an example was the United States, where for decades "contract labour" supplied the market and made it possible for absolutely impecunious labourers to migrate to America. So extensive had this assistance

become that Congress has for many years legislated with the view of preventing further aid of this kind.

Migration to-day differs in many important particulars from that of earlier times. Down to a quite recent date peoples moved as tribes, nations, or races, moving and settling *en masse*. Taking forceful possession of extended areas, they maintained their individuality either under colonial systems or as separate groups; they finally established nations. With these migrating groups went their own institutions, language, religion, industrial methods, and political and legal systems. Usually they moved into uninhabited or sparsely settled areas, where no question of amalgamation could arise. With certain exceptions, the Roman Empire being the most noted, migrations have entailed the settling of a highly cultured people among those of a lower culture. In all such cases of migration *en masse* the native habitat was forever abandoned, and the migrating tribes, thoroughly equipped, entered a new environment and yielded entirely to new influences. In these particulars different conditions now obtain: migration is effected by families and individuals. These go from dense and highly cultured populations where free opportunity is usually closed, taking few possessions with them; their language survives during their own generation, and in the succeeding one is exchanged for the language of the adopted country, though they usually retain their religion. They must fit into a new industrial system, however, unlike their own. As a rule, they renounce their natural political allegiance and assume a new political status, abandoning the relations attaching to their former status and assuming new political and contractual relations. Such migration means to the emigrants the death of a nation, so far as concerns them, while to their new country it brings a serious modification, the extent of which depends upon the relative virility of the newly added national element.

These characteristics of modern migrations have given rise to a threefold movement. In certain lands, as Germany, where migration to America means a loss to German citizenship, attempts have been made to colonize, and thus save the migrating persons to German citizenship and culture. Those nations, moreover, which they enter look with increasing caution and suspicion on the numbers and character of the incoming population. When once admitted, the problem presents itself of granting them citizenship. To what extent shall the immigrant assume the rights and duties of an acquired nationality? The problem of migration is thus inextricably bound up with a political one.

CAUSES OF MIGRATION.—The primary cause of the migration of peoples is the need for larger food supplies. From the time when nomadic peoples were constantly migrating down to the present westward movements, one principle has been uniformly followed—they have gone from areas of low, to areas of high food-supply. This has been a constant impelling and expelling power. In the last analysis, migration results when the forces of increasing population and decreasing food supply are not in equilibrium, and it tends to equilibration of forces among societies of men: equilibration of food in relation to population; equilibration of rights as related to authority; equilibration of industrial energy as between labour and capital. These express in the most general terms the meaning of migration. First came the tribal migrations, such as the exodus of Lot and Abraham towards Zoar and their subsequent separation in search of richer pastures. The nomad tribes on the steppes of Asia take up the journey to the waterways to find richer pastures for their herds. The migration of Germans, Slavs, and similar nations came later, and, pushed on by the same inexorable necessity, they moved south from the Caspian and Baltic regions, overrunning Rome, and taking possession of Gaul and

Britain. With the industrial changes in England, when the modern age dawned, lessening supplies of food pushed men beyond the sea. In more modern times the hunger-stricken peoples of European lands have come to the new parts of the world, to America, North and South; to Australia and South Africa; from Russia they have pushed into Asia, while Japan lays hold of outlying islands where congested population may find room for expansion. Moreover, there are secondary causes which play back and forth with varying degrees of force and effectiveness. These causes operate temporarily though powerfully. They usually act reciprocally in the different countries, and, like the sun and moon affecting the tides, now oppose each other, now act in conjunction.

At the close of the eighteenth century a change in the attitude of the principal governments resulted in greater freedom for those who wished to migrate. During the first half of the nineteenth century the laws limiting or prohibiting emigration were gradually modified or repealed. At this time most countries, especially those of the Western world, favoured immigration, and few limitations existed checking the flow of population; free action was thus secured to social, political, and economic causes. The variations in the flow of immigrants to the United States illustrate with special clearness the operation of these causes. From 1820 to 1833 the number of immigrants gradually increased, but as hard times began here, culminating in the panic of 1837, immigration fell off. More marked still were the effects of economic conditions from 1846 till 1857. During this period unusual activity showed itself in the United States. Under the influence of Clay's tariff measures, manufactures had grown, creating an enlarged demand for labour, which was not forthcoming from the native population. The opening of Western lands absorbed much of the labour that otherwise would have gone into industry, and also drew on foreign sources for increased supply. The greatest impulse, however, was given by the discovery of gold in California in 1848. Not only was there a great demand for labour on the Pacific Coast; the effects of the discovery of gold were more far-reaching. Prices were high, money plentiful, business, so sensitive to these influences, was greatly stimulated, and a heavy demand for labour was created. By an interesting coincidence European economic conditions also favoured a heavy migration. With bad crops and sunless summers throughout Europe, the climax was reached in the potato famine of 1847 in Ireland. This destructive calamity occasioned a heavy migration from Ireland to the United States, where abundant and increasing opportunity was to be found. At the same time certain political causes operated in Europe. Notable among these causes was the overthrow of the attempted revolutions in the German states, especially Prussia; large numbers of the Liberal Party left Germany. The results of the Crimean War are less easily measured, though it probably sent a certain number to our shores. The operation of these causes may be read clearly in the following statistics: in 1844, 78,615 persons came to our shores; in 1845, 114,371; in 1846, 154,416; in 1847, 234,968; in 1848, 226,527; in 1854 the high-water mark was reached when 427,833 immigrants landed here.

Equally forceful were the causes of immigration which manifested themselves at the close of the Civil War. Checked by the war, industry advanced by leaps and bounds at its conclusion, and men and capital were in abnormal demand. Immigration increased from 72,183 in 1862, when the national disaster was at its worst, to 459,403 in 1873. During the misfortunes following the panic of 1873 the number fell (in 1878) to 138,469. In the eighties bad economic conditions again somewhat influenced migration to the United States, when it fell from 788,992 in 1882 to 334,203 in 1886. The panic of 1907 and the

subsequent hard times are clearly recorded in the attenuated immigration to this country in 1908; whereas in 1907 it had received nearly a million and a quarter, in 1908 and 1909 the figures amounted to only three quarters of a million.

Among the motives other than economic which prompt emigration is the desire to escape military service. This has been especially operative in such military countries as Germany. This cause is much more powerful during, or just after, a war. In 1872-73 there were 10,000 processes for desertion on this account alone and in great part due to emigration. Again migration because of religious persecution has been historically of great importance. In past centuries thousands went from the Continent to England, from Ireland and England to the Continent and to the New World, that they might enjoy freedom of worship. In recent years these influences have been most powerful in Russia and Turkey, whence persecutions affecting the Jews and the Greek Christians have sent large numbers of refugees, especially of the former class, to the United States. Another cause, difficult to measure, but of great influence, is the solicitation of relatives and friends. Once in the new country, in many instances relatives plan to bring those left behind, secure places for them, aid them in coming, and in general form a centre of attraction in the new land, drawing powerfully on those beyond the sea. Along with this is the fear, periodically recurring with the agitation for restriction, that further immigration may be cut off, and at such times considerable increase is seen. This was particularly noticeable before the American legislation of 1903.

A phase of this subject which cannot be overlooked and which is of increasing importance in the United States is the commercial. On the one hand is an employing class, eager for cheap foreign labour; on the other hand are various agencies whose business is the transportation of goods and people. As the main profits of, say, the steamship companies come from the immigrants who travel in the steerage, the reasoning is clear to the line of action which they follow. Everywhere, in lands where migration originates, is the ubiquitous immigration agent. His business is to induce people to migrate. Exaggerated reports, sometimes amounting to actual misrepresentation, are too often resorted to. On this legislation has had its important bearing. The greatest influence exerted by the employing class is by means of contract labour. At first generally desirable, when labour was scarce, this has since become most unpopular, and through law and adverse popular opinion is now of comparatively little importance.

IMMIGRATION TO THE UNITED STATES.—The many varied problems of immigration are best illustrated by its history in the United States. Perhaps no more composite nation has existed since the Roman Empire engulfed the various nationalities of Western Europe. At a very early period in the history of the American Colonies, the Negro was introduced—a race so remote, anthropologically, from the first colonists as to be impossible of assimilation. The American Indians, isolated from the first, have ever since been tending to extinction, and hence need not be considered as a possibility in the problem of national and social composition. As time passed, other races came to still further complicate the problem. Besides these distinct racial elements must be reckoned an infinite number and variety of nationalities marked by lesser differences and capable of assimilation.

The settlers of the original Thirteen Colonies, while fairly homogeneous, yet presented some diversity. There were English, at first the dominant element, Irish, and Scotch, and persons of mixed British origin. There were a goodly number of Germans in Pennsylvania and remnants of the Dutch settlement in New

York and New Jersey. A few Swedes had come to Delaware and a sprinkling of Finns. The French were represented by the Huguenots in Georgia and in the Carolinas. It has been estimated that the population of one million in 1750 had developed from an original migration of 80,000. Additional racial modification resulted from the annexation of new territories of alien population. In 1803, by the treaty with France, Louisiana was added, with some accession of population and a considerable effect upon the customs and ideas of the nation as a whole. This addition was chiefly French, though a few Spaniards were included. The acquisition of Florida in 1821 brought a few Spaniards, although their influence is negligible. The enlargement westward, from 1845, when Texas was admitted, till 1848, when the Mexican Treaty added an extensive cession, brought a number of Spaniards, Mexicans, and half-breeds. Following upon the Spanish War of 1898, which resulted in an accession of nearly 8,000,000 of alien, mainly Far-Eastern, races, the extension of American dominion into the Pacific has vastly complicated the problem of nationalization, at the same time rendering more difficult the control of immigration from the Orient.

The beginning of migration to the English Colonies in America was the Jamestown settlement of 1607. In New England the first real migration of any extent was the company that reached Salem, Massachusetts, under John Endicott in 1628. Figures on the subsequent arrivals, while not certainly accurate, are nevertheless very interesting. The diversity of religion was not so marked, though there was some variation. The early German immigrants were mostly Protestants. Maryland was settled by Catholics. Into the South drifted a large number of Huguenots. In New England there was a strong Separatist element. The formation of the State of Pennsylvania by Quakers gave them a stronghold in that commonwealth.

The beginning of immigration into the United States (i. e. of post-Revolution immigration) dates from 1789. Before that time it is more proper to speak of colonists than of immigrants. Statistics as to the aliens coming to, or returning from, the United States are inaccurate and incomplete from 1789 till 1820. Not only are the absolute figures unsatisfactory, but no distinction was made between newcomers and returning Americans; nor was any attention paid to the returning immigrant. Roughly speaking, about 250,000 immigrants landed here from 1789 to 1820. From the meagre figures recorded any analysis is imperfect. The dominant elements were English, Scotch, and Irish. There came to the United States as immigrants, from 1820 to 1910, a grand total of more than 28,000,000. The numbers by decades were as follows:—

1821-1830.....	143,439
1831-1840.....	599,125
1841-1850.....	1,713,251
1851-1860.....	2,598,214
1861-1870.....	2,314,824
1871-1880.....	2,812,191
1881-1890.....	5,246,613
1891-1900.....	3,682,864
1901-1910.....	8,938,470

The figures given for the last decade are, of course, partly conjectural. The statistics recently issued for the year ending 30 June, 1910, give a total of 1,041,570 immigrants to the United States for that year: 736,038 males, 306,532 females. These included 192,673 Italians; 128,348 Poles; 84,260 Jews; 71,380 Germans; 53,498 English. These are the largest numbers of immigrants known for any year so far, except the years 1907 (1,285,349) and 1906 (1,100,735). It will be seen, too, that the last decade shows a very large number of immigrants as contrasted with any previous decade. These figures are only absolute. It is in

relative statistics that meaning lies. From the standpoint of social significance the relation between the influx of population and the native population is the important concern. This is true, considered from the country giving or the country receiving the immigrants. The following figures show the percentages of the native and of the alien population for a series of decades:—

1850	native	90.3	alien	9.7
1860	"	86.8	"	13.2
1870	"	85.6	"	14.4
1880	"	86.7	"	13.3
1890	"	85.2	"	14.8
1900	"	86.3	"	13.7

In 1890 there were 17,314 foreign born to each 100,000 native; in 1900 the proportion was 15,886 to 100,000. The largest proportion of foreign-born is in North Dakota, which in 1890 had 42.7 per cent; in 1900, 35.4 per cent foreign-born. In 1900 there were seven states with more than 25 per cent foreign-born. North Carolina had in 1900 the lowest percentage of foreigners, two-tenths of one per cent, the average in the Southern States being below 5 per cent. From these relative figures it is clear that the effect of immigration is not materially changing.

So also as regards emigration. Not the absolute numbers leaving, but the migration relative to the total, and again to the annual excess of births over deaths, is significant. A very large migration from a country with a very high birth-rate probably has no effect, or only a slight effect. When a million a year leave a country like China, it merely means that famine, disease, infanticide, etc., are less important factors in keeping down population; the greater the migration, the less burden the remaining population must bear. In many Western countries this is not the case, and when heavy emigration takes place the nation may be materially weakened either for war or peace. The following figures illustrate this condition: out of every 1000 inhabitants of Italy 6.87 migrated in 1888; from Great Britain and Ireland, 7.46; from Scotland 8.88; from Ireland 15.06; from Sweden 9.86; from Germany only 2.10. Most remarkable has been the effect upon Ireland, where so great has been the emigration since the potato famine that the population is now little more than half what it then was, this being about the decrease which would be produced by an emigration of 15 in 1000 during a generation.

Statistics require analysis. Immigration statistics are no exception to the rule, and much meaning may be drawn from them by proper analysis. Immigrants are not merely so many units, so many homogeneous things to be blocked off in columns of hundreds, thousands, and millions, and then abandoned. Immigrants are human beings, statistics must be dealt with in the light of that fact, and careful account must be taken of all the conditions to which their lives are subject. These cover age, sex, training, traditions, and property. Of these the most obvious and significant are age and sex. As to age, immigration to the United States has always drawn heavily upon adult life, the mass of immigrants coming to the United States during their productive period. Of German immigrants up to 1894, upwards of 60 per cent were between the ages of fifteen and forty-five. Of all immigrants to the United States in 1887, 70.51 per cent were between fifteen and forty. In 1909, out of 751,786 immigrants admitted, 624,876 were between 14 and 44 years of age; 88,393 were under 14, and 18,517 were 45 or over. These figures indicate about the normal age conditions of immigrants coming to the United States, serving to emphasize the large amount of ready labour brought in, and the large addition to the labour force of the country at a very slight cost. Caution is needed, however, in calculating the value of this influx of foreign labour. Some have taken the average

cost of raising a labourer to the productive stage; others have estimated what value of goods this foreign labour would produce. The better way is to reckon the profits attributable to immigrant labour in excess of their expense to the new country; this would give the actual value accruing from the immigration.

As regards sex among immigrants, males have always far exceeded females. This is illustrated by the statistics of 1909: out of the total arrivals of 751,786 during that year, 519,969 were males and 231,817 (somewhat less than one-third) were females; again, in 1910, out of 1,041,570 immigrants, 736,038 were males. This tends to destroy the equilibrium between the sexes in the countries concerned. It leads in many instances to a large withdrawal of money from the United States to the home land. It retains the interest of the immigrant in his native land, and leads many to return to families from which they have only temporarily separated. It increases that shifting population, especially in the large cities, and greatly augments the numbers of the "birds of passage". On the whole, the results are unfortunate. The condition is far more marked with certain nationalities. The characteristic feature of Chinese immigration to the United States has been the absence of women. The tendency among Italians to leave their families at home is strong. Of 165,248 immigrants from the South of Italy in 1909, there were 135,080 males and 30,168 females. From Northern Italy the proportion was less marked: 18,844 males to 6,306 females. From Ireland came 15,785 males and 15,400 females. In the case of the Japanese more women than men immigrated to the United States.

Statistics of departing emigrants have not been kept with accuracy and completeness; hence it is difficult, if not impossible, to know just how many foreigners actually reside in the United States. In 1908 there entered the country 782,870 immigrant aliens. The same year saw 395,072 depart. These figures for that year show a net gain of 387,797, a rather small number. Of course, this number of departures was exceptional—resulting from the panic of 1907. Out of a total of 751,786 landing in 1909, as many as 225,802 departed, leaving a net increase of 525,984.

The study of illiteracy in connexion with immigration reveals the foreigners to us, enlarges our knowledge of the countries from which they come, and helps to explain the conditions of literacy or illiteracy in the United States. Moreover, as it is strongly urged that illiteracy should exclude immigrants, existing conditions as to foreign education will help to set the limits to this form of regulation. The statistics on this phase of the subject are kept fairly constant by the shifting of the sources of migration from the north to the south of Europe. As education of the masses has not advanced as rapidly in the countries now supplying the immigrant as in countries farther north, so the percentage of illiteracy does not fall with the general advance of education. In 1909, out of a total immigration of 751,786, the totally illiterate numbered 191,040. This number takes in only those over 14 years of age; but, as the great majority of those coming are over 14, and those under that age are, probably, more generally educated, they may be neglected. The percentage of illiteracy of all over 14 years in 1909 was 29; in 1907 it was 30; in 1906 it was 28. There is, then, no general diminution in illiteracy among immigrants to the United States. The degree of illiteracy among those from Southern Europe is considerably above the average; among those from northern Europe a good deal below.

MIGRATION AS AFFECTING OTHER COUNTRIES.—The last quarter of the nineteenth century saw a large migration to South America. The Argentine Republic has presented interesting phases of the subject. For half a century immigration has been an object of public attention and statistical record. There are

about 200,000 immigrants annually, and about 80,000 emigrants. In 1907 there were 209,103 immigrants and 90,190 emigrants. Of the immigrants there were 90,282 Italians, 86,606 Spaniards, and sprinklings of other nationalities. In 1909 there entered Argentina 125,497 Spaniards and 93,479 Italians, with small numbers of Russians, Germans, etc. Since 1857 the balance of immigrants against emigrants has been 2,550,197. There have migrated to Brazil since the records were kept, 2,723,964. In 1908 Brazil received 94,696 immigrants. In 1909 there migrated from the German Empire 24,921, of whom 19,930 came to the United States. Italy in 1908 lost 486,674 emigrants and received back 281,000. Austria-Hungary sent out 386,528 in 1907, of whom 352,983 went to the United States. In 1902, 55,368 Russians emigrated to the United States; in 1903, 68,105; in 1904, 80,892; in 1905, 72,475; in 1906, 112,764.

LEGAL CONTROL OF MIGRATION.—The legal control of migration began when it ceased to be collective and began to be individual. Laws have been passed preventing people from leaving their native land, and also, by the country of destination, forbidding or regulating entrance thereto. Extensive regulation has been found necessary applying to transportation companies and their agents, the means of transportation, treatment *en route* and at terminal points. The justification of public interference is to be found in the right of a nation to control the variations of its own population. The highest necessity is that arising from war: on this ground nations almost universally regulate very closely the movements of population, forbidding emigration, that they may not lose their soldiers, and guarding immigration as a military precaution. Restrictive measures are also justified on grounds of health and morals, and on the general ground that a national family has a right to say who shall join it. Historically speaking, the right of the individual to emigrate is of rather recent date. The old theory was that a man may not leave his native land without the consent of the ruler. This situation arose from a variety of causes. After the dissolution of the feudal system, the population carried some of the advantages and some of the incumbrances of that system over into the monarchic state. One of its leading principles was the fixedness of the mass of the people to the soil. Again, in England, after the ravages of the Great Plague in 1351, laws were enacted requiring people to remain in their own parish or town. As time passed, and the industrial revolution brought its changes, this legislation still farther limited freedom of movement. Furthermore, when the patriarchal idea of the State gave way to the military, the personal bond of national unity yielded to the impersonal, but the obligation of the subject as a member of this new national family did not weaken, the presumption being that no one could abrogate this allegiance. The opposition to emigration was based upon military necessity, upon the desire to maintain a strong industrial population at home, upon the jealousy existing among the nations, and upon the desire to keep the nation intact.

Gradually this attitude toward migration was abandoned. The Treaty of Westphalia extended the right to migrate for religious reasons. The great migrations westward, as discovery and the settlement of new lands became a dominant interest, did much to break the crust of conservatism and allow life to operate in all ways more freely. The development of means of transportation made trans-oceanic voyages possible, leading immigrants into new and unoccupied areas. The growth of a colonial system under which the mother country reaped large profits broke down the narrow policies and removed the old prejudices, and migration to the colonies was encouraged—in some instances enforced. Along with these changed conditions came the radical philosophy of the eighteenth century, the teaching of natural rights and an insistence upon the individual's privilege to go to, and remain in, that part of the world which best suited his fancy. Thus was a condition reached when limitations could be removed. In England, in 1824, the law limiting emigration was repealed. In Continental countries the same liberal policy has obtained. In Russia, in European Turkey, and in certain Oriental lands the old policy is still partially prevalent, though in these countries more liberal measures are being adopted. But, generally, there is no longer question of prohibiting emigration, but rather of encouraging it, and always of making regulations for the arrival and departure of emigrants. European governments have undertaken this control partly on their own account, partly in co-operation with the United States. The fortunate sentiment constantly grows stronger that joint action is necessary to successful regulation.

France is the country where emigration plays the smallest part. With a birth-rate in some years above, in others slightly below, the death-rate, she has no surplus population. It has been truly said that Germany has population to spare, but no territory; England has an excess of both people and territory; but France has no surplus people and little vacant land. The annual emigration from France is 6000. The total since 1860, probably not more than 300,000. The regulations in France deal almost exclusively with the means of transportation, the condition of ships, waiting-room inspection, the health and morals of the emigrant, etc. There are no general legal barriers to free migration. The same thing may be said of Belgium and Holland. The emigration law of Italy of 1901 is the most thorough enactment among the laws of the European states: it places matters concerning emigration under the Foreign Office; all persons leaving Italy must register with the Government; persons under 14 years may not leave alone; parents and guardians must leave their children or wards in competent hands. Strict care is taken that persons shall not take passage who will be liable to return under foreign immigration tests. A fund has been created with which to care for those who are forced to return.

These countries, constantly losing population, have so far had few problems connected with immigration. Immigration into them is practically unrestricted. In Germany, on the contrary, very minute and effective control is exercised. Besides its conformity to their general practice of close public regulation, certain special conditions urge such a course. Germany is, of all lands, most completely organized for military purposes; a vigorous attempt is constantly made, therefore, to prevent desertion from the military forces, whether with the colours or in the Reserves. Hence their laws touching the emigration of eligibles are very strict, and treaty rights for such persons who go to foreign countries are very uncertain and imperfect. Again, up to a recent date Germany has been of all lands the point of departure, not only of her own, but of the emigrants of other European states. This has been true, not merely because, geographically, she lies in the pathway of commerce, but also because for a long time the traffic went out from German ports and over German steamship lines. Germany has been compelled to guard, not only her own emigrants, but, what has perhaps been a more pressing necessity and more difficult task, the inspection of the alien emigrant. The many trans-German emigrants are subjected to two, and often to three, inspections before they finally embark. Of such persons the Russians are the most rigorously dealt with: they must have Russian passports and tickets through to their destination and their baggage must be examined and disinfected.

In the United States immigration problems have developed, demanding, and finally receiving, minute

and comprehensive regulation. As the subject has such important international bearings, the treaties covering the subject demand attention. The most noted of these, dealing with the immigration of Chinese, was the famous Burlingame Treaty of 1868, between the United States and China. In this treaty the contracting parties freely and fully recognize the inalienable right of people everywhere to migrate. They also recognize that migration should be voluntary, and they agree to allow such migration to their respective countries. In 1880 a second treaty between the United States and China reversed the previous policy, and allowed each country at its option to prohibit further immigration, a provision upon which the United States acted in 1882. The last treaty (upon which subsequent legislation touching Chinese immigration has been based) was signed in 1894. A treaty similar to the Burlingame Treaty was concluded between the United States and Japan in 1894. This agreement gives to the subjects of either contracting power the right to enter, and reside in, the country of the other power. A treaty granting privileges of immigration to Italians was signed by the United States and Italy in 1871. This treaty marks the beginning of extensive emigration from that country to the United States. Thus, through treaties a certain amount of control has been exercised over immigration. But the problem of controlling immigration into the United States has been complicated by the dual system of government, state and national. Until the adoption of the Constitution of 1787 the matter rested entirely with the state governments. In that instrument no direct grant of power is made to the Federal Congress for the exclusive control of immigration. It was only after considerable litigation, and several decisions by the Supreme Court, that Congress was, in 1876, given exclusive jurisdiction. Among the earlier attempts to regulate the matter were laws passed by some of the states, particularly New York and Massachusetts. In 1824 New York passed a law covering many details of registration, reports, head tax, etc. This act went on appeal to the Supreme Court, which voided the law as conflicting with the authority of Congress to control international relationships. Other acts touching certain phases of immigration were all declared null by the court, and the exclusive jurisdiction lies to-day in the Federal Congress.

The activity of the Federal Congress dates from 1819, and was called forth, not by any desire to limit the quantity or quality of the immigration, but by the necessity of checking the brutal agencies engaged in transportation. The first statute covering this was passed by Congress in 1819. It limited the number of persons any one ship could bring; at first only two persons per ton, and later only one person per two tons, of the ship's displacement. Subsequent acts made provision for more sanitary ships, better food, and more space to each immigrant. During the first half of the century no serious opposition arose to the immigrant as such. Beginning with 1844, at the rise of the Know-nothing Party, a new attitude was taken by many. This party grew strong, especially in the South, and from 1844 to 1856 it carried many states. It elected members to Congress and to local assemblies, and governors of states. One of its tenets was opposition to immigration, and as a party strong in the Southern states it did much to determine that antipathy of the South to immigration which was maintained for many years. The close of the Civil War marks a new attitude towards the immigrant. It was a period of rapidly expanding industries and there was an increased, indeed an abnormal, demand for labour. An Act was passed by Congress, in 1864, which greatly encouraged the importation of labour, really authorizing contract labour. This Act was operative till 1868. Under its

influence and other favourable conditions there was a vast increase in immigration by 1866. From 72,183 in 1862, the numbers sprang up to 332,577 in 1866.

In the early seventies sentiment began rapidly to form against certain types of immigrant. This was partly due to the organization of the labour movement. It was more largely due to a vast increase of Oriental migration. Acts were passed prohibiting the equipping of ships to carry on the trade in coolies. A system of coolie labour had developed amounting practically to slavery. In 1875 any person contracting for coolie labour was liable to indictment for felony. From 1877 on, an opposition, centred on the Pacific Coast, developed against the further immigration of Chinese labour, and this first took shape in the treaty of 1880 mentioned above. On 6 May, 1882, an Act was passed by Congress forbidding the admission of Chinese labour for ten years. This Act, with certain changes, has been continued to the present day. No Chinese labourer may now enter the United States. No Chinese may become a citizen unless he be born here, in which case citizenship is secured to him by the Fourteenth Amendment of the Constitution. These restrictions, both as to entry and naturalization, have been from time to time extended till they now apply to nearly all Orientals. The following table shows the growth of Chinese immigration to the United States in sixteen typical years:—

1857.....	4,524	1881.....	11,890
1858.....	7,183	1882.....	39,579
1859.....	3,215	1885.....	22
1860.....	6,117	1890.....	1,716
1865.....	3,702	1895.....	975
1870.....	15,714	1900.....	1,247
1875.....	16,437	1906.....	1,544
1880.....	5,502	1910.....	1,770

It will thus be seen that the Chinese Immigration Law has been fairly successful as a measure of exclusion.

The first statute covering the general question of immigration was enacted by Congress on 3 August, 1882. The purpose of this and subsequent legislation has been threefold. It was necessary to provide for a more effective administration of matters of immigration. This involved the concentration of authority in federal hands and the creation of a fund for this purpose. The Act of 1891 gave the control of immigration to the Federal Government exclusively, doing away with concurrent administration. The Act of 1882 had begun the formation of a fund by imposing a head-tax of 50 cents on each alien immigrant entering a port of the United States; this tax was afterwards (1903) raised to \$2 per head, and it now produces enough to carry on the department and leave a slight surplus. The law of 1891 created the office of superintendent of immigration, later changed to commissioner-general of immigration. The Act of 1903 added much to the needed control. It created a number of excluded classes, which may be grouped under three general heads: those physically, those mentally, and those morally diseased. Under the general head of physically unsound are many excluded classes, the most stringent rules covering those having loathsome and contagious diseases, especially trachoma and tubercular affections. Idiots and lunatics are excluded. Among those regarded by the Act as morally unfit, or "the anti-social class", are Anarchists and those accused of plotting against government, all criminals and fugitives from justice, all women immigrating for immoral purposes, all prostitutes and procurers of girls or women for purposes of prostitution. There is provision excluding paupers and those who are likely to become a public charge. All those are excluded who have come under contract to labour, or who have their expenses paid by another, except that immi-

grants' relatives may send money to aid them. Certain of these cases are made criminal: importation of women for lewd purposes, prepaying passages under contract to labour, promising employment to aliens through advertising, bringing diseased aliens in by other than regular routes—all these are constituted criminal offences against the United States.

The Act of 20 February, 1907, is the latest statute of the United States dealing comprehensively with immigration. It constitutes the proceeds of the head-tax a permanent immigrant fund (changed by the Act of 1909), formed so that these moneys go to the general fund. This law of 1907 still further extends the limits of the excluded classes. It makes the prohibition of contract labour stricter, as well as the exclusion of lewd women and girls, and of the procurers of such. It forbids the advertising by anyone for purposes of securing labour to come to this country; limiting such advertisement to furnishing necessary data of sailing, rates, etc. This Act also requires that a list and full descriptions of the aliens coming with each ship shall be furnished. Provision is also made for deporting such persons as may be illegally landed, the time for legal deportation being extended from one year to three years. The Circuit and District Courts are given full jurisdiction in all matters arising under the immigration laws. The Act furthermore makes provision for the calling of an international conference to discuss matters relating to immigration. Some details are relegated to be dealt with by the Department of Commerce and Labor.

EFFECTS OF LEGISLATION IN THE UNITED STATES.—Restrictive legislation shows its results in three ways; the number of immigrants debarred and returned immediately on attempting to land; the number subsequently apprehended and deported; the number of those stopped at the port of departure. Figures are obtainable on the first and second of these classes; they are only conjectured as to the last. It is, however, unfair to measure the effects of legislation by these tests alone; the deterrent influences are also powerful. During the past seventeen years about one per cent of all those coming to the ports of the United States have been either debarred from or deported after, entering. The following table shows approximately the percentage of immigrants debarred or deported for all reasons in certain typical years during that period:—

Year	Gross Immigration	Debarred	Deported	Total Excluded	Percentage Excluded
1892	579,663	2,164	637	2,801	·483
1895	258,536	2,419	177	2,596	1·004
1900	448,572	4,246	356	4,602	1·025
1905	1,026,499	11,879	845	12,724	1·239
1906	1,100,735	12,432	676	13,108	1·190
1907	1,255,349	13,064	995	14,059	1·083
1908	782,870	10,902	2069	12,971	1·656
1909	761,786	10,411	2124	12,535	1·667

Of the 10,411 excluded in 1909, 4401 were likely to become public charges; 2084 had trachoma; 1172 were contract labourers, while 402 were sent back as immoral. Although a larger number of Chinese have been admitted in recent years, a larger number has also been deported. There are, of course, many obvious difficulties in the way of enforcement. Many of the reasons for debarring are difficult to establish—such as many forms of disease, various types of immorality, and weak physical condition with no real organic ailment. Again, the contract labour law is hard to enforce because of so many effective means of evasion. Among these the most serious has been the increased immigration through Canada, which results either in smuggling pure and simple—or by means of a year's residence in Canada—in the evasion of certain regulations—e. g. the head-tax. However, the laws as at present administered, especially with the co-operation of foreign governments, are at least pointing

in the right direction and supplying the country with a better selected body of immigrants.

DISTRIBUTION OF IMMIGRANTS IN THE UNITED STATES.—A. *As to Origin.*—There have been several changes in the origin of migration to the New World. From southern Europe—Italy, Spain, and Portugal—it began when the Americas were new, and migration was a hardy venture. It then shifted northward till the peoples of northern countries began to send many colonists out to America. After the formation of the Republic, its immigrant population came chiefly from northern Europe and so continued well into the nineteenth century. One of the most striking features of migration to America has been the latest change in the sources of the stream, which now flows more strongly from the South and East. This change has been very marked. From 1841 to 1850 45·57 per cent of the immigration to the United States was from Ireland; from 1871 to 1880 only 15·1 per cent. From Germany between 1841 and 1850 there came 25·37 per cent; from 1861 to 1870, 36·63 per cent; from 1871 to 1880, 25·74 per cent, while in 1909 Germany furnished only 8·5 per cent, and Ireland 4·3 per cent of the immigration. From 1820 to 1902 Germany sent 24·98 per cent of all the immigrants, and Italy had sent 66·6 per cent; in 1903 Italy sent 26·91 per cent. In 1907 Italy sent 285,731, while Germany, Scandinavia, and the United Kingdom combined sent 201,337. In 1910 Italy sent 223,431 immigrants; Germany, 71,380; England, 53,498; there were also 128,348 Poles and 52,037 Scandinavians. In 1880 Italy and Austria-Hungary sent 11,765 immigrants; in 1907 these two countries sent 624,184, about one-third more than the total immigration in 1880. From 1872 to 1890 there came to the United States 356,062 Italian immigrants; from 1890 to 1900, 655,888. These figures illustrate what might be much further amplified; the change in source of the immigration to the United States in the last few decades. Further analysis would show many minor divergencies. From Italy come two different types: northern Italy furnishes one; southern Italy and Sicily another. These vary widely in mental characteristics, in industrial habits, and in wealth. They furnish needed elements to our population, lending colour and vivacity to the American nationality. Equally clear are the types of Jews now coming in such numbers. In earlier times there were the Spanish and Portuguese Jews. Later, the migration of Jews had its origin in Germany, and the German Jew was the rule. The great majority of Jews who now migrate to the United States are of Russian origin. There has also been a change in the Irish immigrant. At first the Irish migration was largely from the North, contained a large admixture of Scotch blood, was Protestant in religion, and agricultural in pursuits. The centre of emigration has since then shifted to the South, the emigrants are more largely Catholic in religion, and they settle in the cities.

A variety of causes affecting both northern and southern Europe help to explain these changes. During the period of the greatest German migration the interests of that nation were changing from agrarian to industrial. During this transition a large number of persons were left without occupation, as the older order broke up, and many of these migrated. The stream of migration from Ireland was necessarily checked as that population became more and more seriously depleted, falling to about one-half its number in 1846. During this same time there was a marked increase of population in the southern and south-eastern countries, and owing to various causes a high birth-rate has been accompanied by a low death-rate. A surplus of population resulted, and migration from those countries was the consequence. Low industrial organization there, high industrial demand here, and labour naturally flowed into the area of high demand.

A feature less fundamental is the development of the means of transportation to and from southern ports. In interesting contrast to the earlier domination of the sea by the Romance nations was the transfer of maritime power in the sixteenth and seventeenth centuries into Dutch and English, and, later, into German, hands. This led to a marked neglect of southern ports, and not till a generation ago did the merchantmen begin to reorganize the lines to tap southern countries and call at southern ports. The Italian lines sailing from southern ports doubled in tonnage, and the construction of ships in those ports, for Italian and Austrian trans-Atlantic traffic, became a flourishing industry. Gradually the southern harbours became active in a trade the most important item of which was the transportation of immigrants to the United States. Typical of this change was the growth of the cities of Genoa, Naples, and Trieste. The growth also of the German lines must also be considered. These, together with the extension of railway lines leading to the harbours, have done much to develop the migration from southern and south-eastern countries. From 1880 to 1890, Germany sent to the United States 1,452,977 persons; during the same period Italy sent but 307,309. In the year 1909 Germany sent 58,534, while Italy sent 190,498. Germany formerly supplied one-third of the immigration to the United States; now, less than one-tenth is from that source. Between 1860 and 1870, the British Isles, Germany, Scandinavia, and Canada together supplied 90 per cent of the total immigration to the United States; between 1890 and 1900, only 41 per cent. In 1869 Austria-Hungary, Italy, Poland, and Russia together supplied only 1 per cent; in 1902, the same group of countries supplied 70 per cent.

B. As to Destination.—The distribution of the immigrant population in the United States may be considered (1) Geographically, (2) As to Occupation.

(1) Geographically.—The most obvious distinction is between North and South. From the beginning of the Republic until 1866 there was practically no immigration into the southern States. While slavery existed, the South had no immigrant problem, the only foreigners entering that section being those brought in by the illicit slave trade. The North being considered as the home of the immigrant, the North Atlantic States stood first in percentage of foreign-born. In 1903, according to Dr. Hall, 22·6 per cent of the population in the North Atlantic States were aliens; 15·8 per cent in the North Central; 20·7 per cent in the Western; only 4·6 per cent in the South Central and South Atlantic. In 1909, more than 50 per cent of all the aliens in the country resided in the North Atlantic States; of these, New York was the choice of 220,865; Pennsylvania of 112,402; Massachusetts of 61,187; New Jersey of 41,907. New York received 75,988 Italians—somewhat less than one-half their total number; Pennsylvania took 33,000 Italians. The marked changes in percentages since 1850 are in the North Atlantic States, which received 59 per cent of the immigration then and now receive about 50 per cent; and in the Western States, which in 1850 had 1·2 per cent, 8·2 per cent in 1900, and in 1909 6·5 per cent of all the new arrivals. In 1900, one-eighth of the whole population was foreign-born; in 1909, aliens formed one-tenth of the rural and one-fourth of the urban population.

(2) As to Occupation.—The rapid development of industrialism in the United States has a marked selective effect on a population that is unsettled. That it should act with increasing power on a drifting immigrant population is to be expected; as the century advances, the effect is shown in a great increase of urban immigration. A corresponding lessened interest in agriculture is due partly to the growth of manufactures, partly to the changed nature of population. On

the other hand, the important mining industries still draw very heavily on the immigrant for their labour. The tendency, therefore, is for an ever-increasing percentage of the immigrants to settle in the large cities. According to Professor Smith, in 1880 the cities took 45 per cent of the Irish immigrants; 38 per cent of the German, 30 per cent of the English and Scotch, and 60 per cent of the Italian. In Fall River 80 per cent of the population are foreigners; New Britain shows even a larger percentage. The figures for New York, Boston, Milwaukee, and Chicago show still more impressive contrasts. In 1900 the total population of the principal cities of the United States was 19,757,618, leaving in the remainder of the country 56,541,769. In 70 leading cities of the North Atlantic section there were 3,070,352 foreign-born; outside these cities were 1,685,544 foreign-born, or 30·5 per cent of the aliens were in the cities, and 15·4 per cent of all of the foreign-born lived outside the cities. In the South Atlantic States 9·2 per cent of the urban population and 1·1 per cent of the rural were foreign-born; in the North Central, 25·4 per cent of the urban and 12·9 per cent of the rural; in the Western, the percentages were 27·2 and 18·5 per cent. There are 86 cities in which at least 20 per cent of the population is foreign-born and 27 cities in which they form more than one-third of the total population.

The attitude of the United States at the present time (1910) towards foreign immigration is one of caution. Actual and projected legislation aims, not at exclusion, but at selection. It is recognized that the assimilative power, even of America, has its limits. Legislation must, by the application of rational principles, eliminate those incapable of assimilation to the general culture of the country. Great care is, of course, necessary in determining and applying these principles of selection: an educational test, for instance, while it would exclude much ignorance, would also exclude much honesty, frugality, industry, and solid worth. It is probable that a more vigorous system of inspection of immigrants at ports of entry will be put in force, while a stricter control will be exercised over the steamship companies. At the same time, the co-operation of foreign governments is needed, if the exclusive measures designed for the protection of the United States against undesirable immigration are to be made thoroughly effective.

Milan, ARCHDIOCESE OF (MEDIOLANENSIS), in Lombardy, northern Italy. The city is situated on the Orona River, which, with three canals, the Naviglio Grande (1257-72), the Naviglio Martesana (1457), and the Naviglio di Pavia (1805-19), is the highway of the commerce of this great industrial centre, called the moral capital of Italy. The soil is very fertile and there is extensive cattle-raising and manufacturing throughout the province. The name of Milan is probably derived from the Celtic *mel lan*, which means "in the middle of the plain". The city was founded in 396 B. C. by the Insubres, on the site of the ruined Melpum, and became the chief centre of the Cisalpine Gauls. After the defeat of the Gauls near Clastidium, Mediolanum was taken by the consul Lucius Scipio (221) and be-

came a Roman *municipium*. In 45 B. C. it obtained Roman citizenship, and under the emperors it had famous schools and was a flourishing city, the Emperor Adrian having made it the seat of the *praefectus Liguria* and Constantine, of the *vicarius Italiae*. After A. D. 296 it was several times the capital of the emperors of the West (Maximian Herculus, Valentinian I, his son Honorius, and later, of Ricimer and of Odoacer). The edict of toleration of Constantine and Licinius (313) was agreed on and published at Milan. In 452 the town was besieged by Attila, and in 538 destroyed by Uraia, a nephew of Vitiges, King of the Goths, with a loss, according to Procopius, of 300,000 men. Perchance for this reason the Lombard kings did not thereafter select Milan for their capital, though Bertarius did so during the brief division of the kingdom between the sons of Gundobad (661). After Charlemagne, Milan was the seat of counts, whose authority however, was overshadowed by the prestige of the archbishops, foremost among whom was Ansperto da Biassono (869-81), who fortified the town and adorned it with beautiful buildings. In 896-97 it endured a severe siege by the Hungarians, and a century later Otto II transferred the title of count to the archbishops. The most distinguished of these was Ariberto (1018-45), who induced Conrad II to take the crown of Italy. With the assistance of the people he made war on Pavia and Lodi (1027), on which account he incurred the enmity of the greater feudal lords whom he exiled, but who, leagued together, defeated the archbishop at Campo Malo (1035), and returning to the city, called Conrad to their assistance; the latter, however, besieged Milan in vain (1037). Though the struggle continued, a noble, Lanzano, and no longer Ariberto, headed the popular party. Finally, nobles and burghers entered into compacts, and this intermingling of the classes brought the commune into existence. At the same time studies, the industries (especially wool), and commerce flourished.

As the power of the burghers grew, that of the archbishops waned, and with it the imperial authority which the prelate represented, so that Milan in 1110, refused to pay tribute to Henry V, who had come into Italy. In 1116 the public authority passed entirely into the hands of consuls elected by the people. Milan made war on cities faithful to the empire: Pavia, Cremona, Lodi (destroyed 1111), and Como (destroyed 1127). Frederick Barbarossa wished to remedy these evils, and in 1158 obliged Milan to swear allegiance to him and to receive an imperial podestà. This officer was soon driven from the city, but in 1162 after a long siege, Milan was again reduced to obedience, and in part destroyed. The battle of Legnano (1176) secured their rights to the Lombard cities, and to Milan its consular government; but on many occasions the authority of a foreign podestà was substituted for the native consuls. The long period of peace was favourable to agriculture (greatly furthered by the Cistercians), also to the wool and the silk industries, in the former of which, throughout Milanese territory, 60,000 men were employed, while the silk industry supported 40,000 persons. The struggle against the empire was renewed under Frederick II, who ignored the rights won at the peace of Constance. A second Lombard League was formed, which Frederick defeated at Cortenuova, though he did not succeed in his ulterior purpose. Thereafter Milan entered into further wars with Ghibelline cities, especially with Pavia. The nobility remained favourable to Frederick and to his successors, and this caused internal strife in Milan, and the creation of a new office, that of *capitano del popolo*. The first to hold it was Pagano della Torre, elected in 1240 by the *Credenza di San Ambrogio*, the executive branch of the city government, composed of twelve members representative of the three orders of citizens. The legislative power was exercised by the General Council, the number of whose members was variable.

The *capitano del popolo* was hated by the nobles, and when Pagano della Torre was succeeded (1247) by his nephew Martino, under the title of *anziano della Credenza*, the nobility sought the assistance of Ezzelino da Romano; but Martino overcame the resistance of the nobles, and also defeated Ezzelino, introduced reforms into the public administration, and distributed the public offices with equity. A new civil war was prevented by the "peace of St. Ambrose" (1258), at which the equality of nobles and people was agreed on. As conflicts continued, Martino called to his assistance Oberto Pelavicino, a well-known soldier with whose help Martino had finally vanquished Ezzelino da Romano. In 1263 Filippo, brother of Martino, was real lord of Milan, though he carefully avoided any such title, and as other cities—Como, Lodi, Novara, Vercelli, also La Valtellina, were subject to Milan, he may be called the founder of the duchy. His nephew Napoleone, under the title of *anziano del popolo*, exercised supreme power (1265-77), and in his later years was imperial vicar for Italy, notwithstanding the fact that he was a Guelph. The archbishop Ottone Visconti, who since 1262 had been prevented from taking possession of his see, organized the nobles exiled from Milan, and after several battles, succeeded in capturing Napoleone and his relatives, whom he locked up in cages at Como.

The archbishop then caused himself to be proclaimed perpetual lord, thus putting an end to the Republic of Milan and founding the power of the Visconti, which aimed at the conquest of the entire peninsula, though its real domain was limited by the Alps, the river Sesia, and the Po, while the east extended as far as Brescia, conquered in 1337. From 1302 to 1311, the della Torre were again in power, Guido of that family having driven Matteo I Visconti from Milan. When the latter returned, he was made imperial vicar by Henry VII, and devoted himself to driving the leaders of the Guelph party from the Lombard cities. On this account John XXII declared war, and sent Cardinal Bertrand du Poyet against Matteo. Galeazzo, Matteo's son, continued the war against the legate and the Guelphs, and adhered to the party of Louis of Bavaria. His son Azzo (1329-59) contributed to the ruin of the Scaligers, obtained Brescia, and was succeeded by his sons Luchino (1339-49), famous for the refinement of his cruelty, and Giovanni II (1349-54), Archbishop of Milan, who obtained possession of Genoa and Bologna, though unable to hold either of these towns, or the cities of Asti, Parma, and Alexandria. At the death of Giovanni, Milan was divided between three brothers, his nephews: Matteo II, who died in 1355; Galeazzo II (1354-78), and Bernabò (1354-85) all patrons of literature and of the arts, but odious through their cruelty, misgovernment, and exorbitant taxes. Accordingly, a strong league was formed against them in 1367, by Pope Urban V, Charles IV, the towns of Florence, Ferrara, Mantua, and others, but it was prevented, by fortuitous circumstances, from destroying the power of the Visconti. Galeazzo was succeeded by his son Giovanni Galeazzo, who was forced into war, with his uncle Bernabò, and having taken him in ambush, cast him into prison, where he died in 1385. The state of the Visconti was thus united again and in 1395, Giovanni Galeazzo received the title of duke. In 1387 he had conquered Verona and Vicenza. During his reign the duchy of Milan was at the height of its power, and contained the following cities: Pavia, Bergamo, Brescia, Cremona, Como, Novara, Vercelli, Alexandria, Valenza, Tortona, Piacenza, Parma, Reggio, Verona, Vicenza, Belluno, Pisa, Siena, and Perugia. Giovanni Galeazzo was eminent, both for good and evil; the Carthusian monastery of Pavia is a witness of his religious sentiments and of his taste for the arts. He died in 1402, leaving two sons, minors, Giovanni Maria and Filippo Maria. During their minority, many conquered possessions were lost; but,

Giovanni Maria having been assassinated in 1412, Filippo Maria remained sole duke, and with the assistance of Carmagnola, retook a great portion of the lost territory. The offensive proceeding of Filippo Maria caused the house of Este, the Gonzagas, and Venice to form a league against him, which led to a long war; in the course of it, several famous battles were fought, among them that of Macclodio (1427), by which the Duke of Milan lost Bergamo and Brescia, and the naval battle of Portofino (1431) disastrous to the Genoese allies of Milan. The peace concluded in 1433 was favourable to Venice; but the war broke out again, and continued until the death of Filippo Maria, in 1447, when the Ambrosian Republic was proclaimed (1447-50).

For military reasons, Francesco Sforza was made *capitano del popolo*, and succeeded in taking possession of the fortress and in having himself recognized duke (1450). This event led to a new war with Venice and the King of Naples, closed by the peace of Lodi in 1454. Francesco was succeeded in 1466 by his son Galeazzo Maria, who, hated by his subjects, was stabbed to death in 1476. His son Giovanni Galeazzo had as regent, first his own mother, and then (1480), his ambitious uncle Ludovico il Moro, who succeeded his nephew, at the latter's death in 1494. Louis XII, who pretended to rights over Milan, entered into a compact with Venice for the division of the duchy. Ludovico il Moro attempted to resist them, but was constrained to seek refuge in Germany, and Milan came under the power of the French. In 1500, Duke Ludovico returned to his dominions for a time, but other French troops were sent against him, and he died a prisoner in France. The expulsion of the French from Italy ensued upon the death of Gaston de Foix, the victor of Ravenna (1512), and Milan was given to Maximilian Sforza, a son of Ludovico il Moro, although the Spaniards were its real masters. After the battle of Marignano, Maximilian surrendered Milan at the end of a brief siege, and remained a prisoner. The French had been definitively excluded from the peninsula by the battle of Pavia, when Francis II, a brother of Maximilian, became duke, and at his death Charles V took the Duchy of Milan for himself, and bequeathed it to his successors on the Spanish throne. The peace of Utrecht (1713) gave Milan to Austria, which power had occupied the duchy since 1706. During the war of the Austrian succession, Austria's dominion over Milan was interrupted for a time (1745), and France even offered the duchy to Savoy. Under Maria Theresa and Joseph II much was done for the prosperity of the Milanese, and civil and ecclesiastical reforms were also introduced. In 1796 Milan became the capital of the Cispadan Republic, soon transformed into the Cisalpine Republic, and (1805) into the Kingdom of Italy; the Cispadan Republic was supported entirely by French arms, which checked by Austria (1799), returned victorious, after Marengo. In 1814 the Austrian domination was re-established, and lasted until 1859. Encouraged by the revolution of Vienna in 1848, Milan revolted, in an effort to throw off the foreign yoke; and the five days (18 to 22 March of that year) remain famous; a provisional committee was formed and the Austrians were compelled to retreat; but the consequent war, Piedmont having taken up the cause of Italy, was disastrous to the insurgents; and Milan (with Lombardy) again became subject to Austria. The war of 1859, however, decided the final annexation of Lombardy to the Kingdom of Italy.

Milan is an archiepiscopal see. According to an eleventh-century legend the Gospel was brought there by St. Barnabas, and the first Bishop of Milan, St. Anathalon, was a disciple of that apostle. But a diocese cannot have been established there before 200, and possibly not till much later, for the list of the bishops of Milan names only five predecessors of Merocles, who

was at the Council of Rome (313). During the persecutions several Christians suffered martyrdom at Milan; among them Saints Gervasius and Protasius (first persecution of Diocletian), St. Victor (304), Sts. Nabor and Felix, and Sts. Nazarius and Celsus. Among its bishops should be named St. Eustorgius, St. Protasius, and St. Dionysius, who firmly opposed the Arian emperor Constantius, and was exiled to Cappadocia (355), while the Arian Auxentius was put on the episcopal throne of Milan. But the people remained faithful to the Catholic religion. At the death of St. Dionysius, the great St. Ambrose was elected bishop (375-97), vanquished paganism and Arianism, and was the guide of those good princes Gratian, Valentinian II, and Theodosius. He was succeeded by St. Simplicianus (397), and Venerius (400); Lazarus (438-49) appears to have amplified the Ambrosian rite of Milan; Laurentius (490-512) presided over the Roman councils in the cause of Pope Symmachus; St. Datius (530-52), lived almost always in exile at Constantinople, on account of the Gothic War; Vitalis (552) adhered to the schism caused by the "Three Chapters", but Auxanus (556) re-established the union of the diocese with Rome. Honoratus (568) sought refuge in Genoa, with a great number of his clergy, during the siege of Milan by the Lombard Alboin, and at his death the Milanese at Genoa elected to succeed him Laurentius II, while Fronto (elected at Milan) was not recognized. When Laurentius died, King Agilulfus wished to secure the election of an Arian bishop, in which, however, he was thwarted by the vigilance of St. Gregory the Great, and both at Genoa and at Milan, Constantius was elected to the vacant see; under him, the cathedral of Monza was erected, Agilulfus became a Catholic, and the conversion of the Lombards to the Faith was begun, while the episcopal residence was again taken up at Milan. The first prelate of this diocese who bore the title of archbishop was St. Petrus (784), but it is certain that St. Ambrose had already exercised metropolitan jurisdiction over northern Italy, from Bologna to Turin, and that the Frankish king Childebert gave to Bishop Laurentius II the title of Patriarch. St. Petrus established an asylum for foundlings, one of the first institutions of its kind in Europe. Mention has been made above of Ansperto da Biassono.

In 980 Landolfo, a son of the imperial vicar, Bonizo, became archbishop through simony; he was driven from the city on account of his abuse of power, but was taken back by the emperor Otto II, and repaired the evil that he had done. He was succeeded by Arnolfo II (998) and Ariberto d'Intimiano (1018), mentioned above. The latter was succeeded by Guido (1045), also a simoniac. At this time the morals of the clergy were deplorable: simony and concubinage were common, and out of these conditions developed the famous *pataria*, a popular movement for social and ecclesiastical reform, headed by the priest Anselmo da Biaggio, later Bishop of Lucca, and by the cleric Arialdo, both of whom used force to compel the clergy to observe continence, and to drive its members from benefices obtained by simony. From this great confusion ensued. In 1059 Nicholas II sent to Milan St. Peter Damian and the same Anselmo, at which the people murmured, demanding that the church of Milan be not subject to that of Rome. Archbishop Guido, however, promised amendment, and accepted the conditions imposed upon him, but soon relapsed, and Arialdo, with whom the noble warrior Eriembaldo was associated, began again to agitate the people, in consequence of which he was brutally assassinated 27 June, 1066. Eriembaldo then gave a military organization to the *pataria*, and Guido, who was excommunicated, was compelled to leave the city. While the election of his successor was being discussed, Guido sold the archiepiscopal dignity to his secretary. Until 1085 there were several pretenders to the see;

CATHEDRAL, MILAN

BEGUN UNDER GIAN GALEAZZO VISCONTI IN 1386, FINISHED UNDER NAPOLEON IN 1805

and in one of the many tumults caused by this condition of affairs Eriembaldo was killed (1074). Under Anselm III order was re-established.

Unfortunately, the *pataria* had created an anti-clerical sentiment in the people, and had prepared them to accept the doctrines of Manichæism. In fact, the Cathari of Italy were more frequently called *Patari*, and in Milan, one of their chief centres, they maintained a kind of university. Archbishop Oberto was exiled by Barbarossa in 1162; and though his successor, St. Galdino, was elected at Rome by the emigrated Milanese, he was able to take possession of his see in 1167; he reorganized the hospital del Broglio. Archbishop Uberto Crivelli became Pope Urban III in 1185. At an archiepiscopal election, in 1263, no agreement could be reached, for the people wanted Raimondo della Torre, and the nobles a member of the family of Settala; therefore Urban IV appointed Ottone Visconti, who was prevented by the Milanese from taking possession of his see until 1277, when he entered Milan, both as archbishop and as lord. Roberto Visconti, who succeeded John in 1354, was obliged to enter into litigation with his brothers for the property of the Church, which they regarded as the personal property of their uncle. Among other archbishops of Milan were Pietro Filargo (1402), who became Alexander V; Fra Gabriele Sforza (1454), an Augustinian, brother of Duke Francesco and founder of the *Ospedale Maggiore*; and the cardinals Stefano Nardini (1461), Giovanni Arcimboldi (1448), Ippolito d'Este (1497), also the latter's nephew Ippolito (1520). During the incumbency of this prelate, always absent from his diocese, great abuses grew up which Giovanni Angelo Arcimboldo (1550) and St. Charles Borromeo (q. v.) sought to remedy (1561). Here it is enough to mention the latter's zeal for the reformation of morals, his earnestness in preserving the Ambrosian Rite and extending its use throughout the archdiocese (Monza alone retaining the Roman rite), and his foundation of the Oblates for diocesan missions. His work was continued by Gaspare Visconti (1584) and by a nephew of St. Charles, Federigo (1594-1631), who was a cardinal, as were all of his successors, to Filippo Visconti (1784-1801), whose nomination by Joseph II, made without the consent of the Holy See, nearly brought on a schism. He was followed by Cardinal Caprara, well-known as Apostolic legate to the court of Napoleon. After the death of this prelate in 1811 the See of Milan remained vacant for six years; the next archbishop, Cardinal Carlo Gaetano Gaisruck, was appointed in 1818, and governed the diocese until 1848 "more as a soldier than as a prelate". He was especially opposed to the re-establishment of the religious orders. Archbishop Paolo Angelo Ballerini (1859-67) was never able to take possession of his see, because the Italian Government denied him the *exequatur*; and his auxiliary bishop Dominioni was also persecuted.

Councils were held at Milan in 343 and 347, against Photinus; 355, in the cause of St. Athanasius, at which the Emperor Constans menaced the bishops; 390, against Jovinian; 451, against the Robber Council of Ephesus; 680, against the Monothelites; 1060, 1098, 1117, 1287, for ecclesiastical reforms. The diocesan synods of St. Charles Borromeo and those of 1636 and of 1669 were also reform synods. Diocesan synods were held in 1609 and 1850 respectively. The suffragan bishops of Milan were wont to meet each year at Rò; their sees are Bergamo, Brescia, Como, Crema, Cremona, Lodi, Mantua, and Pavia. The archdiocese has 788 parishes, with 1,828,000 inhabitants, 27 religious houses of men, and of women nearly 80 in the city and 220 throughout the diocese; it has 43 educational establishments for boys and 176 for girls, 2 Catholic daily papers, and many important periodicals. In the Middle Ages there was a monastery at Milan, St. Cosmas, for Armenian monks of the Rule of

St. Basil; they depended, however, on a similar monastery in Genoa, and had no relation with Armenia. This order, which used the so-called Aquileian rite, was suppressed in 1650.

RELIGIOUS EDIFICES.—The wonderful Italian Gothic cathedral is built of white marble, has five naves, and is 486 feet in length; it is surmounted by 98 slender turrets, on the principal one of which is a bronze-gilt statue of the Madonna; there are, in all, 6000 statues, 2000 of which are on the exterior. The cathedral is situated on the site of the ancient basilica of Santa Maria Maggiore (fourth or fifth century), and was begun in 1386 by Giovanni Galeazzo Visconti. The tomb of St. Charles is under the cupola. The treasury of the cathedral contains, among other valuable objects, two statues, of St. Charles and of St. Ambrose, made of silver and set with precious stones, the gift of the city. The high altar is a gift of Pius IV. The church of St. Ambrose, built by its patron saint in 386, and often restored, especially in the twelfth century, contains the tomb of the Emperor Louis II; in the chapel of St. Satyrus is a mosaic that dates, probably, from the fifth century, while the central door, with wood-carvings representing scenes from the life of David, is held, on seemingly good grounds, to be of the time of St. Ambrose; the church possesses also a golden altar-front (*palliotto*) of Angilbert (835). The monastery annexed to this church had a fine library, and belonged at first to the Benedictines, later to the Cistercians; it serves now as a military hospital. The church of St. Eustorgius contains the mausoleums of Stefano Visconti, Martino della Torre, and others. The church of St. Stefano Maggiore is of the fifth century; that of San Vittore *al corpo* is the Basilica Portiana, dating from before the time of St. Ambrose; it contains the body of the martyr St. Victor, and also valuable paintings. San Nazaro Maggiore (382?) has a vestibule by Bramante, and contains the tombs of the Trivulzio family. In the church of St. Aquilinus there is a beautiful mosaic and the sarcophagus of a lady of the family of the Emperor Theodosius. Santa Maria delle Grazie is a church in the style of the Renaissance (1465), with a cupola by Bramante; it has valuable frescoes, beautiful carvings, and inlaid work in the choir; in the ancient monastery, which formerly belonged to the Dominicans, is the famous Last Supper of Leonardo da Vinci. On the site of the principal hall of the baths of Maximian, the peristyles of which remain, is built the church of San Lorenzo, containing ancient mosaics. The church of San Marco (1254) has a beautiful high altar, and valuable paintings; that of San Maurizio, said to have been built by Queen Theodelinda, is covered with frescoes by Luini between 1503 and 1509. San Satiro, a church that dates from 876, was restored by Bramante. There are also the church of the Holy Sepulchre, and others.

SECULAR EDIFICES.—Among these are the Palazzo di Corte (1228), restored several times; whose garden contains the Royal Villa (1790); the Broletto Nuovo, from 1228 to 1786 the palace of the commune; the Palazzo della Ragione (1233); the Broletto (1413-24), at present containing public offices; the Collegio Elvetico, founded by St. Charles Borromeo, and now the seat of the Court of Assizes; the Vittorio Emanuele gallery and the Castello Sforzesco.

SCHOOLS, ETC.—There are two episcopal seminaries, and the Lombard Seminary for foreign missions; the Academy of Sciences and Letters; the Technical Institute; the Superior Institute of Commerce; 3 royal and 6 private gymnasia; many others schools, 17 of which are under religious direction; the Verdi Conservatory of Music; the Lombard Institute for Sciences and Letters; the Royal Pinacoteca della Brera, formerly a Jesuit college, rich in paintings of the old Lombard school, and possessing a valuable numismatic collection. In the Castello Sforzesco is a museum of ancient and medieval art, while many of the private

palaces, such as those of the Borromeos and of the Trivulsios, contain valuable collections of paintings. The National Library in the Brera (1770) and the Ambrosian Library are famous. The latter was founded by Cardinal Federigo Borromeo (1609) and contains 200,000 volumes, besides 8300 manuscripts, 126 of which are illuminated with miniatures. The State and the municipal archives are important; so, also, in their sphere, are the astronomical and the meteorological observatories. Milan has 14 theatres, of which the Scala is world-famous. There are 17 hospitals and 5 polyclinics, also asylums for the insane, the blind, the deaf-mute, etc. There are nearly 5000 industrial establishments, with 150,000 workmen; the textile, typographic, and pharmaceutic industries are especially well represented.

CAPPELLETTI, *Le Chiese d'Italia*, XI (Venice, 1856); EUSTACHIUS A. S. UBALDO, *De metropoli Mediolanensi* (Milan, 1699); histories of Milan by ROEMINI (4 vols., Milan, 1820); CANTÙ, (2 vols., 1855); BONFADINI GIANETTI (4 vols., 1883-1904); AND, *Milan under the Sforza* (London, 1907); SAXIUS, *Archiepiscoporum Mediolanensium series* (Milan, 1755); the periodical *Milano Benefica* (1905 sqq.).

U. BENIGNI.

Milde, VINZENZ EDUARD, Prince-Archbishop of Vienna, b. at Brunn, in Moravia, in 1777; d. at Vienna in 1853. The admirable monument erected to him in the left wing of St. Catharine's chapel in the cathedral of St. Stephen in Vienna portrays a catechist bending over two children, inscribed "Charity", to the left, a priest in the act of elevating the Blessed Sacrament, attended by a young priest and a clerk, inscribed "and Prayer". Under these two inscriptions, and extending across the whole length of the monument are the words "link together the inhabitants of this world and those of the next". The monument thus bears witness to Milde's distinction as a catechist and as the founder of a seminary for priests and teachers. Towards the close of his preparatory studies, Milde felt called to the ecclesiastical state which his stepfather was very much opposed to his entering. His mother favoured his purpose, however, and poor and without acquaintances, he entered the "Alumnat" or little seminary at Vienna in 1794. Here he formed an intimate friendship with Vinzens Darnaut, the future professor of church history, and with Jakob Frint, later Bishop of St. Pölten. The three distinguished men were again united as court chaplains, and remained firm friends for the remainder of their lives. Meanwhile, Milde became catechist in the Normal High School and successor of the famous Augustin Gruber, and occupied also the chair of pedagogics at the university. Later, as court chaplain at Schönbrunn, Milde spoke so comfortably to the Emperor Francis I, inconsolable after a battle lost to Napoleon, that the emperor replied: "I shall never forget this hour, dear Milde." Not content with words, the emperor named Milde Bishop of Leitmeritz in 1823, and in 1831 Prince-Archbishop of Vienna, Milde being the first archbishop named from the ranks of the people to this see, which had hitherto been always occupied by a nobleman. His farewell address is thoroughly characteristic: "The bond of the sacred ministry is broken, but the bond of the heart will never be severed. Those whom I have loved, I shall love to the end, and, though separated from you, I shall remain united with you in charity and prayer. Pray our heavenly father not that I may live long, but that I may live for the salvation of the faithful and for my own salvation." Milde thus greeted the people of Vienna: "Not only do I wish to be united with you in the bonds of the sacred ministry, but I wish to be united with you in the bonds of charity. Not for myself, but for you do I wish to live." He kept the promise which he made to his flock, and was to them a solicitous and loving father.

Nevertheless, the year of the Revolution (1848) brought him his bitterest enmities and his most severe

illnesses. He was between two fires. On 13 March the storm broke, and four days later he warned his clergy, in a circular letter, not to overstep the bounds of their calling: "Priests are not intended to advise regarding the earthly affairs of men, nor to regulate them, but should only concern themselves with interior matters pertaining to the salvation of souls." But the revolution soon menaced the archbishop. Mock serenades were held repeatedly outside his palace and its windows were broken. On the other hand, a portion of the clergy clamoured that he should be declared incapable of managing the affairs of the diocese and expressed the hope of being led to victory by a stronger personality. A deputation of the clergy represented this to Milde, who complied as far as possible by retiring to his castle of Kranichberg. When the draft of the fundamental laws of the Austrian constitution was discussed by the assembly of the States of the Empire at Kremsier, the archbishop drew up an address to the assembly: "The undersigned bishops declare solemnly that they, as true citizens, promote the welfare and hold sacred the rights of the state, but it is the duty of their office and of their conscience to look after the freedom and the rights of the Catholic Church, to oppose encroachment and restriction on the part of the state, and to beg for that support which would promote the true interests of the state and the successful activity of the Church." At the great assembly of bishops in Vienna (1849), Milde was chosen one of a committee of five to continue the negotiations with the state. When finally in 1850 the imperial decisions were promulgated, which at first dealt a blow to the existing Josephist system, Milde published a pastoral for the purpose of stilling the tumult: "The uneasiness is indeed in great part the result of misunderstanding, but often also the result of malicious misrepresentation, since, through some newspapers and through speeches made by certain men inimical to the Church, the words of the august decree were distorted, and erroneous representations spread abroad." The words of Milde in "My last will" are strikingly beautiful. "Hope softens the separation. Those who did me evil I do not think wicked, but gladly persuade myself that I by my sensitiveness have in many cases been more deeply wounded than the occasion warranted. During the last years I have had to bear many bitter misunderstandings and shameful calumnies. I have kept silence through it all, not through apathy, but partly that the malice might not be excited further, and partly in imitation of my Redeemer."

Milde's "Lehrbuch der allgemeinen Erziehungskunde" is famous, and even yet much used (Vol. I: Von der Kultur der physischen und der intellectuellen Anlagen; Vol. II: Von der Kultur des Gefühls- und des Begehrungsvermögens, Vienna, 1811-13, 3rd ed., 1843). A compendium of the Erziehungskunde was published in 1821. J. Ginzl edited Milde's "Reliquien" (2nd ed., Vienna, 1859), which contained various discourses and addresses which he delivered as bishop and archbishop.

G. WOLFGRUBER.

Miles, GEORGE HENRY, dramatist and man of letters, b. in Baltimore, Maryland, 31 July, 1824; d. near Emmitsburg, 23 July, 1871. He graduated from Mount St. Mary's College, Emmitsburg, in 1842, and then took up the study of law, commencing to practise later in his native city. But the profession of

law was ill-suited to his temper of thought and to his literary talents, which had early evinced themselves in a tendency to turn many neat verses. His first appearance in print was with an historical tale, "The Truce of God", which appeared serially in the "United States Catholic Magazine", followed shortly by "The Governess", and in 1849, by "Loretto", which won a \$50 prize offered by the "Catholic Mirror". The following year, when but twenty-six years of age, with his tragedy of "Mahommed", he won the \$1000 prize offered by Edwin Forrest. The law was now definitely abandoned for the drama. In 1859 he scored his first success with the tragedy of "De Soto", produced at the Broadway Theatre, New York City, and during the same season his comedy, "Mary's Birthday", was performed. In 1859 "Señor Valiente" earned the distinction of being presented in New York, Boston, and Baltimore on the same night. During the season 1860-61 the "Seven Sisters", based on the theme of Secession, was produced at Laura Keane's Theatre, New York City. Other dramatic ventures were not so successful, and his most pretentious effort, "Cromwell, a Tragedy", remains unfinished. In 1851 he was despatched to Spain by President Fillmore on official business. He was again in Europe in 1864 and, on his return, published in the "Catholic World" a series of charming sketches, "Glimpses of Tuscany", and, in 1866, "Christine: a Troubadour's Song", and a volume of verse, "Christian Poems". In 1859 he had been appointed professor of English Literature at Mount St. Mary's, in which year, he married Adaline Tiers, of New York, and moved from Baltimore to Thornbrook, a cottage near Emmitsburg, where he lived until his death.

In addition to works of creative fancy, Miles delivered in 1847 a "Discourse in Commemoration of the Landing of the Pilgrims of Maryland", and, shortly before his death, contemplated a series of critical estimates on Shakespeare's characters. Only one, that upon "Hamlet", was published (in the "Southern Review"), which won no mean measure of appreciation from contemporary scholars in England.

Articles on *Mahommed* in *Southern Quarterly Review*, XVIII, 375; and *Poems of G. H. Miles*, by DIDIER in *Catholic World*, XXXIII, 145.

JARVIS KEILEY.

Mileto, DIOCESE OF (MILETENSIS), in Calabria, in the province of Reggio, southern Italy. According to tradition, the city was founded, not far from the site of the ancient Medama, by fugitives from Miletus in Asia Minor, destroyed by Darius. It suffered much from earthquakes, especially from those of 1905 and 1906, and, although in a less degree, from that of 28 December, 1908, which destroyed Reggio and Messina. Mileto was made an episcopal see by Gregory VII in 1073. The earthquake of 1783 destroyed the cathedral, built by Count Roger, who also built the monastery of the Most Holy Trinity and St. Michael for Greek Basilian monks. Callistus II united this diocese with those of Tauriana and Vibona, the latter destroyed by the Saracens. The first bishop was Arnolfo; after him were Godfrey (1094), under whom the see became immediately subject to Rome; Cardinal Corrado Caracciolo (1402); Cardinal Astorgio Agnensi (1411); Antonio Sorbillo (1435), who founded the seminary in 1440; Felice Centini (1611), afterwards a cardinal; Gregorio Ponziani (1640), charged with a mission to England by Urban VIII. The present incumbent (since 1898), Mgr. Morabito, has been a charitable father to the sufferers from the recent earthquakes. The diocese has 124 parishes, containing 220,000 souls; 2 convents of men, and 12 houses of nuns, 2 schools for boys, and 7 for girls.

CAPPELLUZZI, *Le chiese d'Italia*, XXI (Venice, 1870).

U. BENIGNI.

Miletopolis, a titular see of Asia Minor, suffragan of Cysicus. Miletopolis was a town north of Mysia,

at the confluence of the Macestus and the Rhyndacus, west of Lake Miletopolitis Limne. There seems to have been a tribe there, called Milatæ, of which Miletopolis was the chief town and whose name was helienized in order to suggest a colony from Miletus. Nothing is known of the history of Miletopolis except that its inhabitants served to colonize the city of Gargara. It has been identified with Bali-Kesser, Manias, Mikhalitch; but the first two identifications are certainly erroneous and the third doubtful. It was more probably located at Hammamli, in the vilayet of Brusa, where the remains of an ancient town can be seen. Miletopolis figures in the "Notitiæ episcopatum" among the suffragan sees of Cyzicus until the twelfth or thirteenth century; toward the end of the twelfth it was united with the See of Lopadium, as an archbishopric and later as metropolis. Le Quien (*Oriens Christ.*, I, 779) gives the names of some twelve bishops of Miletopolis; the first is Philetus, a contemporary of St. Parthenius, Bishop of Lampsacus, born at Miletopolis, in the beginning of the fourth century.

HAMILTON, *Researches*, I, 81; II, 91; SMITH, *Dictionary of Greek and Roman Geography*, s. v.; RAMSAY, *Asia Minor*, 159. S. PÉTRIDÈS.

Miletus, a titular see of Asia Minor, suffragan of Aphrodisias, in Caria. Situated on the western coast of Caria near the Latmic Gulf at the mouth of the Mæander and the terminus of several of the great roads of Asia Minor, Miletus was for a long period one of the most prosperous cities of the ancient world. At first inhabited by the Leleges and called Lelegeis or Pityussa, it was rebuilt under the name of Miletus by the Cretans (Strabo, XIV, i, 3). It is mentioned by Homer (*Iliad*, II, 868). About the tenth century B. C. the Ionians occupied it, and made it a maritime and commercial power of the first rank. From it numerous colonies were founded along the Hellespont, the Propontis, and the Black Sea, among others Cyzicus and Sinope. Miletus also had its period of literary glory with the philosophers Thales, Anaximander, and Anaximenes, the historians Hecateus and Cadmus, the rhetorician Eschines, and the writer of tales, Aristides. After the sixth century B. C., it passed successively under the domination of the Persians, Alexander, the Seleucides, and the Romans, and finally lost its splendour to such an extent as to become for the Greeks and Romans the symbol of vanished prosperity. It is, nevertheless, often mentioned by Strabo (XII, viii, 16; XIV, i, 3, 6) and by Pliny (*Hist. nat.*, IV, xi; V, xxxii etc.). St. Paul landed there from Samos, and there bade farewell to the ancients of the Church of Ephesus. On another occasion, doubtless after his first captivity, he left here his companion Trophimus, who was ill (*II Tim.*, iv, 20). In the Acts of St. Thyrsus and his companions, martyred at Miletus under Decius, mention is made of a Bishop Cæsarius who gave them burial (*Acta SS.*, III, Jan., 423). Eusebius, Bishop of Miletus, assisted at the Council of Nicea (325). For the list of the other known bishops see Le Quien (I, 917-20) and Gams (448). Mention may be here made of St. Nicephorus in the tenth century (*Anal. Bolland.*, XIV, 129-66). At first a suffragan of Aphrodisias, Miletus afterwards became an autocephalous archdiocese and even a metropolis. Among those who brought fame to the city during Byzantine times must be mentioned the architect Isidore, who, with Anthemius of Tralles, built St. Sophia at Constantinople. The ancient city is now buried under the alluvium of the Mæander, which has also filled up the Latmic Gulf. Near its site, about four and a half miles from the sea, is the village which since the medieval times has been called Palatia or Palatscha. Recent excavations have brought to light other ruins, the remains of a temple of Apollo Didymæus. Greek Christian inscriptions have also been found there, among others one mentioning the

martyr Onesippus, and another, probably of the fourth century, containing an invocation to the seven archangels, guardians of the city (Corp. inscr. gr., 2892, 8847).

Geog. of Asia Minor* (London, 1890), 37, 40, 58-60, 62, 422; PERROT AND CHIFFEZ, *Hist. de l'art dans l'antiquité*, VIII (Paris, 1904), 268-70.

S. SALAVILLE.

Miletus (originally MÜLLER), VITUS, Catholic theologian, b. at Gmünd, Swabia, 1549; d. at Mainz, 11 Sept., 1615. He studied at the German College, Rome, from 1567 to 1575; on 28 Oct., 1573, as dean of the students he gave a short address before Pope Gregory XIII, when he visited the newly organized academy. He was ordained in St. John Lateran on Easter Saturday, 1575, and returned to Germany in the summer of that year; on his way home he was made doctor of theology at Bologna (11 June, 1575). He was summoned to Mainz by the Elector Daniel Brendel von Homburg, where he was active in the reform of the clergy. From there he was sent by the elector to Erfurt, to assist the suffragan bishop Nicolaus Elgard in his efforts for the restoration of Catholicism. His sermons on the doctrine of the Eucharist, preached at Erfurt in Lent, 1579, involved him in sharp controversy with the Protestant preachers. He was sent to Rome in 1582 to bring the pallium for the new archbishop, Wolfgang von Dalberg. The latter brought him back again to Mainz, and employed him on important affairs, notably on the visitation of monasteries. Also in 1601 and 1604 he brought from Rome the confirmation and the pallium for the succeeding archbishops, Adam von Bicken, and Schweikart von Cronenberg. Under all these archbishops, the last of whom appointed him his spiritual counsellor, he was tirelessly engaged in defending the Catholic Faith, both by preaching and writing, until his death. He was provost of St. Moritz, dean of the Liebfrauenstift, canon of St. Victor's and St. Peter's, all in Mainz; and canon of St. Severus' at Erfurt. After 1575 he also had a canonry in the cathedral chapter at Breslau. He did not visit Breslau until 1599, and then only for a short time, while taking part in the election of a bishop; he then went to Rome to bring the confirmation of the elected bishop. His polemical and apologetic writings are:—"De festo Corporis Christi in honorem Jesu Christi" (Mainz, 1580); "Augenschein des Jesuiter Spiegels, so neuwlich zu Erfurd in truck aussgangen" (Cologne, 1582); "De sacramentis, mille sexcenti errores, vaniloquia et cavillationes eorum, qui hoc tempore ab Ecclesia secesserunt catholica, cum brevi eorum refutatione; plerique collecti ex Kemnitio" (Mainz, 1593); "Brevis discussio et refutatio sexcentorum errorum, quos duo Prædicantes Saxonici Tilemannus Heshusius et Joannes Olearius Pontificiis hoc est Christianis Catholicis vanissime hactenus attribuerunt" (Mainz, 1604).

Aufl., VIII, 1515 f.

FRIEDRICH LAUCHERT.

Milevum, a titular see of Numidia. In Ptolemy's "Geography", IV, iii, 7, the city is mentioned under the name of Mileum or Mireon. During the Roman era it was called Colonia Sarnensis Milevitana, after the River Sarnus in Campania, whence the colonists had emigrated. This name is often found in the inscriptions of the city. Together with Cirta, Collo, and Rusicade, Milevum formed the confederation known as the Four Colonies, the territory of which was very extensive. In the sixth century the Emperor Justinian had Milevum enclosed by a fortified wall, which still stands and forms a rampart for the Arabian city

of Milah (Diehl, "L'Afrique byzantine", Paris, 1896, 603 sq.). Two councils were held at Milevum, one in 402 and the other in 416; the second appealed to Pope Innocent I for the repression of the Pelagian heresy. Among the bishops of this titular see were Pollianus, present at the Council of Carthage in 255 and martyred two years later; St. Optatus, noted for his work against the Donatists, d. c. 385, and commemorated on 4 June; Honorius; Severus, fellow-countryman and friend of St. Augustine; Benenanus (484); Restitutus, who attended the Fifth Œcumenical Council in 553. Milevum, now Milah, is a city in the department of Constantine in Algeria, with 8000 inhabitants, 400 of whom are Europeans. We have quite a number of Latin inscriptions from this city and a colossal statue of Saturn.

TOULOTTE, *Géographie de l'Afrique chrétienne: Numidie* (Paris, 1894), 222-27.

S. VAILLÉ.

Milic, JAN, a pre-Hussite reform preacher and religious enthusiast, b. at Kremsier in Moravia, d. 29 June, 1374, at Avignon. From 1358-60 he was registrar and from 1360-2 corrector at the imperial chancery of Charles IV. In 1363 he was priest and canon, probably also archdeacon, at Prague; but towards the end of the same year he renounced all his dignities, began a life of extreme austerity and fearlessly denounced the vices of the clergy and the laity. At least once each day he preached at St. Nicholas's, later at St. Egid's in Prague, in Latin for ecclesiastics and in the Czech language for the laity. After the death of Conrad of Waldhausen in 1369 he preached daily at the cathedral in German. In the spring of 1367 he went to Rome where he was imprisoned by the Inquisition because he had declared to the people that Antichrist had arrived. During his imprisonment he wrote "Libellus de Antichristo", which he submitted to Pope Urban V, who upon his return from Avignon to Rome on 16 Oct., 1367, released him. In 1372 he founded at Prague a home for fallen women, which he called "Jerusalem". In 1373 the mendicants and the city clergy of Prague lodged twelve accusations against him with Pope Gregory XI at Avignon, whereupon he went to Avignon, was completely justified by the pope, and was even permitted to preach before the cardinals. There are extant in manuscript two collections of his Latin sermons, entitled "Gratia Dei" and "Abortivus". His "Libellus de Antichristo" was edited by Mencik in "Sitzungsberichte der böhmischen Gesellschaft der Wissenschaften" (Prague, 1890), 328-336.

MICHAEL OTT.

Military Orders, THE.—Including under this term every kind of brotherhood of knights, secular as well as religious, historians of the military orders have enumerated as many as a hundred, even after eliminating the apocryphal and stillborn. This great number is explained by the eagerness with which the Middle Ages welcomed an institution so thoroughly corresponding to the two occupations of that period, war and religion. Royalty afterwards utilized this new idea to strengthen its own position or to reward faithful nobles, creating secular orders of knighthood until there was no country without its royal or princely order. Even private individuals entered into the business; adventurers attempted to exploit the vanity of the noblesse by sham insignia of knighthood with which they decked themselves, and which they distributed among their dupes lavishly—though not gratuitously. Hence came a whole category of orders justly considered apocryphal. In the seventeenth century Marino Caraccioli (1624), a Neapolitan nobleman, succeeded in

passing himself off as Grand Master of the Order of Knights of St. George, which he pretended to trace to Constantine the Great. In 1632, Balthazar Giron, who called himself an Abyssinian, brought to Europe an order no less ancient, that of St. Anthony of Ethiopia, an imposture almost immediately unmasked by another Oriental, the learned Abraham Echelenius (1646). At the court of Louis XIV, a negro, brought to France from the Gold Coast, posed as a prince, even securing the honour of being baptized by Bossuet (1686), and instituted the Order of the Star of Our Lady before returning to his alleged dominions.

A regular order of knighthood means a brotherhood or confraternity which combines with the insignia of knighthood the privileges of monks. This supposes recognition on the part of both Church and State; to belong to the regular clergy, they needed the pope's confirmation; they could not wear the sword of knighthood without the authorization of the prince. Orders of knighthood lacking this official recognition should be expunged from history, even though they figure in the pages of all the old historians of the military orders. As a matter of fact, more than one rule of this kind, scarcely passing beyond the initial stages, has existed, and such are the orders which may be designated stillborn. No trace is to be found in the "Bullarium romanum" of the order called the Wing of St. Michael, attributed to King Alfonso I of Portugal (1176), nor of the Order of the Ship, which St. Louis was supposed to have founded on the eve of the crusade to Tunis where he died (1270), nor of that of the Argonauts of St. Nicholas, attributed to Charles III, King of Naples, 1382. Philippe de Mezières, chancellor of the King of Cyprus, drew up the statutes of an Order of the Passion of Christ (1360), the text of which has recently been published, but which were never enforced. After the conquest of Lemnos from the Turks, Pope Pius II founded an order of Our Lady of Bethlehem, intending to transfer to it the possessions of older orders which no longer fulfilled their purpose (1459), but the loss of the island prevented its institution. The same fate befell the German Order of the Christian Militia, projected (1615) under Paul V; of the French order of The Magdalen for the suppression of duelling (1614); of the Conception of Our Lady, the statutes of which, drawn up by the Duke of Mantua and approved by Urban VIII (1623), have remained a dead letter. The age of the crusades had passed. The orders of any historical existence may be reduced to three categories: I. The Greater Regular Orders; II. The Lesser Regular Orders; III. The Secular Orders.

I. THE GREATER REGULAR ORDERS.—The great military orders had their origin in the crusades, from which they retain the common badge of every order of knighthood, the cross worn on the breast. The oldest of these, the Knights Templars (q. v.), has served as a model for all the others. After barely a century of existence, they were suppressed by Clement V; but two remnants remained after the fourteenth century, the Order of Christ (q. v.) in Portugal, and the Order of Montesa (q. v.) in Spain. In the twelfth century Portugal had borrowed their rule from the Templars and founded the Portuguese Order of Avis (q. v.). Almost at the same time there arose in Castile the Order of Calatrava (q. v.) and in Leon the Order of Alcantara (q. v.). Contemporary with these purely military orders, others were founded, at once military and hospitaller, the most famous of which were the Hospitallers of St. John of Jerusalem and the Teutonic Knights, modelled on the former, both still in existence. In the same category should be included the Order of Santiago (q. v.) which spread throughout Castile, Leon, and Portugal. Lastly, there are the purely hospitaller orders whose commanders, however, claimed the rank of knights though they had never been in battle, such as the

Orders of St. Lazarus of Jerusalem (q. v.) and of the Holy Spirit of Montpellier (q. v.). With these may be connected the Order of Our Lady of Ransom (*Nuestra Señora de Merced*, also called Mercedarians), founded (1218) in Aragon by St. Peter Nolasco for the redemption of captives. Including religious knights as well as religious clerics, it was originally considered a military order, but dissensions arose and each rank chose its own grand master. John XXII (1317) reserved the grand-mastership to clerics, with the result of a general exodus of knights into the newly founded military Order of Montesa.

II. THE LESSER REGULAR ORDERS.—There is mention in the twelfth century, in Castile, of an Order of

KNIGHTS OF LIVONIA, OR SWORD-BEARERS

Montjoie, confirmed by Alexander III (1180), but difficult to distinguish from the Order of Calatrava, with which it was soon amalgamated. In 1191, after the siege of Acre, Richard I of England founded there in fulfilment of a vow, the Order of St. Thomas of Canterbury, an order of hospitallers for the service of English pilgrims. It seems to have been made dependent on the Hospitallers of St. John, whom it followed to Cyprus after the evacuation of Palestine. Its existence is attested by the Bullarium of Alexander IV and John XXII; beyond this it has left but little trace except a church of remarkable architecture, St. Nicholas, at Nicosia in Cyprus. Better known is the history of the Schwertsbrüder (*Ensiferi*, or Sword-bearers) of Livonia, founded by Albert, first Bishop of Riga (1197), to propagate the Faith in the Baltic Provinces and to protect the new Christianity there against the pagan nations still numerous in that part of Europe. Against these pagans a crusade had been preached; but, the temporary crusaders having made haste to withdraw, it became necessary, as in Palestine, to supply their place with a permanent order. This order adopted the statutes, the white mantle and the red cross of the Templars, with a red sword as their distinctive badge, whence their name of *Ensiferi*. The order was approved in 1202 by a Bull of Innocent III. Thrown open to all sorts of persons without distinction of birth, overrun by aimless adventurers whose excesses were calculated rather to exasperate the pagans than to convert them, it endured but a short time, having only two grand mas-

ters, the first of whom, Vinnon, was murdered by one of his fellows in 1209, while the second, Volquin, fell on the field of battle in 1236, with four hundred and eighty knights of the order. The survivors petitioned to be allowed to enter the Teutonic Order, of which the Knights of Livonia thenceforward formed one branch under a provincial master of their own (1238). Their possessions, acquired by conquest, formed a principality under Charles V (1525), and the last of their masters, Gottart Kettler, apostatized and converted it into the hereditary Duchy of Courland under the suzerainty of the kings of Poland (1562).

The Gaudenti of Our Lady at Bologna, confirmed by Urban IV in 1262, and suppressed by Sixtus V

KNIGHTS TEMPLARS

in 1589, were not so much a military order as an association of gentlemen who undertook to maintain the public peace in those turbulent times. An order of St. George of Alfama, in Aragon, approved in 1363 by Urban V, was merged in the Order of Montesa in 1399. The Knights of St. George, in Austria, founded by the Emperor Frederick III, and approved by Paul II in 1468, failing to perpetuate their existence, owing to the lack of territorial possessions, gave place to a purely secular confraternity. The Order of St. Stephen Pope was founded in Tuscany by the Grand Duke Cosmo I and approved in 1561 by Pius IV, being placed under the Benedictine Rule. It had its principal house at Pisa, and was obliged to equip a certain number of galleys to fight the Turks in the Mediterranean after the manner of, and in concert with, the "caravans" of the Knights of Malta.

III. THE SECULAR ORDERS.—Dating from the fourteenth century, fraternities of lay knights were formed modelled on the great regular orders; as in the latter, we find in these secular orders a patron, a vow to serve the Church and the sovereign, statutes, a grand master (usually the reigning prince), and the practice of certain devotions. Most of them also asked for the approbation of the Holy See, which, on the other hand, granted them spiritual favours—indulgences, the privilege of private oratories, dispensation from certain fasts, etc. The chief of these orders, classified by countries, are as follows:—In England, Edward III, in memory of the legendary Knights of the Round Table, established in 1349 a brotherhood of twenty-five

knights, exclusive of princes of the blood and foreign princes, with St. George as its patron and with its chapel in Windsor Castle for the holding of chapters. This, the Order of the Garter, takes its name from the characteristic badge, worn on the left knee. The choice of this badge has given rise to various anecdotes of doubtful authenticity. Nothing is now known of the original object of the Order of the Bath, the creation of which dates from the coronation of Henry IV (1399). A third order, Scottish by origin, is that of the Order of the Thistle, dating from the reign of James V of Scotland (1534). These orders still exist, though they have been protestantized. In France, the royal orders of the Star, dating from John the Good (1352), of St. Michael, founded by Louis XI (1469), of the Holy Ghost, founded by Henry III (1570), of Our Lady of Carmel, amalgamated by Henry IV with that of St. Lazarus (q. v.), were absolutely suppressed by the Revolution. Austria and Spain now dispute the inheritance from the House of Burgundy of the right to confer the Order of the Golden Fleece, founded by Duke Philip the Good, approved by Eugene IV in 1433, and extended by Leo X in 1516.

In Piedmont, the Order of the Annunziata, under its later form, dates only from Charles III, Duke of Savoy, in 1518, but its first dedication to the Blessed Virgin goes back to Amadeus VIII, first Duke of Savoy, antipope under the name of Felix V (1434). There had, previously to this dedication, existed in Savoy an Order of the Collar, which held its chapters in the Charterhouse (founded in 1392) of Pierre-Châtel in Bugey. Here also the Knights of the Annunziata kept their feast of the Annunciation, so that they have considered themselves as successors of the Order of the Collar. After the cession of Bugey to France, they transferred their chapters to the newly founded Camaldolese monastery on the Mountain of Turin (1627). In the Duchy of Mantua, Duke Vincent Gonzaga, on the marriage of his son Francis II, instituted, with the approbation of Paul V, the Knights of the Precious Blood, a relic of which is venerated in that capital. Lastly there are a number of pontifical secular orders, the oldest of which is the Order of Christ, contemporary with the institution of the same order in Portugal in 1319. In approving the latter institution, John XXII reserved the right of creating a certain number of knights by patent, and it is now used to reward services rendered by any person whatsoever without distinction of birth. The same is to be said of the Orders of St. Peter, instituted by Leo X in 1520, of St. Paul, founded by Paul III in 1534, of Our Lady of Loretto, charged by Sixtus V in 1558, to watch over and preserve that sanctuary. These distinctions were mostly granted to functionaries of the pontifical chancery. There has been some question as to the Order of the Holy Sepulchre (q. v.), formerly dependent on the Patriarch of Jerusalem, and quite recently reorganized by the reigning pope (Pius X). The Knights of St. Catherine of Sinai (q. v.) are not an order, either secular or regular. The respective particular histories of the great military orders have been traced in the various articles devoted to them; it is necessary here only to explain their general organization, religious, military, and economic.

(1) *Religious State*.—The knights of the great orders were regarded in the Church as analogous to monks, whose three vows they professed and whose immunities they shared. They were answerable to the pope alone; they had their chapels, their clerics, and their cemeteries, all exempted from the jurisdiction of the secular clergy. Their landed property was free from tithes. They were not subject to the interdicts which the bishops in those days employed so freely. They did not all follow the same monastic rule. The Templars and orders derived from them

followed the Cistercian Reform. The Hospitallers followed the Rule of St. Augustine. Nevertheless, in consequence of the relaxation which manifested itself among them after the period of the crusades, the Holy See introduced mitigations in favour of the non-clerical brethren. For these it was difficult to maintain the rule of celibacy in all its rigour; they were permitted, in certain orders, to marry once, and that only with a maiden. Even where second marriages were tolerated, they had to vow conjugal fidelity, so that if they violated this obligation of the natural law they sinned doubly, against the law and against their vow. Besides the three vows, the rule bound the brethren to the exercises of the monastic life such as the recitation of the

KNIGHTS OF ST. JOHN OF JERUSALEM

Hours, for which, in the case of illiterates, a fixed number of Paters was substituted. It also prescribed their dress and their food, and their feast, abstinence, and fast days. Lastly, the rule imposed detailed obligations in regard to the election of dignitaries and the admission of members to the two ranks of combatants—knights and men-at-arms—and the two of non-combatants—chaplains, to whom all sacerdotal functions were reserved, and *casaliers*, or tenants, who were charged with the management of temporal affairs.

(2) *Military Organizations.*—The military organization of the orders was uniform, explained by that law of war which compels the belligerent to maintain his military apparatus on a level with those of his adversary, on pain of defeat. The strength of an army was in its cavalry, and to this type the armament, mounting, and tactics of the military orders conformed. The knights-brethren were the heavy cavalry; the men-at-arms-brethren, the light cavalry. The former were entitled to three horses apiece; the latter had to be content with one. Among the former, only knights of tried prowess were admitted, or, in default of this qualification, sons of knights, because in such families the warlike spirit and military training were hereditary. The consequence was that the knights, properly so-called, were never very numerous; they formed a *corps d'élite* which carried the great mass of the crusaders. Gathered in convents which were also barracks, combining with the passive obedience of the soldier, the spontaneous submission of the religious, living shoulder to shoulder in brotherly union,

commander and subordinate, these orders surpassed, in that cohesiveness which is the ideal of every military organization, the most famous bodies of picked soldiery known to history, from the Macedonian phalanx to the Ottoman Janissaries.

(3) *Economic Organization.*—The importance acquired by the military orders during the course of the Middle Ages may be measured by the extent of their territorial possessions, scattered throughout Europe. In the thirteenth century nine thousand manors formed the portion of the Templars; thirteen thousand that of the Hospitallers. These temporalities were an integral part of the ecclesiastical domain, and as such had a sacred character which placed them beyond liability to profane uses or to secular imposts. They differed from the temporalities of other monastic institutions only in the centralized system of their administration. While within each of the other religious institutes every abbey was autonomous, all the houses of a military order were bound to contribute their revenues, after deducting expenses, to a central treasury. As a result of this enormous circulation of capital controlled by the orders, their wealth could be applied to financial operations which made them veritable credit and deposit banks. Their perfect good faith earned for them the implicit confidence of the Church and of temporal rulers. The papacy employed them to collect contributions for the crusades; princes did not hesitate to entrust to them their personal property. In this respect, again, the military orders were model institutions.

CH. MOELLER.

Millennium and Millenarianism.—The fundamental idea of millenarianism, as understood by Christian writers, may be set forth as follows: At the end of time Christ will return in all His splendour to gather together the just, to annihilate hostile powers, and to found a glorious kingdom on earth for the enjoyment of the highest spiritual and material blessings; He Himself will reign as its king, and all the just, including the saints recalled to life, will participate in it. At the close of this kingdom the saints will enter heaven with Christ, while the wicked who have also been resuscitated, will be condemned to eternal damnation. The duration of this glorious reign of Christ and His saints on earth, is frequently given as one thousand years. Hence it is commonly known as the "millennium", while the belief in the future realization of the kingdom is called "millenarianism" (chiliasm, from the Greek *χίλια*, seil. *ἔτη*).

This term of one thousand years, however, is by no means an essential element of the millennium as conceived by its adherents. The extent, details of the realization, conditions, the place, of the millennium were variously described. Essential are the following points: The early return of Christ in all His power and glory, the establishment of an earthly kingdom with the just, the resuscitation of the deceased saints and their participation in the glorious reign, the destruction of the powers hostile to God, and, at the end of the kingdom, the universal resurrection with the final judgment, after which the just will enter heaven, while the wicked will be consigned to the eternal fire of hell.

The roots of the belief in a glorious kingdom, partly natural, partly supernatural, are found in the hopes of the Jews for a temporal Messiah and in the Jewish apocalyptic. Under the galling pressure of their polit-

ical circumstances, the expectation of a Messiah who would free the people of God had, in the Jewish mind, assumed a character that was to a great extent earthly; the Jews longed above all for a saviour who would free them from their oppressors and restore the former splendour of Israel. These expectations generally included the belief that Jehovah would conquer all powers hostile to Himself and to His chosen people, and that He would set up a final, glorious kingdom of Israel. The apocalyptic books, principally the book of *Henoch* and the fourth book of *Esdra*s, indicate various details of the arrival of the Messiah, the defeat of the nations hostile to Israel, and the union of all the Israelites in the Messianic kingdom followed by the renovation of the world and the universal resurrection.

The natural and the supernatural are mingled in this conception of a Messianic kingdom as the closing act of the world's history. The Jewish hopes of a Messiah, and the descriptions of apocalyptic writers were blended; it was between the close of the present world-order and the commencement of the new that this sublime kingdom of the chosen people was to find its place. That many details of these conceptions should remain indistinct and confused was but natural, but the Messianic kingdom is always pictured as something miraculous, though the colours are at times earthly and sensuous. The evangelical accounts clearly prove how fervently the Jews at the time of Christ expected an earthly Messianic kingdom, but the Saviour came to proclaim the spiritual kingdom of God for the deliverance of man from his sins and for his sanctification, a kingdom which actually began with His birth. There is no trace of chiliasm to be found in the Gospels or in the Epistles of St. Paul; everything moves in the spiritual and religious sphere; even the descriptions of the end of the world and of the last judgment bear this stamp. The victory over the symbolical beast (the enemy of God and of the saints) and over Antichrist, as well as the triumph of Christ and His saints, are described in the Apocalypse of St. John (Apoc., 20-21), in pictures that resemble those of the Jewish apocalyptic writers, especially of Daniel and *Henoch*. Satan is chained in the abyss for a thousand years, the martyrs and the just rise from the dead and share in the priesthood and kingship of Christ. Though it is difficult to focus sharply the pictures used in the Apocalypse and the things expressed by them, yet there can be no doubt that the whole description refers to the spiritual combat between Christ and the Church on the one hand and the malignant powers of hell and the world on the other. Nevertheless, a large number of Christians of the post-Apostolic era, particularly in Asia Minor, yielded so far to Jewish apocalyptic as to put a literal meaning into these descriptions of St. John's Apocalypse; the result was that millenarianism spread and gained staunch advocates not only among the heretics but among the Catholic Christians as well.

One of the heretics, the Gnostic Cerinthus, who flourished towards the end of the first century, proclaimed a splendid kingdom of Christ on earth which He would establish with the risen saints upon His second advent, and pictured the pleasures of this one thousand years in gross, sensual colours (Caius in Eusebius, "Hist. Eccl.", III, 28; Dionysius Alex. in Eusebius, *ibid.*, VII, 25). Later among Catholics, Bishop Papias of Hierapolis, a disciple of St. John, appeared as an advocate of millenarianism. He claimed to have received his doctrine from contemporaries of the Apostles, and Irenæus narrates that other "Presbyteri", who had seen and heard the disciple John, learned from him the belief in millenarianism as part of the Lord's doctrine. According to Eusebius (Hist. Eccl., III, 39) Papias in his book asserted that the resurrection of the dead would be followed by one thousand years of a visible, glorious earthly kingdom of Christ, and according to Irenæus (Adv. Hæreses, V, 33), he taught that the

saints too would enjoy a superabundance of earthly pleasures. There will be days in which vines will grow, each with 10,000 branches, and on each branch 10,000 twigs, and on each twig 10,000 shoots, and on each shoot 10,000 clusters, and on each cluster 10,000 grapes, and each grape will produce 216 gallons of wine etc.

Millenarian ideas are found by most commentators in the Epistle of St. Barnabas, in the passage treating of the Jewish sabbath; for the resting of God on the seventh day after the creation is explained in the following manner. After the Son of God has come and put an end to the era of the wicked and judged them, and after the sun, the moon, and the stars have been changed, then He will rest in glory on the seventh day. The author had premised, if it is said that God created all things in six days, this means that God will complete all things in six millenniums, for one day represents one thousand years. It is certain that the writer advocates the tenet of a re-formation of the world through the second advent of Christ, but it is not clear from the indications whether the author of the letter was a millenarian in the strict sense of the word. St. Irenæus of Lyons, a native of Asia Minor, influenced by the companions of St. Polycarp, adopted millenarian ideas, discussing and defending them in his work against the Gnostics (Adv. Hæreses, V, 32). He developed this doctrine mainly in opposition to the Gnostics, who rejected all hopes of the Christians in a happy future life, and discerned in the glorious kingdom of Christ on earth principally the prelude to the final, spiritual kingdom of God, the realm of eternal bliss. St. Justin of Rome, the martyr, opposes to the Jews in his Dialogue with Tryphon (ch. 80-81) the tenet of a millennium and asserts that he and the Christians whose belief is correct in every point know that there will be a resurrection of the body and that the newly built and enlarged Jerusalem will last for the space of a thousand years, but he adds that there are many who, though adhering to the pure and pious teachings of Christ, do not believe in it. A witness for the continued belief in millenarianism in the province of Asia is St. Melito, Bishop of Sardes in the second century. He develops the same train of thought as did St. Irenæus.

The Montanistic movement had its origin in Asia Minor. The expectation of an early advent of the celestial Jerusalem upon earth, which, it was thought, would appear in Phrygia, was intimately joined in the minds of the Montanists with the idea of the millennium. Tertullian, the protagonist of Montanism, expounds the doctrine (in his work now lost, "De Spe Fidelium" and in "Adv. Marcionem", IV) that at the end of time the great kingdom of promise, the new Jerusalem, would be established and last for the space of one thousand years. All these millenarian authors appeal to various passages in the prophetic books of the Old Testament, to a few passages in the Letters of St. Paul and to the Apocalypse of St. John. Though millenarianism had found numerous adherents among the Christians and had been upheld by several ecclesiastical theologians, neither in the post-Apostolic period nor in the course of the second century, does it appear as a universal doctrine of the Church or as a part of the Apostolic tradition. The primitive Apostolic symbol mentions indeed the resurrection of the body and the return of Christ to judge the living and the dead, but it says not a word of the millennium. It was the second century that produced not only defenders of the millennium but pronounced adversaries of the chilastic ideas. Gnosticism rejected millenarianism. In Asia Minor, the principal seat of millenarian teachings, the so-called Alogi rose up against millenarianism as well as against Montanism, but they went too far in their opposition, rejecting not only the Apocalypse of St. John, alleging Cerinthus as its author, but his Gospel also. The opposition to millenarianism

became more general towards the end of the second century, going hand in hand with the struggle against Montanism. The Roman presbyter Caius (end of the second and beginning of the third century) attacked the millenarians. On the other hand, Hippolytus of Rome defended them and attempted a proof, basing his arguments on the allegorical explanation of the six days of creation as six thousand years, as he had been taught by tradition. The most powerful adversary of millenarianism was Origen of Alexandria. In view of the Neo-Platonism on which his doctrines were founded and of his spiritual-allegorical method of explaining the Holy Scriptures, he could not side with the millenarians. He combated them expressly, and, owing to the great influence which his writings exerted on ecclesiastical theology especially in Oriental countries, millenarianism gradually disappeared from the ideas of Oriental Christians. Only a few later advocates are known to us, principally theological adversaries of Origen. About the middle of the third century Nepos, bishop in Egypt, who entered the lists against the allegorism of Origen, also propounded millenarian ideas and gained some adherents in the vicinity of Arsinoë. A schism threatened; but the prudent and moderate policy of Dionysius, Bishop of Alexandria, preserved unity; the chiliasts abandoned their views (Eusebius, "Hist. Eccl.", VII, 14). Egypt seems to have harboured adherents of millenarianism in still later times. Methodius, Bishop of Olympus, one of the principal opponents of Origen at the beginning of the fourth century, upheld chiliasm in his Symposion (IX, 1, 5, in Migne, "Patr. Græc.", XVIII, 178 sqq.). In the second half of the fourth century, these doctrines found their last defender in Apollinaris, Bishop of Laodicea and founder of Apollinarianism (q. v.). His writings on this subject have been lost; but St. Basil of Cæsarea (Epist. CCLXIII, 4, in Migne, "Patr. Græc.", XXXII, 980), Epiphanius (Hæres. LXX, 36, in Migne loc. cit., XLII, 696) and Jerome (In Isai. XVIII, in Migne, "Patr. Lat." XXIV, 627) testify to his having been a chiliast. Jerome also adds that many Christians of that time shared the same beliefs; but after that millenarianism found no outspoken champion among the theologians of the Greek Church.

In the West, the millenarian expectations of a glorious kingdom of Christ and His just, found adherents for a long time. The poet Commodian (Instructiones, 41, 42, 44, in Migne, "Patr. Lat." V, 231 sqq.) as well as Lactantius (Institutiones, VIII, Migne, "Patr. Lat.", VI, 739 sqq.) proclaim the millennial realm and describe its splendour, partly drawing on the earlier chiliasts and the Sybilline prophecies, partly borrowing their colours from the "golden age" of the pagan poets; but the idea of the six thousand years for the duration of the world is ever conspicuous. Victorinus of Pettau also was a millenarian though in the extant copy of his commentary on the Apocalypse no allusions to it can be detected. St. Jerome, himself a decided opponent of the millennial ideas, brands Sulpicius Severus as adhering to them, but in the writings of this author in their present form nothing can be found to support this charge. St. Ambrose indeed teaches a twofold resurrection, but millenarian doctrines do not stand out clearly. On the other hand, St. Augustine was for a time, as he himself testifies (De Civitate Dei, XX, 7), a pronounced champion of millenarianism; but he places the millennium after the universal resurrection and regards it in a more spiritual light (Sermo, CCLIX, in Migne, "Patr. Lat.", XXXVIII, 1197). When, however, he accepted the doctrine of only one universal resurrection and a final judgment immediately following, he could no longer cling to the principal tenet of early chiliasm. St. Augustine finally held to the conviction that there will be no millennium. The struggle between Christ and His saints on the one hand and the wicked world and Satan on the other, is waged in the Church on earth; so the great Doctor

describes it in his work De Civitate Dei. In the same book he gives us an allegorical explanation of Chap. 20 of the Apocalypse. The first resurrection, of which this chapter treats, he tells us, refers to the spiritual rebirth in baptism; the sabbath of one thousand years after the six thousand years of history, is the whole of eternal life; or, in other words, the number one thousand is intended to express perfection, and the last space of one thousand years must be understood as referring to the end of the world; at all events, the kingdom of Christ, of which the Apocalypse speaks, can only be applied to the Church (De Civitate Dei, XX, 5-7, in Migne, "Patr. Lat.", XLI, 607 sqq.). This explanation of the illustrious Doctor was adopted by succeeding Western theologians, and millenarianism in its earlier shape no longer received support. Cerinthus and the Ebionites are mentioned in later writings against the heretics as defenders of the millennium, it is true, but as cut-off from the Church. Moreover, the attitude of the Church towards the secular power had undergone a change with closer connexion between her and the Roman empire. There is no doubt that this turn of events did much towards weaning the Christians from the old millenarianism, which during the time of persecution had been the expression of their hopes that Christ would soon reappear and overthrow the foes of His elect. Chiliastic views disappeared all the more rapidly, because, as was remarked above, in spite of their wide diffusion even among sincere Christians, and in spite of their defence by prominent Fathers of the early Church, millenarianism was never held in the universal Church as an article of faith based on Apostolic traditions.

The Middle Ages were never tainted with millenarianism; it was foreign both to the theology of that period and to the religious ideas of the people. The fantastic views of the apocalyptic writers (Joachim of Floris, the Franciscan-Spirituals, the Apostolici), referred only to a particular form of spiritual renovation of the Church, but did not include a second advent of Christ. The "emperor myths," which prophesied the establishment of a happy, universal kingdom by the great emperor of the future, contain indeed descriptions that remind one of the ancient Sybilline and millenarian writings, but an essential trait is again missing, the return of Christ and the connexion of the blissful reign with the resurrection of the just. Hence the millennium proper is unknown to them. The Protestantism of the sixteenth century ushered in a new epoch of millenarian doctrines. Protestant fanatics of the earlier years, particularly the Anabaptists, believed in a new, golden age under the sceptre of Christ, after the overthrow of the papacy and secular empires. In 1534 the Anabaptists set up in Münster (Westphalia) the new Kingdom of Zion, which advocated sharing property and women in common, as a prelude to the new kingdom of Christ. Their excesses were opposed and their millenarianism disowned by both the Augsburg (art. 17) and the Helvetic Confession (ch. 11), so that it found no admission into the Lutheran and Reformed theologies. Nevertheless, the seventeenth and eighteenth centuries produced new apocalyptic fanatics and mystics who expected the millennium in one form or another: in Germany, the Bohemian and Moravian Brethren (Comenius); in France, Pierre Jurien (L'Accomplissement des Prophéties, 1686); in England at the time of Cromwell, the Independents and Jane Leade. A new phase in the development of millenarian views among the Protestants commenced with Pietism. One of the chief champions of the millennium in Germany was I. A. Bengel and his disciple Crusius, who were afterwards joined by Rothe, Volch, Thiersch, Lange and others. Protestants from Wurtemberg emigrated to Palestine (Temple Communities) in order to be closer to Christ at His second advent. Certain fantastical sects of England and North America,

as the Irvingites, Mormons, Adventists, adopted both apocalyptic and millenarian views, expecting the return of Christ and the establishment of His kingdom at an early date. Some Catholic theologians of the nineteenth century championed a moderate, modified millenarianism, especially in connexion with their explanations of the Apocalypse; as Pagani (*The End of the World*, 1856), Schneider (*Die chiliasische Doktrin*, 1859), Rohling (*Erklärung der Apokalypse des hl. Johannes*, 1895; *Auf nach Sion*, 1901), Rougeyron Chabauty (*Avenir de l'Eglise catholique selon le Plan Divin*, 1890).

J. P. KIRSCH.

Miller, FERDINAND VON, b. at Fürstfeldbruck, 1813; d. at Munich, 1887. He laboured for the development of the bronze founders' craft and the uplifting of the artistic profession, far beyond the borders of Bavaria. After a sojourn at the academy and a preliminary engagement at the royal brass foundry, he went to Paris in 1833, where he learnt from Soyer and Blus the varied technique necessary to him in the manipulation of bronze. He also visited England and the Netherlands, and after his return worked under his teacher and uncle Stiglmayr, whom the Crown Prince Ludwig had induced to devote himself to bronze foundry work and to the establishment of the Munich foundry as a state institution. Millersoon took his uncle's place, and upon the death of the latter was appointed inspector of the workshop. He soon won for it a world-wide reputation, and for himself a fortune and position of influence. He was a gifted artist, a quiet worker, skilful in negotiation and entirely a self-made man. The casting of the Bavaria, one of the world's greatest representations in bronze (1844-56), especially brought him great fame. Commissions came to him from far and near. Thus he cast not merely the statues of Herder, Goethe, and Schiller for Weimar, but also the figures of Duke Eberhard in Stuttgart, of Berselius in Stockholm and two Washington monuments by Mills and Crawford in Boston and Richmond. The gate of the capital in Washington is also by him. The Munich exhibition of art and the art crafts in the year 1876, which resulted so successfully for the art industries in Germany, was largely Miller's work. Two years before he had been elected to the directorate of the society of art industries. He understood not only how to interest the influential classes in the productions of rising arts and crafts, but also to win over artists to a general exhibition of German art in alliance with the art handicrafts. When he had brought architects, sculptors and painters into harmony with the lesser arts he found it possible to bring about an exhibition on an entirely new plan. Drawing rooms, cabinets, boudoirs, sitting rooms and chapels were arranged so as to form in their grouping an harmonious whole by having art and trade appliances put into the place for which they were intended. Where this was not possible, a partition or a wall would be placed with picturesque effect in some adjoining room. As a result art became, especially in Munich, the mistress of industry. Miller forthwith established a center of exhibition and sale for the

society, and procured himself a home especially for the social intercourse of artists and art craftsmen. The result was an unexpected rise of the art industries. Ferdinand Miller junior followed in his father's footsteps, and is known in America by the figures on the Sinton fountain in Cincinnati (at the unveiling of which he was much honoured), as well as by the statues of Shakespeare and von Humboldt in St. Louis, and finally by the war memorial at Charleston. *FERT, Gesch. der Münchener Kunst* (Munich, 1888); *MÜLLER, Universalhandbuch von München; Deutsches Kunstblatt* for 1880, 1883, 1886, etc.

G. GIETMANN.

Miller, WILLIAM J. See TRANSVAAL, VICARIATE APOSTOLIC OF.

Millet, JEAN-FRANÇOIS, French painter; b. at Gruchy, near Cherbourg, 4 October, 1814; d. at Barbizon, 20 January, 1875. This great painter of peasants was a son of peasants: he himself began life as a tiller of the soil, and he never lost touch with it. But though a family of rustics, the Millets were far removed from rusticity of manners: they were serious folks, profoundly pious, a strange stock of Catholic Puritans whose stern sentiments of religion, handed down from generation to generation, gave them something like an aristocratic character; they were incapable of mean ideas. The grandmother—the soul of that household—was an assiduous reader of Pascal, Bossuet, Nicole, and Charron. Young Jean-François was reared by the parish priest in the cult of Vergil and the Bible; the "Georgics" and the Psalms, which he read in Latin, were his favourites. Later on he became acquainted with Burns and Theocritus, whom he preferred even to Vergil. His imagination never lost these majestic impressions. Nature and poetry, the open country and Holy Scripture, shared equally in the shaping of his genius. Of that genius the young ploughman gave the first signs at the age of eighteen. He studied at Cherbourg under Langlois, a pupil of Baron Gros, and the Municipal Council gave him a pension of 600 francs to go and finish his studies in Paris. There he entered the atelier of Delaroche in 1837; but he spent most of his time in the Louvre, with the masters of bygone ages.

The primitives of Italy enraptured him by their fervour: Fra Angelico filled him with visions. The colourists were little to his taste; he remained unmoved in the presence of Velazquez. But then again, he liked Ribera's vigour and Murillo's homespun grace. Among the Frenchmen, the beauty of Le Sueur's sentiment touched him, Le Brun and Jouvenet he thought "strong men". But his favourite masters were the masters of "style"—Mantegna, Michelangelo, and Poussin: they haunted him all his life. Poussin's "Letters" were his everyday food, and "I could look at Poussin's pictures forever and ever", he writes, "and always learn something". His contemporaries, Delacroix excepted, moved him but little and for the most part to indignation. Millet's early works—those of his Paris period (1837-50)—are extremely different from those which made him famous. They are now very rare, but ought not to be forgotten: from the point of view of art, they are probably his most pleasing and felicitous productions; in them the painter's temperament voices itself most naturally before his "conversion", without method, without ulterior purpose. They are generally idylls—eclogues—thoroughly rural in feeling, with a frank, noble sensuality, the artist's Vergilian inspiration finding expression in little pagan scenes, antique bas-reliefs, and neutral subjects, such as "Women bathing", "Nymphs", "Offerings to Pan", and so on—thoughts but slightly defined in forms as definite as sculpture.

Some of these pieces are the most Poussinesque things in modern art. In them the young painter already appears as an accomplished stylist, with a

Correggian feeling for grace that was to be almost entirely lacking in his latest works. Here he has powerfully expressed the joy of living as it might be known to a soul like his—serious and robust, and always veiled in melancholy. His palette is brighter and less embarrassed than it afterwards became; indeed, the colour is sometimes even a little florid, as in the graceful portrait of Mlle Feuardent. On the other hand, the severity of the modelling always saves his work from anything like carelessness or lack of dignity. Some—like the charming pastel of "Daphnis and Chloe" in the Boston Museum—are frankly reminiscent of Puvis de Chavannes. But the beauty of these pastorals had not been very well appreciated. To make a living, Millet was obliged to undertake base and ill-paid work, painting signs for mountebanks and midwives. His "Edipus taken down from the tree", a study of the nude which excels as a piece of virtuosity and an impression of savage wildness, rather shocked and astonished the public than won admiration.

His difficulties increased more and more: having lost his first wife, he married again in 1845, and with children came want. Matters were precipitated by the Revolution of 1848. At first the Republican Government took an interest in the artist, and he received some help from it; but the events of the month of June and the disorders of the following year frightened Millet and inspired him with an unconquerable dislike of Paris. He was beginning at last to understand his own nature; he turned his back forever on the frivolous, worldly public. Without disowning his earlier works, he addressed himself to another, newer and more human, method of interpreting the things of the earth and the life of the rustic. In the summer of 1849 he went to Barbizon, a little village about one league from Chailly, on the borders of the Forest of Fontainebleau. He only meant to spend a few weeks there; but remained for the rest of his life—twenty-seven years. From that time Millet was Millet, the painter of peasants. It is impossible to recount in detail all his life during the ten or fifteen years following his exodus into the country, until his final triumph—to trace the long course of effort and of heroic sacrifice, through which the name of a little obscure hamlet of the Ile-de-France by the tenacity of a small group of painters was made one of the most famous names in the art of all ages.

It was at Barbizon that Millet found Rousseau, who had been settled there for some fifteen years, and with whom he became united in a truly memorable friendship. Other painters—Aligny and Diaz—also frequented the village and the now historic *auberge* of Père Gaune. The little band of pariahs lived in this wilderness like anchorites of nature and art. Nothing could be more original than this modern Thebaid, so curiously analogous to the Port-Royal colony of solitaries or the English Lake School. As a matter of fact, Englishmen and Americans—a William Hunt or a Richard Hearn, a Babcock or a Wheelwright—had the honour of being the first to comprehend this new art and to form an admiring circle of neophytes and disciples about its misunderstood ex-

ponents. Nevertheless, these were years of fierce struggle for the unfortunate painter. Millet, with his large family (he had four sons and five daughters), knew what it was to want for bread, for firewood, for the most indispensable necessities of life. The baker cut off his credit, the tailor sent him summonses. The poor artist lived in agonies of hunger, tormented by bailiffs, by distraint warrants, and by humiliation. It is impossible to read the story of his sufferings without shedding tears.

And yet it was just then that Millet, disgraced and baffled, shut out of the Salon, unable to sell his pictures, was at the height of his genius. From these ten or twelve years date the following immortal works: "The Sower" and "Haymakers" (1850); "Harvesters", "Sheep-shearers" (1853); "Peasant grafting

a tree" (1855); "Gleaners" (1857); "The Angelus" (1859). To be sure, these admirable achievements did not always meet with disparagement: Victor Hugo had written in one of his famous poems: "Le geste auguste du sèmeur" (The sower's noble attitude). The leading critics, Théophile Gautier and Paul de Saint-Victor, agreed in recognizing the epic power of these peasant paintings. But the public still resisted, repelled by the abrupt presentment, the rugged execution, the fierce poesy, they insisted on seeing in these works pleas for democracy, socialistic manifestos, and appeals to the mob. In vain did the painter protest: whether he liked it or not, many made of him a revolutionary, a demagogue, a tribune of the people. In the France of that day no one was able to understand what depth of religion was here—to recognize in this sombre and pessimistic art the only Chris-

tian art of our time. The only peasants then known to painting were comic-opera peasants—the rude buffoons of Ostade and Teniers, or the beribboned ninnies of Watteau and Greuze. They were always travestied in the interests of romance or of caricature, burlesque or preciosity. No one had ever ventured to show them in the true character of their occupations—the rough beauty of the labour from which they derive their dignity.

The whole of Millet's work is but a paraphrase or an illustration of the Divine Sentence: "In the sweat of thy brow shalt thou eat thy bread". "Every man", he writes, "is doomed to bodily pain". And again, "It is not always the joyous side that shows itself to me. The greatest happiness I know is calm and silence". But at the same time, this harsh law of labour, because it is God's law, is the condition of our nobility and our dignity. Millet is quite the opposite of a Utopian or an insurgent. To him the chimeras of Socialism and the wholesale regulation of the good things of life are impious, childish, and disgraceful. "I have no wish to suppress sorrow", he proudly exclaims: "it is sorrow that gives most strength to an artist's utterance". In his subsequent work, moreover, as if challenging the world, he accentuated still further the ruggedness of his painting and the harshness of his sentiment. The year 1863 marks the lowest point of this depressed and misanthropic mood. Nothing ever exceeded his "Winter" in

JEAN-FRANÇOIS MILLET
By himself

desolateness, of his "Man with the Hoe" and "Vine-dresser resting" in sense of utter exhaustion. The impression of physical fatigue reaches the point of stupefaction and insensibility. The figures seem so thoroughly emptied of their vital energy as to be petrified. The hard look is congealed into a grimace. Nowhere has his effort, the forcing of his individual style to its utmost limit, brought the great artist to results more harsh, more grandiose, or more barbarous.

But things were getting quieter and easier for him. His extraordinary personality, his eloquence, the strong conviction of this "Danubian peasant", were all making themselves felt. The world was beginning to appreciate the loftiness of view and the moral grandeur of this man of the fields with the lion's mane and the head of a "Jupiter in wooden shoes". A relaxation came over his spirit and his ideas. He travelled, rested, revisited his own part of the country, made short trips to Auvergne, to Alsace, and to Switzerland. In 1868 he was made a chevalier of the Legion of Honour—at fifty years of age. In 1870 he was elected a member of the jury. But the great war, the death of his sister and of his dear friend Rousseau, finally wrecked a constitution already injured by hard work and privation. During the German invasion he and his family took refuge at Cherbourg near his native home. After that time he almost ceased to paint. His latest pictures, the tragic "November" (1870), the "Church of Gréville" (1872), and the incomparable "Spring" (1873), are mere landscapes, with the human figure entirely absent. Thenceforward he preferred simpler, more direct processes to that of painting, using the pencil or pastel—like the great idealists, who always ended by simplifying or minimizing the material medium and contenting themselves with etching, as did Rembrandt, with drawing, as Michelangelo, or with the piano, as Beethoven. These last works of Millet's are among his finest and most precious. His colouring, formerly heavy and sad, often rusty and unpleasing, or sticky and muddy, is here more delicate than ever before. Nowhere does one feel the touching beauty of this artistic soul, and its masculine but tender eloquence, more perfectly than in his studies and sketches. The finest collections of them are in the possession of M. A. Rouart, in Paris, and of Mr. Shaw, in Boston. Millet passed away at the age of sixty years and four months.

He was one of the noblest figures in contemporary art, one of those men who in our day have done most credit to mankind. As a painter he was not without his faults—somewhat clumsy in technique, not pleasing in colour, while emotion, with him, does not always keep clear of declamation. These faults are most palpable in his most famous works, such as "The Sower" and "The Angelus". But on the other hand, so many others are perfect gems—marvels of execution and poetic sentiment, like "The Morsel in the Beak" (La Becquée), "Maternal solicitude", and "The Sheepfold". Other painters have had more influence than Millet. Courbet, for example, surpassed him in scope and in prodigious sense of life; Corot, with just as much poetry, has in a higher degree the grace, the charm, the exquisite gift of harmony. But who shall say that Millet's rugged gravity was not the condition, the outward sign, of the deep import of his message? No one has done more than he to make us feel the sanctity of life and the mystic grandeur of man's mission upon the earth. His peasants, rooted to the soil and as if fixed there for eternity, seem to be performing the rites of a sacred mystery. One is conscious of something permanent in them, one feels how intimately they are united with the great whole, their fraternal solidarity with the rest of mankind and with the cosmic ends. Though he never handled professedly religious subjects, Millet succeeded in

being the most religious painter of our times. His "Return to the Farm" irresistibly suggests the Flight into Egypt; his "Repast" of harvesters, or of gleaners, evokes the Biblical poetry of Ruth and Boaz. On the river where his "Washerwomen" come and beat their linen, one would think the cradle of Moses was floating. The greatness of his soul has set in relief before our eyes the dignity of our nature; he has shown us how the trivial can be made to serve in the expression of the sublime, and how the Infinite and the Divine can be discerned in the humblest existence.

LOUIS GILLET.

Millet (or MILET), PIERRE, a celebrated early Jesuit missionary in New York State, b. at Bourges, France, 19 November, 1635 (al. 1631); d. at Quebec, 31 December, 1708. Having graduated Master of Arts, he entered the Society of Jesus at Paris on 3 October, 1655, studied philosophy at La Flèche (1657-8), taught various classes there (1658-61) and at Compiègne (1661-3), and then returned to La Flèche for a second year of philosophy (1663-4). After a four years' course in theology at the College of Louis-le-Grand in Paris (1664-8), he was sent to Canada, and had already been chosen to help Father Allouez in the west, when, quite unexpectedly, his destination was changed. The Onondaga ambassadors had received the answer to their address, on 27 August, 1668, and Fathers Millet and de Carheil were assigned them as missionaries. In an incredibly short time Millet picked up enough of the language to enable him to preside at public prayers and to his still greater satisfaction, to teach catechism. This joy, however, was soon turned to sadness and pity at the sight, new to him, of some captive Andastes, brought in by a war party to be burnt at the stake. His feelings may be gathered from what he wrote on this occasion: "I am at a loss to know how to interpret this presage. Would to God that it might betoken that I was to make of these tribes captives of Jesus Christ and prevent their burning throughout eternity. What happiness for me if it foreshadowed that one day I also might be a captive to be burnt for Jesus Christ."

His method of evangelizing the Onondagas may be judged from a letter written from the mission of St. Jean Baptiste, 15 June, 1670 (Rel. 1670, vii). In 1671 he made his solemn profession of the four vows, and received from the Onondaga nation the name of *Teahronhiagannwa*, that is "The Looker-up to Heaven". In 1672 he was appointed missionary of the Oneidas (q. v.), "the most arrogant and least tractable of all the Iroquois" (Rel. 1672, iii), and laboured among them until 1685 with marvellous success. He was then recalled to act as interpreter at the Grand Council of Poace to be held at Catarakouy (now Kingston, Ontario). Both he and the other missionaries were shamefully duped by the governor and used to lure the Iroquois into the pitfall prepared for them (see MISSIONS, INDIAN; Charlevoix, I, 510). Late in 1687 or early in 1688 Millet was sent as chaplain at Fort Niagara. Here, as at Catarakouy, scurvy was decimating the troops, affording ample scope for Millet's charity and zeal. To invoke God's mercy in behalf of the stricken garrison, a cross eighteen feet high was erected in the fort by the officers and blessed by Father Millet on Good Friday, 16 April, 1688. On 15 Sept., 1688, however, the

THE ANGELUS—MILLET, PARIS

remnants of the garrison were informed the fort was to be evacuated, and all were to embark for Catarakouy.

Millet was still engaged at Catarakouy in the ordinary routine of a military chaplain, when about 30 July, 1689, a party of Iroquois presented themselves at Fort Frontenac and asked for an interview. They professed to be on their way home from Montreal whither they had gone with propositions of peace. They needed a surgeon, they said, for some of their chiefs who were sick and Father Millet's services for one who was dying, while the elders wished also to consult with him (Millet's letter in *Rel.*, Cleveland ed., LXIV, 64). The story looked suspicious, but as there was question of a soul to save, Millet undertook the risk, and St. Armand, a surgeon, accompanied him. Both were immediately set upon and bound; his captors first took Millet's breviary, and were divesting him of all he carried, when Manchot, an Oneida chief, interposed on his behalf, and recommended him to the care of the other chiefs. But, when Manchot left to join the three hundred Iroquois who were lying in wait to attack Fort Frontenac, the maltreatment recommenced. Having stripped him almost naked, the Indians bitterly reproached him for all that their countrymen had suffered from the French; they then threw him into the water and trampled him under foot (*ibid.*, 69). When the other Indians returned after their failure to surprise Fort Frontenac, he was escorted to an island two leagues below the fort, where the main body of 1400 Iroquois warriors were encamped. Derisive shouts and yells went up at his approach. According to custom, he was made sing his death-song, the words which came first to his mind being *Ongienda Kehasakchoia* (I have been made a prisoner by my children). For all thanks a Seneca Indian struck him a brutal blow in the face with his fist in such a way that the nails cut him to the bone. He was then led to the cabins of the Oneidas where he was protected from further insult. That same evening the whole force moved down the river eight leagues from the fort, and there halted three days.

On a hilltop on what is now Grenadier Island a great council was held, the war-kettle swung, and all that remained was to choose a fitting victim to cast into it. The final decision was left to the Onondagas, and no doubt the lot would have fallen on Millet, whose death at the hands of the Iroquois would have set the seal to an undying enmity and an unrelenting war, such as they seemed to desire with the French, but for an apparently insignificant detail which had been overlooked. To make the proceedings legal according to their code, all the prisoners should have been present, whereas only the surgeon and Father Millet stood before the council (*ibid.*, 73). The captors of the other prisoners had scattered in hunting parties and had taken them along. An elderly Cayuga sachem blocked all proceedings with the simple announcement: "All are not present at this assembly," and then bade Millet to pray to God. Informed that it was not in preparation for death, Millet rose and prayed aloud in Iroquois, especially for all those assembled. He was then told to resume his seat, one of his hands was unbound, and he was sent to the camp of the Oneidas. There he was acclaimed with joy by several of their leading men, who, to forestall further molestation, determined to send him to Oneida. The next day (about 2 August, 1689), thirty warriors were told off under two chiefs, of whom one was the friendly Manchot, to conduct him thither; from one of Millet's letters (*ibid.*, 87, 91), it is certain that the main body of Indians they were leaving was the identical band of Iroquois who, about 4 August, crossed during the night to the north side of Lake St. Louis, fired the houses for several leagues along the lake shore from St. Anne's to Lachine, and butchered men, women, and children

as they fled from their burning homes. Two hundred in all were massacred, and ninety carried off to be burnt at the stake. Charlevoix's statement (*Hist.*, I, 549) that this occurrence took place on 25 August is erroneous; the contemporaneous reports of de Denonville, de Champigny, and de Frontenac (*Archives Colon. Paris. Cor. Gen. Can. X*) give the correct date as 4 and 5 August, 1689. The surgeon St. Armand, whom the Iroquois had brought with them to Lachine, there made his escape (*Collec. MSS. Quebec, I, 571*).

On the journey to Oneida, Father Millet was not badly treated; he was unencumbered by any burden until they were nearing their last night's sleeping place, ten leagues from their destination, when one of the friendly chiefs, probably to keep up appearances, gave him a light sack to carry. On 9 August, two leagues from their destination, they met Manchot's wife and daughter, belonging to the first nobility of Oneida, both of whom Father Millet had formerly baptised on the same day as Manchot himself. Manchot had left the army at Otoniata for the sole purpose of protecting Millet on the way to Oneida, and had gone ahead two days before to notify his wife of his approach. These good Christians brought with them an abundance of provisions and refreshments; they took the rope from Millet's neck, unbound his arms, and gave him clean clothing. Greatly moved by this kindness and scarcely realizing what he saw, Millet asked if their intention was to deck out the victim, and if, on his arrival, he was to die. The Christian matron answered that nothing had yet been settled, and that the Council of Oneida would decide. Clothed with what he had just received and in a close-fitting jerkin which a sympathizing warrior had lent him at Otoniata, Millet made his approach to the town, wearing the livery of the two most important families of the tribe, that of the Bear and that of the Tortoise. Warned of his near arrival the aged sachems marched out to meet him, and kindled a fire in readiness for what might occur, for they did not all entertain the same benevolent feeling towards him. He was made sit down near the elders, and Manchot presented him to this preliminary council, declaring that he had come, not as a captive, but as a missionary returning to visit his flock; that it was the will of the other chiefs and himself that the father should be placed at the disposal of those who decided the affairs of the nation, and not be given over to the soldiery or populace. A sachem of the Bear Clan, a great friend of the English, then proceeded to denounce Millet as a partisan of the Governor of Canada, who was bent on overthrowing the great Iroquois lodge (i. e. the Iroquois Confederacy), and had burned the Seneca towns. The orator was so violent at the beginning of his speech, that it looked as if Millet would be condemned; but towards the close he grew milder, and admitted that since such was the will of the chiefs, the prisoner should be led to the council lodge which was a privileged cabin.

Crowds of drunken Indian braves and squaws, shouting and yelling, followed him to the council lodge, where he was cordially welcomed by Manchot's wife (*ibid.*, 81). He had, however, to be hidden from the mob of drunken Indians, who stoned the cabin, threatened to batter it down or set it on fire, heaped abuse on those who were sheltering him, and vowed that, since war had begun, they would not be cheated out of its first fruits. Two days after, when the fury of the drunken rabble had somewhat abated, the friends of the captive missionary thought it wiser to have his case adjudicated without further delay, as the popular feeling might be embittered should the army returning from Montreal have to deplore the loss of some of its braves. But once again he was placed in a state of suspense as to his fate, the assembled chiefs deciding that they must wait the return of the warriors and learn what their intentions were.

Three more weeks dragged on thus, but, apart from the importunities and threats of the drunkards, Millet was left in comparative quiet. That he was walking in the shadow of death, is shown by the fact that he was given the name of *Genherontatie*, i. e. "The Dead (or Dying) Man who walks". His everyday work as pastor served to console him, the faithful flocking to him in their spiritual necessities, even to the remote lurking places where he had frequently to be hidden, and his bodily wants were amply supplied. When the Iroquois returned after their bloody foray against Lachine and other settlements near Montreal, it was found that the Oneidas had left three dead warriors behind in the enemy's country, including a leading war-chief. The exasperated braves considered the death and torture of the number of prisoners they had brought back insufficient to atone for this loss, and demanded that Millet should be added to the number. Fearing lest this bloodthirsty faction should, by cutting off a finger or by some similar mutilation, set the mark of death upon their missionary, the Christian Indians were more careful than ever to keep him out of sight (*ibid.*, 87). He was made pass the night sometimes in one cabin, sometimes in another, and more than once under the starlight, anywhere in fact where a drunken Indian was not likely to find him. His protectress added foresight to her zeal, and secured the support of her relatives, the most influential warriors of the tribe, towards saving Millet.

The day when the final sentence was to be pronounced arrived at last. Millet had time to hear the confessions of his fellow-prisoners, two of whom eventually died by fire. As for himself, he could only commend himself to the providence and the mercy of God. His case was a knotty one for the assembled chiefs to decide: on the one hand, he was regarded by the Iroquois as a great criminal and deceiver, being held responsible for the seizure of their fellow-countrymen at Catarakouy (*ibid.*, 89); but, on the other, he was protected by the Christians, among whom were the most influential and distinguished members of the nation, and thus could not be put to death without incurring their displeasure. The result was that he was sent to and fro from one special tribunal to another, his face smeared with black and red to brand him as a victim of the god of war and of the wrath of the Iroquois. At this critical juncture the family which had befriended him so often assembled anew, and ingeniously turned the difficulty in Millet's favour by offering him as a substitute—not for one of the braves killed by the French at Lachine, nor for any made prisoner at Fort Frontenac, but—for a captain named Otasseté, who had died long since a natural death, and whose name was famous as that of one of the founders of the Iroquois Confederation. By this presentation Chief Gannassatiron became the sole arbiter of Millet's life or death. He consulted only the warriors of his family, and, these having without hesitation pronounced in favour of life, he approached the father and in the set formula addressed him: "Satonnheton Szaksi" (My elder brother, you are resuscitated). A few days afterwards the notables of Oneida were invited to a grand banquet, and at the ceremony the name of Otasseté was given Millet to make it manifest to all that the Oneidas had adopted him into their nation and naturalized him an Iroquois. Everything that had been taken from him was restored.

Father Millet turned his long captivity among the Oneidas to good account. Father Bruyas writes to the General on 21 October, 1693: "We have received letters from Father Millet, a captive among the Iroquois for the last six years.... He performs with happy results all the offices of a missionary. He stands in need of one thing only, an altar outfit (a chalice, vestments, etc., so as to say Mass); but he thinks that the time to send him this has not yet come on account of

the hostility of the drunkards among the tribe and of the English who have done their best to have this saintly missionary handed over to their keeping. They cannot brook the presence of a Jesuit there." Dablon had already in the same month and year, written to Rome that the father, a captive among the Iroquois, was most assiduous in opening the way to heaven for many little children by baptism, and for dying adults and old men by a careful preparation and the administration of the sacraments (Letters to the Gen., MS. copy 45, 48). Father Jean de Lamber ville writing from Paris on 3 Jan., 1695, says: "They [his friends among the Oneidas] made a chapel of their dwelling, where the Father performed his functions of missionary, with the result that in the midst of these hostile barbarians he maintained the worship of God and there converted many Iroquois. After having been five years among them, assisting in their death throes the French prisoners who were burned, and interceding successfully for the life of others, he was brought back to Quebec with fifteen French captives" (Rele., LXIV, 245). Belmont (*Hist. du Can.*, p. 36) is certainly astray in giving 1697 as the date of Millet's delivery. Most authors state that the captive missionary was brought back to Quebec in 1694. Colden (*History of the Five Nations*, I, 210-30) states that the return took place towards the end of August; Charlevoix, however, states very positively (II, 14) that Father Millet was brought to Montreal towards the end of October (1694).

Millet passed the year 1695 at Quebec College and in 1696 was sent to Lorette to assist Father Michel Germain de Couvert with the Hurons, and, to the ordinary duties of missionary to the Hurons, those of parish priest of Lorette were added in 1697. In 1698 he is marked in the catalogues of the Society as missionary at Sault-St.-Louis (*Caughnawaga*), but in all probability he went there in the summer of 1697. For, on 15 February of that year, thirty-three Oneidas came to Montreal. They came, they said, to fulfil a promise they had made their Father to throw in their lot with his children and that their fellow-countrymen wished to assure him that they also would have followed if the Mohawks and Onondagas, between whose cantons they dwelt, had not held them back (Charlevoix, "Hist.", II, 199). From 1697 to 1703 inclusively, he remained as missionary at Sault-St.-Louis. During this period he wrote at least once to Rome (10 August, 1700) a mild and submissive complaint that he had not yet obtained the favour of returning to the Iroquois cantons; through feelings of gratitude he begs the Father General to give a share in the prayers of the Society to Tarsha the chief and Suzanne his sister at Oneida, both of whom had acted as hosts to the Father during his captivity. Although peace had been concluded with the Five Nations on 8 September, the missions were not yet re-established when Father Bouvart wrote to Rome 5 October, 1700. The catalogue of 1704 places Father Millet at the college in Quebec as a valetudinarian, though he himself desired to return to the Iroquois mission and continue till the end "to fight like a good soldier the battles of the Lord". In 1705 he is described as under treatment for broken-down health. He lingered on for three years more, always in the hope of going back to the scenes of his captivity, but, on the last day of 1708, he died.

ARTHUR EDWARD JONES.

Mill Hill College. See JOSEPH, SOCIETY OF SAINT, FOR FOREIGN MISSIONS.

Milner, JOHN, b. in London, 14 October, 1752; d. at Wolverhampton, 19 April, 1826. At the age of twelve he went to Sedgley Park School, but the following year he was sent by the venerable Bishop Chaloner to the English College at Douai, France, to study for the priesthood. He remained twelve years, but he does not seem to have distinguished himself in any special manner there. On his ordination in 1777 he returned to England. Two years later he was sent to Winchester to assist the French prisoners in that city, among whom a fever had broken out; and when the pastor, Rev. Mr. Nolan, fell a victim to the fever, Milner was permanently appointed in his place. Winchester was then one of the few towns in the south of England where a Catholic chapel was openly supported. Its existence was indeed illegal, for the penal laws were still in full force; but practically there was not much prospect of its being interfered with. Milner remained there twenty-three years, during which time he devoted himself to missionary work, rebuilt the chapel, and established a school. The Catholic religion in England was at the time going through a double crisis, partly by the action of its own members, and partly by the influence from without, due to the French Revolution. Some thousands of French priests took refuge in England, and were supported by the Government. Some 700 were lodged in the old unfinished king's house outside Winchester, where they formed themselves into a large religious community. Milner, who was brought into daily contact with them, spoke in high terms of the extraordinary edification of their daily lives. The same events on the Continent led to the breaking up of the English convents in France and the Low Countries, and the nuns fled for refuge to their own country, where they arrived penniless and helpless. A great effort was made to assist them. Milner took his share in the movement by establishing in his mission the Benedictine nuns, formerly of Brussels, with whom he ever afterwards maintained cordial relations. The Franciscans from Bruges likewise settled at Winchester.

During succeeding years, Milner began to make his name as a writer and controversialist. His "History of Winchester" appeared in 1798, and showed remarkable power and learning. It led to a controversy with Dr. Sturges, a prebendary of the cathedral, which brought forth two of Milner's best-known works, "Letters to a Prebendary" and "The End of Religious Controversy". In deference to the wishes of his bishop, however, the last-named work was withheld for the sake of peace, and it did not see the light until nearly twenty years later. It was during his residence at Winchester that Milner was first brought into contact with the public affairs of Catholics, which formed the other aspect of the crisis in that body. The Cisalpine or antipapal movement among the laity was beginning, the moving spirit being Charles Butler, nephew of Alban Butler, a lawyer of eminence and reputation, and the lifelong opponent of Milner. The movement also affected some of the clergy, the well-known writer, Rev. Joseph Berington, being the most notable example. Milner, who had a keen sense of orthodoxy and loyalty to the Holy See, directed all his endeavours to combating this movement. His writings were numerous and powerful; but they had

the defect of unceasing asperity of language, so that he continued to embitter the strife. The committee of Catholic laymen, elected first in 1782, and re-elected five years later, were the centre of such opinions, and towards the end three ecclesiastics were added, two of whom (James Talbot and Charles Berington) were bishops. The object of the committee was to help to bring about Catholic emancipation. With this end in view, in 1789 they issued a "Protestation", disclaiming some of the more objectionable doctrines with which they were popularly credited, including the deposing power and papal infallibility. Despite the Cisalpine tone of the document, it was signed by nearly 1500 Catholics, including all the vicars Apostolic, though the signatures of two were afterwards withdrawn. Pitt who was then Prime Minister promised to introduce a bill of Catholic relief; but when it was drafted, it was found to contain an oath which all Catholics were to be called upon to take, based on the "protestation", but in stronger language, and containing doctrine to which no good Catholic could set his name; while the Catholics throughout were called by the absurd title of "Protesting Catholic Dissenters".

JOHN MILNER

The four vicars Apostolic met at Hammersmith, in October, 1789, Milner attending as theological adviser. They unanimously condemned the oath and the new appellation. During the following year the Bishops of the Northern and London Districts died. A great effort was made by the committee to secure the transference of Bishop Charles Berington to the London District. This would have been a triumph for the Cisalpines; but fortunately it did not succeed. Rome, being warned, appointed Dr. Douglass, a Yorkshireman, who had been outside the late disputes.

The committee now suggested some modification of the oath; but it was not sufficient to free it from objection, and three out of the four vicars Apostolic joined in condemning it a second time. When the Relief Bill was brought forward in February, 1791, the bishops called Milner to their assistance. By means of his vigorous action an impression was made on the Government and the oath was further modified; but the situation was really saved after his return to Winchester, when the House of Lords, at the instigation of the Protestant Bishop of St. David's, substituted a totally different oath for the one objected to; and in this form the Bill was passed. It abolished the penal laws properly so-called and legalized the celebration of Mass; but Catholics continued liable to numerous disabilities for many years afterwards. After this the Catholic Committee dissolved; but the chief members re-formed themselves into an association to which they gave the name of the Cisalpine Club and which lasted for many years. Milner continued to write and speak in opposition to them. The clergy who were supporters of the Cisalpine spirit were chiefly in the Midland District, one group who had acted together being known as the Staffordshire Clergy. By a strange fate it was this very district over which Milner was called to rule in 1803, when he was consecrated Bishop of Castabala, and appointed Vicar Apostolic of the Midland District. It is credit-

able both to them and to Milner himself that the resulting state of tension was of short duration. The clergy learned to value the great qualities of their new bishop, and conceived an admiration of him, the tradition of which has lasted to the present day.

Milner, however, was not satisfied with his position in the Midlands. He had formed an alliance with the Irish bishops, and with their co-operation, a determined attempt was made to have him transferred to London as coadjutor with right of succession. This scheme was opposed by Bishop Douglass, and ultimately defeated, though the pope consented that Milner should become parliamentary agent to the Irish bishops in their struggle to procure Catholic emancipation, and that for this purpose he should be permitted to go to London as often as necessary. This unfortunate disagreement with his colleagues led to regrettable results. Milner found fault with the manner in which the London District was governed, and was not afraid to say so publicly, in numerous pamphlets and other publications, and even in his pastorals. The subjects of contention were several; but two especially may be mentioned. One was the well-known "Veto" question, which first came into prominence in the year 1808. By this it was intended to concede to the Crown a negative voice in the election of Catholic bishops, by conferring a right to veto any candidate whose loyalty was open to question. The chief Irish bishops had agreed to the measure in 1799; but since then, owing to the postponement of emancipation, the scheme had dropped. Milner revived it, and was for a time the warm advocate of the veto. He found himself in opposition to most of the Irish bishops. He visited Ireland, and afterwards wrote his "Letter to a Parish Priest" (who was really an Irish bishop) in defence of his position. The Irish bishops, however, condemned the Veto in 1808. A year later Milner was converted to their way of thinking, and became as vigorous in opposition to it as he had been before in its favour. About this time the English Catholics, in presenting a petition to Parliament, embodied what was known as their "Fifth Resolution", offering a "grateful concurrence" to a Bill which would give them emancipation, accompanied by any "arrangements" for the safe-guarding of the Established Church which should not be inconsistent with their religion. Milner declared—contrary to the assertions of the framers of the Resolution—that the "arrangements" intended, included the Veto, and he denounced those who signed the petition, including all the other vicars Apostolic of England. In this he received the support of the Irish bishops. Another source of criticism was the want of vigour which he alleged against the London Vicar in combating the Blanchardist schism among the French emigrant clergy, especially the restoration of one of them, Abbé de Trevaux, to spiritual faculties without a public retraction. In this matter also he was supported by the Irish bishops.

A crisis occurred in 1813, Dr. Poynter being then Vicar Apostolic of the London District. A Bill for the full emancipation of Catholics was introduced into the House of Commons by Grattan; but Lord Castlereagh and Mr. Canning introduced amending clauses giving the Crown a veto on the appointment of bishops, to be exercised only on the recommendation of a committee consisting chiefly of Catholic Peers. Milner and the Irish bishops maintained that no Catholic could assent to this without incurring schism. The other vicars Apostolic did not go so far as this, though they opposed the clauses. The leading members of the Catholic Board, consisting chiefly of laymen, were in favour of accepting them as the necessary price to pay for emancipation. Milner, however, used all his influence to procure the rejection of the Bill. He printed a "Brief Memorial" in this sense, and distributed it among members of Parliament. The Bill

passed its second reading, but in committee the clause admitting Catholics to Parliament was defeated by a small majority of four votes, and the Bill was abandoned. Milner took to himself the credit of having been the cause of its defeat, and the laymen were so angry with him that, to their permanent disgrace, they publicly expelled him from the committee of the Catholic Board. In the meantime Dr. Poynter appealed to Rome for guidance in the expected event of the re-introduction of the Bill. The pope was at that time the prisoner of Bonaparte, and the cardinals were dispersed. In their absence Mgr. Quarantotti, Secretary of Propaganda, using the powers with which he had been provisionally invested, issued a Rescript, dated February, 1814, approving of the Bill as it stood. Milner did not fail to see the serious results which would follow from this and decided immediately to appeal to the pope, who having been liberated from captivity, was on his way back to Rome. His journey was so far successful that the Quarantotti Rescript was recalled, and the pope ordered the whole matter to be examined afresh. In the end a decision was promulgated in the shape of a letter from Cardinal Litta, Prefect of Propaganda, to Dr. Poynter, who had also come to Rome. The provisions of the late Bill were condemned; but on the general question of the veto, apart from the Lay Committees, the decision was against Milner; subject to certain safeguards, Catholics were empowered to concede a veto to the Crown, provided this negative power was so limited as not to be allowed to grow into a positive nomination. This led to further agitation in Ireland, and another deputation was sent to Rome; but the English Catholics, including Milner himself, accepted the decision without question. The English vicars Apostolic were, however, naturally opposed to the veto, and in the event it never became necessary to utilize the permission granted.

On his return from Rome Milner continued to write controversially, the new "Orthodox Journal" being a frequent medium for his communications. His language was as harsh as ever, and unbecoming in a bishop, until at length an appeal was made to Rome, and Cardinal Fontana, who was then Prefect of Propaganda, forbade him to write in it any more. During the last years of his life Milner withdrew to a great extent from public politics. He ceased to act on behalf of the Irish bishops, and though he did not hold any intercourse with the other vicars Apostolic, he ceased to write against them. He devoted himself to literary work. In 1818 his "End of Controversy", perhaps the best known of all his books, at length appeared, and it was followed by a war of pamphlets and replies which went on for several years. Feeling his health failing, he applied for a coadjutor, and Rev. Thomas Walsh, President of Oscott College, was appointed. He was consecrated in 1825 when all the bishops of England met, and a reconciliation was effected. Milner survived less than a year, his death taking place at his house at Wolverhampton on 19 April, 1826. He left behind him a record of a life marked by whole-hearted devotion to religion, and of eminent services rendered to the cause, both as a writer and a man of action. In both capacities his work was marred by the asperity of his language, and his intolerance of any views differing from his own. This made him many enemies through life, and cut him off from his brother bishops during the greater part of his episcopate. But his lot was cast at a difficult time, and he succeeded in combating difficulties which few other men would have faced. He had the advantage of a strong constitution; his vigour and activity were phenomenal, and, added to his devotion to the Holy See, earned for him the title of the English Athanasius.

There are many portraits of Milner: (1) sketch, age about 25; (2) miniature, as a bishop about 1803; (3) miniature by Kernan (1808)—considered the best

likeness); (4) painting by Barber, drawing master at Oscott, 1817; (5) painting by Herbert, R.A.—said to be the most like, but it is in Gothic vestments and mitre, having been painted long after Milner's death. (These are all at Oscott.) (6) Painting of Milner as a priest, age about 45, at the convent, East Bergholt. (7) Painting at the presbytery, Norwich, very similar to (5). (8) Engraving in "Laity's Directory", 1827, from a painting by Radcliffe (Orth. Jour., I, 173). (9) Bust, by Clarke sen. of Birmingham: many copies to be met with. (1), (2), and (6) reproduced in the "Dawn of the Catholic Revival"; (8) in Miss Harting's "Catholic London Mission"; (4) in "Catholic London a Century ago"; (5) in the penny "Life of Milner," by Rev. E. Burton (Catholic Truth Society). His chief works are: "Funeral Discourse on Bishop Challoner" (1781); "The Clergyman's Answer to the Layman's Letter" (1790); "Pastoral of the Bishop of Léon" (translated, 1791); "Discourse at Consecration of Bishop Gibson" (1791); "Divine Rights of Episcopacy" (1791); "Audi Alteram Partem" (1792); "Ecclesiastical Democracy detected" (1793); "Reply to Cisalpine Club" (1795); "Serious Expostulation with Rev. Joseph Berington" (1797); "History of Winchester" (1798); "Brief Life of Challoner" (1798); "Letters to a Prebendary" (1800); "Case of Conscience solved" (1801); "Elucidation of the Conduct of Pius VII" (1802); "Arguments against Catholic Petition" (1805); "Cure of Winefride White" (1805); "Letter to a Parish Priest" (1808); "Letters from Ireland" (1808); "Pastoral Letter on Blanchardists" (1808); "Sequel", "Supplement", and "Appendix" (1808-9); "Appeal to the Catholics of Ireland" (1809); "Discourse at Funeral of Sir William Jerningham" (1809); "Treatise on Ecclesiastical Architecture" (1810); "Instructions for Catholics of Midland Counties" (1811); "Letter to Prelate of Ireland" (1811); "Explanation with Bishop Poynter" (1812); "Pastoral on Jurisdiction of Church", I, II, and III (1812-3); "Brief Memorial on Catholic Bill" (1813); "Mulum in Parvo" (1813); "Encyclical Letter" (1813); "Inquisition. A letter to Sir John Cox Hippisley" (1816); "Humble Remonstrance to House of Commons" (1816); "Memoir of Bishop Hornyold" (Directory, 1818); "End of Religious Controversy" (1818); "Supplementary Memoirs of English Catholics" (1820, and "Additional Notes to" in 1821); "Devotion to the Sacred Heart" (1821); "Vindication of the End of Controversy" (1822); "Exposer exposed" (1824); "Parting Word to Dr. Grier" (1825). (For a complete list, see Husenbeth, *infra*, 572.)

BERNARD WARD.

Milner, RALPH, VENERABLE, layman and martyr, b. at Flacsted, Hants, England, early in the sixteenth century; suffered at Winchester, 7 July, 1591. The greater part of his life was probably passed in his native village, where, being practically illiterate, he supported his wife and eight children by manual labour. He was brought up an Anglican, but, struck by the contrast between the lives of Catholics and Protestants of his acquaintance, he determined to embrace the old religion, and, after the usual course of instruction, was received into the Church. On the very day of his first Communion, however, he was arrested for changing his religion and committed to Winchester jail. Here his good behaviour during the years of his imprisonment won him the jailer's confidence to such

a degree that he was frequently allowed out on parole, and was even trusted with the keys of the prison. This leniency enabled him to render valuable service to the other Catholic prisoners and to introduce priests to administer the sacraments. Soon, extending the sphere of his charitable activity, he acted as escort first to Father Thomas Stanney, and later to his successor at Winchester, Father Roger Dicconson, conducting them to the different villages to minister to the spiritual needs of the scattered and persecuted flock. Finally seized with Father Dicconson, Milner was with him placed under close confinement in Winchester jail pending the approaching sessions. Probably moved with compassion for the aged man, the judge urged Milner to attend even once the Protestant church and thus escape the gallows. The latter refused, however, "to embrace a counsel so disagreeable to the maxims of the Gospel", and began immediately to prepare for death. Every effort was made to persuade him to change his purpose and renounce the Faith, and, when he was approaching the gallows with Father Dicconson, his children were conducted to him in the hope that he might even then relent. Unshaken in his resolution, Milner gave his children his last blessing, declared that "he could wish them no greater happiness than to die for the like cause", and then met his death with the utmost courage and calm.

THOMAS KENNEDY.

Milo. See SIRA, DIOCESE OF.

Milo Crispin, monk, and cantor of the Benedictine Abbey of Bec, wrote the lives of five of its abbots: Lanfranc, Archbishop of Canterbury, Gulielmus de Bellomonte, Boso, Theobaldus, and Letardus. His life of Lanfranc is printed in the "Acta Sanctorum" of the Bollandists (May 28). The other four (those of Theobaldus and Letardus being mere summaries) are included in P. L. (Vol. CL.). Milo must have been an old man when he wrote them, for in the last chapter of his life of Lanfranc he relates something which he himself heard St. Anselm say. As St. Anselm died in 1109, and Letardus did not die till 1149, Milo Crispin shows here incidentally that his own religious life had lasted more than forty years. He came of the noble race of Crispin descended from the Neustrian, Gislebert, who first received the name Crispin because of his erect curly hair. All Gislebert's sons distinguished themselves, and the family proved generous benefactors to the Abbey of Bec. Two of his descendants subsequently became monks there—Gilbert, afterwards Abbot of Westminster, who wrote the life of St. Herluin, founder and first Abbot of Bec, and Milo himself. No details of the latter's career have been preserved, nor is it known when he died.

EDWIN BURTON.

Milopotamos, a titular see of Crete, suffragan of Candia. Certain historians and geographers identify this locality with the ancient Pantomatron mentioned by Stephanus of Byzantium, by Ptolemy (III, xv, 5), who places it between Rhethymnos and the promontory of Dium, and by Pliny (IV, xx, 3), who places it elsewhere. If Milopotamos is identical with Avlopotamos, this Greek see is alluded to for the first time towards 1170 (Parthey, "Hieroclis Synecdemus", 118); it is spoken of again in another undated "Notitia episcopatum" (Gelsner, "Ungedruckte . . . Texte der Notitiæ episcop.", 627). As to the Latin residential see, its first titular, Matthew, is mentioned about 1212, shortly after the conquest of the island by the Venetians. From 1538 to 1549 the Diocese of Cher-

onesus was joined to it; on the other hand, in 1641, the Diocese of Milopotamos was united with Rhethymnos and after the conquest of the island by the Turks in 1670, became merely titular. We know the names of about twenty residential Latin bishops. Among the schismatic Greeks the See of Aulopotamos is united with that of Rhethymnos. The ruins of the city may be seen along the sea-shore at Castel Mylopotamo, about twelve miles from Rhethymnos.

S. VAILLÉ.

Miltiades, SAINT, POPE.—The year of his birth is not known; he was elected pope in either 310 or 311; died 10 or 11 January, 314. After the banishment of Pope Eusebius (q. v.) the Roman See was vacant for some time, probably because of the complications which had arisen on account of the apostates (*lapsi*), and which were not cleared up by the banishment of Eusebius and Heraclius. On 2 July, 310 or 311, Miltiades (the name is also written Melchiades), a native of Africa, was elevated to the papacy. There is some uncertainty as to the exact year, as the "Liberian Catalogue of the Popes" (Duchesne, "Liber Pontificalis", I, 9) gives 2 July, 311, as the date of the consecration of the new pope (ex die VI non. iul. a cons. Maximiliano VIII solo, quod fuit mense septembri Volusiano et Rufino); but in contradiction to this the death of the pope is said to have occurred on 2 January, 314, and the duration of the pontificate is given as three years, six months and eight days; possibly owing to the mistake of a copyist, we ought to read "ann. II" instead of "ann. III"; and therefore the year of his elevation to the papacy was most probably 311. About this time (311 or 310), an edict of toleration signed by the Emperors Galerius, Licinius, and Constantine, put an end to the great persecution of the Christians, and they were permitted to live as such, and also to reconstruct their places of religious worship (Eusebius, "Hist. Eccl.", VIII, xvii; Lactantius, "De mortibus persecutorum", xxxiv). Only in those countries of the Orient which were under the sway of Maximinus Daia did the Christians continue to be persecuted. The emperor now gave Pope Miltiades in Rome the right to receive back, through the prefect of the city, all ecclesiastical buildings and possessions which had been confiscated during the persecutions. The two Roman deacons, Strato and Cassianus, were ordered by the pope to discuss this matter with the prefect, and to take over the church properties (Augustinus, "Brevevulus collationis cum Donatistis", iii, 34); it thus became possible to reorganize thoroughly the ecclesiastical administration and the religious life of the Christians in Rome.

Miltiades caused the remains of his predecessor, Eusebius, to be brought back from Sicily to Rome, and had them interred in a crypt in the Catacombs of St. Callistus. In the following year the pope witnessed the final triumph of the Cross, through the defeat of Maxentius, and the entry into Rome of the Emperor Constantine (now converted to Christianity), after the victory at the Milvian Bridge (27 October, 312). Later the emperor presented the Roman Church with the Lateran Palace, which then became the residence of the pope, and consequently also the seat of the central administration of the Roman Church. The basilica which adjoined the palace or was afterwards built there became the principal church of Rome. In 313 the Donatists (q. v.) came to Constantine with a request to nominate bishops from Gaul as judges in the controversy of the African episcopate regarding the consecration in Carthage of the two bishops, Cæcilian and Majorinus. Constantine wrote about this to Miltiades, and also to Marcus, requesting the pope with three bishops from Gaul to

give a hearing in Rome, to Cæcilian and his opponent, and to decide the case. On 2 October, 313, there assembled in the Lateran Palace, under the presidency of Miltiades, a synod of eighteen bishops from Gaul and Italy, which, after thoroughly considering the Donatist controversy for three days, decided in favour of Cæcilian, whose election and consecration as Bishop of Carthage was declared to be legitimate. In the biography of Miltiades, in the "Liber Pontificalis", it is stated that at that time Manichæans were found in Rome; this was quite possible as Manichæism began to spread in the West in the fourth century. The same source attributes to this pope a decree which absolutely forbade the Christians to fast on Sundays or on Thursdays, "because these days were observed by the heathen as a holy fast". This reason is remarkable; it comes most likely from the author of the "Liber Pontificalis" who with this alleged decree traces back a Roman custom of his own time to an ordinance of Miltiades. The "Liber Pontificalis" is probably no less arbitrary in crediting this pope with a decree to the effect that the Oblation consecrated at the Solemn Mass of the pope (by which is meant the Eucharistic Bread) should be taken to the different churches of Rome. Such a custom actually existed in Rome (Duchesne, "Christian Worship," London, 1903, 185); but there is nothing definite to show that it was introduced by Miltiades, as the "Liber Pontificalis" asserts.

After his death, on 10 or 11 January (the "Liberian Catalogue" gives it as III id. jan.; the "Depositio Episcoporum" as III id. jan.), 314, Miltiades was laid to rest in the Catacomb of St. Callistus and he was venerated as a saint. De Rossi regards as highly probable his location of this pope's burial-chamber (Roma Sotterranea, II, 188 sq.). His feast was celebrated in the fourth century, on 10 January, according to the "Martyrologium Hieronymianum". In the present "Roman Martyrology" it occurs on 10 December.

J. P. KIRSCH.

Miltiz, KARL VON, papal chamberlain and nuncio, b. about 1480, the son of Sigismund von Miltiz, "Landvogt" of Meissen, drowned in the Main near Gross Steinheim, 20 November, 1529. He received his humanistic and theological education at Mainz, Trier, and Meissen and went to Rome in 1514 or 1515, where he was made papal chamberlain and notary, and acted as agent of Frederic, Elector of Saxony, and of Duke George the Bearded. He obtained for the latter the permission to transport some of the earth of the Campo Santo in Rome, which originally had been brought from Jerusalem, to Annaberg, Saxony, where it was used in the cemetery. After the endeavours of Cardinal Cajetan to silence Luther had failed, Miltiz appeared to be the person most suited to bring the negotiations to a successful ending. To have some pretence for the journey to Germany, he was to deliver to his elector the papal golden rose, which the latter had coveted in vain for three years. He went first to Altenburg where he had his first conversation with Luther. Leaving aside all discussion of a promise of retraction, he and Luther agreed to remain silent for the present, and to let the learned Archbishop Richard of Trier conduct the examination. Luther even promised to write an humble letter to the pope. Miltiz then journeyed to Leipzig and covered Tetsel with mortifying, wholly unnecessary reproaches. But the movement started and fanned by Luther, had progressed too far to be halted by mere conclaves and conversations, and for this reason two further meetings between Luther and Miltiz at Liebenwerda (9 Oct., 1519) and Liebenburg

(Oct., 1520) were without success. After a short stay in Rome he returned to Germany in 1522, where he died. He was buried in the cathedral of Mainz.

PATRICIUS SCHLAGER.

Milwaukee, ARCHDIOCESE OF (MILWAUKIENSIS), established as a diocese, 28 Nov., 1843; became an archbishopric, 12 February, 1875, comprises seventeen counties of the State of Wisconsin: Columbia, Dane, Dodge, Fond du Lac, Green, Green Lake, Jefferson, Kenosha, Marquette, Milwaukee, Ozaukee, Racine, Rock, Sheboygan, Walworth, Washington, Waukesha, an area of 9321 square miles. The metropolitan city of Milwaukee is picturesquely situated on Milwaukee Bay, on the eastern shore of Lake Michigan. Its name is derived from the Algonquin family of Indian dialects and means Good Land. In the history of Catholicism it is first mentioned in the "Catholic Almanac" of 1840: "Milvakie, Rev. Mr. Kelly who visits alternately Racine, Rochester, Burlington, Southport (Kenosha), etc." The first Mass, however, was celebrated in Milwaukee as early as 1837 by Rev. J. Bonduel, a missionary from Green Bay, in the home of the "founder of Milwaukee," Solomon Juneau. In the same year Rev. Patrick Kelly came to the city and held services in the court-house till, in 1839, he erected the first Catholic church, dedicated to St. Peter, for several years the bishop's cathedral. It was afterwards removed to its present site near St. Peter and Paul's Church by Mgr. Leonard Batz, V. G. North-west territory, of which the present State of Wisconsin forms a part, belonged to the Diocese of Quebec and afterwards to Bardstown, Ky., till it was affiliated to the newly created See of Cincinnati in 1821. In 1833, when Detroit was made a see, it became a dependency of that see. It was in 1841 that the first bishop visited Milwaukee in the person of Rt. Rev. P. Lefevre of Detroit, accompanied by one of his zealous priests, Rev. Martin Kundig, later vicar-general, whose name is inseparably linked with the early history and subsequent growth of the diocese. In 1843, the Fathers of the Fifth Provincial Council of Baltimore petitioned the Holy See to make Milwaukee a see and to appoint the Rev. John Martin Henni as its first bishop.

Episcopal Succession.—John Martin Henni, first Bishop of Milwaukee, was born at Obersaxen, Switzerland, 13 June, 1805. He studied philosophy and theology in Rome, where he met the Very Rev. Frederic Rézé, Vicar-General of Cincinnati (later Bishop of Detroit), who had come there in quest of priests for the American missions. Together with his fellow-student M. Kundig, he landed in New York, in 1828. Having been ordained priest at Cincinnati, 2 Feb., 1829, he laboured with the zeal and enthusiasm of an apostle for the scattered Catholics of Ohio, traversing the state in all directions, baptizing, preaching, and building churches. Later on he was appointed vicar-general of the diocese and pastor of the church of the Holy Trinity. He also was the founder of the Catholic weekly, "Der Wahrheitsfreund", for some time the only German Catholic paper in the United States. On 19 March, 1844, Henni was consecrated Bishop of Milwaukee by Bishop Purcell of Cincinnati, and soon after started for his new field of labour. He came accompanied by the Rev. Michael Heiss, who for some time acted as his secretary. The prospects of the new diocese were far from encouraging. He found only four priests in the whole extent of his diocese, a few Catholics scattered over the territory, and a small frame church encumbered with a heavy debt. But undaunted by these difficulties the youthful bishop set to work with apostolic zeal, and, thanks to his untiring efforts, the number of Catholics, mostly immigrants from Germany and Ireland, increased from year to year, so that after three years the number of priests

had risen from four to thirty. But a rich share of this phenomenal progress is due to the arduous labours and sacrificing spirit of his priests, the pioneers of the North-west, men like Mazuchelli, the founder of Sinisawa, Morrissey, C. Rehrl, Wisbauer, Beitter, Inama, Gaertner, Gernbauer, Holzhauer, Conrad, and others.

In 1847 there arrived from Austria Dr. Joseph Salzmann, founder of St. Francis Seminary (Salesianum). In the same year Henni laid the foundation of his new cathedral, dedicated to St. John the Evangelist. To raise funds for the building, he made extensive journeys to Cuba and Mexico. The cathedral was consecrated by Archbishop (afterwards Cardinal) Bedini, 31 July, 1853. Owing to the large influx of Germans at that time, St. Mary's church, for the spiritual wants of the German Catholics, was erected in 1846. In the same year the first hospital was opened under Catholic auspices in charge of the Sisters of Charity of St. Vincent de Paul. In 1856 the Seminary of St. Francis of Sales, destined to become the fertile nursery of priests for the North-west, was erected and in the course of years became one of the most flourishing institutions of the country. Its first rector was the Rev. Michael Heiss, while its founder, the Rev. Dr. Salzmann, acted as procurator. On the elevation of Father Heiss to the episcopal dignity, Salzmann was appointed his successor, a position which he held to the time of his death which occurred 17 January, 1874. Salzmann was also the founder of the first Catholic normal school in the United States and of the Pio Nono College. Both institutions were opened in 1871, and have to this day faithfully carried out the intentions of their founder. In 1866 two new dioceses were established in Wisconsin with episcopal sees in La Crosse and Green Bay. In 1875 Milwaukee was made an arch-episcopal see, with Mgr. Henni as first archbishop. During the last years of his administration his burden was considerably lightened by the appointment of Rt. Rev. M. Heiss as coadjutor, with the right of succession, and titular Archbishop of Adrianople. Archbishop Henni who is rightly called the Patriarch of the North-west, was called to his reward 7 Sept., 1881.

Michael Heiss was born at Pfahldorf, Bavaria, 12 April, 1818. Having finished his theological studies at the famous University of Munich, he spent the first two years of his priesthood in his home diocese of Eichstätt, and then offered his services to the American mission. He first had charge of St. Mary's church in Covington, Ky., where he remained till 1844, when he consented to accompany Bishop Henni of Milwaukee to his new see. Having filled the office of secretary for some years, he was appointed pastor of St. Mary's church, Milwaukee. In 1856 he was appointed first rector of St. Francis Seminary, an office which he held till his elevation to the episcopal dignity as first Bishop of La Crosse, in 1868. On the death of Archbishop Henni, in 1881, he succeeded him as archbishop. Archbishop Heiss was known and esteemed as one of the most learned theologians of the country, a reputation which secured to him a place among the members of the dogmatic commission at the Vatican Council. His works "De Matrimonio" (Munich, 1861) and "The Four Gospels Examined and Vindicated" (Milwaukee, 1863), hold a prominent place in theological literature. In 1883 he was invited to Rome to take part in the deliberations preparatory to the Third Plenary Council of Baltimore, which he also attended in 1884. In 1886 he convoked the First Provincial Council of Milwaukee, which opened its sessions on 23 May, in St. John's cathedral. Bishops Flasch of La Crosse, Ireland of St. Paul, Seidenbusch of St. Cloud, Marty, Vicar Apostolic of Dakota, and Katzer, administrator of Green Bay, took part in its deliberations.

During the last years of Archbishop Heiss's wise and peaceful administration, the ecclesiastical horizon was somewhat darkened by the plot of the American Protective Association, a new phase of defunct Know-

nothingism (q. v.). In their bigotry and hatred of everything Catholic, they aimed their first blow at the Catholic schools by the "Bennett Law", which seriously interfered with the rights of Catholic parents. But the timely and united action of the bishops of Wisconsin, and their vigorous protest, by which they branded the bill as "unnecessary, offensive, and unjust", effectively defeated the iniquitous scheme. In 1888 the Diocese of St. Paul was separated from Milwaukee and made an archbishopric. Three suffragan sees were thenceforth subject to Milwaukee: La Crosse and Green Bay in the State of Wisconsin and Marquette in Upper Michigan. The Diocese of Superior was added in 1905. Archbishop Heiss died at St. Francis Hospital, La Crosse, 26 March, 1890. His mortal remains rest beneath the sanctuary of the seminary chapel at St. Francis, at the side of his faithful friend and co-labourer, Joseph Salsmann.

Frederic Xavier Katzer was born at Ebensee, Upper Austria, 7 February, 1844. His preparatory studies he completed at Linz, the capital of Upper Austria, under the direction of the Jesuit Fathers. He came to America in 1864. Having finished his theological studies at the Salesianum, he was ordained priest 21 December, 1866. After his ordination he remained at the seminary where he taught mathematics and, later on, philosophy and dogmatic theology. In 1875 he followed Fr. Krautbauer, the newly appointed Bishop of Green Bay, to his see, where he acted as secretary, and afterwards as vicar-general. Upon the death of Bishop Krautbauer, in 1885, he was appointed administrator of the diocese; and on 31 May, 1886, he was chosen Bishop of Green Bay and consecrated in St. Francis Xavier's cathedral, 21 September of the same year. After the death of Archbishop Heiss he was promoted to the archiepiscopal dignity as third Archbishop of Milwaukee in December, 1890. Archbishop Katzer was a man of profound learning and a thorough theologian. His poetical talent is evidenced by an allegorical drama, entitled, "Der Kampf der Gegenwart" (The Combat of the Present Age). His administration was marked by a uniform regard for justice and strict adherence to the laws of the Church. He died at Fond du Lac, 4 August, 1903, on the same day on which the great pontiff Leo XIII breathed his last. His earthly remains found their last resting place in the little cemetery near the "chapel in the woods" at St. Francis.

Sebastian Gebhard Messmer was born at Goldach, Switzerland, 29 August, 1847. Having finished his theological studies at the University of Innsbruck he was ordained priest in the same city, 23 July, 1871. In the same year he came to the United States, where he joined the Diocese of Newark. For several years he taught canon law, Scripture, and dogmatic theology in Seton Hall. For a short time he also had charge of St. Peter's, Newark, N. J. In 1889 he was called to the chair of canon law in the Catholic University at Washington, but first went to Rome to study Roman civil law. After his return he entered upon his duties as professor and kept this position till his elevation to the episcopal dignity. On 27 March, 1892, he was consecrated Bishop of Green Bay in St. Peter's Church, Newark, by his former classmate, Bishop Zardetti of St. Cloud. On the death of Archbishop Katzer he succeeded him as archbishop, 28 November, 1903. Archbishop Messmer is honourably known as a very able and prolific contributor to Catholic literature, and his name is intimately linked with the principal religious movements in the country. Together with Bishop McFaul of Trenton he has been chiefly instrumental in inaugurating the American Federation of Catholic Societies.

Religious Orders in the Diocese.—Orders of Men.—The rapid, almost miraculous growth of Catholicism in the State of Wisconsin is chiefly due to the apostolic zeal of the pioneer priests of the secular priesthood; but the labours and trials of the early missionaries be-

longing to religious orders ought not to be forgotten. In 1857 the first Capuchin convent was erected at Mount Calvary, Wisconsin. It has been asserted, not without reason, that the foundation of the Calvary Province is a fact unprecedented in the history of the Catholic Church in this country, in as far as the order of Capuchins was introduced into Wisconsin, not by religious, but by two secular priests, Rev. Francis Haas and Rev. Bonaventure Frey. The opposition which they met on all sides, the trials which they had to endure, and the undaunted courage with which they met them, border on the miraculous. To-day the order possesses a flourishing community with convent and college at Calvary, a convent and two parishes in Milwaukee, not to speak of the numerous religious houses and communities in other dioceses. The Society of Jesus was established in Milwaukee in 1856, and St. Gall's church, erected in 1849, was placed in charge of the Society. In 1880 the Jesuit college known as Marquette College was opened, and has lately developed into the flourishing Marquette University. The Jesuits also have charge of the Gesù church, one of the finest religious edifices in the Northwest. The Fathers of the Holy Cross conduct the College of the Sacred Heart at Watertown; the Servite Fathers, a monastery and novitiate at Granville Center; and the Discalced Carmelites, lately arrived from Ratisbon, Bavaria, attend to the chapel on "Holy Hill", a well known place of pilgrimage.

Orders of Women.—The School Sisters of Notre Dame came to Milwaukee in 1855, on the invitation of Bishop Henni, who showed himself their generous friend and protector, especially during the first years when they had to struggle with poverty and violent opposition. To Mother Caroline, who brought the first band of sisters from Munich to Milwaukee, and who for forty-two years stood at the helm, is principally due the present flourishing condition of the community. The sisters have their mother-house and novitiate in Milwaukee. In 1876 the community was divided into two provinces, with the second mother-house in Baltimore; and in 1895 a third province was formed with a mother-house at St. Louis, Mo. The Sisters of St. Francis have two mother-houses in the diocese, one at St. Francis, where they built their first convent in 1847, near the present site of St. Francis Seminary, the other in Milwaukee (St. Joseph's Convent and the Sacred Heart Sanatorium). The Sisters of St. Agnes have their mother-house at Fond du Lac, where they also have charge of a hospital, a home for the aged, and an academy. The Sisters of St. Dominic have their mother-house at Racine, and an academy at Corliss. The sisters of these communities teach in the numerous parochial schools of Wisconsin and other states. The Sisters of Mercy, too, have a mother-house in Milwaukee. Other communities which have no mother-house in the diocese, but are in charge of some charitable or educational establishment are: the Sisters of Charity of St. Vincent of Paul, Sisters of Charity of the Blessed Virgin Mary, Franciscan Sisters of St. Louis, Mo., Polish Sisters of St. Joseph, Hospital Sisters of St. Francis, Little Sisters of the Poor, Society of the Divine Saviour, Dominican Sisters of the Perpetual Rosary, Sisters of the Third Order of St. Dominic (Sinsinawa), Sisters of the Good Shepherd, Felician Sisters, and Sisters de Misericorde.

Statistics.—The official reports for 1910 give the following figures: There are in the archdiocese 377 priests (303 secular and 74 regulars). The city of Milwaukee counts 38 churches; outside of Milwaukee there are 169. Besides there are 65 mission churches without a resident priest and 41 chapels. In the seminary of St. Francis de Sales there are 150 students of philosophy and theology studying for the different dioceses of the province and other dioceses. There is one university, one Catholic normal school, and five colleges with 770 students; six academies for young

ladies; 142 parish schools with 33,279 pupils, four orphan asylums with 401 orphans, one infant asylum, one industrial school for girls, one deaf-mute asylum, one home for boys, one school for feeble-minded, nine hospitals and sanatoriums, two homes for aged poor, and one home for girls. The Catholic population of the archdiocese is estimated at about 238,000.

J. RAINER.

Mind (Gk. *νοῦς*; Lat. *mens*; Ger. *Geist*, *Seele*; Fr. *âme*, *esprit*).—The word mind has been used in a variety of meanings in English, and we find a similar want of fixity in the connotation of the corresponding terms in other languages. Aristotle tells us that Anaxagoras, as compared with other early Greek philosophers, appeared like one sober among drunken men in that he introduced *νοῦς*, mind, as efficient cause of the general order in the universe. In treating of the soul, Aristotle himself identifies *νοῦς* with the intellectual faculty, which he conceives as partly active, partly passive (see INTELLECT). It is the thinking principle, the highest and most spiritual energy of the soul, separable from the body, and immortal. The Latin word, *mens*, was employed in much the same sense. St. Thomas, who represents the general scholastic usage, derives *mens* from *metior* (to measure). He identifies *mens* with the human soul viewed as intellectual and abstracting from lower organic faculties. Angels, or pure spirits, may thus be called minds (De Veritate, X, a. 1). For Descartes the human soul is simply *mens*, *res cogitans*, mind. It stands in complete opposition to the body and to matter in general. The vegetative faculties allotted to the soul by Aristotle and the Schoolmen are rejected by him, and those vital functions are explained by him mechanically. The lower animals do not possess minds in any sense; they are for him mere machines. An early usage in English connects the word mind closely with memory, as in the sentence "to bear in mind". Again it has been associated with the volitional side of our nature, as in the phrases "to mind" and "to have a mind to effect something". Still when restricted to a particular faculty the general tendency has been to identify mind with the cognitive and more especially with the intellectual powers. In this usage it more closely corresponds to the primary meaning of the Latin *mens*, understood as the thinking or judging principle. Mind is also conceived as a substantial being, equivalent to the scholastic *mens*, partly identified with, partly distinguished from the soul. If we define the soul as the principle within me, by which I feel, think, will, and by which my body is animated, we may provide a definition of mind of fairly wide acceptance by merely omitting the last clause. That is, in this usage mind designates the soul as the source of conscious life, feeling, thought, and volition, abstraction being made from the vegetative functions. On the other hand the term soul emphasizes the note of substantiality and the property of animating principle.

In the English psychological literature of the last century there has indeed been exhibited a most remarkable timidity in regard to the use of the term "soul". Whilst in German at all events the word *Seele* has been in general acceptance among psychologists, the great majority of English writers on mental life completely shun the use of the corresponding English word, as seemingly perilous to their philosophical reputation. Even the most orthodox representatives of the Scotch school rigorously boycotted the word, so

that "the nature and attributes of the Human Mind", came to be recognized as the proper designation of the subject-matter of psychology, even amongst those who believed in the reality of an immaterial principle, as the source of man's conscious life. However, the spread of the positivist or phenomenalist view of the science of psychology has resulted in a very widely adopted identification of mind merely with the conscious states, ignoring any principle or subject to which these states belong. The mind in this sense is only the sum of the conscious processes or activities of the individual with their special modes of operating. This, however, is a quite inadequate conception of the mind. It may, of course, be convenient and quite legitimate for some purposes to investigate certain activities or operations of this mind or soul, without raising the ultimate question of the metaphysical nature of the principle or substance which is the basis and source of these phenomena; and it may also serve as a useful economy of language to employ the term mind, merely to designate mental life as a stream of consciousness. But the adoption of this phraseology must not cause us to lose sight of the fact that along with the action there is the agent, that underlying the forms of mental behaviour there is the being which behaves. The connexion of our abiding personal identity, nay the simplest exercise of self-conscious memory, compels us to acknowledge the reality of a permanent principle, the subject and connecting bond of the transitory states. Mind adequately conceived must thus be held to include the subject or agent along with states or activities, and it should be the business of a complete science of mind to investigate both.

All our rational knowledge of the nature of the mind must be derived from the study of its operations. Consequently metaphysical or rational psychology logically follows empirical or phenomenal psychology. The careful observation, description, and analysis of the activities of the mind lead up to our philosophical conclusions as to the inner nature of the subject and the source of those activities. The chief propositions in regard to the human mind viewed as a substantial principle which Catholic philosophers claim to establish by the light of reason are, its abiding unity, its individuality, its freedom, its simplicity, and its spirituality (see CONSCIOUSNESS; INDIVIDUALITY; INTELLECT; SOUL).

MIND AND CONSCIOUSNESS.—In connexion with the investigation of our mental operations there arises the question, whether these are to be deemed coextensive with consciousness. Are there unconscious mental processes? The problem under different forms has occupied the attention of philosophers from Leibnitz to J. S. Mill, whilst in recent years the phenomena of hypnotism, "multiple personality", and abnormal forms of mental life have brought the question of the relation between the unconscious and the conscious processes in the human organism into greater prominence. That all forms of mental life, perception, thought, feeling, and volition are profoundly affected in character by nervous processes and by vital activities, which do not emerge into the strata of conscious life, seems to be indisputably established. Whether, however, unconscious processes which affect conclusions of the intellect and resolutions of the will, but are in themselves quite unconscious, should be called mental states, or conceived as acts of the mind, has been keenly disputed. In favour of the doctrine of unconscious mental processes have been urged the fact that many of our ordinary sensations arise out of an aggregate of impressions individually too faint to be separately perceivable, the fact that attention may reveal to us experiences previously unnoticed, the fact that unobserved trains of thought may result in sudden reminiscences, and that in abnormal mental conditions hypnotized, somnambulist, and hysterical patients often accomplish difficult intellectual feats

former conditions was impossible. The power of the bishop was now so restricted by the chapter and the town, that he was unable to take any important step without their consent; indeed, a complete co-regency of the chapter was set up. Almost all the castles were in the hands of the aristocratic canons, and the revenues of the bishop were extremely limited. The lives of the clergy did not in many cases conform to the canonical rules; concubinage was quite general, monastic discipline had relaxed, and the faith of the laity had grown cold. For these reasons the Reformation spread rapidly in the town and the diocese under Bishop Franz I of Brunswick-Wolfenbüttel (1508-29), who involved the see in the Hildesheim chapter feuds, and died as the result of his excesses. His successor, Franz II von Waldeck, also Bishop of Münster and Osnabrück from 1532, led a dissolute life, and was an adherent of the new religious teachings, which he privately furthered with all his power. In 1553 he was forced to resign in favour of Julius of Brunswick-Wolfenbüttel (1553-54), whose soon resigned in favour of his uncle, Georg (1554-66).

Under his successor Hermann von Schauenberg (1567-82), Protestantism spread rapidly; Hermann accepted the Council of Trent, it is true, but governed as a Protestant prince. Heinrich Julius of Brunswick-Wolfenbüttel (1582-85) declared the Confession of Augsburg the only authorized creed in his diocese. Otto von Schauenberg (1587-99) was a devoted Catholic, but, owing to disputes with the cathedral chapter and the estates, accomplished little for Catholicism. The last bishop but one, Christian of Brunswick (1599-1633, a Protestant), troubled himself little about his diocese, and ruled it from his paternal estates. By the terms of his election he had to allow the free exercise of both creeds. The attempt of the cathedral chapter to turn over the church of St. John at Minden to the Jesuits (1604) was frustrated by the opposition of the citizens. By the Edict of Restitution (1629) the Catholics of Minden obtained the churches of St. Martin and St. Simeon; the Franciscans in 1630 established themselves in the cathedral until 1651, and even the Jesuits, though for only a short time, were welcomed to the city. Franz von Wartenberg (1633-48), last Bishop of Minden, endeavoured to restore the Catholic faith in his Sees of Minden, Osnabrück, and Verden; but in 1633 he was obliged to flee before the Swedes, and after the Treaty of Prague (1635) was unable to return.

By the Peace of Westphalia the diocese was suppressed, Franz Wilhelm retained the title of Bishop of

Minden, but its temporal possessions, embracing more than twenty-two square miles, were awarded to the Electorate of Brandenburg. It was only in 1649 that Brandenburg was able to obtain possession; in 1650 the Elector Frederick William received the oath of allegiance from the town and the nobility at the episcopal castle of Petershagen. The "principality" of Minden remained at first a special jurisdiction, until in 1729 it was united to the Countship of Ravensberg. The Catholics retained only the cathedral with eleven canonries, all of which were suppressed early in the nineteenth century; but the cathedral is still in Catholic hands. After the suppression of the see, its territory was administered for ecclesiastical purposes by the Northern Mission. In 1821 most of it fell to Paderborn, and a small remnant to Hildesheim.

JOSEPH LINS.

Ming, JOHN, philosopher and writer, b. at Gyswyl, Unterwalden, Switzerland, 20 Sept., 1838; d. at Brooklyn, Ohio, U. S. A., 17 June, 1910. He was educated at the Benedictine College,

Engelburg, Switzerland, and entered the German Jesuit novitiate in 1856. He studied philosophy at Aachen (1861-64), and theology at Maria-Laach (1865-69). After a year's tertianship in Westphalia he was sent to Kreuzberg, near Bonn, as a preacher, and in 1871 became lecturer in theology at Görz, Austria. In 1872 he came to the United States, where, after two years devoted to pastoral ministry, he professed theology at Milwaukee. He was transferred two years later to Spring Hill, Alabama, where he taught philosophy, in which work he was afterwards engaged for twenty-one years, mainly at Buffalo, Prairie du Chien, and St. Louis. When once he had acquired English, Father Ming began to write for the leading Catholic magazines, especially the "Messenger" and the "American Catholic Quarterly Review", in which his first article appeared in 1879. His contributions deal mainly with evolution and socialism, the two most important questions confronting Catholics in the United States in his day. After the publication of a short but instructive

treatise on the "Temporal Power of the Pope", he undertook a more ambitious work in his "Data of Modern Ethics Examined". The prominence of the labour question led him to engage in a deep study of that problem. To this we owe "The Characteristics and the Religion of Modern Socialism", and "The Morality of Modern Socialism". These two works supply Catholic students with not only an unprejudiced exposition of the Socialistic movement as propounded by its leading advocates, but a critical refutation of the erroneous theories on which it is based.

HUSSELMAN in America, III (2 July, 1910), 307-308.

A. A. MACERLEAN.

Minimi (or **MINIMS**) are the members of the religious order founded by St. Francis of Paula. The name is an allusion to Friar Minor, or to Matt., xxv, 40: "Quamdiu fecistis uni ex his fratribus meis minimis, mihi fecistis", and suggests, as Leo X in the Bull of canonization of the holy founder says, the great humility which should characterize the religious of this order, and by reason of which, they ought to consider themselves as the least of all religious. With the first Order of the Minims are connected a second and a third order. In this article we are concerned principally with the first.

I. ORIGIN AND RULE.—St. Francis of Paula, having in his youth lived one year in a Franciscan convent at S. Marco (Calabria), dedicated himself to solitary life in a hermitage near Paula. In 1435 some disciples joined him, and after a few years he founded convents at Paterno, 1444, and at Milazzo in Sicily, 1469. The new society was called "Hermits of St. Francis of Assisi". The Archbishop of Cosenza granted them of his own accord, in 1471, exemption from his jurisdiction (Lanovius, "Bullarium", 9), which privilege was confirmed by Sixtus IV, 1473 (Lanovius, "Bull.", 11). The same pontiff gave them the privileges of mendicant friars (q. v.). For 57 years (1435-93) the new foundation had no written rule, but in 1493 the first rule, containing 13 chapters, which was almost a faithful copy of that of St. Francis of Assisi, was confirmed by Alexander VI. (See text Lanovius, ad ann. 1493, and Bull. Rom., V, 352.) A second version of the rule in 10 chapters, which showed more independence of the Rule of St. Francis, was approved by Alexander VI in 1501. Here the fourth solemn vow of *vita quadagesimalis* appears, which forms the distinctive character of the Minims. In the same Bull of confirmation is inserted the rule of the third order in 7 chapters, for seculars of both sexes. (Text Lanovius ad ann. 1501; Bull. Rom., V, 385.) Hardly different from this second version is the rule confirmed in 1502. (Lanovius, ad ann. 1502.) Finally a third definite text of the rule of the first order, which is still observed by the Minims, was confirmed by Julius II, "Dudum ad sacrum ordinem", 28 July, 1506. (Bull. Rom., V, 421.) The rule of the second order, which is for sisters and which originated in Spain, appears for the first time in the same Bull. It is almost a literal adoption of the rule of the first order, while the rule of the third order here inserted is the same as that confirmed in 1501. The spirit which permeates these rules, especially those of the first and second orders, is that of great penance and abnegation. The fourth vow imposes perpetual abstinence from all flesh and white meats, and only in case of grave sickness by order of the physician may it be dispensed with. The Order of Minims is founded on the same principle of organization as that of all mendicants. The superiors are called correctors. At the head is the corrector general, who formerly was elected every three years, but since 1605 every six years. The corrector provincial is elected for three years, while the local superior is elected by each convent for only one year. The habit of the Minims is made of coarse black wool, has broad sleeves, and is girded by a thin

black cord. The *mozetta* of the *capuce* reaches below the cord, almost in the form of a scapular. To ensure the stricter observance of the rules of the first and second orders, Francis of Paula drew up a "Correctorium", consisting of ten chapters corresponding to the number of chapters in the rule, which determines the penance to be inflicted on those who transgress its precepts. This "Correctorium" was approved by Julius II in 1506 and by Leo X in 1517 (Digestum, see below, I, 55).

II. PROPAGATION AND ACTIVITIES.—The Order of the Minims, propagated at first in Italy was introduced by special royal favour into France, whither the holy founder was called in 1482. There the earliest

convents were at Plessis-les-Tours, Amboise, and Nigeon, near Paris. On account of their great simplicity the Minims in France received the appellation of *bons hommes*. In 1495 Charles VIII of France founded in Rome the convent of Trinità dei Monti, which, by Bull of Innocent X (1645), was exclusively reserved to the French fathers. From France the Minims spread to Spain, where they were called "Fathers of the Victory", owing to the victory of King Ferdinand over the Moors of Malaga. In 1497 the Emperor Maximilian introduced the new order into Germany (Bohemia). At the death of St. Francis of Paula, 1507, there existed five provinces spread over Italy, France, Spain, and Germany.

A little later the order counted 450 convents. In 1623 Dony d'Attichi gives the number of members as 6430, convents 359, and provinces 30, distributed in the principal Catholic countries of Europe. Lanovius in 1635 adds to the number of provinces three commissariates, of which one was in the West Indies. In 1646 the Propaganda approved the foundation of a mission in Canada, but it is not known if this plan was ever carried out (Roberti, II, 688). In England the Minims seem not to have had any convents, still some illustrious English members are recorded, as Thomas Felton, martyred in 1588, Henry More, nephew of the chancellor, Blessed Thomas More, d. at Reims, 1587; Andrew Folere, d. at Soissons, 1594. The second order was never very widely propagated. In 1623 there existed 11 convents with 360 sisters. The third order, on the contrary, found many adherents among the faithful in the countries where convents of the first order existed.

To give some indication of its activity we mention some of its most distinguished members. The first to be named is Bernard Boil (see BUIL, BERNARDO), the first vicar Apostolic in America, appointed 1493, who, as

A MINIM FRIAR

the documents published by Fita certainly indicate, belonged at that time to the Minims, although the papal Bull of appointment (see reproduction in this *ENCYCLOPEDIA*, I, 414) used the words *ordinis Minorum*. See Roberti, op. cit. below, I, 89-102. Distinguished theologians were: Lalemandet, d. 1647; Salier, d. 1707; Boucat, d. 1718; Palanco, d. 1720; Perrimezzi, d. 1740; historians (see bibliography), Giry, d. 1688; Marin, d. 1767; mathematicians, Maignan, d. 1676; Mersenne, d. 1648; philosophers, Saguens, d. about 1718, and some of the previously mentioned theological authors. For the bishops chosen from this order see Roberti (op. cit. below, I, 377, II, 681). The cause for beatification of two Minims has been introduced.

III. PRESENT STATE.—Since the French Revolution the Minims are greatly reduced in number. At present there are 19 convents with about 330 friars. There are 15 convents in Italy, 2 in Sicily, 1 in Sardinia, and 1 in Spain. The corrector general resides at St. Andrea delle Fratte, Rome. There are two other convents at Rome, S. Francesco di Paola and S. Maria della Luce. The second order is spread especially in Spain, where it has 10 convents. There are single convents at Marseilles, Rome, and Todi. The third order is spread in Latin countries and also in South America, where secular priests are delegated and authorized to receive members.

ROBERTI (O. Minim.), *Disegno storico dell' Ordine de' Minimi dalla morte del santo Institute fino ai nostri tempi*, I, 1507-1600 (Rome, 1902), II, 1600-1700 (Rome, 1909); FRANCISCUS LANOVIVS (O. Minim.), *Chronicon generale Ordinis Miniorum . . . accedit Registrum Pontificum seu Bullarum a Sixto IV ad Urbanum VIII* (Paris, 1635); DONTY D'ARTICHI (O. Minim.), *Histoire Générale de l'Ordre des Minimes* (2 vols., Paris, 1624); JACOBUS LADORE-FRANC. A. LONGOBARDIS (O. Minim.), *Digestum Sapientia Minimitana tripartitum, complectens regulas S. Francisci de Paula, Statuta Capitulum Generalium* . . . 3 pts. (Rome, 1664); FOSCANO (O. Minim.), *Della vita di S. Francesco di Paola* (Venice, 1691). The rules of the three orders also in HOLSTENIUS, *Codex Regularium*, ed. BROCKIE, III (Augsburg, 1759), 84-100, and in *Bullarium Romanum*, V (Turin, 1860), passim. On the relation of the first redaction of the rule (1493) with the Rule of St. Francis, see MAZARRA, *Legendaria Franciscana*, IV (Venice, 1721), 441-60; MONTOLA (O. Minim.), *Crónica general de la Orden de los Minimos de S. Francisco de Paula* (Madrid, 1619); ANNIBALI DA LATERA (O. Minim.), *Compendio della Storia degli Ordini regolari esistenti*, pt. II, vol. II (Rome, 1791), 351; HEIMBUCHER, *Die Orden und Kongregationen der katholischen Kirche*, 2nd ed., II (Paderborn, 1907), 527. For full bibliography see ROBERTI, I, 17-22, HEIMBUCHER, loc. cit. The information concerning the present state of the order was furnished by the present corrector general.

LIVARIUS OLIGER.

Minister.—The term *minister* has long been appropriated in a distinctive way to the clergy. The language of I Cor., iv, 1-2; Heb., viii, 2; Matt., xx, 26, etc. must have helped to familiarize the thought that those charged with spiritual functions in the Christian Church were called upon to be the servants (*ministri*) of their brethren. Even before the Reformation the word *minister* was occasionally used in English to describe those of the clergy actually taking part in a function, or the celebrant as distinguished from the assistants, but it was not then used *sine addito* to designate an ecclesiastic. This employment of the term dates from Calvin, who objected to the name priest etc. as involving an erroneous conception of the nature of the sacred office. These Calvinistic views had some influence in England. In the Book of Common Prayer the word *minister* occurs frequently in the sense of the officiant at a service, and in the thirty-second of the Canons Ecclesiastical (1603) we read "no bishop shall make a person deacon and minister both upon one day", where clearly minister stands as the equivalent of priest. As regards modern usage the Hist. Eng. Dictionary says: "The use of *minister* as the designation of an Anglican clergyman (formerly extensively current, sometimes with more specific application to a beneficed clergyman) has latterly become rare, and is now chiefly associated with Low Church

views; but it is still the ordinary appellation of one appointed to spiritual office in any non-Episcopal communion, especially of one having a pastoral charge".

As regards Catholic use, *minister* is the title of certain superiors in various religious orders. The head of the Franciscan Order is known as the minister general, and the superior of the different provinces of the various branches is called minister provincial. The same is true of the Order of the Trinitarians for the Redemption of Captives and of some other orders. In the Society of Jesus the second in command in each house, who is usually charged with the internal discipline, the commissariat, etc., is called minister. The statement made in Addis and Arnold's "Catholic Dictionary" and thence incorporated into the great Hist. Eng. Dictionary that each of the five assistants of the General of the Jesuits is called *minister* is without foundation.

HERBERT THURSTON.

Minkellers, JEAN-PIERRE, inventor of illuminating gas; b. at Maastricht, Holland, 1748; d. there 4 July, 1824. At the age of sixteen, in 1764, he went to Louvain, where he studied theology and philosophy at the Collège du Faucon, in which he became professor of natural philosophy in 1772. At this time the question of aerostats and Montgolfiers was occupying the mind of scientists, and the Duc d'Arenberg, a Mæcenas of science and art, engaged a committee to examine into the question of the best gas for balloon purposes. Minkellers was on this committee, and published in 1784, after many experiments, a work entitled "Mémoire sur l'air inflammable tiré de différentes substances, rédigé par M. Minkellers, professeur de philosophie au collège du Faucon, université de Louvain" (Louvain, 1784). As an appendix to this memoir there was a "Table de gravités spécifiques des différentes espèces d'air", by T. F. Thysbaert, a member of the committee. In his memoir Minkellers tells us how he made his precious discovery: from the very beginning of his experiments he had had the idea of enclosing oil in the barrel of a gun and heating it in a forge. Under action of the heat the oil dissolved and gave place to a remarkably light gas, having other advantageous qualities. Having proved that oil gas was the best for balloons, Minkellers used it for many balloons which rose rapidly and travelled great distances in the neighbourhood of Louvain. As we learn from his pupil von Hulstein, who was in his class in 1785, Minkellers at times used this same gas to light his workshop. Moreover, the drift of his memoir proves clearly that in its inventor's eyes the great combustibility of the gas was one of its leading qualities. When Joseph II, in 1788, transferred the University of Louvain to Brussels, Minkellers continued as professor, but when it was removed back to Louvain he refused to return. He resigned in 1794 and was appointed professor of physics and chemistry at the Central School of Maastricht, 4 July, 1824.

Minkellers* (Maastricht, 1897); VERHAEGEN, *Les cinquante dernières années de l'université de Louvain* (Liège, 1894); DE BOCKE, *De vervaardiging van lichtgas uit steenkolen* (Alkmaar, 1882).

D. NYA.

Minnesota, one of the North Central States of the American Union, lies about midway between the eastern and western shores of the continent, and about midway between the Gulf of Mexico and Hudson's Bay.

GEOGRAPHY.—Minnesota extends from 43° 30' to 49° N. lat. and from 89° 39' to 97° 5' W. long. Its length from north to south is about 400 miles, and its greatest breadth about 354 miles. Of its total area of 84,287 sq. miles, no less than 5637 are water surface, owing to the great number of inland lakes (numbering about ten thousand) and watercourses, large and

small. Minnesota is bounded on the north by Canada, on the east by Lake Superior and Wisconsin, on the south by Iowa, and on the west by North and South Dakota. Within the wide domain of the State originate the three principal water systems of North America: those of the Mississippi and the Red River of the North, and the St. Lawrence system beginning with the St. Louis River, which rises in the north-eastern part of Minnesota and flows into the western end of Lake Superior.

SOIL AND GEOLOGY.—A large portion of the state was originally prairie, but along the rivers a dense growth of trees has always extended, while, between the Minnesota River and the Mississippi and extending north-westerly, almost to the Red River, is the great forest of hardwood trees, commonly known as the "Big Woods". The northern part of the state was formerly covered with a dense growth of pine, and has supplied a large portion of the white pine utilized throughout the United States in various industries. Aside from the districts originally covered by pine and the rocky ridges near Lake Superior, the state possesses a warm, dark soil of great fertility. Its geological formations vary from the Laurentian trap-rock, granite, and basalt along the shore of Lake Superior and the banks of the St. Croix, with outcrops of similar formations in various other portions of the state, to the soft limestone of a later period. The granite is of various colours, ranging from dark brown to light grey, and is highly valued for building purposes. Another excellent building material is the Kasota limestone, which has been largely used in the construction of the new and magnificent state capitol. In the north-eastern, and to a considerable extent throughout the entire northern part of the state, are found extensive beds of iron ore of excellent quality. Shipments of this ore have been so great during recent years as to render Minnesota the greatest iron producing state of the Federal Union. No less than 150,000,000 tons of ore have been mined and shipped, and the amount still underground is estimated at fully one thousand million tons, a supply that will not be exhausted for fifty years.

SURFACE AND CLIMATE.—The fact that the state is the source of three continental river systems suggests its high elevation. The Mississippi, which has its chief source in Lake Itasca at an elevation of 1466 feet, leaves the state at 620 feet above sea-level. The Red River of the North rises near Itasca Lake at an altitude of 1600 feet, and, after a circuitous route south and west to Breckenridge in Wilkin County, turns north and enters Canada at an elevation of 750 feet. The Minnesota shore of Lake Superior is 602 feet above sea-level. The average elevation of the state is given as about 1275 feet, the highest elevation being the Misquah Hills in Cook County (2230 feet). Its elevation above the sea, its fine drainage, and the dryness of its atmosphere give Minnesota an unusually salubrious and most agreeable climate. The mean annual temperature is 44°; the mean summer temperature 70°. Owing to its higher latitude, Minnesota enjoys correspondingly longer days in summer than states farther south, and during the growing season there are two and a half hours more sunshine than (e. g.) in Cincinnati. This fact, taken in connexion with the abundant rainfall of early summer, accounts for the rapid and vigorous growth of crops in Minnesota and their early maturity. The winter climate is one of the attractive features of the state. Its uniformity, its general freedom from thaws, excessive periods of cold, severe weather, or heavy snowstorms, and its dryness, together with the bright sunshine and a full supply of ozone in the atmosphere, all tend to make the winters of Minnesota very delightful. It is asserted by labourers from abroad that they can work out-of-doors on more days of the year in Minnesota than in any other region in which they have lived.

NAME.—The name of the state is derived from the Dakota language. Before the white men came to their hunting grounds, the Dakotas called the river which rises on the western border of the state and flows into the Mississippi near the site of St. Paul the *Minisotah* (*mini*, water; *sotah*, sky-coloured), and, when the region between the western border of Wisconsin and the Missouri River was organized by Congress into a territory, it was given the name of this river in a slightly modified form—the name which the state bears at present.

HISTORY.—At the time when the explorations of white men began, the region now known as Minnesota was inhabited by people of two great divisions of the American race. From the southern boundary of the state as far north as lat. 46° 30', the land was inhabited by the Dakotas, while the shore of Lake Superior and the northern portion of the state were occupied by the Ojibways. Many places in Minnesota bear Indian names, and those derived from the respective languages of these two aboriginal nations show very clearly at the present time the areas which they respectively occupied. The French came into contact, first with the Ojibways and other kindred Indian nations of the Algonquin family, who in their language designated the Dakotas the *Nadouessieux* (Ojibway for "enemies"). The French soon abbreviated this long word into its final syllable, and called the Dakotas the *Sioux*, under which title they have been commonly known since the days of Marquette and Allouez.

The real history of the state may be said to begin in 1680 with the visit to the Falls of St. Anthony and adjacent regions made by Rev. Louis Hennepin and his companions, Accault and Augelle. During the same year Sieur Daniel Greysolon Du Lhut explored the northern part of the state, and, in July, joined Father Hennepin at or near the lake now known as Mille Lacs. Late in the autumn Du Lhut and Hennepin departed from the land of the Dakotas and returned to Eastern Canada. From the time of these explorations to the English conquest of Canada in 1760, France held sway over the Upper Mississippi region. Formal assertion of sovereignty was made in 1689, as appears from a document drawn up at Green Bay on the western shore of Lake Michigan, in which Nicholas Perrot, commanding for the king at that post and holding a commission from Marquis Denonville, Governor of New France, issued a declaration in these words:

"We this day, the 8th day of May, 1689, do in the presence of Reverend Father Marest of the Society of Jesus, Missionary among the *Nadouessieux*; of Monsieur de Borieguillot, commanding the French in the neighbourhood of the Ouisconsin on the Mississippi; Augustine Legardeur, Sieur de Caumont, and of Messieurs Le Sueur, Hebert Lemire, and Blein:

"Declare to all whom it may concern, that, being come to the Bay des Puants [Green Bay], and to the Lake of Ouisconsin, and to the River Mississippi, we did transport ourselves to the country of the *Nadouessieux*, on the border of the River St. Croix, and to the mouth of the River St. Pierre, on the bank of which were the *Mantantans*; and further up to the interior to the north-east of the Mississippi, as far as the *Menchokatonx*, with whom dwell the majority of the *Songeskiltons*, and other *Nadouessieux*, who are to the

SEAL OF MINNESOTA

north-east of the Mississippi, to take possession for, and in the name of, the King, of the countries and rivers inhabited by the said tribes, and of which they are the proprietors. The present act done in our presence, and signed with our hand and subscribed."

Without delay, practical measures were taken to ensure the rights of France. A map of the year 1700 shows a fort on the west side of Lake Pepin. In 1695 a second post was established by Le Sueur on an island above the lake. Thus, in the beginning of the eighteenth century what was officially termed "La Baye Department", consisting of a line of military and trading posts, was organized to command the waterway from Green Bay to the Falls of St. Anthony. Not until 1727, however, were systematic efforts made to establish permanent military garrisons north of the mouth of the Wisconsin River.

In the spring of 1685 Governor De La Barre of New France sent from Quebec to the west twenty men under the command of Nicholas Perrot to establish friendly alliances with the Dakotas. Proceeding to the Mississippi, he established a post near the outlet of Lake Pepin, which was known as Fort Perrot. War having been declared in 1687 between the French and the Indians, Perrot and his followers left the Mississippi River and repaired to Mackinac. Early in 1689, however, he returned with a party of forty men to his post on Lake Pepin, and re-established trade with the Dakotas. On a map published in 1700 this post is denominated Fort Bon Secours; three years later it was marked Fort Le Sueur, but was in that year abandoned. In a much later map it is correctly called Fort Perrot. In 1700, acting upon the recommendation of the Governor of Louisiana, Pierre Le Sueur, a native of Artois, France, came to the region now known as Minnesota with an intelligent ship carpenter named Penicaut and about twenty others, in search of copper which, according to earlier explorers, existed in the Sioux country. Le Sueur and his party spent the winter of that year in the neighbourhood of the great bend of the Minisotah, and there gathered a large quantity of green earth which was supposed to contain copper in the crude state. From the circumstance that this earth is sometimes described by Le Sueur and his contemporaries as "blue earth", that name has been given to the tributary of the Minnesota River at the mouth of which Le Sueur spent a winter and built a fort, and also to the country within which the site of this old fort is situated. The Dakota word *Mahkaho* means blue or green earth, and that word, corrupted in the course of time to *Mankato*, is the name of the county seat of Blue Earth County.

A trading company, formed in Montreal to carry on traffic in furs with the Indians of the La Baye Department, dispatched on 16 June, 1727, an expedition under René Boucher to the land of the Sioux. The expedition arrived at its destination on the shore of Lake Pepin on 17 September. Two Jesuit missionaries, Michel Guignas and Nicholas de Gonnor, accompanied Boucher and his small command. Before the end of October a small fort, called *Beauharnois* as a compliment to the Governor of New France, was built on the low lands opposite the towering cliff which now bears the name of Maiden Rock. A chapel was erected within the enclosure of Fort Beauharnois, and was dedicated to St. Michael the Archangel. This was the first Christian temple to cast its beneficent shadow upon the soil of Minnesota. The first ceremony of note in the new chapel was the celebration of the feast of St. Charles of which Father Guignas writes: "We did not forget that the 4th day of the month [November] was the saint's day of the general. Holy Mass was said for him in the morning, and we were well prepared to celebrate the event in the evening, but the slowness of the pyrotechnists and the variability of the weather led to the postponement of the celebration to the 14th of the same month, when

some very beautiful rockets were shot off and the air was made to resound with a hundred shouts of 'Vive le Roy' and 'Vive Charles de Beauharnois'. . . . What contributed very much to the merry-making was the fright of some Indians. When these poor people saw fireworks in the air and the stars falling from the sky, the women and children fled and the more courageous of the men cried for mercy, and earnestly begged that we should stop the astonishing play of the terrible medicine." It may be stated in explanation that, among all the American Indians, any phenomenon which exerted a powerful influence upon the physical and nervous system was designated by a term corresponding to the word medicine in other languages.

In a report made in October, 1728, by the Governor of Canada to the Government of France, Fort Beauharnois was said to be badly situated on account of freshets "and, therefore," as the report says, "this fort could be removed four or five arpents from the lake shore without prejudice to the views entertained in building it on its present site." The report declares that the interests of religion, of the service, and of the colony demand that the fort on the bank of Lake Pepin be permanently maintained. In September, 1730, Fort Beauharnois was rebuilt on a plot of higher ground near the old establishment. Upon this lofty site, surrounded by some of the most beautiful scenery in America, now stands the Ursuline Convent, Villa Maria. The convent chapel very properly bears the same name as its historic predecessor, St. Michael the Archangel. Sieur Linctot was made commandant of the new fort in June, 1731, and in 1735 was succeeded by St. Pierre. The Dakotas having shown a very hostile spirit, St. Pierre decided to abandon Fort Beauharnois, and accordingly on 13 May, 1737, the post was burned. In 1743, and again in 1746, representative chiefs of the Dakota nation made a journey to Quebec and presented to the Government of New France a petition for the re-establishment of the fort and for the restoration of trade relations. Their request was not granted until 1750, when Pierre Marin was commissioned to rebuild the little fortress. Fort Beauharnois was retained until the outbreak of the war between the English and French, but it was never occupied after the surrender which followed the defeat of Montcalm in the famous battle of Quebec (1759).

About one-third of the state, comprising its north-eastern part to the east of the Mississippi, was included in the territory surrendered by Great Britain under the treaty of 1783, at the end of the War of Independence; the greater portion (about two-thirds) of the territory embraced within the boundaries of Minnesota, however, was included in the Louisiana Purchase, ceded to the United States by France in 1803. In 1805 a grant of land nine miles square, at the confluence of the Mississippi and St. Peter (now Minnesota) Rivers, was obtained from the Sioux Indians. A military post was established on the grant in 1819, and in 1820 arrangements were made for the erection of a fort, which was completed in 1822 and named, at first Fort St. Anthony, but later Fort Snelling after the commanding officer. The grant has ever since been known as the Fort Snelling Reservation. In 1823 the first steamboat ascended the Mississippi as far as Fort Snelling, and annually thereafter one or two trips were made by steamboats to this isolated post for a number of years.

From the date of the English victory over the French until the establishment of Fort St. Anthony by the Government of the United States, conditions were unfavourable for the maintenance of Catholic missions in the Upper Mississippi country. However, some colonists from Switzerland, who possessed the true Faith and spoke the French language, having migrated from their original settlements near Fort Garry in Canada to a place seven or eight miles below

the Falls of St. Anthony, Bishop Mathias Loras of Dubuque, whose diocese included the entire region now called Minnesota, visited Fort Snelling and the adjacent Swiss settlement in 1839, and in the following year sent a missionary to Minnesota, Father Lucien Galtier. The latter established himself upon the present site of the metropolitan city of St. Paul, and in the following year built a log chapel which he called by the name of the great Apostle of the Gentiles. The gradual increase of population about the chapel, the development of the community into a village and finally into a large city under the name of St. Paul, constitute an imposing material monument to the missionary seal of Father Galtier, and for ever associate the name and fame of the capital city of Minnesota with the glories of the Catholic Faith. Minnesota was organized as a Federal territory by Act of Congress of 1849, and, on 11 May, 1858, its territorial existence terminated and it became a state.

POPULATION.—The population of the state has shown a rapid increase. According to the successive census returns the population was: 172,023 in 1860; 250,099 in 1865; 439,706 in 1870; 780,773 in 1880; 1,117,798 in 1885; 1,301,826 in 1890; 1,997,912 in 1905. In that year, the population of the five largest cities was: Minneapolis, 261,874; St. Paul, 197,023; Duluth, 64,942; Winona, 20,334; Stillwater, 12,435. The population of Minnesota according to nationalities was thus classified by the census of the year 1905:

Native born	366,767
Minnesota born	1,057,566
Germany	119,868
Sweden	126,283
Norway	111,611
Canada	47,211
Ireland	19,531
Denmark	16,266
England	11,598
Bohemia	8,403
Poland	7,881
Finland	19,847
Austria	14,403
Russia	8,835
Scotland	4,651
France	1,277
Wales	1,035
All other Countries.....	18,345

This makes a total foreign born population of 537,041. The inmates of state institutions, and the 10,225 Indians in the state at the time of taking the census, are not included in the above figures.

The progress of the Catholic Faith in Minnesota has been marvellous. In 1841 the mission of Father Galtier included some twenty families, and in 1851, when Father Joseph Cr  tin (q. v.) was named first Bishop of St. Paul, the number of Catholics in Minnesota is estimated to have been about 1000. In 1888 the See of St. Paul was raised to archiepiscopal rank, the dioceses of St. Cloud, Winona, Duluth, Fargo, Sioux Falls, and Lead becoming later its suffragans. As each of these dioceses is treated in a special article, it will be sufficient to quote here some general statistics for the State of Minnesota, which includes the Archdiocese of St. Paul and the first three of the above-named suffragans: 1 archbishop; 4 bishops; 602 priests (476 secular); 406 churches with resident priests; 168 missions with churches; 67 missions without churches; 67 chapels; 1 university; 6 orphan asylums; 14 hospitals; 32,426 children in parochial schools; 427,627 Catholics. The recently established Diocese of Crookston, separated from Duluth, will constitute an additional suffragan of St. Paul.

LIBERTY OF CONSCIENCE.—The Constitution provides expressly for religious liberty by declaring that "the right of every man to worship God according to the dictates of his own conscience shall never be in-

fringed nor shall any man be compelled to attend, erect or support any place of worship, or to maintain any religious or ecclesiastical ministry, against his consent, nor shall any control of or interference with the rights of conscience be permitted or any preference be given by law to any religious establishment or mode of worship." It further provides: "No religious test or amount of property shall ever be required as a qualification for any office of public trust under the State. No religious test or amount of property shall ever be required as a qualification of any voter at any election in this state; nor shall any person be rendered incompetent to give evidence in any court of law or equity in consequence of his opinion upon the subject of religion." This Constitution has been interpreted by the legislature in the most liberal manner, and Minnesota has led all of the other states in the Union in providing liberty of conscience and the free exercise of religion in favour of the inmates of penal, correctional, and eleemosynary institutions. The general statutes now in force contain these provisions: "Religious Instruction.—Said Board [The State Board of Control] shall provide at least one hour, on the first day of each week, between nine o'clock a. m. and five o'clock p. m., for religious instruction to inmates of all prisons and reformatories under its control, during which clergymen of good standing in any church or denomination may freely administer and impart religious rites and instruction to those desiring the same. It shall provide a private room where such instruction can be given by clergymen of the denomination desired by the inmate, or in case of minors, by the parents or guardian, and, in case of sickness, some other day or hour may be designated; but all sectarian practices are prohibited, and no officer or employee of the institution shall attempt to influence the religious belief of any inmate, and none shall be required to attend religious services against his will" (Revised Laws, 1905, chap. 25, sec. 1903). As to the state prison, the laws provide: "Visitors.—Fees.—The members of the state board of control, the governor, lieutenant governor, members of the legislature, state officers, and regularly authorized ministers of the Gospel may visit the prisoners at pleasure, but no other persons, without special permission of the warden, under rules prescribed by said board. A moderate fee may be required of visitors, other than those allowed to visit at pleasure. Such fees shall be used to defray the expenses of ushers for conducting such visitors, for the maintenance of the prison library, the prison band, and other entertainments of the inmates" (Chap. 105, sec. 5434).

REGULATIONS CONCERNING PROPERTY.—The Constitution of Minnesota provides security for private rights in the declaration that "every person is entitled to a certain remedy in the laws for all injuries or wrongs which he may receive in his person, property or character; he ought to obtain justice freely and without purchase; completely and without denial; promptly and without delay; conformably to the laws", and by the further provision that, "private property shall not be taken, destroyed or damaged for public use, without compensation therefor first paid or secured". To prevent any revival of abuses and monopolies such as grew up under the feudal system, the Constitution contained this provision: "All lands within this State are declared to be allodial, and feudal tenures of every description, with all their incidents, are prohibited. Leases and grants of agricultural land for a longer period than twenty-one years, hereafter made, in which shall be reserved any rent or service of any kind, shall be void."

The statutes of Minnesota provide for the free and untrammelled acquisition of real property, and also for abundant security to its possessor. Estates in lands are divided by statute into estates of inheritance, estates for life, estates for years, and estates at will and by sufferance. The decisions of the Supreme Court

establish the principle that tenancies from year to year are estates at will. The laws further provide that every estate of inheritance shall continue to be termed a fee simple, or fee; and every such estate when not defeasible or conditional, shall be a fee simple absolute. All estates which would at common law be considered as estates tail are deemed and adjudged to be fee simple estates in the person who would, otherwise, be seized thereof in fee tail. Every future estate is void in its creation, which suspends the absolute power of alienation by any limitation for a longer period than during the continuance of two lives in being at the creation of the estate, except that a contingent remainder in fee may be created on a prior remainder in fee, to take effect in the event that the persons, to whom the first remainder is limited, die under the age of twenty-one years, or upon any other contingency by which the estate of such persons may be determined before they attain their full age. The rule in Shelley's case has been abolished. With a few express exceptions, no corporation, unless organized for the construction or operation of a railway, canal, or turnpike, may acquire more than five thousand (5000) acres of land. Uses and trusts, with a few exceptions, have been abolished.

RELIGIOUS CORPORATIONS.—In furtherance of the liberal principles regarding the exercise of religion contained in the state Constitution, the laws of Minnesota provide for the creation of religious corporations and special statutory provisions enable a bishop of the Catholic Church, in association with the vicar-general and the chancellor of his diocese, to create such diocese a corporate body. The bishop and vicar-general, in association with the pastor of any parish, are likewise authorized to create parochial corporations. These corporations have the right to acquire and to hold land to the same extent as have individuals. Every person (and the term includes married women) may dispose of his estate, real and personal, or any part thereof, or right or interest therein, by a last will and testament, in writing. There is no limitation on religious bequests, and full force and effect have been given thereto by the decisions of the courts.

CHARITABLE SOCIETIES AND INSTITUTIONS.—The laws of Minnesota contain the most liberal provisions for the founding and incorporation of charitable societies. Under these provisions, many Catholic hospitals, orphanages, refuges, and reformatories have been established. The public charitable institutions of the state are various and manifold. Provision is made for the care and treatment of all insane persons, not only in great general hospitals, but also in various institutions equipped with buildings on the "cottage group" plan for the custody of the harmless and incurable insane. The state prison is situated at Stillwater and is a most admirably conducted penitentiary. The state reformatory is at St. Cloud and receives for correction, rather than for punishment, offenders whose ages range from sixteen to thirty years. This institution is managed upon the benevolent plan of instruction of the mind and the rehabilitation of character. For boys of wayward tendencies who have repeatedly violated the laws of the state, is provided the state training school, at Red Wing, which is not only a school of moral and mental discipline, but also a manual training school. Wayward girls are accommodated and placed under moral restraint at a similar institution. Each county provides for paupers in a county alms-house, and also distributes out-door relief to the poor. All public charitable institutions and agencies are under the watchful care of the state board of control, consisting of three members appointed by the governor. The board of control not only has visitatorial powers, but is also invested with administrative functions. It has proved highly efficient. The public charities of Minnesota are

famous throughout the world for their advanced humanitarianism and general excellence.

MARRIAGE AND DIVORCE.—The statutes of Minnesota declare that marriage, so far as its validity in law is concerned, is a civil contract, to which the consent of the parties capable in law of contracting is essential. Every male person who has attained the full age of eighteen years, and every female person who has attained the full age of fifteen years, is capable in law of contracting marriage, if otherwise competent. No marriage may be contracted while either of the parties has a husband or wife living; nor within six months after either has been divorced from a former spouse; nor between parties who are nearer of kin than first cousin, whether of the half or full blood, computed by the rules of the civil law; nor between persons either one of whom is epileptic, imbecile, feeble-minded, or insane. Marriage may be solemnized by any justice of the peace in the county in which he is elected, and throughout the state by any judge of a court of record, the superintendent of the department for the deaf and dumb (in the state school for the deaf and dumb), or by any licensed or ordained minister of the gospel in regular communion with a religious society. Before any persons are joined in marriage, a license must be obtained from the clerk of the district court of the county in which the woman resides, or, if not a resident of the state, then from such clerk in the county where the marriage is to take place.

The statutes of Minnesota are liberal in regard to divorce. A divorce from the bonds of matrimony may be adjudged by the district court for any of the following causes: (1) adultery; (2) impotency; (3) cruel and inhuman treatment; (4) sentence to imprisonment in any state prison or state reformatory subsequent to the marriage, and in such case a pardon will not restore conjugal rights; (5) wilful desertion for one year next preceding the filing of the complaint; (6) habitual drunkenness for one year immediately preceding the filing of the complaint. Limited divorces, extending to a separation *a mensa et toro* permanently or for a limited time, may be adjudged by the district court, on the complaint of a married woman, between any husband and wife who are inhabitants of the state, or in cases where the marriage has taken place within the state and the wife is an actual resident at the time of filing her complaint; or in cases where the marriage has taken place outside the state and the parties have been inhabitants of the state at least one year, and the wife shall be an actual resident at the time of the filing of her complaint. The grounds upon which limited divorces may be granted are: (1) cruel and inhuman treatment by the husband; (2) such conduct on the part of a husband toward his wife as may render it unsafe and improper for her to cohabit with him; (3) the abandonment of the wife by the husband and his refusal or neglect to provide for her.

PUBLIC EDUCATION.—The public property of the state consists of realty used in connexion with the various public institutions, and also of a large public domain consisting of lands granted to the State Government by the General Government of the United States at the time when the State of Minnesota was admitted to the Union; such grants having been made for the benefit of the state university, for the support of the common school system, and for the purpose of making internal improvements. The title to such lands is vested in the State of Minnesota, and the care and control of such lands is vested in the auditor of the state, who is ex officio Land Commissioner of Minnesota. The portion of the grant assigned to the support of public education has been estimated by competent authority to be sufficient to yield ultimately a fund of \$250,000,000. The educational system of the state is organized as follows: School districts are divided into common, independent, and special. Among schools are distinguished state rural schools, state

semi-graded schools, state graded schools, state high schools, normal schools, and university. A common school district is controlled by a board of three members; an independent, by one of six members; a special, by a board of six or more members. Common schools are supervised by a county superintendent; independent and special districts have their own superintendents, and in the main are not subject to the county superintendents. The state graded and state high schools are subject to a board of five members; the president of the state university, the superintendent of public instruction, and the president of normal school board are ex-officio members, a city superintendent or high school principal and a fifth member are appointed by the governor. The normal schools are controlled by a board of nine members; five of these are resident directors; three are appointed for the state at large, and one, the superintendent of public instruction, serves ex-officio. The state university is situated in Minneapolis and is in a most flourishing condition. Its enrollment for the year 1909-10 includes 5000 students. The university is controlled by a board of twelve regents; the governor, the president of the university and the superintendent of public instruction are ex-officio members, and nine are appointed by the governor.

The public schools of the state are supported by a direct tax upon the property of the school districts, by a county one-mill (\$.001) tax, by a state mill tax, and by the income from the permanent school fund, together with small fines that are accredited to this fund. No religious school receives any subsidy direct or indirect. The educational institutions established by the Catholic Church have exhibited wonderful vitality and increase. The Seminary of St. Paul, a monument to the zeal of Archbishop Ireland, is the leading institution of theological instruction in the Northwest. A university is conducted by the Benedictines at Collegeville, in the Diocese of St. Cloud, Minnesota, and is well supplied with all the facilities for modern education, including laboratory equipment and scientific collections. The College of St. Thomas at St. Paul has not only acquired a reputation as a seat of learning and sound instruction in the classics, but also as a military school of the first rank. It is attended by six hundred cadets and is constantly expanding both in educational facilities and in attendance. The College of St. Catherine at St. Paul is the leading Catholic institution for the education of women, but the education of girls and women is provided for in many other excellent institutions in the Archdiocese of St. Paul and other parts of the state.

A. Razoux* (St. Paul, 1900).

JOHN W. WILLIS.

Minor (Lat. *minor*), that which is less, or inferior in comparison with another, the term being employed as well of things as of persons. To glance rapidly at its application to things, we may mention *causae minores*, matters of lesser importance, as opposed to *causae majores*, those more important; minor benefices as opposed to the major benefices, which imply jurisdiction and are confirmed in papal consistory; minor churches or those of inferior rank; the minor excommunication (now out of use), as opposed to the major excommunication. In reference to persons, certain uses of the word minor may also be mentioned which depend upon usage rather than upon law: the younger of two persons of the same name is sometimes called minor (or "the less") as St. James the Less. Through humility St. Francis of Assisi gave his religious the name of "Friars Minor", that is, less than other friars.

But in its most frequent and most strictly judicial acceptance, the word designates a person who, having passed his infancy, has not yet reached the age re-

quired by law for the performance of certain acts or the exercise of certain rights; in practice the utmost limit is considered, and beyond it there exists no restriction; those are called minors who have not yet reached the age at which the law makes them capable of performing all civil acts whatever, especially the administration of their property. This age being fixed by most modern laws at twenty-one years, everyone is a minor until the age of twenty-one, or whatever may be the legal age of majority. As the matter is primarily one of civil rights, the Church leaves distinctions to the civil law. In what concerns canon law and Christian acts, no uniform limit of minority has ever been established; for given acts and rights the canon law and ecclesiastical usage have established the necessary and sufficient age. In the first place children are not considered as minors; it is presumed that until the age of reason, legally fixed at seven years, a child possesses neither the intelligence nor the experience to commit sin or to exercise any rights whatsoever. When no longer a child a person becomes a minor. Minors are either under or over the age of puberty, which is fixed by the Roman law at fourteen full years for boys and twelve full years for girls; between the age of seven years and that of puberty they are said to be nearer, or less near to infancy or puberty, as the case may be. For those under puberty, there begins with the age of reason the obligation of observing the moral law and those precepts of the Church from which they are not exempt by their age, notably the obligation to receive the Sacraments; such minors therefore are capable of sinning although their responsibility is less in proportion as they are nearer childhood; for this reason they are not liable to the penalties of the *forum externum*, except where this is specially provided. It is presumed that with puberty the Christian begins to enjoy the plenitude of his intelligence and liberty in spiritual matters and purely personal rights: the minor of the age of puberty can contract marriage, he can receive minor orders, and be nominated to and administer a benefice (Conc. Trid., Sess. XXIII, c. vi, "De ref."; c. iii, "De judic.", in 6). There are, however, acts binding his future which he cannot perform until at a more advanced age; he cannot make a religious profession until the age of sixteen is completed (Conc. Trid., Sess. XXV, "De regular", c. xv); he cannot receive the sub-diaconate before his twenty-first year (Sess. XXIII, c. vii). At the age of twenty-one, too, he begins to be subject to the law of fasting. (For more ample developments see AGE, CANONICAL.)

A leading characteristic in all legislation on minors is the protection afforded them in regard to the administration of property and the obligations which they can assume in reference to third parties. As a general rule the liberty of minors is unrestrained as to contracts which are to their advantage, but they cannot make any contracts which are burdensome to themselves except under certain determined formalities, and with the required authorization. Still more, if they consider themselves as suffering by such contracts they may, by the terms of the Roman Law ("De minorib., xxv, ann." ff., IV, iv), for four years after their majority of twenty-five years, obtain the "restitutio in integrum", i. e. a judicial decree restored the condition of things which existed before the contract by which the minor suffered. These provisions have been more or less completely embodied in the modern laws of various countries, the discussion of which would be out of place here. It is enough to say that the canon law has accepted them (Decret., lib. I, tit. xli, "De in integrum restitutione"), and applied them to churches and other juridical entities which it was expedient to protect against maladministration. When it is said that churches are assimilated to minors (c. vii, 3, 8, "De in integrum restit.") the meaning is that, in respect to burdensome contracts,

churches and other ecclesiastical establishments are subject to the same protective measures, and enjoy the same privileges, as minors.

A. BOUDINHON.

Minorca, DIOCESE OF (MINORICENSIS), suffragan of Valencia, comprises the Island of Minorca, the second in size of the Balearic Islands, which are possessions of Spain. The civil capital is Port Mahon; the ecclesiastical, Ciudadela. The origin of the Diocese of Minorca is not known, but it certainly existed in the fifth century, as its bishop, Macarius, together with Elias and Opilio, Bishops of Majorca and Ivisa, came to Carthage in 484 to make profession of his faith. Baronius published from a Vatican MS., a letter of Severus, Bishop of Minorca in the fifth century. Darneto translates and inserts it. The learned Antonio Roig, a native of Minorca, rector of Felanitx, published in 1787 a Latin treatise commenting upon it and defending its authenticity. But the account of the expedition undertaken, under the direction of a certain Theodore, to convert the Jews who were in possession of Minorca, and the events therein related, are of a legendary character.

The Vandals took possession of Minorca, as well as of Corsica, Sardinia, and Sicily, and during their dominion the Diocese of Minorca was under the jurisdiction of the metropolitan See of Sardinia. The Bull of Pope Romanus, dated 897, in which among other territories assigned to the Bishop of Gerona we find the islands of Majorca and Minorca, shows that the invasion of Spain by the Mohammedans brought the existence of the Diocese of Minorca to an end. It was not re-established until the eighteenth century. When Minorca was recovered, in 1783, from the English, who obtained possession of it in the War of the Spanish Succession (1701-14), the re-establishment of the diocese was considered. Pius VI by the Bull of 23 July, 1795, erected the new Diocese of Minorca. Its first bishop, Antonio Vila, a native of Minorca, took possession of the see on 2 September, 1798. He was a man of learning, and the author of "El noble bien educado" (Madrid, 1776), "Vida y Virtudes del invicto mártir . . . S. Juan Nepomuceno" (Madrid, 1777), and "El Vasallo instruido" (Madrid, 1792). The last-named won for its author his canonry in the cathedral of Minorca. He also worked on an encyclopedic dictionary of which twenty volumes in folio are still preserved in the cathedral of Albarracín. On 25 July, 1802, Bishop Vila was transferred to the Diocese of Albarracín, where he died 30 October, 1809. D. Pedro Antonio Juano was appointed to succeed him in 1814, and was followed by the famous D. Jaime Creus y Martí, canon of Urgel, president of the Junta Suprema de Catalonia during the War of Independence, deputy in the Cortes of Cadiz, and a member of the Royal Council. Having been raised to the dignity of Archbishop of Tarragona, he was succeeded by D. Antonio de Ceruelo and the Dominican Fray Antonio Diaz Merino, who, since 1825, had been an active collaborator in the "Biblioteca de Religión". In 1837 Fray Antonio was exiled first to Cadiz and then to France, and died at Marseilles in 1844. His successor, D. Mateo Jaume was present at the Vatican Council. Since then the see has been filled in succession by D. Manuel Mercader (1875-90), D. Juan Comes y Vidal, founder of the Academia de la Juventud Católica (26 July, 1906), D. Salvador Castellote y Pinazo (1901-6), and D. Juan Torres y Ribas, the present bishop.

The capital, Port Mahon, which has a population of 18,445, is on the east coast and has the best port in the Mediterranean. The saying, "Junio, Julio, Agosto y Puerto Mahón, Los mejores puertos del Mediterraneo" (June, July, August, and Port Mahon are the best harbours in the Mediterranean), is attributed to the

famous Andrea Doria. At the entrance stand the fortresses of San Felipe, built by Philip II, la Mola, and Isabel II. The Isla del Rey (Island of the King), so called from the fact that Alfonso III landed there when he visited Minorca in 1287, is in the centre. In the thirteenth century the famous military hospital was built on this island. Port Mahon has a school for secondary instruction and a custom-house of the first order.

Among the public buildings the most noteworthy are the court-house and the parish church built by order of Alfonso III. The latter has a magnificent organ. A handsome façade ornaments the entrance to the cemetery. Ciudadela, the episcopal city, is believed to be the Jamnana of the Carthaginians, founded by their captain Jamna, or Jama. Many traces of an earlier Celtic civilization are to be found here, among which may be mentioned the *talayots* (Cyclopean constructions of huge blocks of stone in the shape of a tower with a high entrance), obelisks, dolmens, covered galleries, and *corneillons*, or Celtic cemeteries. Many Roman inscriptions, vases, and coins are also to be found. The city is fairly well laid out and well kept, and has a population of 8,000. It has a fortress and other defensive works. On the Paseo del Borne there is an obelisk about 72 feet in height, erected to the memory of the heroes of 9 July, 1558, when the Turks attacked Ciudadela. The defenders of the city on this occasion were commanded by Negrete y Arquimbau, and the monument was erected on the initiative of the Franciscan, José Niu, who died caring for the victims of the cholera epidemic of 1865.

The cathedral of Minorca had, from the time of its foundation in 1287, all the magnificence requisite for the only parish church of Ciudadela, then the capital of the island. A memorial tablet of the year 1362 says that Juan Corça held a benefice in this church. Constructed in the Gothic style of architecture, with a single nave, it presents an imposing appearance. The belfry is square, finished with an octagonal spire. In the beginning of the last century the main entrance was enriched with a mass of Græco-Roman architecture, but the original Gothic portal is still preserved behind this. When the Turks attacked the city they fired the church. Bishop Comes y Vidal restored it, adding numerous small windows, and restoring the main altar. Other church buildings of note are the chapel of the convent of the Poor Clares (ogival style) and the church of San Agustín, very spacious and elegant. The latter has two towers on each side of the portico, colossal frescoes, now in a bad state of preservation, and rich gildings; it is used at present for the chapel of the diocesan seminary which was installed by Bishop Jaume in the ancient convent del Socorro. This seminary (San Ildefonso) was founded by the learned Franciscan Niu, in 1858. Lastly, there may be mentioned the church of San Francisco, in the Gothic style.

Minor Clerks Regular. See FRANCIS CARACCILO, SAINT.

Minorites. See FRANCISCAN ORDER; FRIARS MINOR.

Minor Orders (Lat. *Ordines Minores*).—The lower degrees of the hierarchy are designated by the name of minor orders, in opposition to the "major" or "sacred" orders. At the present time the ranks of the clergy are entered by the tonsure (q. v.), after which all the orders without omission are received in succession. Moreover, ecclesiastics, as a general rule, no longer remain in the lower orders, the liturgical functions of which are discharged either by the clergy in the higher orders, as in exorcism, or by the

laity, as in singing and serving at the altar. Formerly one entered the clergy by being appointed to discharge any of the functions reserved to ecclesiastics. Such functions were of two kinds. The liturgical ones constituted orders, though of a lower rank; by ordination the recipients of the minor orders received official authority to perform these functions. The other ecclesiastical functions were rather offices entrusted to clerics, whether ordained or not. Thus in the first centuries there figured in the ranks of the clergy notaries, *defensores ecclesie*, *aconomi*, catechists, cantors, *fossore* (for the cemeteries), etc., to say nothing of deaconesses. But these various offices did not constitute orders, and those who filled them formed part of the clergy without having been ordained, like tonsured clerics and lay-brothers of to-day. As to the liturgical functions attached to the various minor orders, they are really but a participation, originally rather indefinite, in the liturgical ministry formerly confided entirely to the deacons. This explains why minor orders differ in the Latin Church and in the various Eastern Churches.

In the East, though at an early date we hear of porters and exorcists (never of acolytes), after the Trullan Synod in 692, in accordance with its sixth canon, only lectors and cantors are known, and often even these orders coalesce, or are conferred at the same time; the three other minor orders of the Latin Church (porter, exorcist, acolyte) are held to be included in the subdiaconate. In the East, moreover, the subdiaconate has remained a minor order; in the West it was gradually detached from the minor orders, on account of its higher liturgical functions and also because of the vow of celibacy it called for. Finally, Innocent III definitively included it in the major orders, and made the subdeacon, as well as the deacon and priest, eligible for the episcopate (c. 9, "De ætate et qualitat.", I, tit. 14, an. 1207). There are, then, in the Western Church four minor orders: porter, lector, exorcist, and acolyte; the cantors merely exercise an office and are not an order. These four orders are all mentioned about the year 252 in the famous letter of Pope Cornelius to Fabius of Antioch (Euseb., "Hist. Eccl." I, vi, 43): "He (Novatian) knew that there were in this Church (of Rome) 46 priests, 7 deacons, 7 subdeacons, 42 acolytes, and 52 exorcists, lectors, and porters." This quotation shows that besides the acolytes, who were enumerated separately and were at Rome almost assimilated with the subdeacons, there was a kind of indefinite class formed by the clerics of the three latter orders. This seems to indicate that all clerics did not necessarily pass through the four lower orders; as a matter of fact the Council of Sardica (can. xiii) mentions only the lectorate as obligatory before receiving the diaconate. Pope Siricius (Ad Himerium, nn. 9-10) and Pope Zosimus (Ad Hesychium, nn. 1 and 3) describe for us the ordinary career of Roman clerics: from boyhood or youth they are lectors; about the age of twenty, acolytes or subdeacons; those who enter the clergy when already grown up are first exorcists or lectors, after a certain time acolytes or subdeacons. Briefly, it appears that the obligation of receiving all the minor orders without exception is a law dating from the time when the minor orders ceased to be exercised in the original way. Moreover, there is no longer any fixed age at which the minor orders may be received. Canon law is silent on the subject. Canonists, including Benedict XIV (Constitution, "Eo quamvis", 4 May, 1745), admit that minor orders may be conferred not only on those who have reached the age of puberty, but on boys over seven years. In fact, minor orders are usually conferred on ecclesiastical students during their seminary studies. The Council of Trent requires merely that the candidates understand Latin (Sess. XXIII, c. xii).

Although several medieval theologians regarded minor orders as sacramental, this opinion is no longer

held, for the fundamental reason that minor orders, also the subdiaconate, are not of Divine or Apostolic origin. The rites by which they are conferred are quite different from ordination to holy orders. Minor orders are conferred by the presentation to the candidate of the appropriate instruments, in accordance with the ritual given in the "Statuta Ecclesie antiqua", a document which originated in Gaul about the year 500. We do not know how even in Rome the porters and exorcists were ordained in former times. Lectors received a simple benediction; acolytes were created by handing them the linen bag in which they carried the Eucharist; subdeacons by the reception of the chalice. Moreover, while deacons and priests could be ordained only on the four Ember Saturdays and on two Saturdays in Lent, minor orders could be conferred on any day. Even at the present time the latter may be conferred, apart from general ordinations, on all Sundays and on Holy Days of obligation, not necessarily at Mass. The usual minister of these orders, as of the others, is a bishop; but regular abbots who have received episcopal benediction may give the tonsure and minor orders to their subjects in religion. By papal privilege several prelates *Nullius* (i. e., exempt) can confer these orders. It is an almost universal custom now to confer the four minor orders at one time, and the Council of Trent (loc. cit.) leaves the bishop quite free to dispense with the interstices (q. v.).

Clerics in minor orders enjoy all ecclesiastical privileges. They may be nominated to all benefices not major, but must receive within a year the major orders necessary for certain benefices. On the other hand, they are not bound to celibacy, and may lawfully marry. Marriage, however, causes them at once to forfeit every benefice. Formerly it did not exclude them from the ranks of the clergy, and they retained all clerical privileges, provided they contracted only one marriage and that with a virgin, and wore clerical costume and the tonsure (c. unic., "de cler. conjug." in VI°); they might even be appointed to the service of a church by the bishop (Conc. Trid., Sess. XXIII, c. vi). This earlier discipline, however, is no longer in accordance with modern custom and law. A minor cleric who marries is regarded as having forfeited his clerical privileges. (See ORDERS; ACOLYTE; EXORCIST; LECTOR; PORTER; SUBDEACON; ABBOT; TONSURE.)

A. BOUDINHON.

Minsk, DIOCESE OF (MINSSENSIS), suffragan of Mohileff, in Western Russia. The city of Minsk is situated on the Swislotsh, a tributary of the Beresina, which, again, flows into the Dnieper. In 1879 it numbered 91,500 inhabitants, of whom 27,280 were Catholics. It is the nominal see of a Roman Catholic, a Græco-Ruthenian Uniat, and a Russian Orthodox bishop. After the suppression of the Sees of Smolensk and Livland, Catherine II sought and obtained from the pope the establishment of the metropolitan See of Mohilew, at the same time arbitrarily abolishing the See of Kieff. To make amends for this suppression, Paul I, with the concurrence of Pius VI, established, 17 Nov., 1798, the Latin See of Minsk, and placed it under the Metropolitan of Mohileff. The first bishop was Jacob Ignatius Dederko, formerly a canon of Wilna (d. 1829). After his resignation (1816), the see remained vacant until 1831. In 1839 Pope Gregory XVI appointed Mathias Lipski, after whose death the see again remained for some time without an occupant, the pope and the Russian Government being unable to agree as to a successor. Like the other dioceses of Western Russia and of Poland,

Minsk suffered much from the violent attempts at proselytism on the part of Emperors Nicholas I and Alexander II, by whom the Uniat Lithuanians and Ruthenians were driven out. After the death of Bishop Hermann Woitkiewicz (1852-69) no successor was appointed, owing to governmental opposition, and since then the diocese has been administered by the Archbishop of Mohileff. According to the census of the Archdiocese of Mohileff for 1910, the Diocese of Minsk contained 51 parishes, with 77 priests and 262,374 faithful. The Uniat Ruthenian See of Minsk was erected by Pius VI, 9 August, 1798, but has been left vacant on account of the opposition of the Russian Government. (See RUSSIA.)

JOSEPH LINS.

Mint, PAPAL.—The right to coin money being a sovereign prerogative, there can be no papal coins of earlier date than that of the temporal power of the popes. Nevertheless, there are coins of Pope Zacharias (741-52), of Gregory III (Ficoroni, "Museo Kircheriano"), and, possibly, of Gregory II (715-741). There is no doubt that these pieces, two of which are of silver, are true coins, and not merely a species of medals, like those which were distributed as "presbyterium" at the coronation of the popes since the time of Valentine (827). Their stamp resembles that of the Byzantine and Merovingian coins of the seventh and eighth centuries, and their square shape is also found in Byzantine pieces. Those that bear the inscription GRETI PAPE—SCI PTR (Gregorii Papæ—Sancti Petri) cannot be attributed to Pope Gregory IV (827-44), because of the peculiarity of minting. The existence of these coins, while the popes yet recognized the Byzantine domination, is explained by Hartmann (Das Königreich Italien, Vol. III), who believes that, in the eighth century, the popes received from the emperors the attributes of "Præfectus Urbis". Under the empire, coins that were struck in the provinces bore the name of some local magistrate, and those coins of Gregory and of Zacharias are simply imperial Byzantine pieces, bearing the name of the first civil magistrate of the City of Rome. There are no coins of Stephen III or of Paul I, who reigned when the Duchy of Rome was already independent of the Eastern Empire; the first true papal coins are those of Adrian I, from whose time until the reign of John XIV (984) the popes coined money at Rome.

There is no pontifical money of a date between the last-named year and 1305; this is explained, in part, by the fact that the Senate of Rome, which sought to replace the papacy in the temporal government of the city, took over the mint in 1143. On the other hand, Prince Alberic had already coined money in his own name. The coins of the Senate of Rome usually bear the inscription "ROMA CAPUT MUNDI", or, S. P. Q. R., or both, with or without emblems. In 1188 the mint was restored to the pope (Clement III), with the agreement, however, that half of its profits should be assigned to the *sindaco*, or mayor. The Senate, meanwhile, continued to coin money, and there is no reference, on the coins of that time, to the papal authority. In the thirteenth century the *Sindaco* caused his own name to be stamped upon the coins, and, consequently, we have coins of Brancalione, of Charles I of Anjou, of Francesco Anguillara, viceroy of Robert of Naples, etc.; so, also, did King Ladislao. Cola di Rienzi, during his brief tribunate, likewise struck coins, with the inscription: N. TRIBUN. AUGUST.: ROMA CAPU. MU. Papal coins reappeared with the removal of the pontifical Court to Avignon, although there exists a single coin that is referred to Benedict XI (1303-4), with the legend COITAT. VENAISIN: as, however, this pope never resided in Venaissin, which had belonged to the Holy See since 1274, the coin should be referred to Benedict XII. There are coins of all the popes from John XXII to Pius IX.

The popes, and also the Senate when it coined money, appear to have used the imperial mint of Rome, which was on the slope of the Campidoglio, not far from the Arch of Septimius Severus; but, in the fifteenth century, the mint was near the bank of Santo Spirito. Finally, in 1665, Alexander VII moved it to the rear of the apse of St. Peter's, where it is at present. Bernini invented for it a machine to do the work more rapidly, and Francesco Girardini furnished a very sensitive balance; so that the mint of Rome was technically the most perfect one of those times. In 1845 Pius IX equipped it with the most modern appliances. The administration of the mint was at first entrusted to the cardinal camerlengo; direct supervision, however, was exercised by the senate, from the time at least when that body took possession of the mint, until the reign of Martin V. The *sindaco* and the conservators of the *Camera Capitolina* appointed the masters of the mint, while the minting was witnessed by the heads of the guild of goldsmiths and silversmiths. In 1322 John XXII created the office of treasurer for the mint of Avignon, and its incumbent, little by little, made himself independent of the camerlengo. Later, the office of prelate president of the mint was created. According to Lunadori (Relaz. della Corte di Roma, 1646), the establishments for the coining of money were in charge of a congregation of cardinals.

Rome was not the only city of the Pontifical States that had a mint: prior to the year 1000, there existed at Ravenna the former imperial mint, which was ceded in 996 to Archbishop Gerberto by Gregory V; there were mints also at Spoleto and at Benevento, former residences of Lombard dukes. The Archbishop of Ravenna, who was a feudatory of the emperor rather than of the pope, coined money as long as his temporal power over that city and its territory lasted. The mint of the Emperor Henry VI was established at Bologna in 1194, and nearly all of the coins struck there bear the motto BONONIA DOCET, or BONONIA MATER STUDIORUM. The *baiocechi* of Bologna were called *bolognini*, while the gold bolognino was equivalent to a gold sequin. The *lira*, also a Bolognese coin, was worth 20 bolognini. These coins were struck in the name of the commune; it is only from the time when Bologna was recovered by the Holy See, under Clement VI, that Bolognese coins may be regarded as papal.

Other cities had mints because they were the capitals of principalities subject to the Holy See, or in virtue of a privilege granted them by some prince; and when these feudal states fell to the Holy See, they retained the mints as papal establishments. This was so in the case of Camerino (from Leo X to Paul III), Urbino, Pesaro and Gubbio (under Julius II, Leo X, and Clement XI), Ferrara (from Clement VIII), Parma and Piacenza (from Julius II to Paul III). There were other cities to which the popes granted a mint for limited periods of time, as Ancona (from Sixtus IV to Pius VI), Aquila (1486, when that city rebelled against Ferdinand I of Naples and gave its allegiance to Innocent VIII; its coins, which are very rare, bear the inscription AQUILANA LIBERTAS), Ascoli (from Martin V to Pius VI), Avignon (from Clement V on), Carpentras (under Clement VIII), Venaissin (from Boniface VIII), Fabriano (under Leo X), Fano (from Innocent VIII to Clement VIII), Fermo (from Boniface IX, 1390, to Leo X), The Marches (from Boniface IX to Gregory XIII), Macerata (from Boniface IX to Gregory XIV), Modena (under Leo X and Clement VII), Montalto (under Sixtus V), Orvieto (under Julius II), the "Patrimony" (from Benedict XI to Benedict XII), Perugia (from Julius II to Julius III), Ravenna (from Leo X to Paul III, and under Benedict XIV), Recanati (under Nicholas V), Reggio (from Julius II to Adrian VI), Spoleto (under Paul II), Duchy of

Spoletto, PROVINCE DUCATUS (under Paul V), Viterbo (under Urban VI and Sixtus IV). Pius VI, being obliged to coin a great deal of copper money, gave the minting of it to a great many cities of the Patrimony, of Umbria, and of the Marches, which, together with those already named, continued to strike these coins; among them were Civitavecchia, Gubbio, Matelica, Ronciglione (the coins of 1799 showing the burning of this city are famous), Terni, and Tivoli. Pius VII suppressed all the mints except those of Rome and of Bologna.

As far back as 1370 there were coins struck during the vacancies of the Holy See, by authority of the cardinal camerlengo, who, after the fifteenth century at least, caused his name and his coat of arms to be stamped on the reverse of the coin, the obverse bearing the words "SEDE VACANTE" and the date, surrounding the crossed keys surmounted by the pavilion. All papal coins, with rare exceptions, bear the name of the pope, preceded (until the time of Paul II) by a Greek cross, and nearly all of the more ancient ones bear, either on the obverse or on the reverse, the words S. PETRUS, and some of them, the words S. PAULUS also. From Leo III to the Ottos, the coins bear the name of the emperor as well as that of the pope. After the sixteenth century the coat of arms of the pope alone frequently appears on pontifical coins. There are also found images of the Saviour, or of saints, symbolical figures of men or of animals, the keys (which appear for the first time on the coins of Benevento), etc. From the sixteenth century to the eighteenth, Biblical or moral phrases are added, in allusion to the saint or to the symbol that is stamped upon the coin, as, for example, MONSTRA TE ESSE MATREM, SPES NOSTRA, SUB TUUM PRÆSIDIUM, TOTA PULCHRA, SUPRA FIRMAM PETRAM, DA RECTA SAPERE (during the Conclave), UBI THESAURUS IBI COR, CRESCENTEM SEQUITUR CURA PECUNIAM, HILAREM DATOREM DILIGIT DEUS, PRO PRETIO ANIMÆ, FERRO NOCENTIUS AURUM, IN SUDORE VULTUS, CONSERVATÆ PEREUNT, TOLLE ET PROICE, etc. Sometimes allusion is made to an historical event, as the acquisition of Ferrara, or the deliverance of Vienna (1683), or to some concession of the pope to his subjects, or to a jubilee. From the time of Clement X the coins struck at Rome bear a minute representation of the coat of arms of the prelate in charge of the mint, a custom that obtained until 1817. The only instance of a cardinal camerlengo stamping his coat of arms on the coins during the lifetime of the pope is that of Cardinal Armellini, under Adrian VI, in the case of four *grossi*.

The mints outside of Rome stamped the coins with the arms of their respective cities, or with those of the cardinal legate, of the vice-legate, or of the governor; thus, Cardinal Scipione Borghese in 1612 struck coins at Avignon with his own name and arms, omitting the name of the pope, an example that was followed a year later by the pro-legate Cardinal Filonardi. The city very often placed the image of its patron saint on its coins. The date came to be stamped on coins that were struck during the vacancies of the Holy See, occasionally at first, and later as a rule; it rarely appears on other coins before 1550; the practice became general in the seventeenth century, the year of the Christian era or that of the pontificate being used; and Gregory XVI established it by law, as also the requirement that each coin should bear upon it an expression of its value. At Bologna as early as the seventeenth century, the value of gold or silver coins was usually indicated with the figures 20, 40, 80, etc., i. e. so many bolognini or baiocchi; at Rome, in the eighteenth century, nearly all the copper coins bore an indication of their value. The rim of papal coins rarely bore an inscription; at most, the monogram of the city in which the coin was struck was stamped upon it. From the sixteenth century,

the engravers, also, put their ciphers on the coins; among these engravers may be named Benvenuto Cellini, Francesco Raibolini, called il Francia (Bologna), the four Hamerani, Giulio Romano (trident), Cavaliere Lucenti, Andrea Perpentì, etc. Until the time of Pius VI, the dies for the mint remained the property of the engravers.

The Byzantine monetary system is followed in the papal coinage until the reign of Leo III, after which the system of the Frankish Empire obtains. John XXII adopted the Florentine system, and coined gold florins; the weight of this coin, however, varied from 22 carats to 30, until Gregory XI reduced it to the original 24 carats; but deterioration came again, and then there were two kinds of florins, the *papal florin*, which maintained the old weight, and the *florin di Camera*, the two being in the ratio of 69 *papal florins* = 100 *florins di Camera* = 1 gold pound = 10 *carlini*. The ducat was coined in the papal mint from the year 1432; it was a coin of Venetian origin that circulated with the florin, which, in 1531, was succeeded by the *scudo*, a piece of French origin that remained the monetary unit of the Pontifical States. At the same time, there appeared the *zecchino*. The ancient papal florin was equal to 2 scudi and 11 baiocchi (1 baiocco = 0.01 scudi); one ducat was equal to one scudo and 9 baiocchi. The scudo also underwent fluctuations, in the market and in its weight: the so called *scudo delle stampe* (1595) was worth 184.2 baiocchi, that is, a little less than 2 scudi. Benedict XIII re-established the good quality of the alloy, but under Pius VI it again deteriorated. In 1835 Gregory XVI regulated the monetary system of the Pontifical States, establishing the scudo as the unit, and dividing it into 100 baiocchi, while the baiocco was divided into 5 quattrini (the quattrino, until 1591, had been equal to $\frac{1}{2}$ of a baiocco). The scudo was coined both in gold and in silver; there were pieces of 10 scudi, called *Gregorine*; and pieces of 5 scudi, and of 2½ scudi were also coined. The scudo of the eighteenth century was equal to 1.65 scudi of Pius VII, which last was adopted by Gregory XVI; the *zecchino* was worth 2.2 scudi. The scudo is equal to 5.3 lire in the monetary system of the Latin Union. The fractional silver coins were the half scudo, and the *giulio*, called also *paolo*, which was equal to 0.1 scudi. The latter coin was created by Julius II in order to put the *carlini* of Charles of Anjou out of circulation, these coins being of bad alloy. There were pieces of 2 *giulii* that were called *papetti*, at Rome, and *lire* at Bologna, a name that was later given to them officially. A *grosso*, introduced in 1736, was equal to half a *giulio* (25 baiocchi); there were also the *mezzogrosso*, and the *testone* = 30 *giulii*. The copper coins were the baiocco or soldo (which was called *bolognino*, at Bologna) and the 2 baiocchi piece. The name baiocco is derived from that of the city of Bayeux.

Other coins that were used at various times in the Pontifical States were the *baiocchella* = 1 baiocco, a copper piece with a silver surface, and therefore smaller than the copper baiocco; there were coins made of the two metals of the values, respectively, of 2, 4, 6, 8, 12, and 16 baiocchi; the copper *madonnina* (Bologna) = 5 baiocchi; the *sampietrino* (Pius VI) = 2½ baiocchi; the *paludella* was a soldo, made of an alloy of copper and silver, established by Pius VI as a more easily portable specie with which to pay the workmen of the Pontine Marshes; the *sesino* = 0.4 of a baiocco = 2 quattrini; the *leonina* (Leo XII) = 4.4 Gregorian scudi; the *doblone* = 2 old scudi = 3.3 scudi of the nineteenth century; there were *doblone* of the relative values of 4, 8, and 16 scudi; the *doppio* was worth a little less than the *doblone*, that is, 3.21 scudi of the nineteenth century; at Bologna there were also coined scudi of 80 baiocchi, and half-scudi of 40 baiocchi; the *gabella* was a Bolo-

gnese coin, equivalent to a carlino or giulio; the *gabellone* was equivalent to 26 bolognini (baiocchi); the *franco*, in the fifteenth century, was worth 12 baiocchi at Bologna, but only 10 baiocchi at Rome; the *alberetti* was a two-baiocco piece that was coined by the Roman Republic (1798-99).

No official collection of the papal coins was made before the time of Benedict XIV, who acquired from Cardinal Passionei the valuable collection of Scilla which was enriched later by other acquisitions; in 1809, however, it was taken to Paris, and was never recovered. In the nineteenth century the Holy See obtained possession of the fine collection of Belli, begun in the previous century by Luigi Tommasini, and this collection became the basis of the Numismatic Cabinet, which is under the direction of the prefect of the Vatican Library and has a special custodian. Since the loss of the temporal power, the pope has not coined money; each year, however, he strikes the customary medal for the feast of Saint Peter, which is given to cardinals and to the employees of the Roman Curia.

CINAGLI, *Le monete dei papi descritte in tavole sinottiche* (Fermo, 1848); BELLI, *Cimelioteca delle monete pontificie del dott. Cav. Belli* (Rome, 1835); FLORAVANTES, *Antiqui romanorum pontificum denarii a Benedicto IX ad Paulum III* (2 vols., Rome, 1738); PROMIS, *Monete dei romani pontefici avanti il 1000* (Turin, 1858); VENUTI, *Numismata pontificum romanorum præstantiora a Martino V ad Benedictum XIV* (Rome, 1744); CAPOBIANCHI, *Origine della zecca del Senato romano nel secolo XVII* (Camerino, 1883); AMBROSOLI, *Atlantico di monete papali moderne a sussidio dei Cinagli* (Milan, 1905). Special subjects were treated by SALVAGGI, ROSSI, BELLI, CAPOBIANCHI, RUSPOLI, GARAMPI, DIAMILLA, PILA, CARONI, VITALINI, GREGORIUS, etc. ORFER, *De veteris numismatis potestate ejusque incremento et decremento* (Rome, 1835); MORELLI, *Tariffa universale figurata delle monete* (Rome, 1833).

U. BENIGNI.

Minucius Felix, Christian apologist, flourished between 160 and 300; the exact date is not known. His "Octavius" has numerous points of agreement with the "Apologeticum" of Tertullian, similarities that have been explained by the theory of a common source—an apology written in Latin, and which is supposed to have disappeared without leaving any trace, not even in the name of its author. This hypothesis is now generally abandoned. It seems improbable that such a work, from which Minucius and Tertullian might have drawn, would have so thoroughly disappeared. Lactantius (*Diu. Inst.*, V, i, 21) enumerates the apologists who preceded him and does not even suspect the existence of such a writer. The most natural supposition is that one of the two writers, Minucius or Tertullian, is directly dependent on the other. Formerly, Minucius was regarded as posterior to Tertullian. The first doubts in this respect were expressed in France by Blondel in 1641, by Dailleus in 1660, and in England by Dodwell. The theory of the priority of Minucius was defended by van Hoven in the second edition of Lindner in 1773. In modern times it was most ably defended by Ebert. The priority of Tertullian has been chiefly defended by Ad. Harnack, who has been refuted by A. Krueger. M. Waltzing, the scholar best acquainted with Minucius Felix and what has been written about him, is inclined to think him anterior to Tertullian. The arguments in favour of one or the other of these theories are not decisive. However, it may be said that in the passages taken from the ancient authors, such as Seneca, Varro, and especially Cicero, Minucius seems to be more exact and closer to the original; consequently he seems to be intermediary between them and Tertullian. The ecclesiastical authors were probably not better informed than we are with regard to Minucius. Lactantius puts him before Tertullian (*Diu. Inst.*, I, xi, 55; V, i, 21), and St. Jerome after; but St. Jerome contradicts himself by putting him after St. Cyprian (*Ep. lxx*, (lxxxiii); v; lx; xlviii; "In Isaiam", VIII, præf.), and elsewhere putting him between Tertullian and St.

Cyprian (*De Viris*, lviii). Fronto (d. about 170) is mentioned by Minucius. If the treatise "Quod idola non dii sint" is by St. Cyprian (d. about 258) there is no need of going beyond that date, for this treatise is based on the "Octavius". It is true that the attribution of the aforesaid treatise to St. Cyprian has been contested, but without serious reason. If this be rejected there is no period *ante quem* before Lactantius.

The birthplace of the author is believed to be Africa. This is not proved by Minucius's imitation of African authors, any more than it is by the resemblance between Minucius and Tertullian. At this period the principal writers were Africans, and it was natural that a Latin, of whatever province he might be, would read and imitate them. The allusions to the customs and belief of Africa are numerous, but this may be explained by the African origin of the champion of paganism. The "Octavius" is a dialogue of which Ostia is the scene. Cæcilius Natalis upholds the cause of paganism, Octavius Januarius that of Christianity; the author himself is the judge of the debate. Cæcilius Natalis was a native of Cirta; he lived at Rome and attentively followed Minucius in his activity as an advocate. Octavius had just arrived from a foreign country where he had left his family. Minucius lived at Rome. All three were advocates. The name Minucius Felix has been found on inscriptions at Tebessa and Carthage (*Cor. Inscript. Lat.* VIII, 1964 and 12499); that of Octavius Januarius at Saldæ (Bougie; ib., 8962); that of Cæcilius at Cirta itself (ib., 7097-7098, 6996). The M. Cæcilius Natalis of the inscriptions discharged important municipal duties and gave pagan festivals with memorable prodigality. He may have belonged to the same family as the interlocutor of the dialogue. Attempts have been made to make them identical or to establish family relationship between them. These are pure hypotheses subordinate to the opinion entertained regarding the date of the dialogue.

The persons are real. The dialogue may likewise be so, despite the fact that Minucius has transformed into an almost judicial debate what must have been a mere conversation or series of conversations. Owing to the adjournment of the courts during the vintage time, the three friends went for rest to Ostia. Here they walked on the sea-shore, and when they passed before a statue of Serapis, Cæcilius saluted it with the customary kiss. Octavius thereupon expressed his indignation that Minucius should allow his daily companion to fall into idolatry. They resume their walk while Octavius gives an account of his voyage; they go to and fro on the shore and the quay; they watch children jumping about in the sea. This beginning is charming; it is the most perfect portion of the work. During the walk Cæcilius, silenced by the words of Octavius, has not spoken. He now explains himself and it is agreed to settle the debate. They seat themselves on a lonely pier; Minucius seated in the centre is to be the arbitrator. Thereupon Cæcilius begins by attacking Christianity; Minucius says a few words, and then Octavius replies. At the end Minucius and Cæcilius express their admiration and the latter declares that he surrenders. Fuller explanations of the new religion are postponed until the next day. The dialogue therefore consists of two discourses, the attack of Cæcilius and the refutation of Octavius.

The discussion bears on a small number of points: the possibility of man arriving at the truth, creation, Providence, the unity of God, the necessity of keeping the religion of one's ancestors and especially the advantage to the Romans of the worship of the gods, the low character of Christians, their tendency to conceal themselves, their crimes (incest, worship of an ass's head, the adoration of the generative organs of the priest, prayers addressed to a criminal, sacrifice of

children) their impious and absurd conception of the Divinity, their doctrine of the end of the world and the resurrection of the dead, the hardships of their life, threatened, and exposed without remedy to all sorts of dangers, cut off from the joys of life. In this debate the conception of Christianity is very limited, and is reduced almost solely to the unity of God, Providence, the resurrection, and reward after death. The name of Christ does not appear; among the apologists of the second century Aristides, St. Justin, and Tertullian are the only ones who pronounced it. But Minucius omits the characteristic points of Christianity in dogma and worship; this is not because he is bound to silence by the discipline of the secret, for St. Justin and Tertullian do not fear to enter into these details. Moreover in the discussion itself Octavius ends abruptly. To the accusation of adoring a criminal he contents himself with replying that the Crucified One was neither a man nor guilty (xxix, 2) and he is silent with regard to the mysteries of the Trinity, the Incarnation, and the Redemption which would have made clear his reply. He merely repels the accusation of incest and infanticide without describing the agape or the Eucharist (xxx and xxxi). He does not quote Scripture, or at least very little; and he does not mention the fulfilment of the prophecies. On the other hand he makes only a brief allusion to the manner of proceeding against the Christians (xxiii, 3). He does not speak of the loyalty of the Christians towards the state and the emperors. Political and judicial considerations, which are given so much space in Tertullian, are almost entirely absent here. These omissions are explained by a voluntary limitation of the subject. Minucius wished only to remove the prejudices of the pagans, to prepossess his readers by a pleasant discussion, and to show them the possibility of Christianity. He himself indicated this intention by putting off until the next day a more profound discussion (xi, 2). He addressed himself chiefly to the learned, to sceptics, and to the cultured; and wished to prove to them that there was nothing in the new religion that was incompatible with the resources of dialectics and the ornaments of rhetoric. In a word his work is an introduction to Christianity, a *Protrepticon*.

It is a mosaic of imitations, especially of Cicero, Seneca, and Virgil. The plan itself is that of the "De natura deorum" of Cicero, and Cæcilius here plays the rôle of Cotta. However the personages have their peculiar characteristics. Cæcilius is a young man, presumptuous, somewhat vain, sensitive, yielding to his first impression. Octavius is more sedate, but provincial life seems to have made him more intolerant; his pleading is hot and emotional. Minucius is more indulgent and calm. These learned men are charming friends. The dialogue itself is a monument of friendship. Minucius wrote it in memory of his dear Octavius, recently deceased. In reading it one thinks of Pliny the Younger and his friends. These minds exhibited the same delicacy and culture. The style is composite, being a harmonious combination of the Ciceronian period with the brilliant and short sentences of the new school. It sometimes assumes poetic tints, but the dominating colour is that of Cicero. By the choice of subjects treated, his ease in reconciling very different ideas and styles, the art of combinations in ideas as well as in language, Minucius Felix belongs to the first rank of Latin writers whose talent consisted in blending heterogeneous elements and in proving themselves individual and original in imitation.

MINUCIUS FELIX, *Octavius*, ed. WALTHER (Louvain, 1903); WALTHER, *Studia minuciana*, I and II (Louvain, 1906); IDEM, *Octavius de Minucius Felix, introduction, texte, commentaire, traduction, langue et syntaxe, appendice critique* (2 vols., Bruges, 1909); IDEM, *Lexicon Minucianum in Bib. de la faculté de philosophie et lettres de l'Université de Liège*, fasc. iii (Liège and Paris, 1909). A complete bibliography will be found in the first three works, with analyses and discussion. Recently ELZER in his

Prolegomena zu Minucius Felix (Bonn, 1909), has attempted to show the *Octavius* to be a "consolation" intended exclusively for Christian readers; this theory is without probability.

PAUL LEJAY.

Mirabilia Urbis Romæ, the title of a medieval Latin description of the city of Rome, dating from about 1150. Unhindered by any very accurate knowledge of the historical continuity of the city, the unknown author has described the monuments of Rome, displaying a considerable amount of inventive faculty. From the pontificate of Boniface VIII (1294-1303) to that of John XXII (1316-34) it was revised and attained unquestioned authority, despite the increase in the already large number of misconceptions and errors. Attention was first called to these different recensions by de Rossi in the first volume of his "Roma Sotterranea" (158 sqq.). Almost simultaneously appeared two editions of the text, by Parthey ("Mirabilia Romæ e codicibus Vaticanis emendata", Berlin, 1869) and by Jordan ("Topographie der Stadt Rom im Altertum", II, Berlin, 1871, 605-43), respectively. In the third section Jordan discusses at some length the *Mirabilia* and its redactions (357 sqq.), in the fourth, the earlier divisions of the work (401 sqq.), and in the fifth, the topography of the *Mirabilia* (421 sqq.), presenting most valuable information, the result of much research on all the questions involved. The latest edition is that of Duchesne in the "Liber Censuum de l'Eglise Romaine" (I, Paris, 1905, 262-73), being the text of the original of Cencius Camerarius with the variants of four other manuscripts. Especially valuable for a proper conception of the *Mirabilia* are the 125 notes appended by Duchesne on pp. 273-83, many of them of considerable length. (The concordance with the text in the "Excerpta politici a presbitero Benedicto compositi de ordinibus Romanis et dignitatibus Urbis et Sacri Palatii" may be found in the "Liber Censuum", vol. II, 91, 92, n. 5.) A critical edition of the "Mirabilia Urbis" is still lacking. The contents of the *Mirabilia* fall into the following sections, the titles being taken from the "Liber Censuum": (1) De muro urbis (concerning the wall of the city); (2) De portis urbis (the gates of the city); (3) De miliaribus (the milestones); (4) Nomina portarum (the names of the gates); (5) Quot porte sunt Transiberim (how many gates are beyond the Tiber); (6) De arcibus (the arches); (7) De montibus (the hills); (8) De terminis (the baths); (9) De palatiis (the palaces); (10) De theatris (the theatres); (11) De locis qui inveniuntur in sanctorum passionibus (the places mentioned in the "passions" of the saints); (12) De pontibus (the bridges); (13) De cimiteriis (the cemeteries); (14) De iussione Octaviani imperatoris et responsione Sibille (the demand of the Emperor Octavian and the Sibyl's response); (15) Quare facti sunt caballi marmorei (why the marble horses were made); (16) De nominibus iudicum et eorum instructionibus (the names of the judges and their instructions); (17) De columna Antonii et Trajani (the column of Antony and Trajan); (18) Quare factus sit equus qui dicitur Constantinus (why the horse was made, which is called of Constantine); (19) Quare factum sit Pantheon et postmodum oratio B. (why the pantheon was built and later oration B.); (20) Quare Octavianus vocatus sit Augustus et quare dicatur ecclesia Sancti Petri ad vincula (Why Octavianus was called Augustus, and why the church of St. Peter ad Vincula was so called); (21) De vaticano et Agulio; (22) Quot sunt templa trans Tiberim (how many temples are beyond the Tiber); (23) Predicatio sanctorum (the preaching of the saints).

The reader may consult in addition to the above-mentioned authors, the *Monatsberichte* of the Berlin Academy (1869), 681 sqq.; GRÖSSM, *Beiträge zur Literatur und Sage des Mittelalters*; [NIBBY], *Ephemeri di letterarie di Roma* (1820), 63 sqq. part of this was reprinted without alteration under the title of *Mirabilia ossia le cose maravigliose di Roma* (Rome, 1864). In editing the second of the two recensions mentioned above

JORDAN (II, 83, 357) calls attention to the Sant' Isidoro manuscript, in the collection of Cardinal Nicholas of Aragon (1356-62), on which are based the *Graphia aurea urbis Romae* edited by OSANNA, and the *Chronicle of MARTINUS POLONUS*. Notwithstanding the learned notes of DUCHESNE and the comprehensive commentary of JORDAN, already referred to (in which must be included section 3, vol. I, pt. I, 37-74, on topographical research since the fifteenth century), many questions concerning the text of the *Mirabilia* still remain to be cleared up or are still in dispute. The authorship of the *Mirabilia*, which had never been discussed by any recognized authority, is treated in a most satisfactory manner by Duchesne in the sixth fascicule of the *Liber Censuum* (97-104), which has just appeared. He adduces numerous arguments to prove that the above-mentioned BENEDICT (Canonius Sancti Petri de Urbe, cantor Romanus Ecclesie, the compiler of the *Ordo Romanus*) was also the author of the *Mirabilia*, "Who, if not the indulgent author, would have wished to create a future for it by incorporating it with the *Liber Censuum*?" Duchesne's theory also explains the curious fact that the *Mirabilia* should be found in the *Liber Censuum*, with which it is in no way connected.

PAUL MARIA BAUMGARTEN.

Miracle (Lat. *miraculum*, from *mirari*, "to wonder").—In general, a wonderful thing, the word being so used in classical Latin; in a specific sense, the Latin Vulgate designates by *miracula* wonders of a peculiar kind, expressed more clearly in the Greek text by the terms *répara*, *δυνάμεις*, *σημεία*, i. e., wonders performed by supernatural power as signs of some special mission or gift and explicitly ascribed to God. These terms are used habitually in the New Testament and express the meaning of *miraculum* of the Vulgate. Thus St. Peter in his first sermon speaks of Christ as approved of God, *δυνάμειν, καὶ τέρασιν καὶ σημείοις* (Acts, ii, 22) and St. Paul says that the signs of his Apostleship were wrought, *σημείοις τε καὶ τέρασιν καὶ δυνάμειν* (II Cor., xii, 12). Their united meaning is found in the term *ἔργα* i. e., works, the word constantly employed in the Gospels to designate the miracles of Christ. The analysis of these terms therefore gives the nature and scope of the miracle.

I. NATURE. A. The word *répara* literally means "wonders", in reference to feelings of amazement excited by their occurrence; hence effects produced in the material creation appealing to, and grasped by, the senses, usually by the sense of sight, at times by hearing, e. g., the baptism of Jesus, the conversion of St. Paul. Thus, though the works of Divine grace, such as the Sacramental Presence, are above the power of nature, and due to God alone, they may be called miraculous only in the wide meaning of the term, i. e., as supernatural effects, but they are not miracles in the sense here understood, for miracles in the strict sense are apparent. The miracle falls under the grasp of the senses, either in the work itself (e. g., raising the dead to life) or in its effects (e. g., the gifts of infused knowledge with the Apostles). In like manner the justification of a soul in itself is miraculous, but is not a miracle properly so called, unless it takes place in a sensible manner, as, e. g., in the case of St. Paul. The wonder of the miracle is due to the fact that its cause is hidden, and an effect is expected other than what actually takes place. Hence, by comparison with the ordinary course of things, the miracle is called extraordinary. In analyzing the difference between the extraordinary character of the miracle and the ordinary course of nature, the Fathers of the Church and theologians employ the terms *above*, *contrary to*, and *outside nature*. These terms express the manner in which the miracle is extraordinary.

A miracle is said to be above nature when the effect produced is above the native powers and forces in creatures of which the known laws of nature are the expression, as raising a dead man to life, e. g., Lazarus (John, xi), the widow's son (III Kings, xvii). A miracle is said to be outside, or beside, nature when natural forces may have the power to produce the effect, at least in part, but could not of themselves alone have produced it in the way it was actually brought about. Thus the effect in abundance far

exceeds the power of natural forces, or it takes place instantaneously without the means or processes which nature employs. In illustration we have the multiplication of loaves by Jesus (John, vi), the changing of water into wine at Cana (John, ii)—for the moisture of the air by natural and artificial processes is changed into wine—or the sudden healing of a large extent of diseased tissue by a draught of water. A miracle is said to be contrary to nature, when the effect produced is contrary to the natural course of things.

The term miracle here implies the direct opposition of the effect actually produced to the natural causes at work, and its imperfect understanding has given rise to much confusion in modern thought. Thus Spinoza calls a miracle a violation of the order of nature (*præverti*, "Tract. Theol. Polit.", vi). Hume says it is a "violation" or an "infraction"; and many writers—e. g., Martensen, Hodge, Baden-Powell, Theodore Parker—use the term for miracles as a whole. But every miracle is not of necessity contrary to nature; for there are miracles above or outside nature. Again, the term *contrary to nature* does not mean "unnatural" in the sense of producing discord and confusion. The forces of nature differ in power and are in constant interaction. This produces interferences and counteractions of forces. This is true of mechanical, chemical, and biological forces. So, also, at every moment of the day I interfere with and counteract natural forces about me. I study the properties of natural forces with a view to obtain conscious control by intelligent counteractions of one force against another. Intelligent counteraction marks progress in chemistry, in physics—e. g., steam locomotion, aviation—and in the prescriptions of the physician. Man controls nature, nay, can live only by the counteraction of natural forces. Though all this goes on around us, we never speak of natural forces violated. These forces are still working after their kind, and no force is destroyed, nor is any law broken, nor does confusion result. The introduction of human will may bring about a displacement of the physical forces, but no infraction of physical processes. Now in a miracle God's action relative to its bearing on natural forces is analogous to the action of human personality. Thus, e. g., it is against the nature of iron to float, but the action of Eliseus in raising the axe-head to the surface of the water (IV Kings, vi) is no more a violation, or a transgression, or an infraction, of natural laws than if he raised it with his hand. Again, it is of the nature of fire to burn, but when, e. g., the Three Children were preserved untouched in the fiery furnace (Dan., iii) there was nothing unnatural in the act, as these writers use the word, any more than there would be in erecting a dwelling absolutely fire-proof. In the one case, as in the other, there was no paralysis of natural forces and no consequent disorder.

The extraordinary element in the miracle—i. e., an event apart from the ordinary course of things—enables us to understand the teaching of theologians that events which ordinarily take place in the natural or supernatural course of Divine Providence are not miracles, although they are beyond the efficiency of natural forces. Thus, e. g., the creation of the soul is not a miracle, for it takes place in the ordinary course of nature. Again, the justification of the sinner, the Eucharistic Presence, the sacramental effects, are not miracles for two reasons: they are beyond the grasp of the senses and they have place in the ordinary course of God's supernatural Providence.

B. The word *δύναμις*, "power" is used in the New Testament to signify: (a) the power of working miracles, (*ἐν δυνάμει σημεῖων*—Rom., xv, 19); (b) mighty works as the effects of this power, i. e., miracles themselves (*αὐτὰ τὰ δυνάμειν αὐτοῦ*—Matt., xi, 20) and expresses the efficient cause of the miracle, i. e.,

Divine power. Hence the miracle is called supernatural, because the effect is beyond the productive power of nature and implies supernatural agency. Thus St. Thomas teaches: "Those effects are rightly to be termed miracles which are wrought by Divine power apart from the order usually observed in nature" (Contra Gent., III, cii), and they are apart from the natural order because they are "beyond the order or laws of the whole created nature" (Summa Theol., I, Q. cii, a. 4). Hence *δύναμις* adds to the meaning of *répara* by pointing out the efficient cause. For this reason miracles in Scripture are called "the finger of God" (Exod., viii, 19; Luke, xi, 20), "the hand of the Lord" (I Kings, v, 6), "the hand of our God" (I Esdras, viii, 31). In referring the miracle to God as its efficient cause, the answer is given to the objection that the miracle is unnatural, i. e., an uncaused event without meaning or place in nature. With God as the cause, the miracle has a place in the designs of God's Providence (Contra Gent., III, xcviii). In this sense—i. e., relatively to God—St. Augustine speaks of the miracle as natural (De Civit. Dei, XXI, viii, n. 2).

An event is above the course of nature and beyond its productive powers: (a) with regard to its substantial nature, i. e., when the effect is of such a kind that no natural power could bring it to pass in any manner or form whatsoever, as, e. g., the raising to life of the widow's son (Luke, vii), or the cure of the man born blind (John, ix). These miracles are called miracles as to substance (*quoad substantiam*). (b) With regard to the manner in which the effect is produced, i. e., where there may be forces in nature fitted and capable of producing the effect considered in itself, yet the effect is produced in a manner wholly different from the manner in which it should naturally be performed, i. e., instantaneously, by a word, e. g., the cure of the leper (Luke, v). These are called miracles as to the manner of their production (*quoad modum*).

God's power is shown in the miracle: (a) directly through His own immediate action or (b) mediately, through creatures as means or instruments. In this case the effects must be ascribed to God, for He works in and through the instruments—"Ipso Deo in illis operante" (Augustine, "De Civit. Dei", X, xii). Hence God works miracles through the instrumentality (1) of angels, e. g., the Three Children in the fiery furnace (Dan., iii), the deliverance of St. Peter from prison (Acts, xii); (2) of men, e. g., Moses and Aaron (Exod., vii), Elias (III Kings, xvii), Eliseus (IV Kings, v), the Apostles (Acts, ii, 43), St. Peter (Acts, iii, ix), St. Paul (Acts, xix), the early Christians (Galat., iii, 5). (3) In the Bible also, as in church history, we learn that inanimate things are instruments of Divine power, not because they have any excellence in themselves, but through a special relation to God. Thus we distinguish holy relics, e. g., the mantle of Elias (IV Kings, ii), the body of Eliseus (IV Kings, xiii), the hem of Christ's garment (Matthew, ix), the handkerchiefs of St. Paul (Acts, xix, 12); holy images, e. g., the brazen serpent (Num., xxi); holy things, e. g., the Ark of the Covenant, the sacred vessels of the Temple (Dan., v); holy places, e. g., the Temple of Jerusalem (II Par., vi, vii), the waters of the Jordan (IV Kings, v), the Pool of Bethesda (John, v). Hence the contention of some modern writers, that a miracle requires an immediate action of Divine power, is not true. It is sufficient that the miracle be due to the intervention of God, and its nature is revealed by the utter lack of proportion between the effect and what are called means or instruments.

The word *σημαῖον* means "sign", an appeal to intelligence, and expresses the purpose or final cause of the miracle. A miracle is a factor in the Providence of God over men. Hence the glory of God and the good of men are the primary or supreme ends of every miracle. This is clearly expressed by Christ in

the raising of Lazarus (John, xi); and the Evangelist says that Jesus, in working His first miracle at Cana, "manifested his glory" (John, ii, 11). Therefore the miracle must be worthy the holiness, goodness, and justice of God, and conducive to the true good of men. Hence they are not performed by God to repair physical defects in His creation; nor are they intended to produce, nor do they produce, disorder or discord; nor do they contain any element which is wicked, ridiculous, useless, or unmeaning. Hence they are not on the same plane with mere wonders, tricks, works of ingenuity, or magic. The efficacy, usefulness, purpose of the work and the manner of performing it clearly show that it must be ascribed to Divine power. This high standing and dignity of the miracle is shown, e. g., in the miracles of Moses (Exod., vii-x), of Elias (III Kings, xviii, 21-38), of Eliseus (IV Kings, v). The multitudes glorified God at the cure of the paralytic (Matt., ix, 8), of the blind man (Luke, xviii, 43), at the miracles of Christ in general (Matt., xv, 31; Luke, xix, 37), as at the cure of the lame man by St. Peter (Acts, iv, 21). Hence miracles are signs of the supernatural world and our connexion with it.

In miracles we can always distinguish secondary ends, subordinate, however, to the primary ends. Thus (1) they are evidences attesting and confirming the truth of a Divine mission, or of a doctrine of faith or morals, e. g., Moses (Exod., iv), Elias (III Kings, xvii, 24). For this reason the Jews see in Christ "the prophet" (John, vi, 14); in whom "God hath visited his people" (Luke, vii, 16). Hence the disciples believed in Him (John, ii, 11) and Nicodemus (John, iii, 2) and the man born blind (John, ix, 38), and the many who had seen the raising of Lazarus (John, xi, 45). Jesus constantly appealed to His "works" to prove that He was sent by God and that He is the Son of God, e. g., to the Disciples of John (Matt., xi, 4), to the Jews (John, x, 37). He claims that His miracles are a greater testimony than the testimony of John (John, v, 36), condemns those who will not believe (John, xv, 24), as He praises those who do (John, xvii, 8), and exhibits miracles as the signs of the True Faith (Mark, xvi, 17). The Apostles appeal to miracles as the confirmation of Christ's Divinity and mission (John, xx, 31; Acts, x, 38), and St. Paul counts them as the signs of his Apostleship (II Cor., xii, 12). (2) Miracles are wrought to attest true sanctity. Thus, e. g., God defends Moses (Num., xii), Elias (IV Kings, i), Eliseus (IV Kings, xiii). Hence the testimony of the man born blind (John, ix, 30 sqq.) and the official processes in the canonisation of saints. (3) As benefits either spiritual or temporal. The temporal favours are always subordinate to spiritual ends, for they are a reward or a pledge of virtue, e. g., the widow of Sarephtha (III Kings, xvii), the Three Children in the fiery furnace (Dan., iii), the preservation of Daniel (Dan., v), the deliverance of St. Peter from prison (Acts, xii), of St. Paul from shipwreck (Acts, xxvii). Thus *σημαῖον*, i. e., "sign", completes the meaning of *δύναμις*, i. e., "[Divine] power". It reveals the miracle as an act of God's supernatural Providence over men. It gives a positive content to *répara*, i. e., "wonder", for, whereas the wonder shows the miracle as a deviation from the ordinary course of nature, the sign gives the purpose of the deviation.

This analysis shows that (1) the miracle is essentially an appeal to knowledge. Therefore miracles can be distinguished from purely natural occurrences. A miracle is a fact in material creation, and falls under the observation of the senses or comes to us through testimony, like any natural fact. Its miraculous character is known: (a) from positive knowledge of natural forces, e. g., the law of gravity, the law that fire burns. To say that we do not know all the laws of nature, and therefore cannot know a miracle (Rousseau, "Lett. de

la Mont.", let. iii), is beside the question, for it would make the miracle an appeal to ignorance. I may not know all the laws of the penal code, but I can know with certainty that in a particular instance a person violates one definite law. (b) From our positive knowledge of the limits of natural forces. Thus, e. g., we may not know the strength of a man, but we do know that he cannot by himself move a mountain. In enlarging our knowledge of natural forces, the progress of science has curtailed their sphere and defined their limits, as in the law of abiogenesis. Hence, as soon as we have reason to suspect that any event, however uncommon or rare it appear, may arise from natural causes or be conformable to the usual course of nature, we immediately lose the conviction of its being a miracle. A miracle is a manifestation of God's power; so long as this is not clear, we should reject it as such.

(2) Miracles are signs of God's Providence over men; hence they are of high moral character, simple and obvious in the forces at work, in the circumstances of their working, and in their aim and purpose. Now philosophy indicates the possibility, and Revelation teaches the fact, that spiritual beings, both good and bad, exist, and possess greater power than man possesses. Apart from the speculative question as to the native power of these beings, we are certain (a) that God alone can perform those effects which are called substantial miracles, e. g., raising the dead to life; (b) that miracles performed by the angels, as recorded in the Bible, are always ascribed to God, and Holy Scripture gives Divine authority to no miracles less than Divine; (c) that Holy Scripture shows the power of evil spirits as strictly conditioned, e. g., testimony of the Egyptian magicians (Exod., viii, 19), the story of Job, evil spirits acknowledging the power of Christ (Matt., viii, 31), the express testimony of Christ himself (Matt., xxiv, 24) and of the Apocalypse (Apoc., ix, 14). Granting that these spirits may perform prodigies—i. e., works of skill and ingenuity which, relatively to our powers, may seem to be miraculous—yet these works lack the meaning and purpose which would stamp them as the language of God to men.

II. ERRORS.—Deists reject miracles, for they deny the Providence of God. Agnostics, also, and Positivists reject them: Comte regarded miracles as the fruit of the theological imagination. Modern Pantheism has no place for miracles. Thus Spinoza held creation to be the aspect of the one substance, i. e., God, and, as he taught that miracles were a violation of nature, they would therefore be a violation of God. The answer is, first that Spinoza's conception of God and nature is false and, secondly, that in fact miracles are not a violation of nature. To Hegel creation is the evolutive manifestation of the one Absolute Idea, i. e., God, and to the neo-Hegelians (e. g., Thos. Green) consciousness is identified with God; therefore to both a miracle has no meaning. Erroneous definitions of the supernatural lead to erroneous definitions of the miracle. Thus (a) Bushnell defines the natural to be what is necessary, the supernatural to be what is free; therefore the material world is what we call nature, the world of man's life is supernatural. So also Dr. Strong ("Baptist Rev.", vol. I, 1879), Rev. C. A. Row ("Supernat. in the New Test.", London, 1875). In this sense every free volition of man is a supernatural act and a miracle. (b) The natural supernaturalism proposed by Carlyle, Theodore Parker, Prof. Pfeiderer, and, more recently, Prof. Everett ("The Psychologic Elem. of Relig. Faith", London and New York, 1902), Prof. Bowne ("Immanence of God", Boston and New York, 1905), Hastings ("Diction. of Christ and the Gospels", s. v. "Miracles"). Thus the natural and the supernatural are in reality one: the natural is its aspect to man, the supernatural is its aspect to God. (c) The "Immediate theory", that God acts immediately without second causes, or that

second causes, or laws of nature, must be defined as the regular methods of God's acting. This teaching is combined with the doctrine of evolution.

(d) The "relative" theory of miracles is by far the most popular with non-Catholic writers. This view was originally proposed to hold Christian miracles and at the same time hold belief in the uniformity of nature. Its main forms are: (1) the mechanical view of Babbage (Bridgewater Treatises), later advanced by the Duke of Argyll (Reign of Law). Thus nature is presented as a vast mechanism wound up in the beginning and containing in itself the capacity to deviate at stated times from its ordinary course. The theory is ingenious, but it makes the miracle a natural event. It admits the assumption of opponents of miracles, viz., that physical effects must have physical causes, but this assumption is contradicted by common facts of experience, e. g., will acts on matter. (2) The "unknown" law of Spinoza, who taught that the term *miracle* should be understood with reference to the opinions of men, and that it means simply an event which we are unable to explain by other events familiar to our experience. Locke, Kant, Eichhorn, Paulus, Renan hold the same view. Thus Prof. Cooper writes "The miracle of one age becomes the ordinary working of nature in the next" ("Ref. Ch. R.", July, 1900). Hence a miracle never happened in fact, and is only a name to cover our ignorance. Thus Matthew Arnold could claim that all Biblical miracles will disappear with the progress of science (Lit. and Bible) and M. Müller that "the miraculous is reduced to mere seeming" (n. Rel., pref., p. 10). The advocates of this theory assume that miracles are an appeal to ignorance. (3) The "higher-law" theory of Argyll of "Unseen Universe", Trench, Lange (on Matt., p. 153), Gore (Bampton Lect., p. 36) proposed to refute Spinoza's claim that miracles are unnatural and productive of disorder. Thus with them the miracle is quite natural because it takes place in accordance with laws of a higher nature. Others—e. g., Schleiermacher and Ritschl—mean by *higher law*, subjective religious feeling. Thus, to them a miracle is not different from any other natural event; it becomes a miracle by relation to the religious feeling. A writer in "The Biblical World" (Oct., 1908) holds that the miracle consists in the religious significance of the natural event in its relation to the religious appreciation as a sign of Divine favour. Others explain higher law as a moral law, or law of the spirit. Thus the miracles of Christ are understood as illustrations of a higher, grander, more comprehensive law than men had yet known, the incoming of a new life, of higher forces acting according to higher laws as manifestations of the spirit in the higher stages of its development. The criticism of this theory is that miracles would cease to be miracles: they would not be extraordinary, for they would take place under the same conditions. To bring miracles under a law not yet understood is to deny their existence. Thus, when Trench defines a miracle as "an extraordinary event which beholders can reduce to no law with which they are acquainted", the definition includes hypnotism and clairvoyance. If by *higher law* we mean the high law of God's holiness, then a miracle can be referred to this law, but the higher law in this case is God Himself and the use of the term is apt to create confusion.

III. ANTECEDENT IMPROBABILITY.—The great problem of modern theology is the place and value of miracles. In the opinion of certain writers, their antecedent improbability, based on the universal reign of law, is so great that they are not worthy of serious consideration. Thus his conviction of the uniformity of nature led Hume to deny testimony for miracles in general, as it led Baur, Strauss, and Renan to explain the miracles of Christ on natural grounds. The fundamental principle is that whatever happens is

natural, and what is not natural does not happen. On belief in the uniformity of nature is based the profound conviction of the organic unity of the universe, a characteristic trait of nineteenth-century thought. It has dominated a certain school of literature, and, with George Eliot, Hall Caine, and Thomas Hardy, the natural agencies of heredity, environment, and necessary law rule the world of human life. It is the basic principle in modern treatises on sociology. Its chief exponent is science-philosophy, a continuation of the Deism of the eighteenth century without the idea of God, and the view herein presented, of an evolving universe working out its own destiny under the rigid sway of inherent natural laws, finds but a thin disguise in the Pantheistic conception, so prevalent among non-Catholic theologians, of an immanent God, who is the active ground of the world-development according to natural law—i. e., Monism of mind or will. This belief is the gulf between the old and the modern school of theology, according to Delitzsch ("Deep Gulf between the Old and the Modern Theology", 1890; Principal Fairbairn, "Studies in the Philos. of Hist. and Religion"). Max Müller finds the kernel of the modern conception of the world in the idea that "there is a law and order in everything, and that an unbroken chain of causes and effects holds the whole universe together" ("Anthrop. Relig.", pref., p. 10). Throughout the universe there is a mechanism of nature and of human life, presenting a necessary chain, or sequence, of cause and effect, which is not, and cannot be, broken by an interference from without, as is assumed in the case of a miracle. This view is the ground of modern objections to Christianity, the source of modern scepticism, and the reason for a prevailing disposition among Christian thinkers to deny miracles a place in Christian evidences, and to base the proof for Christianity on internal evidences alone.

Criticism. (1) This view ultimately rests upon the assumption that the material universe alone exists. It is refuted: (a) by proving that in man there is a spiritual soul totally distinct from organic and inorganic existence, and that this soul reveals an intellectual and moral order totally distinct from the physical order; (b) by inferring the existence of God from the phenomena of the intellectual, the moral, and the physical order. (2) This view is also based on an erroneous meaning of the term *nature*. Kant made a distinction between the *noumenon* and the *phenomenon* of a thing; he denied that we can know the *noumenon*, i. e., the thing in itself; all we know is the *phenomenon*, i. e., the appearance of the thing. This distinction has profoundly influenced modern thought. As a Transcendental Idealist, Kant denied that we know the real phenomenon; to him only the ideal appearance is the object of the mind. Thus knowledge is a succession of ideal appearances, and a miracle would be an interruption of that succession. Others, i. e., the Sense-School (Hume, Mill, Bain, Spencer, and others), teach that, while we cannot know the substance or essences of things, we can and do grasp the real phenomena. To them the world is a phenomenal world and is a pure coexistence and succession of phenomena; the antecedent determines the consequent. In this view a miracle would be an unexplained break in the (so-called) invariable law of sequence, on which law Mill based his Logic. Now we reply that the real meaning of the word *nature* includes both the phenomenon and the noumenon. We have the idea of substance with an objective content. In reality the progress of science consists in the observation of, and experimentation upon, things with a view to find out their properties or potencies, which in turn enable us to know the physical essences of the various substances. (3) Through the erroneous conception of nature, the principle of causality is confounded with the law of the uniformity of nature.

But they are absolutely different things. The former is a primary conviction which has its source in our inner consciousness. The latter is an induction based upon a long and careful observation of facts: it is not a self-evident truth, nor is it a universal and necessary principle, as Mill himself has shown (Logic, IV, xxi). In fact uniformity of nature is the result of the principle of causation.

(4) The main contention, that the uniformity of nature rules miracles out of consideration, because they would imply a break in the uniformity and a violation of natural law, is not true. The laws of nature are the observed modes or processes in which natural forces act. These forces are the properties or potencies of the essences of natural things. Our experience of causation is not the experience of a mere sequence but of a sequence due to the necessary operation of essences viewed as principles or sources of action. Now essences are necessarily what they are and unchangeable; therefore their properties, or potencies, or forces, under given circumstances, act in the same way. On this, Scholastic philosophy bases the truth that nature is uniform in its action, yet holds that constancy of succession is not an absolute law, for the succession is only constant so long as the noumenal relations remain the same. Thus Scholastic philosophy, in defending miracles, accepts the universal reign of law in this sense, and its teaching is in absolute accord with the methods actually pursued by modern science in scientific investigations. Hence it teaches the order of nature and the reign of law, and openly declares that, if there were no order, there would be no miracle. It is significant that the Bible appeals constantly to the reign of law in nature, while it attests the actual occurrence of miracles. Now human will, in acting on material forces, interferes with the regular sequences, but does not paralyze the natural forces or destroy their innate tendency to act in a uniform manner. Thus a boy, by throwing a stone into the air, does not disarrange the order of nature or do away with the law of gravity. A new force only is brought in and counteracts the tendencies of the natural forces, just as the natural forces interact and counteract among themselves, as is shown in the well-known truths of the parallelogram of forces and the distinction between kinetic and potential energy. The analogy from man's act to God's act is complete as far as concerns a break in the uniformity of nature or a violation of its laws. The extent of the power exerted does not affect the point at issue. Hence physical nature is presented as a system of physical causes producing uniform results, and yet permits the interposition of personal agency without affecting its stability.

(5) The truth of this position is so manifest that Mill admits Hume's argument against miracles to be valid only on the supposition that God does not exist, for, he says, "a miracle is a new effect supposed to be produced by the introduction of a new cause . . . of the adequacy of that cause, if present, there can be no doubt" (Logic, III, xxv). Hence, admitting the existence of God, Hume's "uniform sequence" does not hold as an objection to miracles. Huxley also denies that physicists withhold belief in miracles because miracles are in violation of natural laws, and he rejects the whole of this line of argument ("Some Controverted questions", 209; "Life of Hume", 132), and holds that a miracle is a question of evidence pure and simple. Hence the objection to miracles on the ground of their antecedent improbability has been abandoned. "The Biblical World" (Oct., 1908) says "The old rigid system of 'Laws of Nature' is being broken up by modern science. There are many events which scientists recognize to be inexplicable by any known law. But this inability to furnish a scientific explanation is no reason for denying the existence of any event, if it is adequately attested. Thus the old *a priori* argument against miracles is gone." Thus in modern thought

the question of the miracle is simply a question of fact.

IV. PLACE AND VALUE OF MIRACLES IN THE CHRISTIAN VIEW OF THE WORLD.—As the great objection to miracles really rests on narrow and false philosophical views of the universe, so the true world-view is necessary to grasp their place and value. Christianity teaches that God created and governs the world. This government is His Providence. It is shown in the delicate adjustment and subordination of the tendencies proper to material things, resulting in the marvelous stability and harmony which prevail throughout the physical creation, and in the moral order, which through conscience, is to guide and control the tendencies of man's nature to a complete harmony in human life. Man is a personal being, with intelligence and free-will, capable of knowing and serving God, and created for that purpose. To him nature is the book of God's work revealing the Creator through the design visible in the material order and through conscience, the voice of the moral order based in the very constitution of his own being. Hence the relation of man to God is a personal one. God's Providence is not confined to the revelation of Himself through His works. He has manifested Himself in a supernatural manner throwing a flood of light on the relations which should exist between man and Himself. The Bible contains this revelation, and is called the Book of God's Word. It gives the record of God's supernatural Providence leading up to the Redemption and the founding of the Christian Church. Here we are told that beyond the sphere of nature there is another realm of existence, the supernatural, peopled by spiritual beings and departed souls. Both spheres, the natural and the supernatural, are under the overruling Providence of God. Thus God and man are two great facts. The relation of the soul to its Maker is religion.

Religion is the knowledge, love, and service of God; its expression is called worship, and the essence of worship is prayer. Thus between man and God there is constant intercourse, and in God's Providence the appointed means of this intercourse is prayer. By prayer man speaks to God in acts of faith, hope, love, and contrition, and implores His aid. In answer to prayer God acts on the soul by His grace and, in special circumstances, by working miracles. Hence the great fact of prayer, as the connecting link of man to God, implies a constant interference of God in the life of man. Therefore, in the Christian view of the world, miracles have a place and a meaning. They arise out of the personal relation between God and man. The conviction that the pure of heart are pleasing to God, in some mysterious way, is world-wide; even among the heathens pure offerings only are prepared for the sacrifice. This intimate sense of God's presence may account for the universal tendency to refer all striking phenomena to supernatural causes. Error and exaggeration do not change the nature of the belief founded in the abiding conviction of the Providence of God. To this belief St. Paul appealed in his discourse to the Athenians (Acts, xvii). In the miracle, therefore, God subordinates physical nature to a higher purpose, and this higher purpose is identical with the highest moral aims of existence. The mechanical view of the world is in harmony with the teleological, and when purpose exists, no event is isolated or unmeaning. Man is created for God, and a miracle is the proof and pledge of His supernatural Providence. Hence we can understand how, in devout minds, there is even a presumption for and an expectation of miracles. They show the subordination of the lower world to the higher; they are the breaking in of the higher world on the lower ("C. Gent.", III, xviii, xcix; Benedict XIV, 1, c; 1, IV, p. 1, c. I).

Some writers—e. g., Paley, Mansel, Mozley, Dr.

George Fisher—push the Christian view to the extreme, and say that miracles are necessary to attest revelation. Catholic theologians, however, take a broader view. They hold (1) that the great primary ends of miracles are the manifestation of God's glory and the good of men; that the particular or secondary ends, subordinate to the former, are to confirm the truth of a mission or a doctrine of faith or morals, to attest the sanctity of God's servants, to confer benefits and vindicate Divine justice. (2) Hence they teach that the attestation of Revelation is not the primary end of the miracle, but its main secondary end, though not the only one. (3) They say that the miracles of Christ were not necessary but "most fitting and altogether in accord with His mission" (*decentissimum et maximopere conveniens*)—Bened. XIV, IV, p. 1, c. 2, n. 3; Summa, III, Q. xliii) as a means to attest its truth. At the same time they place miracles among the strongest and most certain evidences of Divine revelation. (4) Yet they teach that, as evidences, miracles have not a physical force, i. e., absolutely compelling assent, but only a moral force, i. e., they do no violence to free will, though their appeal to the assent is of the strongest kind. (5) That, as evidences, they are not wrought to show the internal truth of the doctrines, but only to give manifest reasons why we should accept the doctrines. Hence the distinction: not *evidenter vera*, but *evidenter credibilia*. For the Revelation, which miracles attest, contains supernatural doctrines above the comprehension of the mind and positive institutions in God's supernatural Providence over men. Thus the opinion of Locke, Trench, Mill, Mozley, and Cox, that the doctrine proves the miracle, not the miracle the doctrine, is not true. (6) Finally, they maintain that the miracles of Scripture and the power in the Church of working miracles are of Divine faith, not, however, the miracles of church history themselves. Hence they teach that the former are both evidences of faith and objects of faith; that the latter are evidences of the purpose for which they are wrought, not, however, objects of Divine faith. Hence this teaching guards against the other exaggerated view recently proposed by non-Catholic writers, who hold that miracles are now considered not as evidences, but as objects of faith.

V. TESTIMONY.—A miracle, like any natural event, is known either from personal observation or from the testimony of others. In the miracle we have the fact itself as an external occurrence and its miraculous character. The miraculous character of the fact consists in this: that its nature and the surrounding circumstances are of such a kind that we are forced to admit natural forces alone could not have produced it, and the only rational explanation is to be had in the interference of Divine agency. The perception of its miraculous character is a rational act of the mind, and is simply the application of the principle of causality with the methods of induction. The general rules governing the acceptance of testimony apply to miracles as to other facts of history. If we have certain evidence for the fact, we are bound to accept it. The evidence for miracles, as for historical facts in general, depends on the knowledge and veracity of the narrators, i. e., they who testify to the occurrence of the events must know what they tell and tell the truth. The extraordinary nature of the miracle requires more complete and accurate investigation. Such testimony we are not free to reject; otherwise we must deny all history whatsoever. We have no more rational warrant for rejecting miracles than for rejecting accounts of stellar eclipses. Hence, they who deny miracles have concentrated their efforts with the purpose of destroying the historical evidence for all miracles whatsoever and especially the evidence for the miracles of the Gospel.

Hume held that no testimony could prove miracles,

for it is more probable that the testimony is false than that the miracles are true. But (1) his contention that "a uniform experience", which is "a direct and full proof", is against miracles, is denied by Mill, provided an adequate cause—i. e., God—exists. (2) Hume's "experience" may mean: (a) the experience of the individual, and his argument is made absurd (e. g., historic doubts about Napoleon) or (b) the experience of the race, which has become common property and the type of what may be expected. Now in fact we get this by testimony; many supernatural facts are part of this race experience; this supernatural part Hume prejudices, arbitrarily declares it untrue, which is the point to be proved, and assumes that *miraculous* is synonymous with *absurd*. The past, so expurgated, is made the test of the future, and should prevent the consistent advocates of Hume from accepting the discoveries of science. (3) Hard-pressed, Hume is forced to make the distinction between testimony contrary to experience and testimony not conformable to experience, and holds that the latter may be accepted—e. g., testimony of ice to the Indian prince. But this admission is fatal to his position. (4) Hume proceeds on the supposition that, for practical purposes, all the laws of nature are known, yet experience shows that this is not true. (5) His whole argument rests upon the rejected philosophical principle that external experience is the sole source of knowledge, rests upon the discredited basis that miracles are opposed to the uniformity of nature as violations of natural laws, and was advanced through prejudice against Christianity. Hence later sceptics have receded from Hume's extreme position and teach, not that miracles cannot be proved, but that as a matter of fact they are not proved.

The attack by Hume on miracles in general has been applied to the miracles of the Bible, and has received added weight from the denial of Divine inspiration. Varying in form, its basic principle is the same, viz., the humanism of the Renaissance applied to theology. Thus we have: (1) The old rationalism of Semler, Eichhorn, de Wette, and Paulus, who held the credibility of the Bible records, but contended that they were a collection of writings composed by natural intelligence alone, and to be treated on the same plane with other natural productions of the human mind. They got rid of the supernatural by a bold interpretation of miracles as purely natural facts. This is called the "interpretation" theory, and appears today under two forms: (a) modified rationalism, which teaches that we are warranted in accepting a very considerable portion of the Gospel narratives as substantially historical, without being compelled to believe in any miracles. Hence they give credence to the accounts of the demoniacs and healings, but allege that these wonders were wrought by, or in accordance with, natural law. Thus we have the electric theory of M. Corelli, the appeal to "moral therapeutics" by Matthew Arnold, and the psychological theory advanced by Prof. Bousset of Göttingen, in which he claims that Christ performed miracles by natural mental powers of a superior kind (cf. "N. World", March, 1896). But the attempt to explain the miracles of the Gospel either by the natural powers of Christ, i. e., mental or moral superiority, or by peculiar states of the recipient, faith cure, and allied psychic phenomena, is arbitrary and not true to facts. In many of the miracles faith is not required, and is in fact absent; this is shown, in the miracles of power, by the expressed fear of the Apostles, e. g., at Christ stilling the tempest (Mark, iv, 40), at Christ on the waters (Mark, vi, 51), at the draught of fishes (Luke, v, 8), and in the miracles of expelling demons. In some miracles Christ requires faith, but the faith is not the cause of the miracle, only the condition of His exercising the power.

(b) Others, like Holstein, Renan, and Huxley, follow de Wette, who explains the miracles as the emo-

tional interpretation of commonplace events. They claim that the facts which occurred were substantially historical, but in the narrating were covered over with the interpretations of the writers. Hence, they say that, in studying the Gospels, we must distinguish between the facts as they actually took place and the subjective emotions of those who witnessed them, their strong excitement, tendency to exaggeration, and vivid imagination. Thus they appeal not to the "fallacies of testimony" so much as to the "fallacies of the senses". But this attempt to transform the Apostles into nervous visionaries cannot be held by an unbiased mind. St. Peter clearly distinguished between a vision (Acts, x, 17) and a reality (Acts, xii), and St. Paul mentions two cases of visions (Acts, xxii, 17; II Cor., xii), the latter by way of contrast with his ordinary missionary life of labours and sufferings (II Cor., xi). Renan even goes so far as to present the glaring inconsistency of a Christ remarkable, as he says, for moral beauty of life and doctrine, who nevertheless is guilty of conscious deception, as, e. g., in the make-believe raising of Lazarus. This teaching is in reality a denial of testimony. The miracles of Christ must be taken as a whole, and in the Gospel setting where they are presented as a part of his teaching and his life. On the ground of evidence there is no reason to make a distinction among them or to interpret them so that they become other than they are. The real reason is prejudgment on false philosophical grounds with a view to get rid of the supernatural element. In fact, the conjectures and hypotheses proposed are far more improbable than the miracles themselves. Again, how thus explain the great miracle that the hero of a baseless legend, the impotent and deceitful Christ, could become the founder of the Christian Church and of Christian civilization? Finally, this method violates the first principles of interpretation; for the New-Testament writers are not allowed to speak their own language.

(2) The theory of Biblical Humanism.—The fundamental idea of Hegel's metaphysics (viz., that existing things are the progressive manifestation of the idea, i. e., the absolute) gave a philosophical basis for the organic conception of the universe, i. e., the Divine as organic to the human. Thus revelation is presented as a human process, and history—e. g., the Bible—is a record of human experience, the product of a human life. This philosophy of history was applied to explain the miraculous in the Gospels and appears under two forms: (a) the Tübingen School. Baur regards the Hegelian process in its objective aspect, i. e., the facts as things. He held the books of the New Testament to be states through which the human life and thought of early Christianity had passed. He attempted to do with reference to the origin what Gibbon tried with reference to the spread of Christianity—i. e., get rid of the supernatural by the tacit assumption that there were no miracles and by the enumeration of natural causes, chief of which was the Messianic idea to which Jesus accommodated Himself. The evolution element in Baur's Humanism, however, constrained him to deny that we possess contemporaneous documents of our Lord's life, to hold that the New-Testament literature was the result of warring factions among the early Christians, and therefore of a much later date than tradition ascribes to it, and that Christ was only the occasional cause of Christianity. He accepted as genuine only the Epistles to the Galatians, Romans, I and II Corinthians, and the Apocalypse. But the Epistles admitted by Baur show that St. Paul believed in miracles and asserted the actual occurrence of them as well-known facts both in regard to Christ and in regard to himself and the other Apostles (e. g., Rom., xv, 18; I Cor., i, 22; xii, 10; II Cor., xii, 12; Gal., iii, 5, especially his repeated references to the Resurrection of Christ, I Cor., xv). The basis on which the Tübingen School

rests, viz., that we possess no contemporaneous records of Christ's life, and that the New-Testament writings belong to the second century, has been proved to be false by the higher criticisms. Hence Huxley admits that this position is no longer tenable (The Nineteenth Century, Feb., 1889), and in fact there is no longer a Tübingen School at Tübingen. Harnack says: "As regards the criticisms of the sources of Christianity, we stand unquestionably in a movement of return to tradition. The chronological framework in which tradition set the earliest documents is to be henceforth accepted in its main outlines" (The Nineteenth Cent., Oct., 1899). Hence Romanes said that the outcome of the battle on the Bible documents is a signal victory for Christianity (Thoughts on Religion, p. 165). Dr. Emil Reich speaks of the bankruptcy of the higher criticism ("Contemp. Rev.," April, 1905).

(b) The "Mythical" School.—Strauss regarded the Hegelian process in its subjective aspect. The facts as matters of consciousness with the early Christians concerned him exclusively. Hence he regarded Christ within the Christian consciousness of the time, and held that Christ of the New Testament was the outcome of this consciousness. He did not deny a relatively small nucleus of historical reality, but contended that the Gospels, as we possess them, are mythical inventions or fabulous and fanciful embellishments and are to be regarded only as symbols for spiritual ideas, e. g., the Messianic idea. Strauss thus attempted to remove the miraculous—or what he considered the unhistorical matter—from the text. But this view was too fanciful long to hold currency after a careful study of the truthful, matter-of-fact character of the New-Testament writings, and a comparison of them with the Apocrypha. Hence it has been rejected, and Strauss himself confessed to disappointment at the result of his labours (The Old and New Faith).

(3) The Critical Agnostic School.—Its basis is the organic idea of the universe, but it views the world-process apart from God, because reason cannot prove the existence of God, and therefore, to the Agnostic, He does not exist (e. g., Huxley); or to the Christian Agnostic, His existence is accepted on Faith (e. g., Baden-Powell). To both there is no miracle, for we have no way of knowing it. Thus Huxley admits the facts of miracles in the New Testament, but says that the testimony as to their miraculous character may be worthless, and strives to explain it by the subjective mental conditions of the writers ("The Nineteenth Cent.," Mar., 1889). Baden-Powell (in "Essays and Reviews"), Holtzmann (Die synoptischen Evangelien), and Harnack (The Essence of Christianity) admit the miracles as recorded in the Gospels, but hold that their miraculous character is beyond the scope of historical proof, and depends on the mental assumptions of the readers.—Criticism: The real problem of the historian is to state well-authenticated facts and give an explanation of the testimony. He should show how such events must have taken place and how such a theory only can explain them. He takes cognizance of all that is said about these events by competent witnesses, and from their testimony he draws the conclusion. To admit the facts and to deny an explanation is to furnish very great evidence for their historical truth, and to show qualities not consistent with the scientific historian.

(4) The theory of liberal Protestantism.—(a) In its older form, this was advocated by Carlyle (Froude's "Life of Carlyle"), Martineau (Seal of Authority in Religion), Rathbone Greg (Creed of Christendom), Prof. Wm. H. Green (Works, III, pp. 230, 253), proposed as a religious creed under the title of the "new Reformation" ("The Nineteenth Cent.," Mar., 1889) and popularized by Mrs. Humphry Ward in "Robert Elsmere". As the old Reformation was a movement to destroy the Divine authority of the Church by ex-

alting the supernatural character of the Bible, so the new Reformation aimed at removing the supernatural element from the Bible and resting faith in Christianity on the high moral character of Jesus and the excellence of His moral teaching. It is in close sympathy with some writers on the science of religion, who see in Christianity a natural religion, though superior to other forms. In describing their position as "a revolt against miraculous belief", its adherents yet profess great reverence for Jesus as "that friend of God and Man, in whom, through all human frailty and necessary imperfection, they see the natural head of their immort life, the symbol of those religious forces in man which are primitive, essential and universal" ("The Nineteenth Cent.," Mar., 1889). By way of criticism it may be said that this school has its source in the philosophical assumption that the uniformity of nature has made the miracle unthinkable—an assumption now discarded. Again, it has its basis in the Tübingen School, which has been proved false, and it requires a mutilation of the Gospels so radical and wholesale that nearly every sentence has to be excised or rewritten. The miracles of Jesus are too essential a part of His life and teaching to be thus removed. We might as well expurgate the records of military achievements from the lives of Alexander or of Caesar. Strauss exposed the inconsistencies of this position, which he once held (Old Faith and the New), and von Hartmann considered the Liberal theologians as causing the disintegration of Christianity ("Selbstersetzung des Christ", 1888).

(b) In its recent form, it has been advocated by the exponents of the psychological theory. Hence, where the old school followed an objective, this pursues a subjective method. This theory combines the basic teaching of Hegel, Schleiermacher, and Ritschl. Hegel taught that religious truths are the figurative representation of rational ideas; Schleiermacher taught that propositions of faith are the pious states of the heart expressed in language; Ritschl, that the evidence of Christian doctrine is in the "value-judgment", i. e., the religious effect on the mind. On this basis Prof. Gardner ("A Historical View of the New Test.," London, 1904) holds that no reasonable man would profess to disprove the Christian miracles historically; that in historical studies we must accept the principle of continuity as set forth by evolution, that the statements of the New Testament are based mainly on Christian experience, in which there is always an element of false theory; that we must distinguish between the true underlying fact and its defective outward expression; that this expression is conditioned by the intellectual atmosphere of the time, and passes away to give place to a higher and better expression. Hence the outward expression of Christianity should be different now from what it was in other days. Hence, while miracles may have had their value for the early Christians, they have no value for us, for our experience is different from theirs. Thus M. Réville ("Liberal Christianity", London, 1903) says: "The faith of a liberal Protestant does not depend upon the solution of a problem of historical criticism. It is founded upon his own experience of the value and power of the Gospel of Christ", and "The Gospel of Jesus is independent of its local and temporary forms" (pp. 54, 58).—All this, however, is philosophy, not history; it is not Christianity, but Rationalism; it inverts the true standard of historical criticism—viz., we should study past events in the light of their own surroundings, and not from the subjective feeling on the part of the historian of what might, could, or would have occurred. There is no reason to restrict these principles to questions of religious history; and if extended to embrace the whole of past history, they would lead to absolute scepticism.

VI. THE FACT.—The Bible shows that at all times God has wrought miracles to attest the Revelation

of His will. (1) The miracles of the Old Testament reveal the Providence of God over His chosen people. They are convincing proof for the commission of Moses (Exod., iii, iv), manifest to the people that Jehovah is Sovereign Lord (Exod., x, 2; Deut., v, 25), and are represented as the "finger of God" and "the hand of God." God punishes Pharaoh for refusing to obey His commands given by Moses and attested by miracles, and is displeased with the infidelity of the Jews for whom He worked many miracles (Num., xiv). Miracles convinced the widow of Sarepta that Elias was "a man of God" (III Kings, xvii, 24), made the people cry out in the dispute between Elias and the prophets of Baal, "the Lord he is God" (III Kings, xviii, 39), caused Naaman to confess that "there is no other God in all the earth, but only in Israel" (IV Kings, v, 15), led Nabuchodonosor to issue a public decree in honour of God upon the escape of the Three Children from the fiery furnace (Dan., iii), and Darius to issue a like decree on the escape of Daniel (Dan., v). The ethical element is conspicuous in the miracles and is in consonance with the exalted ethical character of Jehovah, "a king of absolute justice, whose love for his people was conditioned by a law of absolute righteousness, as foreign to Semitic as to Aryan tradition", writes Dr. Robertson Smith ("Religion of the Semites", p. 74; cf. Kuenen, Hibbert Lect., p. 124). Hence the tendency among recent writers on the history of religion to postulate the direct intervention of God through revelation as the only explanation for the exalted conception of the Deity set forth by Moses and the prophets (R. Kettel, "Geschichte der Hebräer", 1889-92).

(2) The Old Testament reveals a high ethical conception of God who works miracles for high ethical purposes, and unfolds a dispensation of prophecy leading up to Christ. In fulfilment of this prophecy Christ works miracles. His answer to the messengers of John the Baptist was that they should go and tell John what they had seen (Luke, vii, 22; cf. Isa., xxxv, 5). Thus the Fathers of the Church, in proving the truth of the Christian religion from the miracles of Christ, join them with prophecy (Origen, "C. Celsum", I, ii; Irenæus, Adv. hæ. L, ii, 32; St. Augustine, "C. Faustum", XII). Jesus openly professed to work miracles. He appeals repeatedly to His "works" as most authentic and decisive proof of His Divine Sonship (John, v, 18-36; x, 24-37) and of His mission (John, xiv, 12), and for this reason condemns the obstinacy of the Jews as inexcusable (John, xv, 22, 24). He worked miracles to establish the Kingdom of God (Matt., xii; Luke, xi), gave to the Apostles (Matt., x, 9) and disciples (Luke, x, 9, 19) the power of working miracles, thereby instructing them to follow the same method, and promised that the gift of miracles should persist in the Church (Mark, xvi, 17). At the sight of His marvellous works, the Jews (Matt., ix, 8), Nicodemus (John, iii, 2), and the man born blind (John, ix, 33) confess that they must be ascribed to Divine power. Pfeiderer accepts the second Gospel as the authentic work of St. Mark, and this Gospel is a compact account of miracles wrought by Christ. Ewald and Weiss speak of the miracles of Christ as a daily task. Miracles are not accidental or external to the Christ of the Gospels; they are inseparably bound up with His supernatural doctrine and supernatural life—a life and doctrine which is the fulfilment of prophecy and the source of Christian civilisation. Miracles form the very substance of the Gospel narratives, so that, if removed, there would remain no recognisable plan of work and no intelligent portrait of the worker. We have the same evidence for miracles that we have for Christ. Dr. Holtzmann says that the very traits whose astonishing combination in one person presents the highest kind of historical evidence for His existence are indissolubly connected with miracles. Unless we accept miracles, we have no Gospel history.

Admit that Christ wrought many miracles, or confess that we do not know Him at all—in fact, that He never existed. The historical Christ of the Gospels stands before us remarkable in the charm of personality, extraordinary in the elevation of life and beauty of doctrine, strikingly consistent in tenor of life, exercising Divine power in varied ways and at every turn. He rises supreme over, and apart from, His surroundings and cannot be regarded as the fruit of individual invention or as the product of the age. The simplest, clearest, only explanation is that the testimony is true. They who deny have yet to offer an explanation strong enough to withstand the criticism of the sceptics themselves.

(3) The testimony of the Apostles to miracles is twofold: (a) They preached the miracles of Christ, especially the Resurrection. Thus St. Peter speaks of the "miracles, and wonders, and signs" which Jesus did as a fact well-known to the Jews (Acts, ii, 22), and as published through Galilee and Judea (Acts, x, 37). The Apostles profess themselves witnesses of the Resurrection (Acts, ii, 32), they say that the characteristic of an Apostle is that he be a witness of the Resurrection (Acts, i, 22), and upon the Resurrection base their preaching in Jerusalem (Acts, iii, 15; iv, 10; v, 30; x, 40), at Antioch (Acts, xiii, 30 sqq.), at Athens (Acts, xvii, 31), at Corinth (I Cor., xv), at Rome (Rom., vi, 4), and in Thessalonica (I Thess., i, 10). (b) They worked miracles themselves, wonders and signs in Jerusalem (Acts, ii, 43), cure the lame (Acts, iii, xiv), heal the sick, and drive out demons (Acts, viii, 7, 8), raise the dead (Acts, xx, 10 sqq.). St. Paul calls the attention of the Christians at Rome to his own miracles (Rom., xv, 18, 19), refers to the well-known miracles performed in Galatia (Gal., iii, 5), calls the Christians of Corinth to witness the miracles he worked among them as the signs of his apostleship (II Cor., xii, 12), and gives to the working of miracles a place in the economy of the Christian Faith (I Cor., xii). Thus the Apostles worked miracles in their missionary journeys in virtue of the power given them by Christ (Mark, xii, 15) and confirmed after His Resurrection (Mark, xvi, 17).

(4) Dr. Middleton holds that all miracles ceased with the Apostles. Mosley and Milman ascribe later miracles to pious myths, fraud, and forgery. Trench admits that few points present greater difficulty than the attempt to determine the exact period when the power of working miracles was withdrawn from the Church. This position is one of polemical bias against the Catholic Church, just as presumptions of various kinds are behind all attacks on the miracles of scripture. Now we are not obliged to accept every miracle alleged as such. The evidence of testimony is our warrant, and for miracles of church history we have testimony of the most complete kind. If it should happen that, after careful investigation, a supposed miracle should turn out to be no miracle at all, a distinct service to truth would be rendered. Throughout the course of church history there are miracles so well authenticated that their truth cannot be denied. Thus St. Clement of Rome and St. Ignatius of Antioch speak of the miracles wrought in their time. Origen says he has seen examples of demons expelled, many cures effected, and prophecies fulfilled ("C. Celsum", I, II, III, VII). Irenæus taunts the magic-workers of his day that "they cannot give sight to the blind nor hearing to the deaf, nor put to flight demons; and they are so far from raising the dead, as Our Lord did, and the Apostles, by prayer, and as is most frequently done among the brethren, that they even think it impossible" (Adv. hæ., II). St. Athanasius writes the life of St. Anthony from what he himself saw and heard from one who had long been in attendance on the saint. St. Justin in his second apology to the Roman Senate appeals to miracles wrought in Rome and well attested. Tertullian

challenges the heathen magistrates to work the miracles which the Christians perform (Apol., xxiii); St. Paulinus, in the life of St. Ambrose, narrates what he has seen. St. Augustine gives a long list of extraordinary miracles wrought before his own eyes, mentions names and particulars, describes them as well known, and says they happened within two years before he published the written account (*De civit. Dei*, XXII, viii; *Retract.*, I, xiii). St. Jerome wrote a book to confute Vigilantius and prove that relics should be venerated, by citing miracles wrought through them. Theodoret published the life of St. Simon Stylites while the saint was living, and thousands were alive who had been eye-witnesses of what had happened. St. Victor, Bishop of Vita, wrote the history of the African confessors whose tongues had been cut out by command of Hunneric, and who yet retained the power of speech, and challenges the reader to go to Reparatus, one of them then living at the palace of the Emperor Zeno. From his own experience Sulpicius Severus wrote the life of St. Martin of Tours. St. Gregory the Great writes to St. Augustine of Canterbury not to be elated by the many miracles God was pleased to work through his hands for the conversion of the people of Britain. Hence Gibbon says, "The Christian Church, from the time of the Apostles and their disciples, has claimed an uninterrupted succession of miraculous powers, the gift of tongues, of visions and of prophecy, the power of expelling demons, of healing the sick and of raising the dead" (*Decline and Fall*, I, pp. 264, 288); thus miracles are so interwoven with our religion, so connected with its origin, its promulgation, its progress and whole history, that it is impossible to separate them from it. The existence of the Church, the kingdom of God on earth, in which Christ and His Holy Spirit abide, rendered illustrious by the miraculous lives of saints of all countries and all times, is a perpetual standing witness for the reality of miracles (Bellar., "*De notis eccl.*", LIV, xiv). The well-attested records are to be found in the official processes for the canonization of saints. Mosley held that an enormous distinction exists between the miracles of the Gospel and those of church history, through the false notion that the sole purpose of miracles was the attestation of revealed truth: Newman denies the contention and shows that both are of the same type and as well-authenticated by historical evidence.

VII. PLACE AND VALUE OF THE GOSPEL MIRACLES. —In studying the Gospel miracles we are impressed by the accounts given of their multitude, and by the fact that only a very small proportion of them is related by the Evangelists in detail; the Gospels speak only in the most general terms of the miracles Christ performed in the great missionary journeys through Galilee and Judea. We read that the people, seeing the things which He did, followed Him in crowds (*Matt.*, iv., 25), to the number of 5000 (*Luke*, ix, 14), so that He could not enter the cities, and His fame spread from Jerusalem through Syria (*Matt.*, iv, 24). His reputation was so great that the chief priests in council speak of Him as one who "doth many miracles" (*John*, xi, 47), the disciples at Emmaus as the "prophet, mighty in work and word before God and all the people" (*Luke*, xxiv, 19), and St. Peter describes Him to Cornelius as the wonder-working preacher (*Acts*, x, 38). Out of the great mass of miraculous events surrounding our Lord's person, the Evangelists made a selection. True, it was impossible to narrate all (*John*, xx, 30). Yet we can see in the narrated miracles a twofold reason for the selection.

(1) The great purpose of the Redemption was the manifestation of God's glory in the salvation of man through the life and work of His Incarnate Son. Thus it ranks supreme among the works of God's Providence over men. This explains the life and teaching of Christ; it enables us to grasp the scope and plan of His

miracles. They can be considered in relation to the office and person of Christ as Redeemer. Thus (a) they have their source in the hypostatic union and follow on the relation of Christ to men as Redeemer. In them we can see references to the great redemption work He came to accomplish. Hence the Evangelists conceive Christ's miraculous power as an influence radiating from Him (*Mark*, v, 30; *Luke*, vi, 19), and theologians call the miracles of Christ theandrical works (Bellar., "*Controv.*", I, lib. V, c. vii). (b) Their aim is the glory of God in the manifestation of Christ's glory and in the salvation of men, as e. g. in the miracle of Cana (*John*, ii, 11), in the Transfiguration (*Matt.*, xvii), the Resurrection of Lazarus (*John*, xi, 15), Christ's last prayer for the Apostles (*John*, xvii), the Resurrection of Christ (*Acts*, x, 40). St. John opens his Gospel with the Incarnation of the Eternal Word, and adds, "we saw his glory" (*John*, i, 14). Hence Irenæus (*Adv. hæc.*, V) and Athanasius (*Incar.*) teach that the works of Christ were the manifestations of the Divine Word who in the beginning made all things and who in the Incarnation displayed His power over nature and man, as a manifestation of the new life imparted to man and a revelation of the character and purposes of God. The repeated references in the Acts and in the Epistles to the "glory of Christ" have relation to His miracles. The source and purpose of the miracles of Christ is the reason for their intimate connexion with His life and teaching. A saving and redeeming mission was the purpose of the miracles, as it was of the doctrine and life of the eternal Son of God. (c) Their motive was mercy. Most of Christ's miracles were works of mercy. They were performed not with a view to awe men by the feeling of omnipotence, but to show compassion for sinful and suffering humanity. They are not to be regarded as isolated or transitory acts of sympathy, but as prompted by a deep and abiding mercy which characterizes the office of Saviour. The Redemption is a work of mercy, and the miracles reveal the mercy of God in the works of His Incarnate Son (*Acts*, x, 38). (d) Hence we can see in them a symbolical character. They were signs, and in a special sense they signified by the typical language of external facts, the inward renewal of the soul. Thus, in commenting on the miracle of the widow's son at Naim, St. Augustine says that Christ raised three from the death of the body, but thousands from the death of sin to the life of Divine grace (*Serm. de verbis Dom.*, xcvi, al. xlv).

The relief which Christ brought to the body represented the deliverance He was working on souls. His miracles of cures and healings were the visible picture of His spiritual work in the warfare with evil. These miracles, summarized in the answer of Jesus to the messengers of John (*Matt.*, xi, 5), are explained by the Fathers of the Church with reference to the ills of the soul (*Summa*, III, Q. xlv). The motive and meaning of the miracles explain the moderation Christ showed in the use of His infinite power. Repose in strength is a sublime trait in the character of Jesus; it comes from the conscious possession of power to be used for the good of men. Rousseau confesses, "All the miracles of Jesus were useful without pomp or display, but simple as His words, His life, His whole conduct" (*Lett. de la Montag.*, pt. I, lett. iii). He does not perform them for the sake of being a mere worker of miracles. Everything He does has a meaning when viewed in the relation Christ holds to men. In the class known as miracles of power Jesus does not show a mere mental and moral superiority over ordinary men. In virtue of His redeeming mission He proves that He is Lord and Master of the forces of nature. Thus by a word He stills the tempest, by a word He multiplied a few loaves and fishes so that thousands feasted and were filled, by a word He healed lepers, drove out demons, raised the dead to life, and

finally set the great seal upon His mission by rising from death, as He had explicitly foretold. Thus Renan admits that "even the marvellous in the Gospels is but sober good sense compared with that which we meet in the Jewish apocryphal writings or the Hindu or European mythologies" (Stud. in Hist. of Relig., pp. 177, 203).

(e) Hence the miracles of Christ have a doctrinal import. They have a vital connexion with His teaching and mission, illustrate the nature and purpose of His kingdom, and show a connexion with some of the greatest doctrines and principles of His Church. Its catholicity is shown in the miracles of the centurion's servant (Matt., viii) and the Syro-phenician woman (Mark, vii). The Sabbatical miracles reveal its purpose, i. e., the salvation of men, and show that Christ's kingdom marks the passing of the Old Dispensation. His miracles teach the power of faith and the answer given to prayer. The central truth of His teaching was life. He came to give life to men, and this teaching is emphasized by raising the dead to life, especially in the case of Lazarus and His own Resurrection. The sacramental teaching of the miracles is manifested in the miracle of Cana (John, ii), in the cure of the paralytic, to show he had the power to forgive sins [and he used this power (Matt., ix) and gave it to the Apostles (John, xx, 23)], in the multiplication of the loaves (John, vi) and in raising the dead. Finally, the prophetic element of the fortunes of the individual and of the Church is shown in the miracles of stilling the tempest, of Christ on the waters, of the draught of fishes, of the didrachma and the barren fig-tree. Jesus makes the miracle of Lazarus the type of the General Resurrection, just as the Apostles take the Resurrection of Christ to signify the rising of the soul from the death of sin to the life of grace, and to be a pledge and prophecy of the victory over sin and death and of the final resurrection (I Thess., iv).

(2) The miracles of Christ have an evidential value. This aspect naturally follows from the above considerations. In the first miracle at Cana He "manifested His glory", therefore the disciples "believed in Him" (John, ii, 11). Jesus constantly appealed to His "works" as evidences of His mission and His divinity. He declares that His miracles have greater evidential value than the testimony of John the Baptist (John, v, 36); their logical and theological force as evidences is expressed by Nicodemus (John, iii, 2). And to the miracles Jesus adds the evidence of prophecy (John, v, 31). Now their value as evidences for the people then living is found not only in the display of omnipotence in His redeeming mission but also in the multitude of His works. Thus the unrecorded miracles had an evidential bearing on His mission. So we can see an evidential reason for the selection of the miracles as narrated in the Gospels.

(a) This selection was guided by a purpose to make clear the main events in Christ's life leading up to the Crucifixion and to show that certain definite miracles (e. g., the cure of the lepers, the casting out of demons in a manner marvellously superior to the exorcisms of the Jews, the Sabbatical miracles, the raising of Lazarus) caused the rulers of the Synagogue to conspire and put Him to death. (b) A second reason for the selection was the expressed purpose to prove that Jesus was the Son of God (John, xx, 31). Thus, for us, who depend on the Gospel narratives, the evidential value of Christ's miracles comes from a comparatively small number related in detail, though of a most stupendous and clearly supernatural kind, some of which were performed almost in private and followed by the strictest injunctions not to publish them. In considering them as evidences in relation to us now living, we may add to them the constant reference to the multitude of miracles unrecorded in detail, their intimate connexion with our Lord's teaching and life, their relation to the prophecies of the Old Testa-

ment, their own prophetic character as fulfilled in the development of His kingdom on earth.

VIII. SPECIAL PROVIDENCES.—Prayer is a great fact, which finds expression in a persistent manner, and enters intimately into the life of humanity. So universal is the act of prayer that it seems an instinct and part of our being. It is the fundamental fact of religion, and religion is a universal phenomenon of the human race. Christian philosophy teaches that in his spiritual nature man is made to the image and likeness of God, therefore his soul instinctively turns to his Maker in aspirations of worship, of hope, and of intercession. The real value of prayer has been a vital subject for discussion in modern times. Some, like O. B. Frothingham (Recollections and Impressions, p. 296), Drobisch and Herbart (Pfleiderer, "Phil. of Religion", II, p. 296), hold that its value lies only in its being a factor in the culture of the moral life, by giving tone and strength to character. Thus Professor Tyndall, in his famous Belfast address, proposed this view, maintaining that modern science has proved the physical value of prayer to be unbelievable (Fragments of Science). He based his contention on the uniformity of nature. But this basis is now no longer held as an obstacle to prayer for physical benefits. Others, like Baden-Powell (Order of Nature), admit that God answers prayer for spiritual favours, but denies its value for physical effects. But his basis is the same as that of Tyndall, and besides an answer for spiritual benefits is in fact an interference on the part of God in nature. Now Christian philosophy teaches that God, in answer to prayer, confers not only spiritual favours but at times interferes with the ordinary course of physical phenomena, so that, as a result, particular events happen otherwise than they should. This interference takes place in miracles and special providences.

When we kneel to pray we do not always beg God to work miracles or that our lives shall be constant prodigies of His power. The sense of our littleness gives an humble and reverential spirit to our prayer. We trust that God, through His Infinite knowledge and power, will in some way best known to Him bring about what we ask. Hence, by special providences we mean events which happen in the course of nature and of life through the instrumentality of natural laws. We cannot discern either in the event itself or in the manner of its happening any deviation from the known course of things. What we do know, however, is that events shape themselves in response to our prayer. The laws of nature are invariable, yet one important factor must not be forgotten: that the laws of nature may produce an effect, the same conditions must be present. If the conditions vary, then the effects also vary. By altering the conditions, other tendencies of nature are made predominant, and the forces which otherwise would work out their effects yield to stronger forces. In this way our will interferes with the workings of natural forces and with human tendencies, as is shown in our intercourse with men and in the science of government. Now, if such power rests with men, can God do less? Can we not believe that, at our prayer, God may cause the conditions of natural phenomena so to combine that, through His special agency, we may obtain our heart's desire, and yet so that, to the ordinary observer, the event happens in its ordinary place and time. To the devout soul, however, all is different. He recognizes God's favour and is devoutly thankful for the fatherly care. He knows that God has brought the event about in some way. When, therefore, we pray for rain, or to avert a calamity, or to prevent the ravages of plague, we beg not so much for miracles or signs of omnipotence: we ask that He who holds the heavens in His hands and who searches the abyss will listen to our petitions and, in His own good way, bring about the answer we need.

JOHN T. DRISCOLL.

Miracle Plays and Mysteries.—These two names are used to designate the religious drama which developed among Christian nations at the end of the Middle Ages. It should be noted that the word "mystery" has often been applied to all Christian dramas prior to the sixteenth century, whereas it should be confined to those of the fifteenth century, which represent the great dramatic effort anterior to the Renaissance. Before this period dramatic pieces were called "plays" or "miracles". The embryonic representations, at first given in the interior of the churches, have been designated as liturgical dramas.

LITURGICAL DRAMA.—The origin of the medieval drama was in religion. It is true that the Church forbade the faithful during the early centuries to attend the licentious representations of decadent paganism. But once this immoral theatre had disappeared, the Church allowed and itself contributed to the gradual development of a new drama, which was not only moral, but also edifying and pious. On certain solemn feasts, such as Easter and Christmas, the Office was interrupted, and the priests represented, in the presence of those assisting, the religious event which was being celebrated. At first the text of this liturgical drama was very brief, and was taken solely from the Gospel or the Office of the day. It was in prose and in Latin. But by degrees versification crept in. The earliest of such dramatic "tropes" (q. v.) of the Easter service are from England and date from the tenth century. Soon verse pervaded the entire drama, prose became the exception, and the vernacular appeared beside Latin. Thus, in the French drama of the "Wise Virgins" (first half of the twelfth century), which does little more than depict the Gospel parable of the wise and foolish virgins, the chorus employs Latin, while Christ and the virgins use both Latin and French, and the angel speaks only in French. When the vernacular had completely supplanted the Latin, and individual inventiveness had at the same time asserted itself, the drama left the precincts of the Church and ceased to be liturgical, without, however, losing its religious character. This evolution seems to have been accomplished in the twelfth century. With the appearance of the vernacular a development of the drama along national lines became possible. Let us first trace this development in France.

PLAYS AND MIRACLES OF THE TWELFTH AND THIRTEENTH CENTURIES.—The first French drama offered by the twelfth century is called "Adam", and was written by an Anglo-Norman author whose name is unknown. The subject extends from the Fall in the terrestrial Paradise to the time of the Prophets who foretell the Redeemer, relating in passing the history of Cain and Abel. It is written in French, though the directions to the actors are in Latin. It was played before the gate of the church. From the thirteenth century we have the "Play of St. Nicholas" by Jean Bodel, and the "Miracle of Theophilus" by Rutebeuf. Jean Bodel was a native of Arras, and followed St. Louis on the crusade to Egypt. He lays the scene of

his play in the East, and mingles with heroic episodes of the crusades realistic pictures taken from taverns. His drama concludes with a general conversion of the Mussulmans secured through a miracle of St. Nicholas. Rutebeuf, who flourished in the second half of the thirteenth century, was born in Champagne, but lived in Paris. Though at first a gambler and idler, he seems to have ended his days in a cloister. His miracle depicts the legend, so famous in the Middle Ages, of Theophilus, the *aconomus* of the Church of Adana in Cilicia, who on losing his office bartered his soul to the devil for its recovery, but, having repented, obtained from the Blessed Virgin the miraculous return of the nefarious contract.

MIRACLES OF OUR LADY.—Save for the play of Griseldis, whose heroine, a poor shepherdess, married to the Marquis de Saluces, is subjected to cruel trials by her husband, and through the protection of St. Agnes triumphs over all obstacles, the entire dramatic activity of the fourteenth century was devoted to the miracles of Our Lady. Forty-two specimens of this style of drama are extant. Herein the Blessed Virgin saves or consoles through marvellous intervention those who are guiltless and unfortunate and sometimes great sinners who have confidence in her. The author or authors of these works are unknown.

THE MYSTERIES.—The fifteenth century is the century of the "mysteries". The word is doubtless derived from the Latin *ministerium* and means "act". In the Middle Ages sacred dramas were also called by other names; in Italy *funzione*, in Spain *autos* (acts). Even to-day we say "drama", a word of analogous signification. But the dramatic and the dogmatic mysteries were soon confused, and it was thought that the former derived their name from the latter because the plays frequently took for subject the mysteries of Christian belief. However, the mysteries were often devoted to a saint, and, in exceptional cases, even represented matters which were not religious. Thus we have the "Mystery of the Siege of Orleans", and even the "Mystery of the Destruction of Troy", the only two profane mysteries which have been preserved. The mysteries may be grouped under three cycles, that of the Old Testament, that of the New Testament, and that of the saints. It must be borne in mind that in all these the authors mingled truth and legend without distinction. The most celebrated of these were the passion plays, by which must be understood not only the plays devoted to the Passion properly so called, but also those which set forth the complete history of the Saviour. From 1400 to 1550 the authors were numerous; about a hundred of them are known, many of them priests.

At first somewhat short, the dramas eventually became very long. Thus Arnoul Greban, canon of the church of Le Mans, wrote about 1450 a "Passion" consisting of about 35,000 verses. This play was still further developed more than thirty years later by a physician of Angers, Jean Michel, whose work was the most famous and the best of its kind. The same Greban and his brother Simon, a monk of St. Riquier, composed together an enormous mystery of the "Acts of the Apostles", consisting of nearly 62,000 verses, which was played in its entirety at Bourges, the performance lasting forty days. The number of verses of mysteries still extant exceeds 1,000,000, and an equally large number may have been lost. These pieces were not played by professional actors, but by dramatic associations which were formed in all large towns for the purpose of representing them. Some were permanent, such as the "Confrérie de la Passion", which in 1402 secured the monopoly of the representations in Paris. For the people of the middle classes, artisans, and priests (all ranks in this matter being equal), it was an enviable honour to take part in this religious performance. To play it they condemned themselves to a labour to which few of our

contemporaries would care to submit. In some "passions" the actor who represented Christ had to recite nearly 4000 lines. Moreover, the scene of the crucifixion had to last as long as it did in reality. It is related that in 1437 the curé Nicolle, who was playing the part of Christ at Metz, was on the point of dying on the cross, and had to be revived in haste. During the same representation another priest, Jehan de Missey, who was playing the part of Judas, remained hanging for so long that his heart failed and he had to be cut down and borne away.

As regards the æsthetic side of this drama, modern standards should not be applied. This theatre does not even offer unity of action, for the scenes are not derived from one another: they succeed one another without any other unity than the interest which attaches to the chief personage and the general idea of eternal salvation, whether of a single man or of humanity, which constitutes the common foundation of the picture. Moreover, side by side with pathetic and exalted scenes are found others which savour of buffoonery. The plays used as many as one, two, and even five hundred characters, not counting the chorus, and they were so long that they could not be played on one occasion. This is true at least of the mysteries dating from the middle of the fifteenth century; on the other hand, the oldest of them and the miracles were rather short. Two faults have at every period characterized this dramatic style, viz. weakness and wordiness. The poets said things as they occurred to them, without display of selection, gradation, or taste. They had facility, but they abused it and never amended. Furthermore, in the drawing of character there was no art whatever. The dramas of the Middle Ages are simply grand and animated spectacles. Doubtless their authors sometimes, though rarely, succeeded in fittingly depicting the patience and meekness of the august Victim of the Passion. In this they were assisted by recollections of the Gospel. More often they succeeded in attractively interpreting the complex emotions experienced by the soul of the Blessed Virgin, but as a definite object the analysis of the soul did not occupy them at all.

A few words may be said as to the manner of representation and technic. Places were indicated by vast scenery, rather than really represented. Two or three trees, for example, represented a forest, and although the action often changed from place to place the scenery did not change, for it showed simultaneously all the various localities where the characters successively appeared in the course of the drama, and which were thus in close proximity, even though in reality they were often far removed from each other. For the rest nothing was neglected to attract the eye. If the scenery was immovable, it was very rich and secrets of theoretical mechanism often produced surprising and fairy-like effects. The actors were richly dressed; each defrayed the cost of his own costume, and looked more for beauty than for truth. The subject-matter admitted of the marvellous and was borrowed from religion. For the rest there was some difference between the miracles and the mysteries. The miracles emphasized the supernatural intervention of a saint or the Blessed Virgin; the events might be infinitely varied, and this afforded the authors a wide field of which, however, they did not take full advantage, though they incidentally supply us a host of details regarding the manners of the times which are not found elsewhere.

The mysteries, at least in the Old and New Testament cycles, followed a previously traced out path, from which they could with difficulty depart since the foundation was borrowed from Holy Scripture. The traditional doctrine and the august characters of the chief personages had to be respected. But, to offset this handicap, what exalted, dramatic, and affecting subjects were theirs! These poets recalled not only

the events of this world, but depicted before their audience the terrors and the hopes of the next. They set forth at the same time heaven, earth, and hell, and this enormous subject gave occasion for scenes of powerful interest. The scenes of the Passion are surely the most wonderful, the most moving, and the most beautiful that can be enacted on earth. The poet lacked art, but he was saved by his subject, as Sainte-Beuve himself has observed, and from time to time he became sublime despite himself. And what the spectator saw represented was not fiction, but the holy realities which from his childhood he had learned to venerate. What was put before his eyes was most calculated to affect him, the doctrines of his faith, the consolations it afforded in the sorrows of this life, and the immortal joys it promised in the next. Hence the great success of these religious performances. The greatest celebration a city could indulge in on a solemn occasion was to play the Passion. On this occasion the entire populace crowded into the enormous theatre, the city was deserted, and it was necessary to organize bands of armed citizens to protect the deserted houses against robbery. This custom endured until 1548, when the Parliament of Paris forbade the Confrères de la Passion to play thenceforth "the Sacred mysteries". The prohibition was due to the opposition of the Protestants against the mixing of comedy and fabulous traditions with Biblical teachings. These attacks aroused the scruples of some Catholics, and the judiciary considered it time to interfere. The mysteries perished; for the example of Paris, where they were forbidden to be played, was by degrees followed by the provinces. Thus the religious drama of the Middle Ages disappeared in France at the height of its success.

GEORGES BERTIN.

ENGLAND.—There is no record of any religious drama in England previous to the Norman Conquest. About the beginning of the twelfth century we hear of a play of St. Catharine performed at Dunstable by Geoffroy, later abbot of St. Albans, and a passage in Fitzstephen's "Life of Becket" shows that such plays were common in London about 1170. These were evidently "miracle plays", though for England the distinction between miracles and mysteries is of no importance, all religious plays being called "miracles". Of miracle plays in the strict sense of the word nothing is preserved in English literature. The earliest religious plays were undoubtedly in Latin and French. The oldest extant miracle in English is the "Harrowing of Hell" (thirteenth century). Its subject is the apocryphal descent of Christ to the hell of the damned, and it belongs to the cycle of Easter-plays. From the fourteenth century dates the play of "Abraham and Isaac". A great impetus was again given to the religious drama in England as elsewhere by the institution of the festival of Corpus Christi (1264; generally observed since 1311) with its solemn processions. Presently the Eastern and Christmas cycles were joined into one great cycle representing the whole course of sacred history from the Creation to the Last Judgment. Thus arose the four great cycles still extant and known as the Towneley, Chester, York, and Coventry plays, the last three designated from the place of their performance. The Towneley mysteries owe their name to the fact that the single MS. in which they are preserved was long in the possession of the Towneley family. They were performed, it seems, at Woodkirk, near Wakefield. These cycles are very heterogeneous in character, the plays being by different authors. In their present form the number of plays in the cycles is: Towneley 30 (or 31), Chester 24, York 48, Coventry 42. Four other plays are also preserved in the Digby codex at Oxford. The so-called "moralities" (q. v.) are a later offshoot of the "miracles". These aim at the inculcation of ethical

to which Italian society was exposed at the time, he sounded a warning on the occasion of the Lateran Council: "Joannis Francisci Pici oratio ad Leonem X et concilium Lateranense de reformandis Ecclesiis Moribus" (Hagenau, 1512, dedicated to Pirckheimer). He was discussing funerals and tombs with Lillio Giraldi when the catastrophe occurred which carried him off. Giraldi commemorated the tragic event in a touching postscript to the "De sepulchris" (in his works, Basle, 1580, I, 640).

NICÉRON, *Mémoires*, XXXIV; TIRABOSCHI, *Storia della letteratura Italiana*, VII, part I, 397; SANDYS, *A History of Classical Scholarship*, II (Cambridge, 1908), 113. His works are appended to those of his uncle in the ed. of Basle, 1601.

PAUL LEJAY.

Mirandola, GIOVANNI PICO DELLA, Italian philosopher and scholar, b. 24 February, 1463; d. 17 November, 1494. He belonged to a family that had long dwelt in the Castle of Mirandola (Duchy of Modena), which had become independent in the fourteenth century and had received in 1414 from the Emperor Sigismund the fief of Concordia. To devote himself wholly to study, he left his share of the ancestral principality to his two brothers, and in his fourteenth year went to Bologna to study canon law and fit himself for the ecclesiastical career. Repelled, however, by the purely positive science of law, he devoted himself to the study of philosophy and theology, and spent seven years wandering through the chief universities of Italy and France, studying also Greek, Latin, Hebrew, Syriac, and Arabic. An impostor sold him sixty Hebrew manuscripts, asserting positively that they were written by order of Esdras, and contained the secrets of nature and religion. For many years he believed in the Kabbala and interwove its fancies in his philosophical theories. His aim was to conciliate religion and philosophy. Like his teacher, Marsilius Ficinus, he based his views chiefly on Plato, in opposition to Aristotle the doctor of scholasticism at its decline. But Pico was constitutionally an eclectic, and in some respects he represented a reaction against the exaggerations of pure humanism. According to him, we should study the Hebrew and Talmudic sources, while the best products of scholasticism should be retained. His "Heptaplus", a mystico-allegorical exposition of the creation according to the seven Biblical senses, follows this idea (Florence, about 1480); to the same period belongs the "De ente et uno", with its explanations of several passages in Moses, Plato, and Aristotle; also an oration on the Dignity of Man (published among the "Commentationes").

With bewildering attainments due to his brilliant and tenacious memory, he returned to Rome in 1486 and undertook to maintain 900 theses on all possible subjects ("Conclusiones philosophicæ, cabalisticæ et theologicæ", Rome, 1486, in fol.). He offered to pay the expenses of those who came from a distance to engage with him in public discussion. Innocent VIII was made to believe that at least thirteen of these theses were heretical, though in reality they merely revealed the shallowness of the learning of that epoch. Even such a mind as Pico's showed too much credulity in nonsensical beliefs, and too great a liking for childish and unsolvable problems. The proposed disputation was prohibited and the book containing the theses was interdicted, notwithstanding the author's defence in "Apologia J. Pici Mirandolani, Concordiæ comitis" (1489). One of his detractors had maintained that Kabbala was the name of an impious writer against Jesus Christ. Despite all efforts Pico was condemned, and he decided to travel, visiting France first, but he afterwards returned to Florence. He destroyed his poetical works, gave up profane science, and determined to devote his old age to a defence of Christianity against Jews, Mohammedans, and astrologers. A portion of this work was published after his death

("Disputationes adversus astrologiam divinatricem", Bologna, 1495). Because of this book and his controversy against astrology, Pico marks an era and a decisive progressive movement in ideas. He died two months after his intimate friend Politian, on the day Charles VIII of France entered Florence. He was interred at San Marco, and Savonarola delivered the funeral oration.

Besides the writings already mentioned, see his complete works (Bologna, 1496; Venice, 1498; Strasburg, 1604; Basle, 1557, 1573, 1601). He wrote in Italian an imitation of Plato's "Banquet". His letters ("Aurea ad familiares epistolæ", Paris, 1499) are important for the history of contemporary thought. The many editions of his entire works in the sixteenth century sufficiently prove his influence.

NICÉRON, *Mémoires*, XXXIV; TIRABOSCHI, *Biblioteca Modenese*, IV, 95; biography by his nephew, in complete works; *Storia della letteratura Italiana*, VI, part I, 323; SANDYS, *A History of Classical Scholarship*, II (Cambridge, 1908), 82.

Miridite, ABBEY OF (MIRIDITARUM, or SANCTI ALEXANDRI DE OROSHI), the name of an *abbazia nullius* in Albania, where there formerly stood a Benedictine abbey, now destroyed, dedicated to St. Alexander, martyr. By decree of 25 October, 1888, this abbey with its two affiliated parishes, together with five other parishes in the Diocese of Ljes (Alessio, or Alise), were removed from the jurisdiction of the Bishop of Ljes. In 1890 three parishes from the Diocese of Sappa were added, and in 1894 five from Ljes. The country forms part of the Turkish dominions in Europe and is inhabited by Mohammedans, Greek Schismatics, and Catholics. The Catholics number 16,550, and are under the care of secular and regular clergy. The abbot is chosen from among the secular clergy. The present abbot, Mgr. Primus Docchi, who resides at Oroshi was born at Bulgri, 7 Feb., 1846, and studied at the Propaganda College, Rome. The Franciscans have a parish and a hospital at Gomsice.

A. L. GANCEVIĆ.

Miserere, the first word of the Vulgate text of Psalm I (Hebrew, li). Two other Psalms (lv and lvi) begin with the same word, and all three continue with *mei, Deus* (Have mercy on me, O God). In alphabetical indexes to the (Latin) Psalms they are inter-distinguished by the fourth word, which in Ps. I is *secundum*; Ps. lv, *quoniam*; in Ps. lvi, *miserere*: so that Ps. I will appear as "Miserere . . . secundum". So liturgically and musically pre-eminent is Ps. I, however, that it is commonly referred to as the *Miserere*, without further qualification. The psalm has a title which is one of the best authenticated of all, as it is found in the Hebrew, the Greek, and the Latin, and which in the Vulgate reads: "In finem, Psalmus David, Cum venit ad eum Nathan propheta, quando intravit ad Bethsabee." This title forms vv. 1 and 2 of the psalm, and refers to the sin of David (II Kings, xi) and to the reproaches and warnings of the prophet Nathan (II Kings, xii). Some commentators think that the last two verses of the psalm were added in the time of the Captivity. Delitzsch nevertheless considers them quite admissible in the mouth of David, arguing that the Hebrew word for "build" means not only "to rebuild", but "to complete what is being built", and that Solomon's wall (III Kings, iii, 1) can be regarded as a fulfilment of David's prayer "that the walls of Jerusalem may be built up". (Cf. the appended bibliography, which gives the suffrages of some recent Catholic commentators to the traditional ascription, in addition to the opinions of several of the more recent non-Catholic commentators.)

The *Miserere* has a most prominent place in the Di-

vine Office and in various ceremonies. It is the first psalm at Lauds in all the ferial (week-day) Offices throughout the year, outside of Paschal Time, and in the Sunday Offices from Septuagesima to Palm Sunday inclusive. It holds the same place in the Office of the Dead. It is the psalm chosen for the *preces feriales* at Vespers for all the weekdays in Lent with the exception of the triduum of Holy Week, for those in Advent, for the ember-days except those of the Pentecostal season, and for all vigils, except those of Christmas, Epiphany, the Ascension, and Pentecost. In addition it is said just before the *oratio*, or prayer, in all the Canonical Hours in the triduum of Holy Week, except the Vespers and Compline of Holy Saturday. As it is also the fourth in order of the seven penitential psalms (q. v.), its times of recitation will be governed by the appropriate rubric in the Breviary. It (or, as alternative, Ps. cxvi, "Laudate . . . omnes") is said daily in the prayers after dinner (*post prandium*), except on days when only one meal is taken (in which case the prayers are those styled *post coenam*, "after supper") and also except the times from Christmas to the Octave of the Epiphany, from Holy Saturday until Low Sunday exclusively, and from Ascension Thursday to the Octave of Pentecost exclusively. It is very prominent in the ceremony of the Asperges (q. v.), during which the choir sings the antiphon "Asperges me, Domine, hyssopo", etc. (i. e. Ps. l, verse 8; Vulg., 9), then the verse "Miserere mei, Deus", etc. (i. e. Ps. l, 1; Vulg., 3), then the Gloria Patri, and finally the antiphon "Asperges me", the celebrant meanwhile reciting, either alone or alternately with the sacred ministers, the entire Miserere. On Passion and Palm Sundays the Gloria Patri is omitted, and during Paschal Time the antiphon and psalm are "Vidi aquam" and "Confitemini" (Ps. cxvii) respectively.

The Miserere is found in many other ceremonial functions; at the Burial of the Dead, with the antiphon "Exultabunt Domino ossa humiliata", taken from the 9th (Vulg., 10th) verse of the psalm; at the episcopal visitation of parishes; the blessing of a bell; the consecration of an altar-stone; the laying of the corner-stone of a church; the blessing of a church, of a cemetery, of a house, of congregations, and fields; the reconciliation of a profaned church (whether consecrated or merely blessed) or of a profaned cemetery. It is especially prominent in the consecration of a church, when it is first said like other psalms, and afterwards in a more solemn manner, with the antiphon "Asperges" repeated after each group of three verses, during the sprinkling of the altars with holy water. It is said by the penitent who is to be absolved from excommunication (*in foro externo*), and by the absolving priest in the case of a deceased excommunicate who had given some sign of contrition before death, the ceremony entitling to ecclesiastical burial. At the Visitation of the Sick the priest may say the Miserere or any other of the first three penitential psalms. While carrying the Blessed Sacrament to the sick, the priest is to say the Miserere ("which is the best suited for obtaining divine mercy for the sick"—de Herdt, "Praxis") and other psalms and prayers. In monasteries it is said during the customary "discipline". It figured prominently in the ancient ceremony of the Reconciliation of Penitents on Maundy Thursday, both as one of the seven penitential psalms recited by the bishop in the sanctuary, and as one of the three psalms commencing with Miserere during the prostration of clergy and laity (including the penitents). For an interesting description of this ancient function, cf. the volume entitled "Passiontide and Holy Week", of Guéranger's "Liturgical Year."

In some Jewish rituals the Miserere is recited on the Day of Atonement. It is also found in the Anglican Communion Service. In a fragmentary form it is also prominent, in the selection of some of its most

searching verses, for the *preces* of Prime in the Divine Office; in the verse "Domine labia mea aperies", etc., with which the Office commonly opens at Matins and Prime; in the use of the antiphon "Asperges", and the verse "Miserere" in the Communion of the Sick, and of the antiphon alone at Extreme Unction (de Herdt, "Praxis"); in the selection of various verses for use as antiphons in the Office, and for an Offertory, a Communion, and an Alleluia-verse at Mass. The partial use made of it at Mass and Office has been minutely detailed in Bishop Marbach's exceedingly elaborate work, "Carmina Scripturarum" (Strasburg, 1907), 134-36.

As remarked above, the Miserere is not only the first psalm at Lauds in the ferial Office, but is also repeated just before the *oratio* at the end of Lauds in the triduum of Holy Week. The thought of giving to this second Miserere a musical treatment more elaborate than the ordinary plain-song used for the psalms in general, and of making it serve as a climax to the dramatic ceremonial of the Tenebræ, is probably due to Leo X. In 1514 the Miserere was sung to a *falsobordone*. The oldest example extant is that of Costanzo Festa (1517), which alternated verses in plain-song with verses in *falsibordoni* of four and five voices. This interestingly contrasted setting or method of treatment formed the type for imitation ever since.

The musical settings of the Miserere are very many. Three of them (Baini's on Wednesday, Bai's on Thursday, and Allegri's on Friday afternoons) are especially famous because of their yearly repetition in the pope's chapel during the Tenebræ. Among the numerous estimates recorded by musicians and travellers on these three settings, mention may be made of Mendelssohn's, Cardinal Wiseman's, Madame de Staël's (in "Corinne"), Mr. Rockstro's (in Grove, Dictionary of Music), and especially of the young Mozart's sincerest tribute in the famous copy of it made by him at one hearing of Allegri's Miserere (with corrections made at a subsequent hearing). In the second of his "Four Lectures on the Offices and Ceremonies of Holy Week", Cardinal Wiseman gives a comparative estimate of these settings and, in accord with all who have heard them, awards the palm of supremacy to Allegri's. His description is glowing and vivid; but that of Mr. Rockstro is equally appreciative and musically more precise and detailed in respect of Allegri's Miserere, of which he gives many illustrations, and which he defends against certain criticisms. (Cf. in the same dictionary articles on Bai, Baini.)

M'SWINEY, *Translation of the Psalms and Canticles with Commentary* (St. Louis, 1901), 186-90, gives a bi-columnar translation from the Vulgate and the Hebrew Massoretic text, 186-190: "With the exception of the two last verses, probably added to the Psalm during the Babylonian captivity, there is no valid reason for assigning this Psalm to a poet of a later age, who undertook to set forth the thoughts and emotions of David, on the occasion mentioned in the title". D'EYRAGUES, *Les Psaumes traduits de l'hébreu* (Paris, 1904), 146-51, ascribes it to David: "Verses 20-21 were doubtless added after the return from captivity in the time of Eadras when he again raised the walls of the temple. The congregation sing the verses." VIGOUROUX praises the work as one of irreproachable learning. Against the Davidic authorship: CLEYNE, *The Book of Psalms* (New York, 1892), 144-149; BUGGOS, *A Critical and Exegetical Commentary on the Book of Psalms* (New York, 1907), II, 3-12: "Ps. 51 is a penitential prayer of the congregation in the time of Nehemiah."—Neutral: KIRKPATRICK, *The Book of Psalms* (Cambridge, 1901), bks. II, III, 284-95, briefly disposes of some objections to the Davidic authorship and allows weight to others; LESTRE, *Le Livre de Psaumes* (Paris, 1883), a very extended commentary; KENRICK, *The Psalms*, etc. (Baltimore, 1861), very condensed, but satisfactory; WOLTER, *Psallite Sapienter* (*Psallend weise*) (Freiburg im Br., 1905), II, 294-331, an extensive account of the mystical and liturgical uses of the Miserere.—Metrical translations into English: BAGINAWA, *The Psalms and Canticles in English Verse* (St. Louis, 1903), proposes the use of metrical versions of the Psalms by Catholics and gives (106) his metrical version of Ps. l; MILBOURNE, *The Psalms of David in English Metre* (London, 1698), 105-08, gives two translations into English verse; *The Psalter, a revised Ed. of the Scottish Metrical Version of the Psalms set to suitable music* (Dublin, 1880), 68.—Latin metrical versions: GEORGE BU-

step in this evolution seems to have been furnished by the introduction of certain smaller volumes called "Libelli Missæ" intended for the private celebration of Masses of devotion on ordinary days. In these only one, or at most two or three Masses, were written; but as they were not used with choir and sacred ministers, all the service had to be said by the priest and all was consequently included in the one small booklet. A typical example of such a volume is probably furnished by the famous "Stowe Missal". This little book of Irish origin of which the leaves measure only five and a half by four inches, is nevertheless one of our most priceless liturgical treasures. The greater part is devoted to a single Mass of the Blessed Sacrament, in which the Epistle and Gospel are inserted entire as well as a number of communion anthems, the private preparation of the priest, and other matter including rubrical directions in Irish. Thus, so far as Mass was concerned, it was in itself a complete book and is probably the type of numberless others—fragments of similar Irish "libelli Missæ" are preserved among the manuscripts of St. Gall—which were used by missionaries in their journeys among peoples as yet only half christianized.

The convenience of such books for the private celebration of Mass where sacred ministers and choir were wanting, must soon have made itself felt. When one thinks of the many hundreds and even thousands of Masses which in the eighth and ninth centuries every large monastery was called upon to say for deceased brethren in virtue of its compacts with other abbeys (see details in Ebner, "Gebets-Verbrüderungen", Ratisbon, 1890), it appears obvious that there must have been great need of private Mass-books. Consequently it soon became common to adapt even the larger sacramentaries to the use of priests celebrating privately by inserting in some of the "missæ quotidianæ votivæ et diversæ", or sometimes again in the "commune sanctorum" such extracts from the "Graduale", "Epistolare", and "Evangelarium" as made these particular Masses complete in themselves. Examples of Sacramentaries thus adapted may be found as early as the ninth century. Ebner for instance, appeals to a manuscript of this date in the caputular library of Verona (No. 86) where in the "*Missæ votivæ et diversæ*" the choral passages are written as well as the prayers. Whether the word *Missalis liber* was specially employed for service books thus completed for private use there seems no evidence to determine. Alcuin writing in 801 certainly seems to contrast the term "*Missalis libellus*" with what he calls "*libelli sacrorum*" and with "*sacramentaria maiora*" (see Mon. Germ. Hist. Epist., IV, 370); but the phrase was older than Alcuin, for Archbishop Egbert of York in his "Dialogus" speaks of the dispositions made by St. Gregory for the observance of the ember-days in "*Antiphonaria cum missalibus suis*" which he had consulted at Rome (Haddan and Stubbs, "Councils", III, 421), where certainly the language used seems to suggest that the "*Missalia*" and "*Antiphonaria*" were companion volumes separately incomplete. Certainly it may be affirmed with confidence that what was afterwards known as the "*Missale plenum*", a book like our present Missal, containing all the Epistles, Gospels, and the choral antiphons as well as the Mass prayers, did not come into existence before the year 900. Dr. Adalbert Ebner, who spent immense labour in examining the liturgical manuscripts of the libraries of Italy, reports that the earliest example known to him was one of the tenth century in the Ambrosian Library at Milan; but although such books are of more frequent occurrence from the eleventh century onwards, the majority of the Mass-books met with at this period have still only an imperfect claim to be regarded as "*Missalia plena*".

We find instead a great variety of transition forms belonging to the eleventh, twelfth, and thirteenth

centuries which may be referred in particular to two distinct types. In the first place the sacramentary, lectionary, and antiphonary were sometimes simply bound up together in one volume as a matter of convenience. Codex 101 in the library of Monza offers an example of this kind in which the three component elements are all of the ninth or tenth century, but even earlier than this in an extant notice of the visitation of the Church of Vicus (Vieil-St-Remy) in 859 by Bishop Hincmar of Reims we find mention of a "*Missale cum evangelis et lectionibus seu antiphonario volumen 1*". As a rule, however, the fusion between the original sacramentary and the books used by the readers and the choir was of a more intrinsic nature, and the process of amalgamation was a very gradual one. Sometimes we find sacramentaries in which a later hand has added in the margin, or on any available blank space, the bare indication, consisting of a few initial words, of the Antiphons, the Epistles, and the Gospels belonging to the particular Mass. Sometimes the "*Commune Sanctorum*" and the votive Masses have from the beginning included the passages to be sung and read written out in full, though the "*Proprium de Tempore*" and "*de Sanctis*" show nothing but the Mass prayers. Sometimes again, as in the case of the celebrated Leofric Missal in the Bodleian, the original sacramentary has had extensive later supplements bound up with it containing new Masses which include the parts to be read and sung. In one remarkable example, the Canterbury Missal (MS. 270 of Corpus Christi, Cambridge), a number of the old prefaces of the Gregorian type have been erased throughout the volume and upon the blank spaces thus created the proper Antiphons from the Graduale, and sometimes also the Epistles and Gospels for each Mass, have been written entire. In not a few instances the Gospels may be found included in the Mass-book but not the Epistles, the reason probably being that the latter could be read by any clerk, whereas a properly ordained deacon was not always available, in which case the priest at the altar had himself to read the Gospel. Regarding however this development as a whole it may be said that nearly all the Mass-books written from the latter half of the thirteenth century onwards were in the strict sense *Missalia plenaria* conforming to our modern type. The determining influence which established the arrangement of parts, the selection of Masses, etc., with which we are familiar in the "*Missale Romanum*" to-day, seems to have been the book produced during the latter half of the thirteenth century under Franciscan auspices and soon made popular in Italy under the name "*Missale secundum consuetudinem Romanæ curiæ*" (see Radulphus de Rivo, "*De Canonum Observatione*", in La Bigne, "Bib. Max. PP.", XI, 455).

VARIETIES OF MISSALS.—Although the "*Missale secundum consuetudinem Romanæ curiæ*" obtained great vogue and was destined eventually to be officially adopted and to supplant all others, throughout the Middle Ages every province, indeed almost every diocese, had its local use, and while the Canon of the Mass was everywhere the same, the prayers in the "*Ordo Missæ*", and still more the "*Proprium Sanctorum*" and the "*Proprium de Tempore*", were apt to differ widely in the service books. In England especially the Uses of Sarum and York showed many distinctive characteristics, and the Ordinary of the Mass in its external features resembled more the rite at present followed by the Dominicans than that of Rome. After the invention of printing a great number of Missals were produced both in England itself and especially at Paris and other French cities for use in England. Of the Sarum Missal alone nearly seventy different editions were issued between that of 1487 (printed for Caxton in Paris), and that of 1557 (London). After Elizabeth's accession no more Missals were published, but a little book entitled "*Missale parvum pro Sacerdoti-*"

FRAGMENTS OF AN EGYPTIAN LITURGY OF THE SEVENTH OR EIGHTH CENTURY
AFTER A COPY BY WALTER CRUM, WHO RECOGNIZED THEIR LITURGICAL CHARACTER

bus in Anglia, Scotia, et Ibernia itinerantibus" was printed two or three times towards the beginning of the seventeenth century for the use of missionary priests. Its size allowed it to be carried about easily without attracting observation, and as it contained relatively few Masses, only those for the Sundays and the principal feasts, it recalled in a measure the "libelli Missæ" of the Anglo-Saxon and Irish missionaries nine centuries earlier. Even at this date the peculiarities of the Sarum Rite were not retained and the Canon and Masses of this "Missale parvum" were all Roman with the exception of one special Mass of the Holy Name of Jesus which is described in the 1616 edition as "taken from the Missal according to the Use of Sarum". Moreover, just as the Roman liturgy came in this way to prevail in England, so in France and throughout the rest of Europe the local uses have for the most part been surrendered by degrees, two of the principal influences at work being no doubt the advantage of uniformity and the authority and relative purity of the Roman Missal, as authoritatively revised and improved after the Council of Trent.

The first printed edition of the "Missale Romanum" lately republished by the Henry Bradshaw Society in two volumes (1899 and 1907), was produced at Milan in 1474. Numerous editions followed, but nothing authoritative appeared until the Council of Trent left in the hands of the pope the charge of seeing to the revision of a Catechism, Breviary, and Missal. This last, committed to the care of Cardinals Scotti and Sirlet with Thomas Goldwell (an Englishman, Bishop of St. Asaph, deprived of his see upon the accession of Elizabeth), and Julius Poggio, was published in 1570. St. Pius V published a Bull on the occasion, still printed at the beginning of the Missal, in which he enjoined that all dioceses and religious orders of the Latin Rite should use the new revision and no other, excepting only such bodies as could prove a prescription of two hundred years. In this way the older orders like the Carthusians and the Dominicans were enabled to retain their ancient liturgical usages, but the new book was accepted throughout the greater part of Europe. A revised edition of the "Missale Romanum" appeared in 1604 accompanied by a brief of Clement VIII in which the pontiff complained among other things that the *vetus Italia* version of the Scripture which had been retained in the antiphonal passages of the Pian Missal had been replaced, through the unauthorized action of certain printers, by the text of the newly edited Vulgate. Another revision bearing more especially upon the rubrics followed under Urban VIII in 1634. In the early part of the nineteenth century, owing largely to the exertions of Dom Guéranger, the Benedictine liturgist, a number of the dioceses of France which had up to this persistently adhered to their own distinctive uses upon a more or less valid plea of immemorial antiquity, made a sacrifice to uniformity and accepted the "Missale Romanum". The last authoritative revision of the Missal took place in 1884 under Leo XIII. It should be noticed finally that the term Missal has been applied by a loose popular usage to a number of books which, strictly speaking, have no right to the name. The "Missale Francorum", the "Missale Gothicum", the "Missal of Robert of Jumièges", etc., are all, properly speaking, Sacramentaries.

The most important contribution to the subject is EBER, *Quellen und Forschungen zur Gesch. und Kunstgesch. des Missale Romanum in Mittelalter* (Freiburg, 1896), a monograph in which special attention is paid to the peculiarities of the pictorial decoration of ancient Missals. Another valuable work which has at least an indirect bearing on early missals is DELISLE, *Mémoire sur les anciens Sacramentaires* (Paris, 1886); SCHROD in *Kirchenlex.*, s. v. *Missale*; KLEINSCHEIDT in *Theologische Quartalschr.* (Lins., 1907); LIPPA and LEGG, *The Missale Romanum of 1474*, III (2 vols., Henry Bradshaw Society, 1907). To give a list of the more famous published Missals such as the *Missale ad usum ecclesie Sarum* (London, 1661, etc.), the *York Missal*, the *Ambrosian Missal*, the *Mozarabic Missal*,

etc., would be superfluous. On the rubrics of the Missal the reader may be referred, besides such Catholic works as MERGAT, GAVANTI and VAN DER STAPPEN, to WICKHAM LEGG, *Tracts on the Mass* (Henry Bradshaw Society, 1904).

HERBERT THURSTON.

Mission, CONGREGATION OF PRIESTS OF THE.—A congregation of secular priests with religious vows founded by St. Vincent de Paul. The members add the letters C.M. to their name. As with many other communities, an appellation from the founder or the place they dwell in has superseded the original title. Thus in France and in almost all countries they are called Lazarists, because it was in the Priory of St. Lazare in Paris that St. Vincent de Paul dwelt and that he established his principal works. In the Irish province, which includes practically all English speaking countries except the United States, they are called Vincentians, and this name is gradually replacing that of Lazarists in the United States. In countries whose language is Spanish they are called Paules. This appellation, like the preceding, is obviously derived from the name of the founder. The name Congregation of the Mission indicates their first and chief object.

I. ORIGIN OF THE CONGREGATION.—In the beginning of the year 1617, Vincent de Paul was at the Château de Folleville in Picardy with the family of M. de Gondy, Count de Joigny, General of the Galleys of France, and had charge of the education of M. de Gondy's sons, one of whom became the celebrated Cardinal de Retz, Coadjutor of Paris. Vincent had opportunities of observing the ignorance of religion of the peasants of the neighbourhood. As the result of a sermon which he preached on the 25 Jan., 1617, in the church of Folleville, Vincent, with two Jesuit Fathers, began, at Mme de Gondy's request, to preach to and instruct the people of the neighbouring villages on her estates. Thus began the work which was to become eight years later, in 1625, the Congregation of the Mission. Mme de Gondy wished to make a foundation that would secure a mission every five years for the rural population of her extensive estates. The Oratorians and Jesuits being unable to undertake this work, she urged Vincent to gather together some zealous priests and organize missions for the poor country people at that time so little in touch with the clergy. Ecclesiastical authorization was easily obtained from John Francis de Gondy, then Archbishop of Paris, brother of the General of the Galleys. He also handed over to Vincent the ownership and all the rights of an old college in Paris, called "des Bons Enfants". Vincent de Paul took possession through his first disciple and co-labourer Anthony Portail, 6 March, 1624. The next year a contract confirming the previous promises was signed by the de Gondy family in favour of Vincent and his companions united "under the name of Company, Congregation or Confraternity of Fathers or Priests of the Mission". This took place on 17 April, 1625.

Edified by the success of their labours, the Archbishop of Paris gave his official approval a year later, 24 April, 1626, to the contract of foundation, and on 4 Sept., 1626, before two notaries of Châtelet in Paris, Vincent and his first companions declared that they had joined together "to live in a community or confraternity and to devote themselves to the salvation of the poor country people". Only three priests signed this declaration with Vincent de Paul: Du Coudray, Portail, and de la Salle. Very soon afterwards four other priests joined the little company: John Bécu, of the Diocese of Amiens; Anthony Lucas, of Paris; John Brunet, of the Diocese of Clermont; and John d'Horny, of the Diocese of Noyon. The King of France, Louis XIII, added the seal of his royal authority to the act of foundation already approved by ecclesiastical authority the preceding year. In May, 1627, he issued letters patent, allowing the missionaries to form

a congregation, to live in community, and to devote themselves with the consent of the bishops to works of charity. Community life being established, St. Vincent could no longer hold as his own property the Collège des Bons Enfants, which was annexed to the mission by a decree of the Archbishop of Paris granted 8 June, 1627. The court of the Parlement ordered the registration of the letters patent of 1627 which the opposition of certain pastors of Paris had delayed, and pontifical authorization was granted by the Bull "Salvatoris Nostri" of Urban VIII, 12 Jan., 1632. In 1632 an important change took place in the installation of the new community. On 8 January, Vincent took possession of the house of St. Lazare, then in the outskirts of Paris. It was an immense priory where only eight regular canons of St. Victor remained and which Prior Adrian Le Bon, seeing the great good that Vincent de Paul and his missionaries were accomplishing, had resolved in concert with his religious to transfer to him. An agreement was entered into between Adrian Le Bon and his religious on one side, and Vincent de Paul acting in the name of his community on the other, on 7 Jan., 1632, and the next day the Archbishop of Paris granted the transfer of the house of St. Lazare, and came himself to introduce Vincent. Vincent left some of his priests at the Collège des Bons Enfants, which was destined to become a seminary under the name of St. Firmin. The house of St. Lazare became the headquarters of the Congregation of the Mission.

The Congregation of the Mission, according to the desire of its founder and from a canonical standpoint, is a "congregation of secular clergymen"; this is the term the Sovereign Pontiffs use; for instance, Benedict XIII in the Bull of the Beatification of St. Vincent de Paul calls him "Congregationis presbyterorum secularium Missionis fundator" (13 August, 1729). To ensure its permanency St. Vincent surrounded his work with safeguards including vows, but on the other hand, for many reasons, was careful to prevent its becoming a religious order. Meanwhile the missionaries extended their labours over France and in foreign lands. They undertook labours of various kinds. But the exact form of the congregation had not yet been determined. Vincent saw communities around him, which he used to say, people entered and left like a well conducted hotel. In 1642 and 1651 he held two assemblies of the priests who had been longest with him. They decided at first on a vow of stability, and afterwards on the three ordinary vows of poverty, chastity, and obedience, without meaning to form a religious order, though they had due respect for the religious state. Almost immediately after his election Alexander VII completed the work of Urban VIII, confirming the transfer of St. Lazare to the Congregation of the Mission, and authorizing on 22 Sept., by the Brief "Ex commisso Nobis", the constitution of the community. The Brief declares that at the end of two years of probation, simple vows are to be taken, but that nevertheless the community belongs to the secular clergy. That there might be no question of changing the nature of his institute, Vincent did not establish a novitiate for the aspirants to his community, but a seminary, which is known as internal, to distinguish it from the diocesan or external seminaries. He also made it a rule that his missionaries wear the dress of secular priests; in a word that they should be distinguished, in the exercise of the apostolic functions, only by their organized effort to save souls (cf. Maynard, "St. Vincent de Paul", I, p. 253, ed. 1886). Such is the canonical status of the Congregation of the Mission.

II. RULE AND GOVERNMENT.—There was, moreover, need of rules according to which the society he had just constituted should perform its functions. Vincent de Paul wished to test first, by experience, what circumstances might gradually require among the mis-

sionaries as to their manner of life and their work. Thus he was 82 years old when, 17 May, 1658, he distributed to the community the little book of "Common Rules or Constitutions". From these rules can be seen the elements of which the congregation is made up, the life it leads, its spirit, and the works to which its energies are directed. The elements, or members, of which it is composed are according to the "Common Rules", ecclesiastics and laymen. The ecclesiastics are, in imitation of Christ and His disciples, to preach and break the bread of the Word of God, to recall sinners to a Christian life, to give themselves up to various apostolic works which zeal for God's glory may call for among the people and the clergy. The laymen, or coadjutor-brothers, have for their work, while labouring also at their personal sanctification, the care of temporal concerns, and the practice of prayer and mortification to obtain the blessing of God upon the labours of the missionaries. The life prescribed by the rule is that which was led by Jesus Christ and His disciples. It does not prescribe any special austerities. But as Collet, one of the disciples of St. Vincent de Paul, says, although the life prescribed has nothing very extraordinary about it, nothing even which the Sacred Canons have not already laid down as a law for ecclesiastics who live in community, the servant of God knew that he must adopt special means to sustain human weakness in so regular and laborious a life. For this purpose he prescribed to his followers the daily exercises of piety which every priest who is desirous of his own perfection should impose on himself. As to their daily intercourse, he especially recommends charity among his followers, urging them in particular not to speak evil of any one, above all of other communities, and never to decry other nations or countries. So far as intercourse with the outside world is concerned, he prescribes dependence on superiors, which is a guarantee of prudence and regulates whatever unwisdom might be found in even the best intentioned zeal. If, in the words of Abelly, Bishop of Rodez and first biographer of St. Vincent de Paul, the man of God made it his rule never to anticipate Providence, in the words of another Bishop of Rodez, Cardinal Bourret, in the nineteenth century, it is not less true to say that St. Vincent de Paul has always followed closely in the footsteps of Providence. Asylums for foundlings, for old people, the institution of the Daughters of Charity, retreats in preparation for ordination, seminaries, the apostolate of foreign missions among the infidels of Madagascar and Barbary, all show the zeal of St. Vincent de Paul, and this zeal he urged his sons not to allow to be extinguished among them after his death. Finally, according to the rules, the works that form the special object of the congregation founded by St. Vincent de Paul are thus determined: besides devoting himself to his own perfection, each one shall be employed in preaching the Gospel to the poor, especially to poor country people, and in helping ecclesiastics to the knowledge and virtues requisite for their state.

During the life of the founder, establishments were made not only in France but also in Poland and in Italy. The congregation undertook mission work in the North, in the Hebrides, in the Tropics, in Barbary and Madagascar. It was under Vincent (in 1642) that the houses of the congregation were grouped in provinces, each having at its head a provincial superior called visitor. The same year a rule was introduced for the holding of general assemblies, for the election of the superior general, for the nomination of his advisers under the name of assistants, and for other matters of importance. The following establishments were founded in St. Vincent's lifetime: in Paris: Bons Enfants (1626) and St. Lazare (1632); Toul: seminary and mission centre (1636); Notre

Dame de la Rose: missions (1637); Richelieu: parish and missions (1638); Anneecy: seminary and mission (1639); Crécy: missions (1641); Cahors: seminary, parish, and missions (1643); Marseilles: mission (1643); Sedan: parish and mission (1643); Saintes: seminary and mission (1643); Montmirail: missions (1644); Le Mans: seminary and missions (1645); Saint Méen: missions (1645); Paris: St. Charles Seminary (1645); Treguier: seminary and missions (1648); Agen: seminary and missions (1648); Montauban: seminary and missions (1652); also foundations in Rome (1642), Genoa (1645), Turin (1654), Warsaw (1651), Tunis (1645), Algiers (1646), Madagascar (1648). At the death of its founder the congregation numbered 500 members.

The government of the congregation is very simple. It consists of the superior general, and four assistants, aided by the procurator general and secretary general. All these officials are chosen by a majority vote of a general assembly, which is composed of the visitors of the several provinces and two delegates from each province, elected by secret ballot in the provincial assemblies. Each house in domestic assembly selects also by secret ballot, a delegate to accompany the superior to the provincial assembly. The provincial government is made up of a visitor appointed by the superior general and of consultants approved by him. Usually for the appointment of a visitor three names are selected by the provincial council, and presented to the superior general who chooses one to govern the province. Local superiors also are appointed by the superior general, with the advice of the visitor and his council. A general assembly is held every twelve years to legislate for the congregation. This is the only legislative body in the congregation.

An assembly is held every six years made up of the general officers of the congregation, and of one delegate from each province. This body may elect to vacancies among the superior general's assistants and may also decide minor matters of discipline. Decrees of general assemblies are binding on the entire congregation. Their interpretation rests with the superior general and his council. The office of superior general is held for life, or until his resignation. Provision is however, made in the "Constitutions" for his removal from office for crime, or perpetual inability to govern. Visitors remain in office at the discretion of the superior general. In like manner local superiors are removable, for cause, by the visitor, whose action, however, must be approved by the superior general, who alone has the right to appoint and remove superiors.

III. HISTORY.—*From St. Vincent until the Revolution.*—From St. Vincent's death until the Revolution there were nine superiors general, whose part was to complete the organization of the new society and to forward the various works for which it was instituted. These superiors general were: René Alméras (1661), Edmund Jolly (1673), Nicholas Pierron (1697), Francis Watel (1703), John Bonnet (1711), John Couty (1736), Louis Debras (1747), Antoine Jacquier (1762-1788). Felix Cayla was at the head of the congregation during the French Revolution. It was during the generalship of René Alméras, especially, that, in 1668, what are sometimes called the "Great Constitutions" were drawn up. They were discussed and accepted by the general assembly held that year from 15 July to 1 Sept., and were approved in October following by the Archbishop of Paris, Harduin de Péréfixe, with authority granted him by the Bull of Urban VIII, in 1632. The title is "Constitutions which concern the superior general and the government of the whole Congregation of the Mission". These are the general constitutions in force at the present day. Alméras is responsible for the compilation of an abridgment of these constitutions which has a still greater authority in the sense that this condensed edition under the name of "Summary", or, in Latin "Constitutiones

selectæ", discussed in the general assembly of 1668 and approved by it, has been submitted to the authority of the Holy See. The text was examined and changed in some points by the examiners appointed by the pope. In this form it has been cited in its entirety in the Brief "Ex injuncto Nobis" of Clement X of 2 June, 1670. This is the chief act of internal legislation for the Lazarists. It has been published in the "Acta apostolica in gratiam Congregationis Missionis" (Paris, 1876). Alméras secured the drawing up of the rules for the offices, which were sent to all the houses in 1670. Edmund Jolly completed this work.

Bonnet, elected in 1711, had the longest and fullest generalship of all the superiors general before the Revolution. He had keen intelligence and great capacity for work. A brief sketch of his life and character is given in the preface to a collection of meditations which he composed and Collet published. He had to pass with his community through the difficult period of Jansenism. His congregation in charge of a great number of seminaries, and hence in close contact with a great number of bishops whose tendencies were very doubtful, was indeed in a delicate position. Rome condemned Jansenism, and Bonnet, regardless of the inconveniences his community might suffer, here and there, as a consequence, held firmly the course marked out by the pope. He expelled from the congregation men otherwise most distinguished such as Himbert and Philopald. After him, Couty and Debras showed themselves equally faithful and courageous in the doctrinal difficulties which still continued. The Congregation of the Lazarists had sometimes to suffer for this fidelity: for instance at Auxerre all the directors of the seminary were placed under interdict by de Caylus, an imperious bishop, a friend of the Jansenists, but they were reinstated by de Condorcet, his successor (see Migne, "Dictionnaire des Ordres Religieux", II, 766). The Lazarists held firmly to the side of Rome. One of them, Soardi, superior of the seminary of Avignon, published an important work "De Suprema Romani Pontificis auctoritate" (1747), which passed almost in its entirety into the work of Abbé, afterwards Cardinal, Villecourt, on "The Rights of the Holy See". Another Lazarist, Peter Collet, produced among other works, a theology of merit, which made him the butt of various attacks. In 1764 appeared a "Denunciation" of the theology of Peter Collet addressed to the Bishop of Troyes by a great number of ecclesiastics of his diocese (120 pp. duodecimo, 1764). The clergymen who signed it numbered one hundred and nine says an anonymous note. They accuse Collet of inclining scandalously towards a lax morality. The period of the French Revolution was approaching. The superior general since 1788 was Felix Cayla, a man of great ability. Elected as the first alternate for the deputation of the clergy of the National Assembly, he had in fact to take part in it because of the departure of one of the ecclesiastical deputies, and he refused at the tribunal of the assembly the oath for the civil constitution in 1791. He was immediately sent into exile.

When St. Vincent de Paul died in 1660 the secular clergy of Paris had a solemn service at which the preacher, Henry de Maupas du Tour, Bishop of Puy, who had been for many years in very close intimacy with Vincent did not hesitate to take as his text; "Whose praise is through all the churches" (II Cor., viii, 18). Abelly, Bishop of Rodes, writing only four years later, declared that the work founded by this humble priest had already extended most widely and through his congregation would spread still more. (1) Missions.—The end of the sixteenth and the beginning of the seventeenth century was for France a half century of political and religious anarchy. The clergy of the large cities, where there were universities,

were cultured, but the rural clergy were ignorant and neglected their flocks, who, in face of the disorders created by the conflict between the Protestant Reformation and Catholicism, not knowing which to believe, lost all interest in religion. To remedy this indifference and this ignorance, was what Vincent de Paul chiefly sought. The first missions of the Lazarists were in the suburbs of Paris and in Picardy and Champagne. The method and rule given by St. Vincent de Paul has been preserved for us by Abelly, a contemporary of the saint. It is in all essentials identical with the system used by his missionaries and in fact by all modern missionaries. "There was one thing that Mr. Vincent observed on the missions", says Abelly, his contemporary biographer, "and which he wished his spiritual sons to observe most faithfully; to give all the instructions and render all services gratuitously without being in any way a charge to those to whom they render these offices of charity", and this the priests of the Mission have inviolably observed. It was for this reason that Vincent de Paul would not agree to the establishment of a mission house unless it had a sufficient foundation to allow the missions to be given gratuitously. In the United States indeed where there are no foundations it has been the custom of St. Vincent's missionaries to accept whatever offering might be made them, but this usage is confined to English speaking countries, elsewhere this most disinterested custom is in full vigour. The fruits of these missions were very marked and many bishops desired to procure this blessing for their dioceses. Soon after the establishment of the congregation, while he was at the Collège des Bons Enfants, that is to say from 1625 to 1632, St. Vincent himself gave one hundred and forty missions.

In 1638 Louis XIII wished Vincent to have his missionaries give a mission at St. Germain-en-Laye near Paris, where he then was with all the court. Vincent offered many excuses but to no avail. He recommended his missionaries to preach as simply at court as they did in the rural districts, having nothing in view but the good of souls. The mission was a complete success and Anne of Austria a few years later, 1641, asked for another in the same place and under the same circumstances. Mission preaching has been employed in every age of the Church; but systematic parish missions as now understood were commenced by St. Vincent de Paul (*American Eccles. Rev.*, XI, 90), and the wonderful influence of the modern form of this great work of zeal dates from the first missions of St. Vincent and his companions in the infant Congregation of the Mission. St. Vincent cites instances: "A mission was given among the banditti and these wretched people were converted by the grace of God." Elsewhere he generalizes: "Of all the means which the Almighty has left to mankind for the correcting of their lives there is none that has produced effects more striking, more multiplied and more marvelous than the exercises of a mission." What the spiritual exercises of St. Ignatius have done for religious and the clergy and for individuals among the laity, the missions as organized by the Lazarists have done for the people at large. Vincent fully appreciated the value of retreats and his house and the houses of his sons have always been open to laymen and clerics for retreat. From their foundation to the present time innumerable missions have been given throughout the Catholic world and the pioneers in the field have done a goodly share of the work. It has been, however, earnestly pursued by almost all the active orders and, especially in recent years, by zealous members of the diocesan priesthood. St. Vincent always insisted that this is the chief work of his community and should be held in the highest esteem by all its members.

From 1652 to 1660 more than seven hundred missions were given from the house of St. Lazare alone. The

number of those given by the missionaries in various dioceses of France cannot be reckoned.

(2) Parishes and Chapels.—It is only with regret that the Lazarist Missionaries accept chapels and parishes. For they wish to be free to go here and there on missions to give the help peculiar to their ministry, and by preaching and hearing confessions to revive if need be or maintain the good effects of the work of the parish priests. They accepted the charge of parishes and chapels only in two circumstances: when they could make of these parishes a residence for other missionaries who would go out preaching missions, or when circumstances made it impossible to refuse. An example of these circumstances is the parish of Richelieu founded by the Cardinal of that name, minister of Louis XIII, and the parish of Sedan. In 1638 Cardinal Richelieu wished to establish the Lazarists not only in the city of his ducal title but also in the Diocese of Luçon of which he had been bishop. By an act of 4 Jan., passed at Ruel, he obtained of Vincent seven priests who were to be sent to Richelieu in the following February, and to whom three others should be added within two years. Four of these the act declares "shall remain at Richelieu to perform the functions of the mission. The three others shall be sent every five years for the same purpose, to every town and village of the duchy, and while awaiting the time to begin their rounds again they shall give missions in the Diocese of Poitiers, or other places in the adjacent country as it shall please His Eminence to arrange. The three remaining priests shall be sent to Luçon for the same purpose and all shall go to the country four times a year at the period most suited for this work, and labour there for six weeks each time. One of the four priests living at Richelieu shall act as pastor with as many assistants as shall be deemed expedient. In the house of Richelieu shall be received gratuitously and for twelve days those who are to be ordained for the Diocese of Poitiers at the four seasons of the year, and for fifteen days such priests of the diocese as the Bishop of Poitiers shall send to make the exercises of the spiritual retreat". On his part the cardinal agrees to have erected and to furnish a suitable house and to obtain the annexation of the parish to the Congregation of the Mission and to procure for it the necessary revenues.

Sometimes special spiritual needs have caused the Lazarists to accept a parish. Hardly was Louis XIII in possession of Sedan when he desired Vincent to send his priests there. The needs of religion were very pressing for, through their continual intercourse with the Huguenots, the number of Catholics was daily diminishing and the true faith almost extinguished. The parish of Sedan was at first transferred to the Mission by the Archbishop with the consent of the Abbot Mouzon and the religious of the abbey, and Louis XIII gave an annual income of 2,500 livres for the administration of the parish and the support of the missions. Besides a priest to officiate at Balan, there were to be at Sedan a parish priest, seven other priests, and two brothers. At least four of the priests were to remain in charge of the work of the parish and four others were to preach missions to the people of the surrounding country. Three more priests were added in 1680, because since its foundation in 1644 the number of communicants had increased by two-thirds. Soon, of more than 10,000 inhabitants among whom at first not more than 1,500 Catholics could be counted, hardly a third part remained heretics. It was by means of the pacific method always recommended by St. Vincent, that the Lazarists thus diminished the number of Protestants and increased so wonderfully the number of Catholics. Instead of controversies which often embitter hearts, they preferred the explanatory system which gave solid and practical instruction to Catholics and Protestants alike. At the same time they extended their labours

to the districts surrounding Sedan almost depopulated by war and they helped the people by exhortations and alms. Their charity thus helped their preaching and gained the hearts of those that were least disposed. At Sedan as elsewhere they aided the Protestants as well as the Catholics as Brother Sirven testifies whose eulogium Vincent wrote in a letter to Laudin in Mans, 7 Aug., 1660: "The whole city and surrounding country regret him, even the heretics who were edified by his modesty and aided by his charity."

(3) The Seminaries.—The Congregation of the Mission founded by St. Vincent has for its chief object together with the missions devotion to the service of ecclesiastics. In France in his day there were in the cities a certain number of well educated and distinguished clergymen, but the great majority especially in the country places had no practical means of formation. Many zealous priests of this period, Condren and Berulle of the Oratory, Bourdoise of St. Nicholas, above all Olier of St. Sulpice were preoccupied with the matter. Vincent used to say, as it is of the utmost importance for a military commander after he has conquered a country to leave behind him garrisons to maintain his conquest, so when apostolic men have led the people to God, or brought them back to Him, it is a vital matter to preserve this conquest, by procuring worthy and zealous priests to labour among them. He arranged with the Bishop of Beauvais as early as 1628 for a retreat for those to be ordained in that city. During the days preceding ordination they were assembled for exercises of piety and for immediate preparations for the pastoral ministry. These exercises were established at the house des Bons Enfants, afterwards at St. Lazare for the Diocese of Paris. The archbishop made them obligatory for all who received orders in Paris. At Rome, enjoined by the pope, they have been held at the house of the Lazarists at Montecitorio up to the present day. At Paris in the house des Bons Enfants in February, 1642 Vincent de Paul established an ecclesiastical seminary and gave it a rule for the exercise of piety and for the order of studies. It is no doubt the same that was put in practice by the Lazarists when they began the theological seminary at Annecy in 1641, and in the seminary at Alet. It was in substance that which is in vogue in the seminaries of France at the present day. The rule, as given in Maynard (op. cit., II, 211), exhibits an excellent compromise between the secular and the cloistered life and a wise mingling of study, piety, and discipline. The object is to fit the cleric for his sacred functions. In the seminary as conceived and actually established by St. Vincent students of classics were separated from students of theology. He withdrew the former pupils at Bons Enfants and placed them in a separate establishment at St. Lazare, in what constituted the preparatory seminary of St. Charles. The beneficial effect was immediately apparent.

As early as 1647, Vincent de Paul could write what he afterward embodied in his "Constitutions": "Our institute has but two chief ends, the instruction of the poor country people and the seminaries." After the first successes of Vincent and Olier there was a rivalry among the bishops to endow their dioceses with these most useful establishments. In 1643 the Lazarists were entrusted by Alain de Solminhac, Bishop of Cahors, with a mission house and the direction of the seminary of that city. In 1644 the Bishop of Saintes placed them in charge of his seminary; in 1645 those of Mans, of St. Malo and St. Méen were confided to them; that of Agen in 1650, and of Montauban in 1660. After the death of the saint until the time of the Revolution the following seminaries were directed by the Lazarists: Narbonne and Metz (1661); Amiens, Troyes, and Noyon (1662); Saint-Brieuc (1666); Marseilles (1672); Saint-Flour (1674); Sens (1675); Arras (1677); Béziers and Alet (1678); Beau-

vais (1679); Tours, Chartres, Toul, and Auxerre (1680); Poitiers, Boulogne, and Châlons (1681); Bayeux and Bordeaux (1682); Sarlat (1683); Pau (1684); Manosque (1685); Saint-Pol-de-Léon (1689); Notre-Dame-de-la-Délivrande (1692); Vannes (1701); Angoulême (1704); Avignon (1705); Notre-Dame-de-Buglose (1706); Toulouse (1707); Poitiers (1710); Saint-Servan (1712); Pamiers and Tours (1715); Mornant (1717); Chartres (1719); Villefranche (1723); Figeac (1735); Arles (1752); Lure (1753); La Rochelle and Metz (1763); Rodez (1767); Luçon (1771); Cambrai (1772); Albi (1774); Nancy (1780); Soissons (1786); finally, Castres (1788), the last seminary that was given to the Congregation before the Revolution. In all 43 theological and 9 preparatory seminaries (Maynard, II, p. 234). The Lazarists soon spread outside of France. In Italy, in 1641, a papal Bull authorized an establishment in Rome, and the Duchess of Aiguillon gave them a donation to devote their time to missions for the rural population, to labour for the clergy, the spiritual retreats for those to be ordained, etc. In 1697 the pope gave them the house and church of Sts. John and Paul on the Caelian Hill, but this has been exchanged for St. Sylvester's on the Quirinal. In 1645 they were called to Genoa, to Turin in 1655, to Naples in 1668. In St. Vincent's time they went to preach in Ireland and in the Hebrides; later Charles II called them to London for his chapel as Louis XIV had done in France for his chapel at Versailles. In Poland, in the time of John Casimir and his queen Louise Marie de Gonzaga, they were called to Warsaw in 1651, to Krakow in 1656, to Culm in 1677, to Vilna in 1687, and to many other cities, so that before the Revolution Poland was one of the most flourishing provinces. In Spain they were established in Barcelona and from there settled in several other cities. They reached Portugal in 1718 though not recognized by the king, John V, who up to this time was opposed to their dependence upon the superior general in Paris, but who afterwards favoured them and built them the magnificent house of Rilhafolles in the suburbs of Lisbon, a house which was confiscated by the Revolution. At the Revolution of 1834 there were six establishments of the Portuguese tongue.

(4) Foreign Missions among the Infidels.—Foreign missions had a place in the schedule of apostolic works drawn up by St. Vincent de Paul, and although this sort of labour did not develop among his sons before the Revolution to so great an extent as it did in the nineteenth century, yet from the beginning they gave themselves to this work. In 1645 the missionaries set out for Barbary, as they then called it. The regencies of Tunis and Algiers in the power of the Turks were a den of pirates where a great number of Christians taken prisoners by Turkish Corsairs were held captives. The Lazarists did mission work there, and from time to time they even fulfilled the duties of consul, when it was too difficult to find a layman for this office. Some were imprisoned by the Deys of Algiers, some were put to death at the cannon's mouth as John Le Vacher and Francillon. They kept this duty till, finally, in 1830, France destroyed that stronghold of pirates. The Lazarists of the seventeenth century also preached the Gospel in the Island of Madagascar, and in the eighteenth century in Bourbon Island and the Isle de France. They passed over into China, at first one by one, like Appiani and Pedrini during the nunciature of Cardinal de Tournon, and like Mullener who became Vicar Apostolic of Se-Tchuen. They were called to Macao, a possession of the Portuguese, by the Portuguese Government in 1784, and directed many houses of education there. After the suppression of the Society of Jesus and despite the refusal of the superior general because of the inadequate number of subjects, through an agreement between the King of France and the Propaganda at Rome, the Lazarists were charged with the duty of

taking the places, so far as they could, which had been held by the Jesuits in the Levant and in China (1782-1783). Father Viguier, a Lazarist, took possession of the mission at Constantinople and 8 May, 1785, another Lazarist, Father Raux, took possession of the mission of Pekin. At the outbreak of the French Revolution there were in France, Spain, Portugal, and the Palatinate along with the missions outside Europe about one hundred and fifty Lazarist establishments.

Under the Revolution.—Even before the Revolution in France many nations had been the prey of internal dissensions. In the first place must be mentioned Poland whose discords were leading it to dismemberment and ruin. In 1772, in the first partition of Poland, twelve houses of the Lazarists passed under foreign dominion, Austrian, Prussian, or Russian. The Polish houses which became Austrian disappeared before the exactions of Joseph II of Austria. The King of Prussia, who when taking his share of Poland had promised to respect religious institutions, soon began confiscating ecclesiastical property. Nevertheless, in 1789 the Polish province of the Lazarists still numbered twenty-two houses. A second and a third division took place in 1793 and in 1795, among Austria, Prussia, and Russia, leaving nothing of unhappy Poland. In the part that fell to Russia the Polish Lazarists constituted a new province called the Lithuanian, remaining as far as possible in communication with the superior general in Paris. The Polish uprisings of 1830 and 1863 drew down upon the Catholics the rigours of the Prussian and Russian Governments. The Lazarist houses at Culm, Gnesen, and Posen were suppressed by the laws of 1836. The houses in Russia, much more numerous, were destroyed by the Government in 1842 and 1864. It was only later, under the Austrian dominion, that the Polish Lazarists could reorganize. They have establishments on Austrian territory in Galicia and Bukowina. In the different states of Italy, where the princes of the House of Bourbon reigned, life was no longer an easy matter for religious communities. In the Kingdom of Naples they were forced under penalty of suppression to stop all intercourse with the houses of the community in foreign states and especially with the superior general. This state of affairs continued from 1790 till 1815. About 1789 the houses of the congregation in Italy were divided into two provinces: the province of Rome with twelve houses and the province of Lombardy with fifteen houses which included the foundations at Barcelona, Palma, and Barbastro in Spain. In Paris on the day after the taking of the Bastille the mob made an attack upon the house of St. Lazare which was one of the chief religious establishments in Paris. The furniture was broken and thrown out of the windows, the priests and students were obliged to disperse. The missionaries returned and banded together there some days afterwards, but they had to separate again in 1792, and to abandon this house in which St. Vincent had lived and died, and which was the central house of the congregation. The other house of the Lazarists in Paris, the old Collège des Bons Enfants, became the scene of still more dramatic events in 1792. On the second and third of September of this year massacres occurred in different establishments in Paris in which the Revolutionists had locked in the priests. The Abbey, Carmel, and St. Firmin served as prisons. In the last house more than seventy priests were cruelly massacred, among others the Lazarist superior of the establishment, Father Louis Joseph François and his confrère, Henry Gruyer. The superior general of St. Lazare, Cayla, at the Assembly, refused the oath of the Civil Constitution of the clergy. Among the members of his congregation several published learned protests against it and all refused it except a few, three of whom afterwards became Constitutional bishops. A goodly number died martyrs to their fidelity to the Church of

Rome. Some of these martyrs were François and Gruyer, massacred at St. Firmin in Paris, Matthew Caron, John Colin and John Gallois at Versailles. Many perished on the scaffold: Francis Bergon at Cahors, John Guibaud at Mans, Louis Hayer at Niort, Francis Martelet at Besançon. In addition, several succumbed in prison: Nicholas Bailly, Paul Brochois, Victor Julienne, and Angelus Bernard Lamourette, nephew of the Constitutional bishop, or on the prison-ships of Rochefort and at the Isle Madame, as John Janet and Nicholas Parizot; or at Sinnamari, as Claude Cuin.

Such is the tribute which the Congregation of the Mission paid during the bloody Revolution. As a result of the legislation concerning the Constitutional Church and the decrees of suppression of religious orders, all the establishments of the Lazarists in France were destroyed. At that time they had in France provinces comprising 78 houses with 824 members. Obligated to flee, the superior general, Cayla, took refuge in Rome, where he died 12 February, 1800. His death at a period when the scattered members of the congregation could not come together to elect his successor, began an interregnum which was full of difficulties. There were vicars-general; ordinarily two vicars-general governed simultaneously, one for the Lazarists in France and the foreign missions and as superior of the Daughters of Charity, the other had authority over the Lazarists of other countries. This provisional organization lasted until 1827, when a superior general was finally named. During these twenty-seven years the vicars general were as follows. On the death of the superior general, Felix Cayla, in 1800, Francis Brunet, his companion in exile at Rome and his assistant, was appointed vicar-general. Returning to France in 1804 Brunet lodged at the house of the Daughters of Charity and died there in 1806. Claude Placard, his successor, who seemed destined for a longer career, died the next year after an illness of three days. He was succeeded by Dominic Hanon. The zeal with which the latter strove to maintain the authority which the superior general used to exercise over the Daughters of Charity drew upon him the animosity of the imperial power and he was imprisoned in the fortress of Fenestrelle. He did not regain his liberty until 1814 when he returned to Paris where he died in 1816. The next year he had as his successor Charles Verbert, who lived till 1819. On his death Charles Boujard was invested with the vicar-generalship, like his four predecessors, and it was under his government, lasting about eight years, that the congregation succeeded in reorganizing, and noticeably increased. These five vicars-generals were French and resided in Paris. The Italian vicars-general residing in Rome were Dominio Sicardi from 1804 to 1818 and Antony Baccari from 1819 to 1827. Even under the provisional régime of the vicars-general, the work of preaching, of the seminaries, and of the foreign mission was gradually re-established. In France as early as 1819 Verbert saw gathered around him a considerable body of young men and of ecclesiastics already formed and could state that the Lazarists had houses at Amiens, Soissons, Sarlat, Montauban, Vannes, Valfleury, St. Etienne (Circular letters, II, 351). At the same period some of the houses in Italy that were suppressed by the Revolution reopened. There were six houses in Spain, six also in Portugal, counting the college at Macao which was a Portuguese possession. The province of Poland or of Warsaw numbered twelve houses. The Lithuanian province because of political circumstances had but little intercourse with the superiors of the congregation. The foreign missions had to suffer too from the critical conditions brought about by the Revolution in those countries whence they drew their supply of missionaries. This period of expectation was followed by a period of expansion.

After the French Revolution.—After the sanguinary crisis of the Revolution, the way was gradually paved for the restoration of the congregation. It was not until 1827, however, that its abnormal situation ceased when the two vicars-general Bonjard in France and Boccari in Rome having resigned, Pope Leo XII, by a Brief of 16 Jan., 1827, nominated Peter Dewailly superior general. In 1804 an imperial decree dated 27 May re-established the Congregation of the Lazarists; in 1816, under the Government of the Restoration a royal ordinance recognized it in the condition in which it had been placed by the Act of 1804. It was especially on the basis of these two decrees that the Council of State of 16 Jan., 1901, considered the Congregation of St. Lazare as legally recognized in France. The old house of St. Lazare having been transferred by the State to the public service, the Government handed over to the use of the congregation a piece of property situated at Rue de Sèvres 95, the Hôtel des Longes, and here Verbert, the vicar-general, entered with his community still small in number, 19 Nov., 1817. Some adjoining ground on the Rue de Sèvres was bought partly by King Charles X for the building of a chapel, which was blessed by Mgr. de Quélen, Archbishop of Paris, 1 Nov., 1827. The following is a list of the superiors general who have been elected by the general assemblies held in Paris down to 1910. After Peter Dewailly died, 23 Oct., 1828, the general assembly of 15 May, 1829, selected as his successor Dominic Salhorgne. He had the consolation of seeing the relics of St. Vincent which had to be hidden during the Revolution brought back in solemn state to his religious family in 1830. Under the weight of age and infirmities he resigned in 1835. The general assembly named as his successor John Baptist Nozo who was succeeded in 1843 by John Baptist Etienne whose long and most successful generalship continued until his death in 1874. Then Eugene Boré was elected, a man well known in the world of literature and science. Death claimed him after four years, and in 1878 the general assembly made Anthony Fiat his successor, and he is now, 1910, at the head of the congregation.

The work of the congregation has remained unchanged save for adaptations to new circumstances. Missions at home are no less necessary than formerly. A special consideration makes them more than ever the objects of solicitude. It is that the people of our democratic age have acquired an influence and an authority which they never exercised before. Besides missions to the people, the congregation has adapted its methods in seminaries to new conditions. In the seventeenth and eighteenth centuries clerics received their formation chiefly at the universities or in the colleges of the chief cities; clerics who did not study there unfortunately but too often did not study at all. In this state of affairs it sufficed to provide seminaries as ecclesiastical homes for clerics who went out to follow the courses in the universities and colleges of the city. In the seminary there was a course in liturgy; the students were helped to make for themselves a practical abridgment of moral theology and when the time came they were aided by the exercises of the retreat to prepare for ordinations. Two or three priests at most sufficed for such establishments. To-day all is changed in this regard. Seminarians ordinarily spend all their time within the walls of the seminary. The seminary gives them ecclesiastical instruction in philosophy, history, exegesis, canon law, and theology, teaching that they could not find outside save in a few universities. Seminary life no longer lasts for some months only, as it usually did in the seventeenth and eighteenth centuries, but for several years, so that the faculty required for a seminary, whether it be composed of members of a community or of the secular clergy, must be much more numerous and specially equipped

for scientific training. The Congregation of the Mission had then to adapt itself to the new order of things. Finally, as to the foreign missions, new facilities of travel and communication, and new means of influence and of intercourse with pagan or savage peoples have given a new character to the work of evangelization, requiring missionary bodies to change their methods to meet these changed conditions.

IV. LITERARY AND SCIENTIFIC ACTIVITY.—*Teaching.*—The method of teaching which prevails in Lazarist colleges and seminaries, is that of explaining a well chosen text of some approved author from whose opinions even the professor is not allowed to depart, except by the express permission of his superiors. Such a text is placed in the hands of the pupils, who learn a portion of it, and receive explanations and comments from the professor. Individual research is encouraged but within limits suggested by the practical character of Lazarist college and seminary training. Conformably to the commands and recommendations of Leo XIII and Pius X, philosophy and theology are taught in accord with the doctrines of St. Thomas and of his most authorized interpreters. Novelties in doctrine are distinctly discouraged, while professors are bidden to make themselves acquainted with modern errors, for refutation. *Writings.*—The life of Lazarists is above all, an active life, in college, in the seminary, and on the missions, hence their writings have been called forth for some practical utility, or as a result of their scientific explorations and their journeys as missionaries. The following are noteworthy as writers: (1) Theology.—Collet, Peter, a Frenchman (b. 1693; d. 1770), professed theology with success in Paris. When Tournely died (1729) leaving unfinished a course of theology which the university and the seminaries held in high esteem, Cardinal Fleury, then prime minister, invited Collet whose talents he knew, to continue and complete the work, which Collet did with much success, publishing "Continuatio Praelectionum Theologicarum Horatii Tournely" in 8 volumes (Paris, 1733-1760). He made an abridgment of this work as a class book of theology for seminaries. "Institutiones theologiae quas a fusiore suis editis et ineditis ad usum Seminariorum contraxit Petrus Collet" (Paris, 1744, 5 vols.). Whilst engaged in this great work, Collet composed more than forty volumes on different theological, canonical, liturgical, and devotional subjects. Brunet, Francis Florentin (b. in France, 1731; d. 1806), wrote a "Parallèle des Religions" in 5 volumes 4° (Paris, 1792), which by its abundant researches paved the way for the comparative histories of religion now so much in vogue. Morino, John, visitor of the Neapolitan province, issued in 1910 the seventh edition of his Moral Theology. MacGuiness, John, a native of Ireland and professor in the Irish College in Paris, has recently published a second edition of a complete course of theology. McNamara, Thomas, a pioneer Irish Vincentian, published many books of great utility to the clergy, the best known of these is "Programme of Sermons and Instructions", which is still much used.

(2) Works on Canon Law and Liturgy.—De Martinis (b. in Italy, 1829; died 1900), Archbishop of Laodicea, published "Juris Pontificii de Propaganda Fide, Pars Prima continens Bullas, Brevia, Acta S.S. a Congregationis institutione ad praesens, juxta temporis seriem disposita" (Rome, 1888-1897, 7 vols., in quarto), a collection of documents emanating from the Propaganda in every respect superior to any preceding collection. Baldeschi, Joseph (b. in Italy, 1791; d. 1849), published an "Esposizione delle Sacre Ceremonie" (Rome, 1830, 4 vols., 24mo.), which has been translated into various tongues. Mancini, Calcedonio (d. 1910) began at the Lazarist house of Montecitorio, Rome, in 1887, the publication of a monthly review,

"Ephemerides Liturgicæ," which is still issued. Buroni, Joseph (b. in Piedmont, 1821), besides theological and liturgical writings, has published several philosophical works, the chief is "Dell' Essere e del Conoscere" (Turin, 1877); he had previously issued a large portion of it under the title "Della Filosofia di Antonio Rosmini saggio di Giuseppe Buroni" (1877-80). (3) Languages.—Led by their ministry to speak the languages of the nations they evangelized the Lazarists have issued divers works in or concerning these languages. Caulier, Philip Albert (b. in France, 1723; d. 1793), composed an abridged catechism in the language of Madagascar, and wrote a Malagasy grammar for the Antanosy dialect. Gonsalves, Joachim Alphonsus, published among other works in the Chinese language, "Lexicon Magnum Latino-Simicum ostendens etymologiam, prosodiam et constructionem vocabulorum" (Macao, 1841, in folio). Viguier, Peter Francis (b. France, 1745; d. 1821), published "Elements of the Turkish Language, or Analytical Tables of the ordinary Turkish Language with developments" (Constantinople, Printing Press of the Palais de France, 1790, 4°). Coulbeau, John Baptist (b. in France, 1843), has published in the *glez* language or primitive Ethiopian tongue, the "Missal of the Ethiopian Rite" (Kerew, Printing Press of the Catholic Mission, 1890) and other works. He also published other books in Armariḡna, the present idiom of Abyssinia, for example "Dialogues on the Things of Faith" (Kerew, Printing Press of the Catholic Mission, 1891). Schreiber, Jules, compiled a manual of the Tigray language spoken in Central and Northern Abyssinia (Vienna, 1887) and Gren, John (b. in Germany, 1842; d. 1907), "La Lengua Quichua", a dialect of the Republic of Ecuador (Freiburg, 1896, in 12mo). More than half a million Indians in Ecuador, says the author, understand no language but the Quichua. He also wrote the first grammar and dictionary of this language. Bedjan, Paul, a Persian Lazarist, has written and published many works for the use of his fellow countrymen. During twenty years he printed more than forty volumes in the Syriac and Neo-Aramaic, reproducing almost all the ancient MSS. hitherto unpublished in the various branches of ecclesiastical science and history. The latest is the most curious and important, the hitherto unpublished autobiography of Nestorius, "Nestorius, Le Livre d'Heraclide de Damas édité par Paul Bedjan, Lazariste" (Leipzig, 1910, in 8°).

(4) Travels and Scientific Explorations.—Huc, (q. v.) Evariste-Régis (b. in France, 1813; d. 1860), published "Travels in Tartary, Thibet, and China" (Paris, 1850, 2 vols. in 8°), which was immediately translated into many languages. Later he published a sequel, "The Chinese Empire" (Paris, 1854, 2 vols. 8vo), and finally "Christianity in Tibet, Tartary, and China" (Paris, 1854, 4 vols. 18mo). David, Armand (b. in France, 1826; d. 1900), corresponding member of l'Institut de France, travelled in the East and Far East. Commissioned by the Museum of Natural History of Paris to make explorations, he enriched the collection by numerous discoveries. He wrote "Journal of Travel in Central China and in Eastern Tibet" which appeared in "Nouvelles Archives du Muséum" VIII, IX, and X, "Journal of my Third Tour of Exploration in the Chinese Empire" (Paris, 1875, 2 vols. 8°). Besides numerous studies edited by him, there are several works published at the expense of the French Government describing the scientific discoveries of David: "The Birds of China with Atlas of 124 plates" (Paris, 1877); "Plantæ Davidianæ ex Sinarum Imperio par Frarichet" (Paris, 1884, 2 vols. 4°), etc. Boccardi, John Baptist, has published astronomical studies of observations made at the Vatican Observatory and at Catania. He is the director of the Royal

Observatory of Turin (1910). Many of his studies have appeared in the "Bulletin Astronomique de l'Observatoire de Paris" 1898, 1899. See "Notices Bibliographiques sur les Écrivains de la Congrégation de la Mission" (Angoulême, 1878, 8°). The English edition of the "Annals of the Cong. of the Miss.", Nos. 38 and 39 (1903), contains in thirty closely printed pages a list of books published by the Lazarists in various languages.

V. PRESENT STATUS.—*The Lazarists in Europe.*—The mother-house, the residence of the superior general of the whole congregation, is at Paris, 95 Rue de Sèvres. This central residence is also a house of formation with its internal seminary, or as it is often less accurately called, its novitiate and scholasticate. A second house of formation is established at Dax, a city a little south of Bordeaux. In 1900 there were about fifty establishments in France, missions, seminaries, and colleges. Since 1902 and 1903 the greater number of these establishments had to be abandoned when a large number of the establishments of communities were closed, and when congregations not authorized by the State were suppressed. France has hitherto supplied almost exclusively subjects for the Lazarists' missions in China, Persia, the Levant, Abyssinia, and the different countries of South America. In Germany, where the Lazarists had been established since 1832, they were expelled by the Kulturkampf (1873), and since then they have establishments on the frontier of their country in Belgium and Holland. There are establishments in Syria, and in Central America at Costa Rica. In Austria there are two centres of activity for the Lazarists, one at Gratz for the houses of Austria and Hungary, the other, Polish in language, at Krakow for the establishments of Galicia and Bukowina, and for the colonies of Polish emigrants to America. In Spain, where the works of the Lazarists are in a flourishing condition, the houses are divided into two provinces, Madrid and Barcelona. The Spanish Lazarists furnish to a great extent labourers for several of the old Spanish colonies, Cuba and Porto Rico, Mexico, and the Philippine Islands. They were twice expelled from their country by the revolutions of 1835 and 1868. They have been recognized by the Governments since the Concordat of 1851. In Portugal where they had six houses before the political and religious revolution of 1835, they have gradually been restored both on the mainland and in the Madeira Islands, where they are engaged in their former works. The Congregation of the Mission in Italy has felt the political vicissitudes of that country in the nineteenth century, the Napoleonic wars with their suppression of religious houses, the confiscation of ecclesiastical property by the Italian princes in 1848, 1860, and 1873. At the present time there are 38 houses divided into three provinces, Turin, Rome, and Naples. As to Belgium and Holland, it is chiefly since the difficulties in France that the Lazarists have secured in these countries houses for the missions and especially for the training of their young men. The congregation has taken up again work in Northern Africa, in Algiers. There is a vicariate Apostolic in southern Madagascar and another in Abyssinia, and there are establishments at Alexandria in Egypt. They have also founded schools in the Levant, Turkey in Europe, and Turkey in Asia. There are prominent colleges in Constantinople, in Smyrna, and in Antoura near Beirut. They have also other establishments for missions and education, near Constantinople, at Bebeck, in the Archipelago at Santorin, in Macedonia, Salonica, at Cavalla and at Monastir near Salonica; at Zeitenlik they maintain a seminary for the Bulgarian Rite, the hope for the religious regeneration of that country. In Syria they are engaged in the same work in various houses. In Persia where the Lazarists have had establishments since 1840, and where, since 1842,

the Holy See selected from their number the prefects Apostolic and the Apostolic delegate for that country, they exercise the apostolate by preaching and by works of charity. One of the Lazarist missionaries in Persia said forty years ago: "No mission is so militant and perhaps also so difficult as this."

In China, which is one of the widest fields for apostolic labour, the Lazarists are in charge of the important missions of Peking and of several vicariates Apostolic. Sent to China towards the close of the eighteenth century, during the early part of the nineteenth century they passed through most trying times. Persecutions burst forth sometimes in certain localities, sometimes everywhere. In 1820 Francis Régis Clet (q. v.), a Lazarist, died a martyr, and in 1840 Jean-Gabriel Perboyre (q. v.) had a like fate and like honour. Both have been beatified. The work of spreading the Gospel was not interrupted, however. Apostolic work has been prosperous. Instead of the old residence of Petang at Peking a new and much more commodious residence has been erected on a large tract of land given by the Chinese Government and a new cathedral was begun in December 1888. This important work was begun and finished by the bishop, Mgr Tagliabue, and Rev. A. Favier who after became Bishop of Peking. Around the cathedral of Peking are grouped the theological and preparatory seminaries, a printing office, schools, and charitable institutions. Apostolic zeal has not grown lax. In 1908 the Lazarists of the Vicariate of Peking had the joy of numbering more than thirty thousand baptisms of adults. The total for the last five years was fully, if not beyond, one hundred thousand conversions. The Lazarists in China have six other vicariates Apostolic with their centres at Young-Ping-Fou and Ching-Ting-Fou in Tche-Ly; Ning-Po in the Province of Tche-Kiang; Kiou-Kiang, Fou-Tcheou-Fou and Ki-Ngan-Fou in the Province of Kiang-Si. In the missions entrusted to the Lazarists in China there are at present one hundred and forty-five European Lazarists and thirty-five Chinese Lazarists, eleven secular priests from Europe and eighty-nine native secular clergy. The Lazarists in China have two internal seminaries or novitiates. The procurator of these missions resides at Shanghai.

Such are the works of the Congregation of the Mission carried on by its 3249 members (1909), priests, students, lay brothers, and novices. It may be added that wherever they are, there is commonly to be found the other congregation founded by St. Vincent, the Daughters or Sisters of Charity (*Cornettes*). Such is the case in Europe, in America, and even on the foreign missions as in Madagascar, Persia, Syria, China. They number (1910) more than 30,000 and labour also in places where the Congregation of the Mission is not established.

The English Speaking Lazarists.—(1) The Irish Province.—During St. Vincent's lifetime his priests were sent to Ireland at the request of Innocent X, to help the persecuted Catholics. Eight priests went to Limerick and Cashel. In Cashel and the surrounding towns they gave missions and heard eighty thousand general confessions. In Limerick too their success was most marked and its memory is not yet dead. But new and terrible persecutions under Cromwell, forced the missionaries to go into hiding and ultimately to fly the country. A lay brother who had accompanied them died a martyr's death. When Maynooth College was founded in 1798, Father Edward Ferris, an assistant of the superior general, was allowed by his superiors to come to the aid of the new college. Archbishop Troy of Dublin had asked for him and made him dean of the new seminary. A few years later he took the chair of moral theology which he held until his death, 26 November, 1809. There is a tradition that his copy of the "Rules" of the congregation, found at Maynooth after his death, gave the first

impulse to what resulted in the establishment of the community in Ireland. Early in the last century when the lack of church accommodation had been partially supplied, the desire of establishing Lazarists or some kindred institute for missions in Ireland was expressed by Dr. Doyle who had known them in Coimbra, by Dr. Maher who had been with them at Montecitorio and by Father Fitzgerald, O.P., of Carlow College, but nothing was done. In 1832 four young men at Maynooth approaching ordination, impressed by the dangers surrounding the ministry, and the importance of working for God and the salvation of souls, agreed that a community life was desirable for them. They were James Lynch, Peter Richard Kenrick, Anthony Reynolds, and Michael Burke, all of the Diocese of Dublin. On consulting with the senior dean, they were directed to the Congregation of the Mission. The dean, Father Philip Dowley, soon after became their leader. He had just been made vice-president of the college but resigned. About this time they were joined by Father Thomas McNamara, a valuable recruit, as his powers of organization contributed greatly to the success of the missions and other works of the congregation in Ireland. With the approval of Archbishop Murray a small college was opened in Dublin to serve as a preparatory seminary. Another newly-ordained priest, Rev. John McCann, supplied the funds for the purchase of Castleknock. In 1838 the little church in Phibsborough, a suburb of Dublin, was placed in the hands of Dr. Murray of Dublin, to which he soon added a foundation for two annual missions. It was for missions they had banded together, but though they gave three in their neighbourhood, other works took up all their energies. By this time they had lost Father Anthony Reynolds by death. Father Peter Richard Kendrick joined his brother, then Bishop of Philadelphia, and subsequently became Archbishop of St. Louis. Overtures were made to the congregation in Paris for the aggregation of the Irish community and this was soon accomplished; two of the Fathers beginning their internal seminary course or novitiate in Paris and finishing it in Ireland under Father Girard were delegated by the superior to form these postulants.

Father Hand who had early joined the community left before this time to found All Hallows College at Drumcondra for the foreign missions. The first mission of these Lazarists was given in Athy in Dublin Diocese. It was the introduction of the modern mission into Ireland. At this and the following missions the people attended in thousands and the confessionals were thronged night and day. The church at Phibsborough has given place to a fine Gothic structure. Here the devotion to the Sacred Heart was promoted most vigorously after the consecration of Ireland to the Sacred Heart by the bishops in 1873. Here too the care of the poor led Father John Gowan, C.M., to found a flourishing community of sisters called Sisters of the Holy Faith (q. v.) recently approved by Rome. The beginnings in Cork were similar to those of Dublin. A priest of high standing desired to open a house for missionaries, on the model of the congregation but with some modifications. He began by opening a day college. He was the Rev. Michael O'Sullivan, vicar-general of the diocese. For some years the college succeeded, but afterwards did not get on so well. He then offered the college to the superior at Castleknock and entered as a member of the community. Two who as superiors had a large share in the development of the Cork foundation afterwards became bishops, Dr. Lawrence Gillooly (1819-1895), Bishop of Elphin, and Dr. Neil McCabe, Bishop of Ardagh. In 1853 a church in Sheffield where there was plenty of work among the poor was confided to the congregation.

St. Vincent himself had sent a member of his community to the French consul in London in the hope of

getting some foothold for his community in England where they might aid the persecuted Catholics, but in vain. Sheffield was the first foundation in England and it has become a mission centre partly endowed by the Duke of Norfolk. A house was established in Mill Hill, London, in 1889, and it is now a parish, and has the direction of the provincial house of the Sisters of Charity. A normal college at Hammersmith was entrusted to the Lazarists in 1899. In Scotland, Fathers Duggan and White laboured in St. Vincent's time, sent thither by him. Father Duggan worked zealously in the Hebrides travelling from place to place until his labours were cut short by death. Father White's busy life of missionary travel on the mainland of Scotland was interrupted by his imprisonment in Cromwell's time; on his release with the condition that if he be caught preaching or baptizing he would be hanged without trial, he resumed his work undaunted in the mountain districts. But it was not until 1859 that the first Scotch house was established at Lanark. The magnificent church destroyed by fire in 1907 has been rebuilt and the work of giving missions has gone on uninterruptedly.

In 1840, the houses of Ireland were formed into a Province and Rev. Philip Dowley (1788-1864), was appointed visitor. He was succeeded in 1864 by Father Thomas MacNamara (1809-1892), a man of great zeal and learning, who did much for the spiritual welfare of the deaf-mutes in Ireland and was head of the Irish College from 1868 to 1889. Father Duff (1818-1890) became visitor in 1867. He was followed, in 1883, by Father Morrissey who resigned in 1909, after a most successful career and was succeeded by Rev. Joseph Walsh. The novitiate was started in 1844 at Castleknock. Prior to that, and even to some extent afterwards, the novices were trained at the mother-house in Paris. In 1873, a new site was secured and the novitiate transferred thither. It is known as St. Joseph's Vincentian Novitiate, Blackrock, near Dublin. In 1858 the Irish College in Paris (q. v.), founded in the last years of the sixteenth century, was transferred to the Irish Vincentians. Father Lynch, the leading spirit of the young priests who founded the congregation in Ireland, was consecrated bishop while head of this college; going first to Scotland, and afterwards to the See of Kildare and Leighlin. Armagh seminary was confided to them by Dr. Dixon in 1861. About 1888, the Irish Lazarists were made spiritual fathers at Maynooth, then according to Cardinal Newman the most important ecclesiastical seminary in Catholic Christendom. In 1875, a training school was begun at Drumcondra, Dublin, and in 1883 it was superseded by the newly founded normal college entrusted to the Irish Lazarists by the Government. In the space of twenty-six years it has sent out over 2300 Catholic teachers. All Hallows College (q. v.) was placed under the care of the Lazarists in 1892. The Australian mission of the Irish Province was begun in 1885 with a most successful series of missions from their new mission house in New South Wales. At the urgent request of Bishop Patrick Joseph Byrne they assumed charge of St. Stanislaus College, Bathurst, New South Wales, which had been founded some years previously. A mission centre and parish were established at Malvern near Melbourne in 1892. The Irish Province numbers (1910) 125 priests, 30 lay brothers, and 20 scholastics.

(2) The United States Province.—The Congregation of the Mission was brought to the United States in 1816 by Bishop Dubourg (q. v.) of New Orleans. His diocese comprised both upper and lower Louisiana as it was then called. Upper Louisiana to which he sent the Lazarists included what became afterwards the States of Arkansas, Missouri, and Illinois and all the territory north and west of these states. There were but four priests there at this time and three of them died soon afterwards. He succeeded after some difficulty

in getting three Lazarist priests, with a brother, to head a band of twelve apostolic workers for his vast territory. They were Rev. Felix de Andreis (q. v.), Joseph Rosati, John Baptist Acquaroni, and Brother Blanka. Bishop Ryan of Buffalo wrote of them as coming "to do for religion and the Church in the distant and still undeveloped West what a Carroll, a Cheverus, a Flaget, and other great and holy men had done and were doing in other parts of the country" (Early Lazarist Missions and Missionaries, 1887). They embarked 12 June, 1816, on an American brig bound for Baltimore, reaching there 26 July. They were welcomed at St. Mary's Seminary by Father Bruté. On their way to St. Louis, they stopped all winter at Bardstown, where Father de Andreis taught theology in St. Thomas' Seminary. He had already taught it with great success at the College of the Propaganda in Rome. He was, however, eager to go and preach the Gospel to the poor savages and studied the Indian language with this design. On 8 Jan., 1818, Father de Andreis settled down as pastor of St. Louis and vicar-general of the diocese, an appointment he had received on leaving Rome. He writes: "It will not be easy to establish our missionaries on the same footing as in Italy. Here we must be like a regiment of cavalry or flying artillery ready to run wherever the salvation of souls may require our presence." Several of those who came from Europe at Bishop Dubourg's invitation joined the little community. Father Joseph Cosetti died on the eve of his reception into the internal seminary. Father Andrew Ferrari, F. X. Dahmen, a subdeacon, and Joseph Tichitoli, a subdeacon, were admitted to the novitiate on 3 Dec., 1818, in St. Louis.

Early in 1818 the beginnings of an establishment were made at the Barrens, Perry Co., Missouri, and thither the novitiate was transferred and placed under Father Rosati. In 1820, a small log house twenty-five by eighteen feet was occupied by priests, seminarians, and brothers. In 1820, shortly after writing to Father Rosati of his joy at the near prospect of going to work among the Indians, Father de Andreis died in the odour of sanctity. The process of his beatification has been begun (1910). In a few years a large brick building arose and gradually the splendid group of buildings, church, mother-house of the Lazarists of the West, and apostolic college were added. The early days were full of missionary activity for the new community. They gave the first real impetus to the progress of the Church in Illinois, Missouri, Arkansas, Indiana, Mississippi, and Texas were the scenes of missionary journeys. Here and there churches were established but these were generally relinquished, as diocesan priests were found to take them. Father Rosati, who had been appointed superior by Father de Andreis, wrote in 1822: "We are, 19 March, ten priests, three clerics, and six brothers." He refused the post of Vicar Apostolic of Florida and only the peremptory command of the pope made him accept the coadjutorship of New Orleans. Though overburdened with work he continued still to hold the office of superior of the Lazarists until 1830 when Father Tornatore arrived from Rome.

In the year 1835 the province of the United States was formed. Rev. John Timon, born at Conewago, Penn., in 1797, was appointed visitor. He became first Bishop of Buffalo, dying in 1867. With Father Odin (q. v.), afterwards Archbishop of New Orleans, he had done great work in Texas where the Lazarists succeeded in having the State restore to the Church the property it had taken when Texas separated from Mexico. The parish of La Salle, Illinois, a centre for the missionary labours of the Lazarists, was established in 1838 and they still minister to the faithful there. The same year, 1838, a school was begun at Cape Girardeau, Missouri, by Father Odin where

a church had been opened two years before. This was the commencement of St. Vincent's College, Cape Girardeau. In 1893, the theological department of the Cape was transferred to the Kenrick Seminary in St. Louis directed by the Lazarists with Aloysius J. Meyer as superior. In 1900 a preparatory seminary was added to the theological department in St. Louis. The Seminary of the Assumption of Bayou La Fourche was placed in the hands of the Lazarists by Bishop Blanc. It was destroyed by fire. Rebuilt in New Orleans it was not occupied until the Lazarists opened there the seminary of St. Louis, but the fewness of the candidates for the priesthood did not justify a separate institution and it was closed again in 1907. Since 1849 St. Stephen's Church in New Orleans with its schools, hospitals, and orphan asylum has been cared for by the Lazarists. They also have charge of St. Joseph's, established in 1858 and St. Catherine's, for the coloured people of the whole city.

Between the years 1842 and 1847 the Bishops of Cincinnati, Louisville, Philadelphia, and New York urged the visitor to take charge of their respective seminaries, to which by the advice of his council he consented. These seminaries remained in the charge of the Lazarists for a few years, but most of them were given up owing to the withdrawal of European Lazarists to their own land where religious disturbances had ceased, and the promotion of members to the episcopacy. The New York seminary, after its removal from La Fargeville to Fordham was accepted by the Lazarists at the request of Bishop Hughes. Father Anthony Penco, who was made superior, did not approve of the seminarians teaching in the college, so the community retired from the work. For eleven years the Lazarists had charge of the diocesan seminary at Philadelphia. They had been invited there by Bishop Francis Patrick Kenrick. His former professor at the Propaganda, Father Tornatore, presided for a time over the seminary. The community withdrew from the seminary, in 1854, when Father Thaddeus Amat (q. v.) the superior was made Bishop of Monterey, Cal. The College or Seminary of Our Lady of the Angels was founded in 1856 by Rev. John Joseph Lynch, who left it when called to become Bishop and Archbishop of Toronto. It became the Niagara University in 1883. Its deceased presidents have been Rev. John O'Reilly (b. 1802; d. 1862), Rev. Thomas J. Smith, afterwards visitor, Rev. R. E. V. Rice (b. 1837; d. 1878), and Rev. P. V. Kavanaugh (b. 1842; d. 1899). The Immaculate Conception parish in Baltimore was founded by the Rev. Mark Anthony in 1850. He was succeeded by the saintly Father Joseph Giustiniani (b. 1811; d. 1886) who built the present beautiful church and schools. In 1850 the parish at Emmitsburg, Md., was placed in charge of the Lazarists and there resided the Rev. Mariano Maller, first director from St. Vincent's priests of the Sisters of Charity when Mother Seton's Sisters were affiliated to the central house in Paris. Father Maller's successors in the office of director of the Daughters of Charity of the province of the United States were Rev. Francis Burlando (b. 1814; d. 1873), 1853-1873; Rev. Felix Guedry (b. 1833; d. 1893), 1873-1877; Rev. Alexis Mandine (b. 1832; d. 1892), 1877-1892; Rev. Sylvester V. Haire, 1892-1894; Rev. Robert A. Lennon, 1894-1907; Rev. James J. Sullivan, 1907. This province was divided in 1910, Rev. J. J. Sullivan becoming director of the western with headquarters at St. Louis, Mo., and the Rev. John P. Cribbins director of the eastern and residing at Emmitsburg, Md. St. Vincent's Church, Germantown, was established in 1851 by Father Domenec, who was consecrated Bishop of Pittsburgh in 1860. The mother-house for the United States was transferred from St. Louis to Germantown in 1868. There magnificent buildings in Cheltenham Avenue have been erected, including a house of studies, an internal

seminary, and an apostolic school, as well as a beautiful church.

Father Philip Borgna laboured in Brooklyn at St. Mary's Church, Williamsburg, during the year 1843-44. A later date, 1868, saw the beginnings of St. John the Baptist's Church and College, the growth of which has been constant. The first president was Father John Theophilus Landry (b. 1839; d. 1899). The diocesan seminary of Brooklyn (1891) has been under the care of the Lazarists since its establishment. In 1865 Los Angeles college was opened. From 1875 in Chicago dates St. Vincent's Church and College, now De Paul University. In 1888 the province of the United States was divided; the western, with the mother-house at the old St. Mary's Seminary, Perryville, Missouri; the eastern retaining as the newer mother-house, St. Vincent's Seminary, Germantown. In 1905 Holy Trinity College, with an especially fine equipment for engineering, was built at Dallas, Texas, and St. Thomas' Seminary at Denver, Col., in 1907. A mission house was opened at Springfield, Mass., in 1903 and another at Opelika, Alabama, 1910. Mission bands are also stationed at Germantown, Pa., and at Niagara, N. Y., in the East, and at St. Louis and Perryville, Mo., in the West.

Since Father Timon the visitors have been: Rev. Mariano Maller (b. 1817; d. 1892), 1847-1850; Rev. Anthony Penco (b. 1813; d. 1875), 1850-1855; Rev. John Masnou [pro-visitor] (b. 1813; d. 1893), 1855-1856, recalled to Spain and made visitor there; Rev. Stephen V. Ryan (b. 1825, d. 1896), 1857-1867, when he was made Bishop of Buffalo; Rev. John Hayden (b. 1831; d. 1872), 1867-1872; Rev. James Rolando (b. 1816; d. 1883), 1872-1879; Rev. Thomas J. Smith (b. 1832; d. 1905), 1879-1905. In 1888 the Rev. James McGill became head of the eastern province; at his resignation (1909), the Rev. P. McHale became visitor. In the West Father Smith's successors have been Rev. William Barnwell (b. 1862; d. 1906, a few months after his appointment) and the present visitor the Rev. Thomas Finney. The two provinces number over two hundred priests who have charge of six colleges, one preparatory seminary, two apostolic schools for students aspiring to become Lazarists, four theological seminaries, about fifteen churches, and about eighty lay brothers and scholastics. Lazarists from the Polish province have churches for their fellow countrymen, at Conshohocken and Philadelphia, Penn., at Derby and New Haven, Conn., whence also they go to preach Polish missions. The Polish Lazarists are also preparing to build a college at Erie, Penn., 1910. Two Lazarists from Barcelona province in 1908 began work for the Spanish in Philadelphia, where they have a church and conduct night classes, and an employment agency. The establishments of the Lazarists at Ponce and San Juan, Porto Rico, as well as those at Manila, Calbayog, Cebu, Jaro, and Nueva Caceres in the Philippine Islands may also be mentioned in connexion with the Lazarists of the United States.

B. RANDOLPH.

Missionaries of St. Charles Borromeo, CONGREGATION OF, founded by John Baptist Scalabrini, Bishop of Piacenza, Italy (d. 1 June, 1905); approved in principle by Leo XIII in a Brief dated 25 November, 1887; constitution definitively approved by a decree of the Sacred Congregation of Propaganda, 3 October, 1908. The expediency of providing for the spiritual—and also, in some degree, for the temporal—needs of Italian emigrants to America was forcibly brought home to Bishop Scalabrini by the pathetic spectacle of a number of such emigrants waiting in the great railway station of Milan. Acting upon this inspiration, and encouraged by Cardinal Simeoni, then Cardinal Prefect of Propaganda, the bishop acquired at Piacenza a residence which he converted into "The Christopher Columbus Apostolic Institution", forming there a community of priests which was to be the nucleus of a new congregation.

This congregation, which was henceforth to be known as the "Missionaries of St. Charles Borromeo", was to be governed by a superior-general, dependent upon the Congregation of Propaganda; its aim was to maintain Catholic faith and practice among Italian emigrants in the New World, and "to ensure as far as possible their moral, civil, and economical welfare"; it was to provide priests for the emigrants, as well as committees of persons who should give the good advice and practical direction needed by poor Italians newly arrived in foreign ports; to establish churches, schools, and missionary homes in the various Italian colonies in North and South America, and to train youths for the priesthood. The members of the congregation promise obedience to their superiors in the congregation and the ecclesiastical hierarchy.

Seven priests and three lay brothers of Bishop Scalabrini's institute left Italy, on 12 July, 1888, of whom two priests and one lay brother were bound for New York, five priests and two lay brothers for various parts of Brazil. On this occasion, Cesare Cantù, the famous Italian historian, addressed to the Bishop of Piacenza some memorable words of congratulation, asking leave to add to the bishop's blessing on the departing missionaries, "the prayers of an old man who admires a courage and an abnegation so full of humility". A welcome had already been assured these first missionaries of the congregation by a commendatory letter (1 June, 1888) of Leo XIII addressed to the American bishops.

Immediately after their arrival in New York the new missionaries were enabled to secure a favourable site in Centre Street, where there was a colony of Italians, and in a short time a chapel was opened; soon after this the church of the Resurrection was opened in Mulberry Street; lastly, a building in Roosevelt Street, which had been a Protestant place of worship, became the property of the mission fathers who transformed it into the church of St. Joachim, the first specially Italian church in the Diocese of New York. The Society of St. Raphael (see EMIGRANT AID SOCIETIES) was organized at Ellis Island. The good work thereafter spread rapidly through the continent. The United States and Canada now (1910) contain 21 parish churches, besides several chapels, served by the congregation; in Brazil the fathers have charge of 13 parish churches, mostly with schools attached, and 2 important orphanages. The two provinces (Eastern and Western) of the congregation in the United States number 45 priests and 3 lay brothers, while the single province of Brazil numbers 35 priests and 5 lay brothers.

VICTOR CANGIANO.

Missionaries of St. Francis de Sales of Annecy.—Amid the many activities to which St. Francis devoted himself, he long had the desire to found a society of missionary priests. This wish, however, was not to find its realization until nearly two cen-

turies after his death. At that time Monseigneur Riley, a successor of the Saint in the See of Annecy, broached the subject of such a society to Father Mermier, who had been considering the same idea. Accordingly, Father Mermier put the design into execution. In 1830 the institute was formed with La Feuillette as the site for the mother-house. This was solemnly blessed by the bishop on 8 August, 1837, and the congregation canonically instituted by him on 8 October, 1838. The society was not to be a mere association of priests, but a new religious congregation, bound by simple vows. Hence Father Mermier, the first superior-general, offered himself and his companions to the pope for foreign missions. In 1845 his offer was accepted by the Propaganda, and the first missionaries of St. Francis de Sales set out for India. The work has prospered and since that time more than 100 priests and seminarians have been sent out by the congregation, besides many lay brothers. More than 200 nuns of different orders have gone out at the call of the missionaries to help them. The dioceses of Nagpur and Visagapatam have always been governed by prelates belonging to this institute. At Visagapatam the first vicar Apostolic was Mgr Neyret (1850); he was succeeded by Mgr Tissot, first bishop of the diocese. The present occupant of the see is Mgr Clerc. The first Bishop of Nagpur was Mgr Riccas; after him came Mgrs Pelvat, Crochet, Bonaventure, and Coppel. In England the fathers have three missions in the Diocese of Clifton. Since the persecution of 1903, the congregation has been obliged to leave Savoy for England, where the juvenate, the novitiate, and the house of studies are successfully carried on. The superiors-general since the foundation are: the Very Rev. Fathers Mermier, Gaiddon, Clavel, Tissot, Gojon, and Bouvard.

LOUIS VALLUET.

Missionary Rector. See RECTOR.

Missionary Society of St. Paul the Apostle, otherwise known as the PAULIST FATHERS, a community of priests for giving missions and doing other Apostolic works, especially for making converts to the Catholic Faith. It was founded, in Rome and in New York, in 1858, by Father Isaac Thomas Hecker, with whom were associated Augustine F. Hewit, George Deshon, Francis A. Baker, and Clarence A. Walworth. All of these had been members of the Congregation of the Most Holy Redeemer, and owing to certain misunderstandings had been suspected of disloyalty to their order and accused of disobedience.

In order to set matters right and to explain their case to the superior general, Father Hecker went to Rome, and on 29 August, 1857, three days after his arrival, was expelled from the Redemptorists. This action was appealed to the Holy See and was not approved. Father Hecker and the above named priests were then at their own request dispensed from their vows, and proceeded to form the new community. Hecker received letters from Propaganda, strongly recommending him and his associates to the bishops of the United States. This is the official origin of the Paulists.

But long before this, however, the Holy Spirit gave Father Hecker distinct and unmistakable intimations—to use his own words—that he was "set apart to undertake in some leading and conspicuous way the conversion of this country". He adds that he "made an explicit statement of these supernatural visitations to various persons, singly and in common, always under compulsion of obedience or necessity". These advisers included Cardinal Barnabo, the Prefect of Propaganda at this time, and several of the most approved directors of souls in Rome. They unanimously decided that he acted wisely in following this interior supernatural guidance.

During the summer of 1858 a practical beginning of their apostolate was made by the Paulists in New York, to which diocese they were made heartily welcome by Archbishop John Hughes. He gave them a parish in what was then a suburb and is now the heart of the city. As they had given missions as Redemptorists in all parts of the country, they were well and favourably known to the bishops and clergy and were very popular with the people. They were all men of ability, quite above the ordinary intellectual standard, powerful preachers, and of mature spirituality. Father Hecker especially was known as a remarkable man, a leader in Catholic thought, of profoundly interior spirit of prayer, joined to such a zeal for souls as characterizes only the saints. They were all Americans and all converts, and under their founder's inspiration, they soon developed their high gifts of preaching, of writing, and of the guidance of souls. To provide a house and church the new community, having but a handful of parishioners, appealed to their friends everywhere for financial help. The response was generous, and they built in West 59th Street, a convent and church combined, which in later years, when the present church was erected, was used wholly for their dwelling. This is the mother-house. In course of time foundations were made in San Francisco and Berkeley, California; Chicago, Illinois; Winchester, Tennessee; and Austin, Texas. The novitiate and house of studies is in Washington, D. C., the scholastic training being affiliated to the courses of the Catholic University.

A programme of rule was drawn up at the time of the founding of the community, in 1858, and approved by Archbishop Hughes. This served all needful purposes for twenty years, when it was much enlarged. It is still in process of experiment before being presented to the Holy See for canonical approbation. Its spiritual features are substantially the same routine of devout exercises, in private and in common, observed by the original fathers while Redemptorists. Although the Paulists do not make vows of religion, they undertake to observe the evangelical counsels as fervently as if canonically bound to do so. This is expressed in the formula of profession as a "whole-hearted determination to obey the rules, to aspire after Christian and religious perfection, to devote oneself energetically to the labours of the Apostolic ministry, and to persevere in the same vocation to the end of life". The training of the members is provided for in the exercises of the novitiate and house of studies. Permanency in the community is secured by this original training, and the act of profession witnesses to a well matured purpose of striving after perfection and to a sincere love of community life. To this bond of union is joined that of zeal for souls actuating the members of the institute individually and in common. Father Hecker's estimate of the fundamental principle of the Paulist life is as follows: "The desire for personal perfection is the foundation stone of a religious community; when this fails, it crumbles to pieces." And again: "The main purpose of each Paulist must be the attainment of personal perfection by the practice of those virtues without which it cannot be secured—interior fidelity to grace, prayer, detachment and the like."

In the external order, the Paulist vocation is primarily, as was the original vocation of Father Hecker, the conversion of non-Catholics. It embraces all branches of the Catholic apostolate, lecturing and preaching, printing and distribution of missionary literature, and private conference with earnest inquirers. The spread of Catholicism holds the first place both in their prayers and in their active life; it outranks in importance all other external labours. It is on this account that Paulists are most commonly known both in and out of the Church as convert makers. Missions for non-Catholics are systematically given, being very often joined to Catholic missions,

X.—24

though not seldom given separately. The effects of this apostolate have justified Father Hecker's lifelong contention that America is a ripe field for the zeal of Catholic missionaries. Many thousands of converts have been made, some immediately, more after prolonged examination of the claims of the Church, and multitudes of half-hearted and indifferent Catholics have been restored to the practice of their religion, a result which so invariably follows these lectures as to give them a very high place in the work of "stopping the leaks".

In the year 1894, the Paulists introduced missions to non-Catholics among the diocesan clergy, beginning with the Diocese of Cleveland. This work has now been extended into over twenty-five American dioceses, and also into England and Australia. The number of secular priests actively engaged in these diocesan apostolates is very considerable. For the training, and in many cases for the support, of these bands of convert-makers, members of the Paulist community brought about the establishment of the Catholic Missionary Union, a corporation whose board of directors is controlled by members of the hierarchy. Under its direction, but administered wholly by Paulists, the Apostolic Mission House was opened on the Catholic University grounds, Washington, D. C., in 1903, and from its classes most of the diocesan missionaries have been recruited. The present sovereign pontiff wrote to Cardinal Gibbons a letter of approval of this institution in September, 1908.

With the same end in view the Paulists have vigorously engaged in the apostolate of the press. The first fathers printed and circulated their sermons in the earliest years of the community, and in 1865 Father Hecker started the "Catholic World Magazine", then the only Catholic monthly in the country; and this was immediately followed by an organized propaganda of missionary books, pamphlets, and tracts, most of which were either distributed to Protestants gratis or disposed of at nominal prices—a work highly praised by the Second Plenary Council of Baltimore, and still energetically carried on. The Paulist Fathers also consider it part of their vocation to influence the secular press in the interests of Catholic truth. The preaching of missions to Catholics also has engaged much of the zeal of the Paulists.

No innovation on traditional Catholic methods, least of all on the Catholic spirit, has ever been observed in their public utterances or ministrations, though the personal tone and character of the Paulists has imparted to their discourses and writings a peculiar zest. Parish work has occupied many members of the institute, characterized by special care in preparing and preaching sermons, the training of children, the relief of the poor, the beauty and dignity of ceremonial, and the proper rendering of the official music of the Church. The making of converts is a prominent feature of their parish activities. Constant endeavours are made to attract non-Catholics to the sermons and the public services of the Church, as well as to private conference, and converts are always under instruction.

The number of Paulists is now 67, of those not yet ordained, 23. The increase, though not numerically great, has been continuous, the larger number of the novices being attracted by the non-Catholic missions.

Hewitt, *Memoir of Reverend Francis A. Baker* (New York, 1866); Elliott, *The Life of Father Hecker* (New York, 1898).

Mission Indians (OF CALIFORNIA).—A name of no real ethnic significance, but used as a convenient popular and official term to designate the modern descendants of those tribes of California, of various stocks and languages, evangelized by the Franciscans

in the latter part of the eighteenth and early part of the nineteenth centuries, beginning in 1769. The historic California missions were twenty-one in number, excluding branch foundations, extending along the coast or at a short distance inland from San Diego in the south, to Sonoma, beyond San Francisco Bay, in the north. Besides these, two others, established in 1780 in the extreme south-eastern corner of the present state, had a brief existence of less than a year when they were destroyed by the Indians. As their period was so short, and as they had no connexion with the coast missions, they will be treated in another place (see YUMA INDIANS).

I. MISSION SITES.—The following are the twenty-one missions in order from south to north, with name of founder, location, and date of founding. In several cases the mission was removed from the original site to another more suitable at no great distance. It will be noticed that the northward advance does not entirely accord with the chronological succession:

1. San Diego (de Alcalá): founder, Fr. Junípero Serra, 1769. Indian name of site, Cosoy. At Old Town, suburb of present San Diego, in county of same name. Removed 1774 to Nipaguay (Indian name), north bank of San Diego, six miles above present city.
2. San Luis Rey (de Francia): Fr. Fermín Francisco Lasuen, 1798. Indian name, Tacayme. Four miles up San Luis Rey River, south side, San Diego Co. (a) San Antonio de Pala, branch mission: Fr. Antonio Peyrá, 1816. At Pala, about 20 miles above, north side of same river, in same county.
3. San Juan Capistrano: Serra, Nov., 1776. Indian name, Sajirit or Quanis-savit. At present San Juan, Orange Co.
4. San Gabriel (Arcangel): Serra, Sept., 1771. Indian name, Sibagna, or Tobiscagna. San Gabriel River, about ten miles east of Los Angeles, Los Angeles Co.
5. San Fernando (Rey de España): Lasuen, Sept., 1797. Indian name, Pashecgna. At present Fernando, Los Angeles Co.
6. San Buenaventura: Serra, 1782. Indian name, Miscanaga. Ventura, Ventura Co.
7. Santa Barbara: Palou, 1786. Indian name, Taynayan. Santa Barbara, Santa Barbara Co.
8. Santa Inés: Tapis, 1804. Indian name, Alajulapu. North side Santa Inez River, about present Santa Inez, Santa Barbara Co.
9. Purísima Concepción: Palou, 1787. Indian name, Algasacupí. Near present Lompoc, Santa Barbara Co.
10. San Luis Obispo (de Tolosa): Serra, 1892. Indian name, Tishlini. In present San Luis Obispo town and county.
11. San Miguel: Lasuen, July, 1797. Indian name, Vahíá (Vaticá), or Chulam (Cholame). West bank Salinas River, at present San Miguel, San Luis Obispo Co.
12. San Antonio (de Padua): Serra, July, 1771. Indian name, Teshhaya, or Sextapay. East side San Antonio River, about six miles from present Jolon, Monterey Co.
13. (Nuestra Señora de la) Soledad: Palou, Oct., 1791. Indian name, Chuttusgelis. East side Salinas River, about four miles from present Soledad, Monterey Co.
14. San Carlos (Borromeo, de Monterey), alias Carmelo: Serra, 1770. Indian name (second site), Eselenes (Esselen?). First at present Monterey, but removed in same year to Carmelo River, a few miles distant, Monterey Co.
15. San Juan Bautista: Lasuen, 24 June, 1797. Indian name, Popelout, or Popeloutchom. West side San Benito River, about present San Juan and six miles from Sargent, in San Benito Co.
16. Santa Cruz: Palou, Sept., 1791. Indian name, Aulintac. Present Santa Cruz, Santa Clara Co.
17. Santa Clara (de Asís): Serra, 1777. Indian name, Thamien. First established near Guadalupe River, about head of San Francisco Bay. Removed in 1781 three miles to present site of Santa Clara, Santa Clara Co.
18. San José: Lasuen, 11 June, 1797. Indian name, Oroysom. East of San Francisco Bay, about fifteen miles north of San José City near present Irvington, in Alameda Co.
19. San Francisco (de Asís), alias Dolores: Serra, Oct., 1776. Within

present limits of San Francisco City. 20. San Rafael (Arcangel): Payeras, 1817. Indian name Awániwi (Nanaguami). North of San Francisco Bay, at present San Rafael, Marin Co. 21. San Francisco Solano, alias Sonoma: Altamira, 1823. Indian name, Sonoma (?). North of San Francisco Bay, at present Sonoma, Sonoma Co.

II. TRIBES AND LANGUAGES.—Nowhere in North or South America was there a greater diversity of languages and dialects than in California. Of forty-six native linguistic stocks recognized within the limits of the United States by philologists, twenty-two, or practically one-half, were represented in California, of which only six extended beyond its borders. Seven distinct linguistic stocks were found within the territory of actual mission colonization, from San Diego to Sonoma, while in the border territory north and east, from which recruits were later drawn, at least four more were represented. As most of the dialects have perished without record, it is impossible to say how many there may have been originally, or to differentiate or locate them closely. As tribal organization such as existed among the Eastern Indians was almost unknown in California, where the *rancheria*, or village hamlet, was usually the largest political unit, the names commonly used to designate dialectic or local groups are generally merely arbitrary terms of convenience. For the linguistic classification the principal authorities are Kroeber, Barrett, and other experts of the University of California.

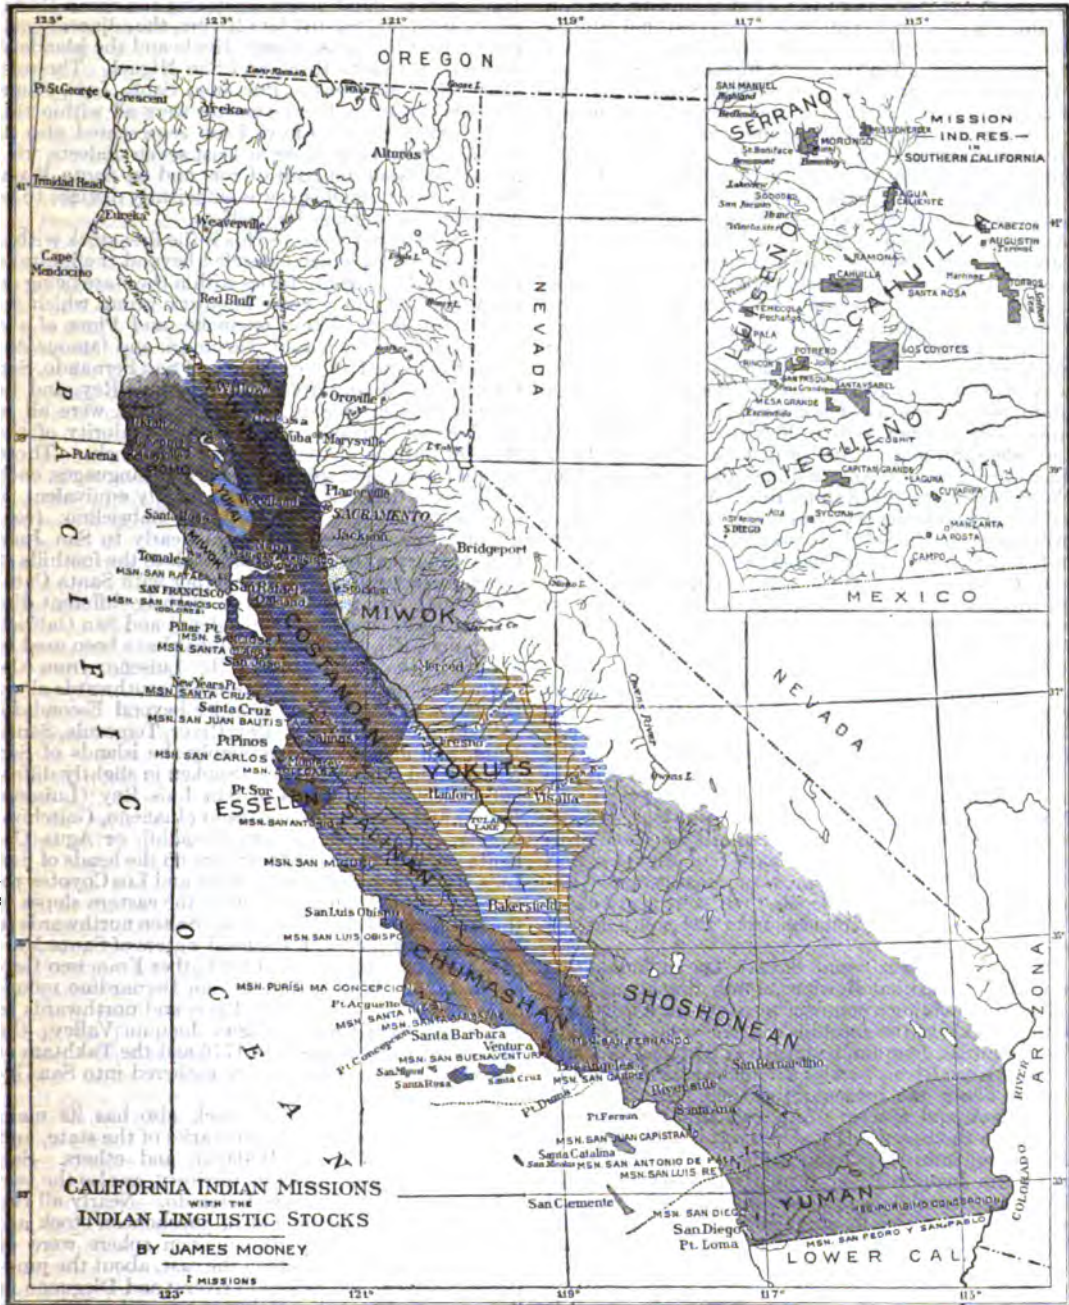

1. *Pomo, or Kulanapan, Stock*.—The Indians of this stock bordered on the northern frontier of the mission area, and although no mission was actually established in their territory in the earlier period, numbers of them were brought into the missions of San Rafael and San Francisco Solano. Broadly speaking, the Pomo territory included the Russian River and adjacent coast region with all but a small portion of the Clear Lake basin. Barrett has classified their numerous local bands and *rancherías* into seven dialectic divisions, but all probably mutually intelligible. Of their southern bands, some of the Gallinero (or Kainomero), of lower Russian River, were brought into San Rafael mission and the Gualala also were represented either there or at Sonoma. The so-called "Diggers" of the present mission schools at Ukiah and Kelseyville are chiefly Pomo.

2. *Yukian Stock*.—The Yuki tribes were in four divisions, two of which were north of the Pomo territory and therefore beyond the sphere of mission influence. The two southern bodies, originally one, speaking one language with slight dialectic variations, and commonly known as Wappo (from Spanish *guapo*), occupied (a) a small territory south of Clear Lake and east from the present Kelseyville; (b) a larger territory including upper Napa River and a portion of Russian River, and extending approximately from Geyserville to Napa. They were probably represented at Sonoma mission, as they probably are also under the name of "Diggers" in the present mission school at Kelseyville.

3. *Wintun, or Copehan, Stock*.—This stock held all (excepting the Wappo projection) between the Sacramento River and the main Coast Range from San Pablo (San Francisco) and Suisun Bays northwards to Mount Shasta, including both banks of the river in its upper course. The various dialects are grouped by Kroeber into three main divisions or languages, of which the southern, or Patwin, includes all south from about Stony Creek, and possibly also those of Sonoma Creek on the bay. Indians of these southern bands were brought into the missions of Sonoma, San Rafael, and even San Francisco (Dolores) across the bay. At Sonoma mission, among others, we find recorded the Napa and Suisun bands. According to Kroeber the whole region of Putah Creek was thus left vacant until repopulated after 1843 by Indians who had originally been taken thence to Sonoma mission.

4. *Moquelumnan, or Miwok, Stock.*—The numerous bands of this stock occupied three distinct areas, viz., (a) Northern: A very small territory south-east of Clear Lake and about the heads of Putah Creek, in Lake Co., occupied by a band known as Oleomi, or Guenock (?), speaking a language apparently distinct

Rafael and Sonoma, both of which were established within their territory. In 1824 nearly 500 Indians of this group were brought back from San Francisco and San José to reside in the new mission of Sonoma. The whole group was known as Olamentke by the Russians. Among the principal bands or villages

from the others of the stock. They seem mostly to have been gathered into Sonoma mission. (b) Western: A larger territory lying north of San Francisco Bay to beyond Bodega Bay, and extending from the coast eastwards to beyond Sonoma, included within the present Marin and lower Sonoma Counties. The various bands of this area spoke the same language in two slightly different dialects (three, according to Merriam) and were gathered into the two missions of San

were Bolina, Tamal, Chokuyem, Licatuit, Petaluma, Sonoma, Soclan, Olompali, Cotati, Guymen, with others of less note. The celebrated fighting chief, Marin, was of the Licatuit band. (c) Eastern: The main area, occupying nearly the whole region east of San Joaquin River to the heads of the tributary streams, from Cosumnes River on the north to Fresno River on the south. Their numerous bands, collectively known usually as Miwok, spoke four different

dialects, of which that of the north-western plains section may be considered a distinct language. Although no missions were established in the territory of the Miwok, large numbers of them were brought into San Juan Bautista, Santa Clara, and San José.

5. *Costanoan Stock*.—The territory of this linguistic group extended from the coast inland to the San Joaquin River, and from San Francisco and Suisun Bays on the north southwards to about the line of Point Sur, including the seven missions of San Francisco (Dolores), San José, Santa Clara, Santa Cruz, San Juan Bautista, San Carlos, and Soledad. Although there was no true tribal organization, a number of divisional names are recognized, probably corresponding approximately to dialectic distinctions. On the peninsula, and later gathered into San Francisco mission were the Romanan (at present San Francisco), Ahwaste, Altahmo, Tulomo, and Olhone, or Costano proper, all apparently of one language in different dialects. The Saclan, about Oakland, were in the same mission. The Karkin along Carquinez straits and the Polye further south were gathered into San José. Santa Clara had two native dialects, while Santa Cruz apparently had another. About San Juan Bautista was spoken the Mutsun dialect, known through a grammar and phrase book written by the resident missionary, Father Arroyo de la Cuesta, in 1815, and published in Shea's "American Linguistics" in 1861. Eastward were the Ansaima and about the mouth of the Salinas were the Kalindaruk. At San Carlos the principal band was the Runsen, of which a remnant still exists, and at Soledad were Chalone, besides others of Esselen, Salinan, and Yokuts lineage.

6. *Esselen Stock*.—The Esselen, or Ecclemach, constituting a distinct stock in themselves, occupied a small territory on Carmel and Sur rivers, south of Monterey Bay, until gathered into San Carlos, and perhaps into Soledad mission.

7. *Salinan Stock*.—This stock centred upon the waters of the Salinas, chiefly in Monterey and San Luis Obispo Counties, from the seacoast to the Coast Range divide, and from the head streams of the Salinas down (north) nearly to Soledad. San Antonio and San Miguel missions were within their territory. Nothing definite is known of their divisions, excepting that there seem to have been at least three principal dialects or languages, viz., of San Miguel, of San Antonio, and of the Playanos, or coast people. Besides those native to the region, there were also Yokuts from the east and Chumash from the south in the same missions.

8. *Yokuts, or Mariposan, Stock*.—The Indians of this stock had true tribal divisions, numbering about forty tribes, and holding a compact territory from the Coast Range divide to the foothills of the Sierras, including the upper San Joaquin, Kings River, Tulare Lake, and most of Kern River, besides a detached tribe, the Cholvone, about the present Stockton. Together with the Miwok and eastern Costanoan tribes, they were known to the Spaniards under the collective name of Tulareños, from their habitat about Tulare lake and along San Joaquin River, formerly Rio de los Tulares. Their numerous dialects varied but slightly, and may have been all mutually intelligible, the principal difference being between those of the river plains and of the Sierra foothills. Although outside of the mission territory proper, the Yokuts area was a principal recruiting ground for the missions in the later period, hundreds of Indians, and even whole tribes, being carried off, either as neophyte subjects or as military prisoners of war, to San José, San Juan Bautista, Soledad, San Antonio, San Miguel, San Luis Obispo (?), and probably other neighbouring missions. One Spanish expedition, about 1820, carried off three hundred men, women, and children from a single *rancheria* to San Juan Bautista, where their language was afterwards recorded by Father La Cuesta. The Tachi and

Telamni from Tulare lake and eastward were brought into San Antonio. A few are now gathered upon Tulare River reservation, while a few others still remain in their old homes.

9. *Chumashan Stock*.—The Indians of this stock held approximately the territory from San Luis Obispo Bay south to Point Mugu, including the Santa Maria, Santa Inés, and Santa Clara Rivers, the adjacent eastern slope of the Coast Range divide and the islands of Santa Cruz, Santa Rosa, and San Miguel. The missions San Luis Obispo, Purísima, Santa Inés, Santa Barbara, and San Buenaventura were all within this area. They seem to have been represented also at San Miguel. There were at least seven dialects, viz., at each mission, on Santa Cruz, and on Santa Rosa. That of San Luis Obispo was sufficiently distinct to be considered a language by itself.

10. *Shoshonean Stock*.—This is the first stock within the mission area which extended beyond the limits of California, the cognate tribes within the state being an outpost of the same great linguistic group which includes the Piute, Ute, Comanche, and Pima of the United States, the Yaqui, Tarumari, and famous Aztec of Mexico. The five missions of San Fernando, San Gabriel, San Juan Capistrano, San Luis Rey, and its branch mission of San Antonio de Pala, were all in Shoshonean territory, and the great majority of the Mission Indians of to-day are of this stock. Those within the mission sphere were of five languages, each with minor dialectic differences, nearly equivalent to as many tribes, as follows:—(a) Gabrielino: from about Santa Monica southward nearly to San Juan Capistrano, and from the coast back to the foothills of the San Bernardino range, together with Santa Catalina island. It was spoken in slightly different dialects at San Fernando (Fernandeño) and San Gabriel. The names Kij, Kizh, and Tobikhar have been used to designate the same group. (b) Luisefio: from the Gabrielino border about Alisos creek southwards along the coast to the Yuman frontier beyond Escondido, including lower San Luis Rey River, Temecula, Santa Rosa, San Jacinto, and probably the islands of San Nicolas and San Clemente. Spoken in slightly different dialects at missions of San Luis Rey (Luisefio, Kechi) and San Juan Capistrano (Juanefio, Gaitchim, Netela, Acagchemem). (c) Panakhil, or Agua Caliente, occupied a limited territory on the heads of San Luis Rey River, and now at Pala and Los Coyotes reserves. (d) Cahuilla, or Kawia: the eastern slopes of the San Jacinto Range from about Salton northwards to Banning, together with the head waters of Santa Margarita River. First visited by Father Francisco Garcés in 1776. (e) Serrano: in San Bernardino mountains and valley on Mohave River and northwards to Tejon and Paso Creeks of San Joaquin Valley; the Beñeme of Father Garcés in 1776 and the Takhtam of Gatschet. Some of them were gathered into San Gabriel. Three dialects.

11. *Yuman Stock*.—This stock also has its main home beyond the eastern boundaries of the state, and includes the Mohave, Walapai, and others. San Diego mission was within its territory, as also the two short-lived missions on the Colorado. Nearly all the present Mission Indians not of Shoshonean stock are Yuman. Those within the mission sphere were of two languages, viz., Yuma in the east, about the junction of the Gila and Colorado rivers; and Diegueño in the west, in two main dialect groups: (a) Diegueño proper, along the coast, including San Diego, and (b) Comeya, farther inland.

Very little is in print concerning the languages of the mission territory. For vocabularies and grammatic analysis the reader may consult Bancroft's volume on "Myths and Languages", Power's "Tribes of California", Gatschet in "Wheeler's Rept.", and above all, Barrett and Kroeber in the University of California publications (see bibliography), with other works

and collections therein noted. Among the important single studies are a "Grammar of the Mutsun Language" by Fr. Arroyo de la Cuesta, published in Shea's "American Linguistics", IV (1861); a Chumashan (?) catechism and prayer manual by Fr. Mariano Payeras of Purisima, about 1810, noted by Bancroft; and a MS. grammar and dictionary of the Luiseño language, by Sparkman, now awaiting publication by the University of California. The missionaries were more than once urged in prefectual letters to acquire the native languages in order better to reach the Indians, and in 1815 the official report states that religious instruction was given both in Indian and Spanish.

III. ARTS, CUSTOM, AND RITUAL.—The Indians of California constituted a culture body essentially distinct from all the tribes east of the Sierras. The most obvious characteristic of this culture was its negative quality, the absence of those features which dominated tribal life elsewhere. There was practically no tribal organization and in most cases not even a tribal name, the *rancheria*, or village settlement, usually merely a larger family group, being the ordinary social and governmental unit, whose people had no common designation for themselves, and none for their neighbours excepting directional names having no reference to linguistic or other affiliation. Chiefs were almost without authority, except as messengers of the will of the priests or secret society leaders. The clan system is held by most investigators to have been entirely wanting, although Merriam claims to have found evidence of it among the Miwok and Yokuts. Excepting basketry, all their arts were of the crudest development, pottery being found only in the extreme south, while agriculture was entirely unknown. Both mentally and physically they represented one of the lowest types on the continent. The ordinary house structure throughout the mission area was a conical framework of poles thatched with rushes and covered with earth, built over a circular excavation of about two feet deep. The fire was built in the centre, and the occupants sat or lay about it, upon skins or sage bushes, without beds or other furniture. The Gallinero, north of San Francisco Bay, built a communal house of L shape, with a row of fires down the centre, one for each family. The "sweat-house", for hot baths and winter ceremonies, was like the circular lodge, but much larger. The dance place or medicine lodge was a simple circular inclosure of brushwood open to the sky, with the sacrifice poles and other ceremonial objects.

Agriculture being unknown, the food supply was obtained in part by hunting and fishing, but mostly by the gathering of wild seeds, nuts, and berries. The islanders lived almost entirely by sea-fishing, while about San Francisco they depended mainly on the salmon. The Chumashan coast tribes fished from large dugout canoes. Hunting was usually confined to small game, particularly rabbits and jackrabbits, the larger animals being generally protected by some religious taboo. On account of a prevalent ritual idea which forbade the hunter to eat game of his own killing, men generally hunted in pairs and exchanged the result. Grasshoppers were driven into pits and roasted as a dainty. Among vegetable foods the acorn was first in importance, being gathered and stored in large quantities, pounded into meal in stone mortars or ground on metates, leached with water to remove the bitterness, and cooked as mush (porridge) or bread. Wild rice was also a staple in places, while in the blossom season whole communities lived for weeks upon raw clover tops. The men went nearly or entirely naked, excepting for a skin robe over the shoulders in cold weather. Women usually wore a short skirt with fringes of woven or twisted bark fibre. Both sexes commonly kept their hair at full length, but bunched up behind. Some bands shaved one side of the head. Tattooing was practised by both sexes to some extent.

Shell beads were used for necklace purposes, and eagle and other feathers for head adornments. Dance-leaders and priests at ceremonial functions wore feather crowns and short skirts trimmed with feathers. Light sandals were sometimes worn. Musical instruments were the rattle, flute, and bone whistle. The drum was unknown. Weapons were the bow and arrow, wooden club, stone knife, and a curved throwing stick for hunting rabbits. Cremation was universal, excepting in the Chumashan. Marriage and divorce were simple, and polygamy was frequent.

Of the mythology and ceremonial of the coast tribes of the mission area northwards from Los Angeles we know almost nothing, as the Indians have perished without investigation, but the indications are that they resembled those of the known interior and southern tribes. For these our best authorities are the missionary Boscana, Powers, Merriam, and especially the ethnologists of the University of California. The southern tribes—Juaneño, Luiseño, Diegueño, etc.—base their ritual and ceremonial upon a creation myth in which Ouiot, or Wiyot, figures as the culture hero of an earlier creation in which mankind is not yet entirely differentiated from the animals, while Chungich-nish (Chinigichinich of Boscana) appears as the lord and ruler of the second and perfected creation, which, however, is a direct evolution from the first. The original creators are Heaven and Earth, personified as brother and sister. The rattlesnake, the tarantula, and more particularly the lightning and the eagle, are the messengers and avengers of Chungich-nish. In the Diegueño myth the whole living creation issues from the body of a great serpent.

The principal ceremonies, still enacted within recent memory, were the girls' puberty ceremony, the boys' initiation, and the annual mourning rite. In the puberty ceremony the several girls of the village who had attained the menstrual age at about the same time were stretched upon a bed of fresh and fragrant herbs in a pit previously heated by means of a large fire, and, after being covered with blankets and other herbs, were subjected to a sweating and starving process for several days and nights while the elders of the band danced around the pit singing the songs for the occasion. The ordeal ended with a procession, or a race, to a prominent cliff, where each girl inscribed symbolic painted designs upon the rock. The boys' initiation ceremony was a preliminary to admission to a privileged secret society, the officers of which constituted the priesthood. A principal feature was the drinking of a decoction of the root of the poisonous *tolache*, or jimson-weed (*datura meteloides*), to produce unconsciousness, in which the initiate was supposed to have communication with his future protecting spirit. Rigid food taboos were prescribed for a long period, and a common ordeal test was the lowering of the naked initiate into a pit of vicious stinging ants. A symbolic "sand painting", with figures in vari-coloured sand, was a part of the ritual.

The corpse was burned upon a funeral pile immediately after death, together with the personal property, by a man specially appointed to that duty, the bones being afterwards gathered up and buried or otherwise preserved. Once a year a great tribal mourning ceremony was held, to which the people of all the neighbouring *rancherias* were invited. On this occasion large quantities of property were burned as sacrifice to the spirits of the dead, or given away to the visitors, an effigy of the deceased was burned upon the pyre, and the performance, which lasted through several days and nights, concluded with a weird night dance around the blazing pile, during which an eagle or other great bird, passed from one to another of the circling dance priests, was slowly pressed to death in their arms, while in songs they implored its spirit to carry their messages to their friends in the other world. The souls of priests and chiefs were supposed to ascend

to the sky as stars, while those of the common people went to an underworld, where there was continual feasting and dancing, the idea of future punishment or reward being foreign to the Indian mind. The dead were never named, and the sum of insult to another was to say "Your father is dead."

In connexion with childbirth most of the tribes practised the *couvade*, the father keeping his bed for some days, subjected to rigid diet and other taboos, until released by a ceremonial exorcism. Besides the great ceremonies already noted, they had numerous other dances, including some of dramatic or sleight-of-hand character, and, among the southern tribes, a grossly obscene dance which gave the missionaries much trouble to suppress. Among the Gallinero, and perhaps others, aged parents were sometimes choked to death by their own children by crushing the

neck with a stick. Ordinary morality could hardly be said to exist even in theory. Infanticide and abortion were so prevalent that even the most strenuous efforts of the missionaries hardly succeeded in checking the evil. In this and certain other detestable customs the coast tribes were like the California Indians generally, whom Powers characterizes, in their heathen condition, as perhaps the most licentious race existing.

GERÓNIMO BOSCANÁ

tent. Even before the arrival of the missionaries, their blood, like that of all the coast tribes as far north as Alaska, had been so poisoned by direct or transmitted contact with dissolute sealing and trading crews, that the race was already in swift decline. The confiscation of the missions and the subsequent influx of the gold-hunters doomed the race to extinction.

IV. VITAL STATISTICS.—By the confiscation of the missions (1834-38) the Indians lost their protectors together with their stock and other movable property, and by the transfer of California to the United States in 1848 they were left without legal title to their lands, and sank into a condition of homeless misery under which they died by thousands and were fast approaching extinction. With the exception of occasional ministrations by secular priests or some of the few remaining missionaries, they were also left entirely without spiritual or educational attention, notwithstanding which the Christian Indians continued to keep the Faith and transmitted the tradition to their children. At last, as the result of a governmental investigation in 1873, a number of village reservations were assigned by executive proclamation in 1875 to the southern remnant, the northern bands being already extinct. By subsequent legislation there are now established some thirty small "Mission Indian" reservations, all in western and central San Diego and Riverside Counties, California, with a total population, in 1909, of 2775 souls, representing five tribes and languages, viz., Luiseno, Serrano, Cahuilla, Agua Caliente, and Diegueño. The largest groupings are at Morongo adjoining Banning (chiefly Cahuilla) 238; Pala (Luiseno and Agua Caliente) 226; Pechanga (Luiseno) 170; and Santa Ysabel No. 3 (Diegueño) 165. They are practically all Catholics and besides twelve

government day-schools with a total enrolment of 266 there are 17 Catholic schools served by secular priests under the diocese of Los Angeles, with a total enrolment in 1909 of 1894 pupils. Of these the largest are at Pala (260), La Jolla (195), Pauma (180), Soboba, or San Jacinto (163), Campo (125), and Martinez (125). All are day-schools, excepting St. Boniface boarding-school at Banning with 100 pupils. About the same time Catholic mission work was begun among the remnant tribes on the northern border of the original mission territory. In 1870 the mission of St. Turibius was founded by Father Luciano Osuna, north of Kelseyville in Lake County. In 1889 Saint Mary's mission was established near Ukiah in Mendocino County. The Indians of both stations are locally called "Diggers", but are properly Pomo and Yukai and some of the older ones still have recollection of the early mission fathers. They are in charge of the Friars Minor and Capuchins. All these northern missions are in the Archdiocese of San Francisco.

According to a careful estimate made by Merriam, the original Indian population of the mission territory, eastwards to the San Joaquin and lower Sacramento rivers, was approximately 50,000 souls. About 30,000 were domiciled in the missions at the time of confiscation. Following the ruin of the missions and the invasion of the Americans, they died in such thousands that of all those north of the present Los Angeles, comprising perhaps four-fifths of the whole, not 300 are believed to survive to-day. The southern tribes, being of manlier stock and in some degree protected by their desert environment, have held themselves better, and number to-day on the "Mission Indian" reservations, as already stated, 2,775 souls, a decrease, however, of 152 in nine years. The Mission Indians of California have dwindled to fewer than one-sixteenth of their original number, and indications point to their extinction. (See CALIFORNIA.)

JAMES MOONEY.

Missions, CATHOLIC.—The history of Catholic missions would necessarily begin with the missionary labours of Christ, and would cover a very considerable portion of the history of the Catholic Church. The principal chapters of this history will be found elsewhere in THE CATHOLIC ENCYCLOPEDIA, in the articles devoted to the various countries, provinces, dioceses, vicariates, religious orders, and congregations, notable missionaries, etc. The present article will be confined to a short general survey of the missionary activity of the Catholic Church at the present day. The subject, as thus limited, may conveniently be considered under the following heads: I. Organization of Catholic Missions; II. Receipts and Expenditure; III. Utility and Object of Mission Statistics; IV. Statistics.

I. ORGANIZATION.—The main direction of the Catholic missions is vested in the Sacred Congregation of Propaganda under the supreme jurisdiction of which stand most of the missions of the Catholic world (see PROPAGANDA, CONGREGATION OF). This congregation determines the ecclesiastical rank of each mission (prefecture, vicariate, diocese), assigning to it a superior according to this rank, and undertakes the duty of supplying missionaries wherever their services are necessary. For the training of Catholic missionaries numerous secular seminaries have been instituted; the most important are: the Urban (so called after its founder, Urban VIII), English, Irish, Scotch, American, and Canadian Colleges at Rome; Pontifical Seminary of Kandy; Leonine Seminary of Athens; the seminaries at Milan, Lyons, and Paris (this last is the headquarters of the famous Society of Foreign Missions); Josephinum College, Columbus, Ohio, U. S. A.; American College, Louvain; English Colleges at Valladolid and Lisbon; Scotch College at Valladolid; Irish College, Paris; All Hallows, Dublin; St. Joseph's Seminary, Mill Hill, London; St. Joseph's, Rosendaal, Holland; St. Joseph's, Brixin, Tyrol; General College of Pulo Pinang. The religious orders—Benedictines, Dominicans, Franciscans, Jesuits, Augustinians, etc.—which continue with unabated zeal to labour for the propagation of the Gospel, are assisted by a series of new orders and congregations. It will be sufficient to cite here the names of the societies most widely engaged in foreign missions, and to refer the reader to the special articles for particulars: Congregation of the Holy Ghost and the Immaculate Heart of Mary; Congregation of the Mission (Lazarists); Oblates of Mary Immaculate; Society of Mary; Oratorians and Oblates of St. Francis de Sales; Redemptorists; Paulists; Congregation of the Sacred Hearts of Jesus and Mary; Priests of the Foreign Missions (*Missions Etrangères*). For a fuller list see "Missiones Catholice", 853-8. Among the colleges of the regular orders specially devoted to the training of missionaries may be mentioned: the College of St. Fidelis (Capuchin), College of St. Anthony (Franciscan), College of St. Isidore (Irish Franciscan), and the College of the Irish Augustinians, at Rome; Seminary of Scheut, near Brussels (Congregation of the Immaculate Heart of Mary); the colleges of the Society of African Missionaries (White Fathers); the Veronese Institute and the colleges of the Society of the Divine Word.

II. RECEIPTS AND EXPENDITURE.—Of late years the support formerly lent by various European states to missionary enterprises has been considerably diminished, and the missions are to-day largely dependent for their support on the voluntary contributions of the faithful. For the collection of these offerings mission-

ary societies have been founded in the different Catholic countries. The most important of these societies are: the Society of Foreign Missions (*Missions Etrangères*), founded at Paris, 1820; Society for the Propagation of the Faith, founded at Lyons, 1822; Leopoldinische Stiftung, founded at Vienna, 1829; Bavarian Ludwig-Missionsverein (1839); Society of the Holy Childhood (Paris, 1843); Society of the Holy Land (1895). To arrive at even an approximate estimate of the total sum contributed by Catholics towards their foreign missions is impossible. To regard the sums collected by a few of the leading missionary societies as the total Catholic contribution towards the missions, and to take such total as indicative of Catholic interest in the propagation of the Gospel (as is too commonly done to-day by some controversialists), is manifestly indefensible. Not only are no statistics of receipts available for many of the missionary societies, but no estimate can be made of the great sums expended by all the religious orders and congregations (which are in turn practically dependent on voluntary contributions) on the preparation of their members for missionary labours and on the missions themselves.

Again, the numberless contributions made directly to the missions, offerings given to non-missionary orders or secular priests to be forwarded to the heads of certain missions, legacies and similar gifts, never appear in the statistics of receipts furnished by the collecting societies. So important a portion of the total amount do these contributions form that Baumgarten ("Die kathol. Kirche u. ihre Diener in Wort u. Bild", III, Munich, 1903, p. 399) declares that we must multiply the sum collected by the missionary societies by four or five to arrive approximately at the sum contributed towards Catholic missions. Those who contrast the apparent totals of the sums contributed by Catholics and Protestants towards their respective missions thus fail to take into account all the data for the comparison. Krose (op. cit. in bibliography, p. 38) quotes the case of two similarly situated states of about the same size, Catholic Belgium and Protestant Holland, whose respective contributions towards foreign missions were 1,019,474 (only the sum collected by a few of the leading missionary societies) and 701,000 francs. The same writer points out (loc. cit.) that, even accepting the known Catholic contributions as the total, and accepting the Protestant total at the figure given by their own statisticians, the German Catholics contributed 15 pfennig *per capita* towards their missions, and the German Protestants 12 pfennig, although the latter are, as a class, the wealthier. This last circumstance, indeed, merits special attention, if we would not accept a single large donation of a millionaire as indicative of more widespread missionary zeal than a thousand humble subscriptions of the poor. The astonishing success of the Catholic missions during the nineteenth century, although most of the property of the missionary orders was confiscated or secularized, was entirely due to the extraordinary zeal and self-sacrifice of the Catholic missionaries in the face of innumerable difficulties. Regular contributions to the missionary societies and the centralization of the missions fund are highly desirable: men are, as a rule, ready to subscribe freely to conspicuously successful missions, while the less prosperous, in which the missionaries have to face perhaps greater obstacles and disappointments, receive but faint support.

III. UTILITY AND OBJECT OF MISSION STATISTICS.—Scientifically compiled statistics render self-deception impossible, preventing us from being unduly elated or disheartened by isolated successes or reverses. They tend, also, to lessen the heated controversies which, unfortunately, too frequently centre around the Christian missions. The duty of supplying the public with accurate and complete statistics rests with the mission-

aries themselves. A report of comparative failure does not prejudice their cause: the more numerous the difficulties with which they have to contend, the more conspicuous is their self-sacrifice. As, however, statistics now receive the attention of all denominations, words of explanation should be added concerning local difficulties, and in cases where a non-Catholic might be misled. Thus, e.g., a non-Catholic might not know that a Catholic priest may not, in general, baptize a pagan child without its parents' consent, nor an adult without proper instruction.

The object of mission statistics is to supply the reader with such information as will enable him to

used exclusively of such. How many of the missionaries are natives should also be indicated, since this information reveals the progress made towards the ideal of all missionary work, the establishment of a native priesthood. Besides the number of missionaries, exact information should be given concerning the male and female auxiliaries, who are engaged as catechists, as teachers, or to care for the sick; likewise concerning all the lay brothers and sisters (not, however, mere servants) who are employed directly or indirectly in the work of evangelization.

(3) *Mission Establishments*.—In this category may be classed the mission-stations, churches, chapels,

judge how far the work of the mission has been successful. The special points on which exact information is most desirable may be grouped under four heads: (1) Number of Christians; (2) Personnel of the Mission; (3) Mission Establishments; (4) Administrative Statistics.

(1) *Number of Christians*.—In recording the number of Christians, a distinction should always be drawn between converted heathens and Christian settlers. While, in most missionary countries, the latter class may constitute so small a proportion of the totals as to be negligible, there are many countries in which the number is sufficiently large to create a false idea of the progress of the mission, if this distinction be not observed in the statistics. A distinction between Christians and catechumens is equally necessary, and under the former head none but the baptized should ever be included. By catechumens are to be understood only such heathens as are actually being instructed for baptism: as they constitute the harvest of the mission, they should never be excluded (as is now too often the case) from the statistics.

(2) *Personnel of the Mission*.—The statistics concerning the personnel of the mission should state how many are priests, the term *missionary* being

schools of every kind, hospitals, and charitable establishments. Chief stations are most simply distinguished from sub-stations by confining the former term to stations which have at least one resident missionary, and the latter to stations where Divine service is periodically or constantly held by a non-resident missionary. To attempt to restrict the term *chief station* to centres of unusual missionary activity must lead to great uncertainty, as it would be hopeless to expect that any uniform dividing-line could be universally observed. Again, the name *sub-station* should never be applied to places where instruction alone is given: the number of such might easily assume proportions which would almost necessarily lead to misapprehension of the exact position of Christianity in the country. Outposts, such as those here indicated, should (if given) be kept separate from the stations. The schools and educational establishments possess a peculiar interest, since in many lands the task of reclaiming adults of a low cultural level, whose minds are obsessed with superstitions and brutalized by crime, is a well-nigh impossible one. The statistics should always distinguish between male and female, elementary and secondary, Catholic and non-Catholic pupils, and also between ordinary pupils

THOMAS KENNEDY.

Missions, CATHOLIC INDIAN, OF CANADA.—The French discoverers of Canada did not fail to impress the aborigines they met with a vague idea of the religion they professed. Thus, on 3 July, 1534, when Jacques Cartier reached Baie des Chaleurs, he presented the Indians with prayer beads, and shortly afterwards erected a large cross with the inscription "Vive le Roi de France", thereby combining patriotism with religion. In his second expedition (1535) he was accompanied by two chaplains, who, of course, could not impart much instruction to the Eskimos, Micmacs, Algonquins, and Hurons with whom they came into contact, yet must have indicated in some way the interest the newcomers took in their spiritual welfare. Moreover this important voyage ultimately resulted in the conversion and baptism of Donnacona, the Quebec chief kidnapped to France by the discoverer. Likewise, when the Sieur de Monts established his colony (1604) in what was to become known as Acadia, he had with him priests who soon turned their attention to the surrounding tribes. In the course of time a few Micmacs received baptism (1610), and their companions ever manifested the greatest attachment for the compatriots of their missionaries. Two priests, Father Pierre Biard and Edmond Massé, left Dieppe for Port Royal (26 January, 1611), and started their ministrations among the natives by a wise show of prudence, which some were tempted to regard as an excessive dilatoriness in admitting into the Church. Four years later more important missions were commenced on the arrival at Quebec, then founded seven years, of Fathers Denis Jamay, Jean Dolbeau, and Joseph Le Caron, Recollects, accompanied by a lay brother. While the first-named remained at the French fort, Father Dolbeau went to instruct the Montagnais who repaired to Tadoussac at the mouth of the Saguenay, and Father Le Caron went to the Hurons in the West. Champlain, in order to secure the friendship of the latter, the most numerous of the Indian bands in his vicinity, deemed it good policy to espouse their cause against their inveterate enemies, the powerful Iroquois of the South. This step eventually embroiled the French colony in incessant hostilities. Well meant though it undoubtedly was, and perhaps necessary under the circumstances, the French leader's intervention in the inter-

tribal politics of the natives likewise resulted in their paying more heed to the war songs and the satisfaction of their passions than to the question of their spiritual advancement. Le Caron worked faithfully, evangelizing the savages and paving the way for other priests by the preparation of a dictionary of the Huron language. Having made a trip to France, he returned (1623) with Father Nicholas Viel and Brother Gabriel Sagard, the future historian of the early Catholic missions in Canada.

Yet the results of the Recollects' labours were but indifferent. So these religious generously yielded their places to the Jesuits, who reached Quebec on 19 June, 1625, the first to arrive being Fathers Jérôme Lalemant, E. Massé, and Jean de Brébeuf. Father Massé had already laboured among the Micmacs of what is now Nova Scotia. He renewed his exertions in their midst, while Brébeuf succeeded Le Caron at the head of the Huron mission, whither he was accompanied by three other priests from France (1626). One of these, a zealous Franciscan, Father de la Roche Dallion, directed his steps towards the Neutral nation, on which he could make no impression. He finally left (1627), while Brébeuf's Jesuit companion had also to return East in the course of the same year. Brébeuf laboured heroically amidst the most discouraging apathy, if not hostility, of the Hurons. In 1633, after a temporary absence from his post, he returned West with Fathers Antoine Daniel and Ambroise Devost. Incredible hardships led them to the village of Ihonatiria, where they met a pleasant reception. Thence they visited hamlet after hamlet, teaching and exhorting the Indians, at first with no very great success. In the East Fathers Dolbeau and Jamay, with Brother Duplessis, were displaying their zeal on behalf of the roving Montagnais and Algonquins of the Saguenay, Ottawa, and Lower St. Lawrence. In 1636 Father Dolbeau had even extended his activities to the outlying bands of the Labrador Eskimos. Thus were missions established at Tadoussac for the Montagnais; at Gaspé for that tribe and the Micmacs; for the latter alone at Miscou, New Brunswick, and at Three Rivers for the Montagnais and the Algonquins. As a rule, those Indians, though lower than the Hurons in the social scale, showed themselves more amenable to Christian ideals.

To the west of these, missionary operations were thenceforth to be concentrated chiefly with a view towards the conversion of tribes of the Huron confederacy. By the end of 1635 Fathers Daniel and Devost, going to Quebec, met two priests proceeding to the north, and at Three Rivers Father Isaac Jogues, newly arrived from France. This missionary soon after left with a party of Hurons with whom he was to make his apprenticeship of the hardships in store for him. From the central mission of St. Joseph, or Ihonatiria, some twenty-eight towns were visited, the inhabitants of which proved as fickle as they were superstitious. Hence continual dangers for the missionaries nearly culminated in their death at the hands of those for whose salvation they were devoting themselves. In 1638 there were nine priests working zealously in thirty-two villages of some twelve thousand souls. Gradually they established the residences of the Conception, St. Mary's, and St. Joseph's, named after the one at Ihonatiria. Thence they visited the Petuns (1639), and in 1641 Fathers Charles Raymbault and Isaac Jogues went among the Ottawas. Then, smallpox having made its appearance among the Hurons, fresh dangers ensued for the missionaries, ever considered the cause of such visitations. They now turned their attention to the Neutrals, a powerful nation settled on the peninsula between Lakes Erie and Ontario, where they experienced new insults, and met with very few consolations (1640-41). Though they thus visited eighteen villages, trying to win over the people by

their gentleness and their devotion to their interests, they were everywhere greeted with maledictions and railery. Nevertheless it would seem as if their patience and fortitude must have at length struck those uncouth savages, for in 1645 they invited them to their country, promising a better reception for the tireless apostles. The days of the Neutrals, however, were numbered; the Iroquois were to be the unconscionable executors of the justice of God upon them.

To the north of Huronia lay the territory of the Algonquins who counted at that time no less than one hundred and four distinct groups. One of these, the Nipissings, was visited by Fathers Claude Pijart and Raymbault (1640), who were cordially received. Though they soon made a number of baptisms, their success was scarcely commensurate with their exertions. Little by little, however, the Nipissings tired of the missionaries, and, as if by way of punishment, they were in 1650 exterminated by the Iroquois. Unfortunately good and bad alike had too often to suffer by the invasions of those warlike aborigines. In the summer of 1652 Father Jogues and Brother René Goupil were surprised by a party of that nation, who shockingly mutilated and shamefully tortured the former, and put the latter to death (see *GOUPIL* and *JOQUES*). In common with practically all the missionaries of the time, Father Jogues was a native of France; an Italian, Father Francis Joseph Bressani, was soon to walk in his footsteps (see *BRESSANI*). Nothing daunted by torments which, humanly speaking, should have proved fatal, Bressani, after his experience with the Mohawks, returned to Canada (1645) and consecrated his unflinching energies to the welfare of the Hurons, who could not help regarding him as a hero. Meantime, constantly harassed by the Iroquois, who had burnt several of their villages, the Hurons were rapidly marching to their doom. Yet, thanks to the fearlessness of their spiritual guides, mission work grew apace among them. Indeed about 1648 Father Bressani felt warranted to write that "whereas at the date of their arrival they found not a single soul possessing a knowledge of the true God, at the present day, in spite of persecution, want, famine, war, and pestilence, there is not a single family which does count some Christians." Better still, the converts were living up to the Christian standard of morality, and the general tone of the nation's society was gradually undergoing a decided change for the better. But the implacable Iroquois would not allow them to profit peacefully by the ministrations of their priests. One by one their villages were attacked and destroyed. In the spring of 1648 St. Joseph's was annihilated and its missionary, Father Daniel, killed while comforting his flock. Next came the turn of the fortified town of St. Louis where the lion-hearted Brébeuf and his companion, Father Lalemant, were martyred (see *BRÉBEUF*). St. Ignatius village suffered a similar attack, and most of its inhabitants were butchered. Then St. Mary's was assailed by the enemy; but, warned in time, it succeeded in repulsing the attack. Numerous Huron villages were successively razed, and many of their people massacred, while others were led off to the land of the invaders, there to undergo torture, perpetual captivity, or death.

No wonder, then, if the Hurons lost heart and sought safety in flight and dispersion. Their devoted pastors followed them in their exile. They at first gathered remnants of their once powerful nation on an island in Lake Huron, called to-day Christian Island, while the Petun village of Etharita succumbed under the blows of the southern aborigines, and with it Father Charles Garnier who, though in the grasp of death, dragged himself to minister to the spiritual needs of his afflicted flock. His companion, Father Noël Chabanel, was at the same time the victim of an apostate Huron who flung his body

into the river. The one consolation in the midst of these ruins was the constancy with which the converts stuck to their faith, even when in the land of their executioners. So thoroughly did they share the fortitude of their pastors, that many of them not only confessed their faith in Christ at the peril of their lives but even exhorted their persecutors to embrace it themselves. Some of the fugitives went west, while others found a temporary refuge on the desert islands of Lake Huron, or among the Neutrals who had soon themselves to flee for their lives. Meanwhile the exiles of Christian Island, after untold sufferings, retired in the spring of 1650 to the neighbourhood of Quebec, finally settling at the Lorette Mission (see *HURON INDIANS*). Their chief occupation having ceased with the practical extinction of the Hurons as a people, the Jesuit missionaries now turned their attention to the fierce Iroquois, repeating the prodigies of self-denial with which their victims had been favoured. Against their tenacious perseverance and devotion to duty no bigotry can stand. To Protestants as well as to Catholics they are nothing short of heroes of Christian fortitude. To the west of Huronia proper was the land of the Petuns who boasted nine or ten villages with a population of perhaps ten thousand in 1640. Two missions, that of St. John's and that of St. Mathias, had been established among them. These Indians were commencing to yield to the influence of grace when they, too, had to retire before the victorious march of the ruthless Iroquois. In 1652 we find them at Michillimackinac, whence they set out on a series of peregrinations which landed them among tribes of the United States, by whom they were ultimately absorbed. The other remnant of the Huron nation fared better. About 1665 they enjoyed the ministrations of an able and pious priest, Father Joseph M. Chaumonot, a pioneer missionary who had given no less than fifty-three years of his life to the ill-fated Hurons (d. 1692).

Considered as a nation, the Hurons had been wiped off the face of the earth. Such of the priests as were not required for missionary work within what is now the American Union then turned their attention toward the more pacific tribes nearer home. The Micmacs had from the first accepted Christianity (see *MICMACS*). On 29 July, 1657, Gabriel De Queylus, Gabriel Souart, and Dominique Galinier, members of a newly founded ecclesiastical society, the Sulpicians, accompanied by M. d'Allet, a deacon of the same institute, arriving at Quebec, immediately proceeded to the village of Ville-Marie, now Montreal, where they replaced the Jesuits in the charge of the local parish. Though more especially destined for work among the whites, the Sulpicians did not overlook the salvation of the native tribes. Thus, ten years after their arrival in Canada (1667), they ministered to the Ottawas and other Algonquin groups. Bishop De Montmorency-Laval, the first prelate in the colony, entrusted to them the care of a mission established at Quinté Bay on Lake Ontario, for the benefit of the Cayugas, an Iroquois tribe, and many adopted Hurons settled in their midst. Their success with the adult population was not complete; but their very presence paved the way towards establishing missionary stations all along the western shore of Lake Ontario (1669). Soon after, the Sulpicians were succeeded in that field by the Recollects who had just returned to Canada. Father Louis Hennepin and others laboured with energy, but harvested only tares, and the natives gradually returned south; all traces of a mission on the Canadian side of the lake disappeared.

It was then that, quite a number of Iroquois of the American Union having been won over to the Faith, a step was taken by their spiritual advisers of which the results were to last to our day. To withdraw them from the dangers of their pagan environment, the Jesuits induced them (1668) to settle at La Prairie,

near Montreal, whence they moved (1676) to Sault St. Louis, and then to Caughnawaga. One of the chief reasons for that migration was the prevailing excesses, principally owing to the intoxicants dealt out by the Dutch. The French colony itself was not free from that greatest of curses for the American aborigine. But, in addition to the solemn promise to abstain therefrom which was exacted of all the newcomers into the model settlement, the stopping of the evil was more easy on Canadian than on American (or, as it was then, English) soil. As a matter of fact, the missionaries of New France, and especially their valiant head, Bishop Laval, fought it with unflagging perseverance, appealing to the French authorities whenever their representatives on the St. Lawrence proved unwilling to stay the spread of this scourge. In their new home at Sault St. Louis the Iroquois Christians gave great consolations. Thus one of the former torturers of Father de Brébeuf, Garonhiagué by name, became one of the most zealous catechists of the new mission, and the war-chief Kryn shone by his virtues as much as by his courage. But the best known example of Christian efflorescence in that settlement was Catherine Tegakwitha, a native virgin surnamed the "Lily of the Mohawks", who died in 1678 after a short life passed in the practice of heroic virtues. About that time events shaped themselves in such a way as to further increase the extent of the missionary field in the East. The Abenakis, an Algonquin nation, ever a staunch ally of the French, though most of its tribes were considerably nearer to the English, were attracting the attention of Father Gabriel Druliettes, who visited them repeatedly in their original homes. These natives were soon to swell the ranks of the Canadian Indians under the care of the Jesuits. After a series of hostilities in the course of which the English had at one time to agree to pay them tribute, the Abenakis were defeated on 3 Dec., 1679. Rather than remain neighbours to the victors, most of them immediately made their way to Canada and Acadia, where they have since remained.

The following year (1680) two Jesuits, the brothers Vincent and Jacques Bigot, were appointed to watch over the spiritual interests of the newcomers. These, gathered at the village of Sillery, joined St. Joseph's Mission which in 1681 counted already some five hundred or six hundred inhabitants, as yet unbaptized, but animated by excellent dispositions. Their congeners in Acadia, having heard of the welcome extended to them, asked for, and were granted, 1 July, 1683, a land concession of thirty-six square miles on the Chaudière River, to which they flocked in large numbers. This was given the name of St. Francis' Mission. For over twenty years the Bigot brothers devoted their energies to the welfare of the Indians of both missions, and their zeal was rewarded by complete success. In 1708 other aborigines of the same stock were settled at Bécancourt, with a view to serve as a rampart against the Iroquois. They "were all Christians, and practised with much edification the precepts of Christianity" (Charlevoix, "Journal Hist.", V, p. 164). Twelve years later (1720) they numbered about five hundred souls. A short time before (1716), the mission of Oka, or Lake of the Two Mountains, was established, where Christianized Iroquois and remnants of the Algonquin nation were gathered under the guidance of the Sulpicians. In these various foundations the secular authorities generously seconded the efforts of the missionaries by the grant of large tracts of land for the benefit of their charge.

Now that the French were more or less at peace with the Iroquois, and friendly with the other tribes in the East, they dreamt of fresh conquests in the West. The "Western Sea" (Pacific Ocean) was especially the object of their ambition. They commissioned

the Sieur Pierre Gauthier de Laverendrye to undertake an expedition in that direction, and in the summer of 1735 Father Jean Pierre Aulneau, S.J., accompanied him to the Lake of the Woods previous to attempting his ultimate mission, the conversion of the Mandans of the Upper Missouri. With a party of twenty Frenchmen, he was treacherously slain on an island of the same lake by the Sioux on 8 June of the following year. Father Claude Godefroy Coquart, of the same order, took his place (1743) as chaplain of the exploring expedition, and dwelt a short time at the present Portage la Prairie, but could accomplish nothing for the Western Indians. The mission of Michilimackinac, at the west end of Lake Huron, was then the base of operations for such expeditions. Thence also the Jesuits scoured the woods in quest of souls to save, and Ross Cox says that the impression they made on their wayward wards was such that, at the beginning of the eighteenth century, the descendants of the latter had not forgotten "the good white fathers who, unlike other white men, never robbed or cheated them" ("Adventures on the Columbia River", New York, p. 149). But, with the exception of the reservations of the Abenakis and the Micmacs in the far East, all under the care of the Jesuits, most of the Catholic missions in Canada were along the St. Lawrence. Quite a few were at the various localities then called the Posts of the King, the Malbaie, Tadoussac, Mingan, Chicoutimi, and other places, concerning which Father Coquart addressed a memoir to the Intendant of New France under date 5 April, 1750.

Shortly before, a Sulpician, Father Francis Picquet, had started a movement among the aborigines, the results of which were most remarkable. In a village called Ogdensburg he established a reduction, the success of which soon attracted widespread attention. In the space of four years he grouped over three thousand Indians and opened for their benefit the missions of La Présentation, La Galette, Sugatsi, L'Île au Galop, and L'Île Picquet, on the St. Lawrence. So great was his success and so considerable the extent of his operations that (1749) it took the Bishop of Quebec ten days to inspect his central establishment officially. Two years later Father Picquet visited the Indians on Lake Ontario, whence he repaired to the land of the Senecas. When Quebec was captured in 1759, that missionary had converted large numbers of heathens. Unfortunately, the ensuing unsettled state of the country put a stop to his activities, and in May, 1760, he had to leave Ogdensburg, never to return. Another Sulpician, Father Jean Mathevet, after having mastered the language of the Abenakis, of which he compiled a dictionary, was then ministering to the mixed congregation of Oka (1746-81), together with Father Vincent Guichart, whose missionary labours extended from 1754 to the time of his death in 1793. Perhaps the most famous Canadian missionary of that period was Father Jean-Baptiste Labrosse, a Jesuit, who exercised his ministry all through Lower Canada and New Brunswick during no less than thirty-five years, being with the Montagnais and the Malecites from 1754-82, when he died regretted by all for his unrelenting charity. Two events then conspired to interrupt the progress of the Catholic missions in Canada. These were the change of political masters, owing to which several members of the clergy returned to France, and the suppression, in 1773, of the Jesuit Order. By the fortieth clause of the Montreal capitulation England had granted religious liberty to the Indians as well as to the whites then in the colony. Yet some of the instructions soon after sent to her representatives on the banks of the St. Lawrence were openly against the spirit, if not the letter, of that treaty. The officials were told that "all missionaries among the Indians, whether established under the authority or appointed by the Jesuits, or by any other

ecclesiastical authority of the Romish Church, [must] be withdrawn by degrees, and at such times and in such a manner as shall be satisfactory to the Indians and consistent with the public safety, and Protestant missionaries appointed in their places" (Royal Instructions to Sir George Prevost). The natives refused to part with their priests on any consideration, thereby showing the extent of the influence these had acquired over them. After the suppression of the Society of Jesus the care of the Indians fell entirely on the shoulders of the Sulpicians and of such of the secular clergy as could be spared for that work. Among the former we may mention Father Thavenet, who laboured, mostly at the Oka mission, from 1793 to 1815. Of the latter one of the most prominent was a refugee from the horrors of the French Revolution, Abbé le Courtois, who reached Canada on 26 June, 1794, and died on 18 May, 1828, after having devoted himself to the service of the northeastern and St. Lawrence aborigines.

Meantime an event had taken place in the West which was portentous of the most important results for Catholic influence among the natives of North America. The Earl of Selkirk having founded, in 1812, a colony of Scotch Presbyterians and Irish Catholics at the junction of the Assiniboine and Red Rivers, was violently opposed by the representatives of the Northwest Company. This opposition resulted (19 June, 1816) in the Battle of Seven Oaks, in which twenty-two whites, including the governor of the colony, lost their lives. As it was evident to the noble founder that no permanent success could be achieved without the aid of religion, he obtained from the Bishop of Quebec two missionaries, Father Joseph-Norbert Provencher and Joseph Nicholas S. Dumoulin, who, on 16 July, 1818, arrived to found the church of St. Boniface, opposite Fort Douglas, the headquarters of the traders in the country. One of the chief objects of the new mission was the conversion of the aborigines of the Middle West of Canada. Father Dumoulin tried to meet the wishes of his bishop in this respect; but, owing to the fact that he could give only half of his time to the Indians, he accomplished little enough. In fact, such was the rebellious temper of his native charges, that he was twice shot at by one of them. Scarcely anything could be done to better their lot until 1831, when Father George A. Belcourt arrived among them from Lower Canada. The newcomer, an able man, immediately commenced to acquire a thorough knowledge of the language of the Saulteux, or Chippewas, which he reduced to writing and of which he composed a dictionary. In 1833 he established on the Assiniboine an Indian village, known as St. Paul's Mission, where he strove to teach farming as well as the elements of the Christian doctrine. Owing perhaps to his insistence on the former, his success was far from complete. In the summer of the same year, Father Jean-Baptiste Thibault reached the Middle West; though less brilliantly endowed than Belcourt, he was to prove more successful as a missionary. The latter was then journeying to Rainy River, where he found the Indians "little disposed to leave the bottle for the word of God", according to the founder of the Red River Missions, now Bishop Provencher. In the course of 1838 Belcourt established a second post at the confluence of the English and Winnipeg Rivers. This was Wabassimong, which soon acquired a degree of celebrity, though it had to be abandoned in 1847. In 1842 a new and larger field was opened to the zeal of the missionaries, the Far West, to-day Alberta, where Father Thibault preached the Gospel to the Crees and Blackfeet who repaired to Fort Edmonton. Without becoming at once converts to our holy faith, these aborigines were persuaded by the preaching of the Canadian priest to the extent of definitively rejecting the advances of the Methodist minister who

had preceded him in that distant region. Then Thibault journeyed even farther west, and founded the mission of St. Ann, whence he and other priests thenceforth attended, with some measure of success, to the spiritual wants of the surrounding tribes. He next went (1844) as far as Cold Lake, Lac la Biche and even Ile à la Crosse, where the Déné Indians received him with open arms.

A short time before (1842) another Canadian missionary, Father Modeste Demers, began work throughout British Columbia, or New Caledonia, as that country was then called, going as far as Stuart Lake, where he accomplished wonders. As early as 1838, after having crossed the entire continent from Quebec, Father Demers had reached the Columbia valley, where he was everywhere received as the special envoy of the Almighty, and produced among the populous tribes of the Pacific an impression which powerfully worked for unity when, later on, the ministers of various sects made their appearance. In the spring of the following year, Father Jean Baptiste Z. Bolduc reintroduced Christianity on Vancouver Island, where it had been planted at the time of the occupation of Nootka by the Spaniards (1789-95). In 1845-47 Father John Nobili, a Jesuit, retraced Demers' itinerary, and finally went even so far as Babine Lake in the course of his missionary excursion. Meantime a new worker, Father Jean E. Darveau, was in a fair way towards materially improving the spiritual condition of the hardened Saulteux of what is to-day Northern Manitoba, when he was murdered, 4 June, 1844, by Indians who sided with a Protestant catechist stationed at Le Pas, Lower Saskatchewan, where the priest intended to start a permanent mission. East of the Manitoban lakes, Father Dominique Du Ranquet, S.J., inaugurated in April of the same year the missionary station of Walpole Island, on Lake Superior, whence he visited various posts, and in the following July another Jesuit, Father Choné, took up his residence at Wikwemikong, on Manitoulin Island, where a secular priest had preceded him. No less than twenty-one posts on the island, Georgian Bay from Mississaugé to Owen Sound, as well as Lake Nipissing and Beausoleil Island, were attended from that mission. Great was the opposition of the Protestant ministers (among whom was James Evans, the inventor of the Cree syllabics); but the Jesuits held their own, and managed to organize the flourishing Christian settlements of Garden River and Pigeon River (1848). The latter station was transferred in 1849 to Fort William by Fathers Choné and Frémont. Thence these missionaries ministered to the Indians of Port Arthur, Prince's Bay, Royal Island, and Lake Nipigon. Still further east, in the very land of the Abenakis, less consoling events had taken place some time previously. An Indian known by the name of Masta had been educated in the United States, whence he returned in 1830 to St. Francis Mission with the title and attributes of a Protestant minister. After much opposition at the hands of his fellow Abenakis he succeeded, by dint of skilful intrigue and with the connivance of the Canadian authorities, in putting up a Protestant chapel in the very midst of the Indian village (1837). Three years later Father J. A. Maurault was sent thither by Bishop Signay to learn the language of the natives, and in 1847 he actually became their missionary. Thenceforth the Abenaki preacher saw whatever influence he had gained wane until he had to leave the scene of his exploits. At the same time a still better known priest was commencing his apostolic career at Oka, Father J. A. Cuocq, an able Sulpician, who was to consecrate his energies for over half a century to the welfare of the Mohawks and Algonquins, whose languages he eventually mastered.

A new era dawned for the Indian missions of

Canada. At the request of Mgr Bourget, Bishop of Montreal, four Oblates of Mary Immaculate reached the St. Lawrence from France (1841) and immediately began preaching missions, not only to the whites, but also to the Indians of Lower Canada. Several missionaries of the new order, Fathers Louis Délaage, Flavien Durocher, and Jean-N. Laverlochère, soon distinguished themselves. Hearing of their success, Bishop Provencher begged for the co-operation of their brethren in religion. On 25 Aug., 1845, Father Pierre Aubert and Brother Antonin-Alexandre Taché arrived at St. Boniface, and, while the older missionary was sent to Wabassimong, Brother Taché left after his ordination (22 Oct., 1845) for the distant post of Ile à la Crosse. There he had for a superior Father Louis Lafêche, who had established that mission in the course of the preceding year. Both priests did a vast amount of good to the native population. In 1846 two other Oblates, Father Henri Faraud and a companion, reached the Canadian West. In the north Father Taché gradually extended his field of action. He visited (1847), first of all missionaries, the shores of Lake Athabasca, where Father Faraud was to inaugurate the Nativity Mission on 8 September, 1849. On 24 June of the following year Father Taché was appointed coadjutor to Bishop Provencher, and temporarily left the Ile à la Crosse mission in the hand of newcomers, Fathers Maisonneuve and Tissot, whose inexperience was somewhat resented by the Indians. Hence Bishop Taché had to return to them after his consecration (23 Nov., 1851), and for several years the young prelate continued among them the labours which pertain more to the province of a simple priest than to that of a bishop. Father Henri Grollier, a young Oblate who was to become the Apostle of the Arctic Circle, came to swell the ranks of the missionaries (June, 1852), while Father Albert Lacombe started on his long career as an itinerant missionary over the Saskatchewan plains. Father Grollier soon went to Lake Athabasca, where he was for some time Father Faraud's companion. Then he founded the mission of Fond du Lac, on the same body of water (1853), while Father René Rémas established that of Lac la Biche. The principal event of 1854 was the arrival in the Canadian Northwest of Father Vital J. Grandin, a young Oblate who was to do yeoman service in the cause of the missions there. The new recruit was sent to Lake Athabasca, to relieve Father Faraud, who established (1856) St. Joseph's Mission on Great Slave Lake. Illustrative of the result of the Oblates' exertions in the north, we may say that, by the end of 1856, there remained of the seven hundred and thirty-five natives who formed the population of Ile à la Crosse, only one hundred and forty-eight heathens.

In the far East other Oblates were emulating those of the Canadian Northwest; in addition to those already mentioned there were Fathers André Garin and Charles Arnaud, then Fathers Louis Babel and Jean-Pierre Guéguen. These missionaries repeatedly visited in succession Tadoussac, Les Escoumains, Maskuaro, Mingan, Portneuf, and Les Îlets. As a rule their efforts were crowned with success. Not only did they teach their neophytes the rudiments of the Christian doctrine, but they even imparted to them some knowledge of the secular sciences, and enhanced the attractiveness of the Catholic worship by solemn processions and other pious devices. As early as 30 Sept., 1850, one of them, Father Arnaud, at this writing (1910) still actively engaged in the eastern field, wrote of the natives of Les Îlets: "They are the best instructed on the coast; they all know how to read and write. It is inspiring to see them in the church, the men on one side and the women on the other, prayer-book in hand, vying with each other, as it were, in modesty and fervour. Another spectacle scarcely less striking is that of the little children in prayer after

the evening service, when every mother teaches the members of her family how to pray to the Great Spirit" (*Rapport sur les Missions de Québec, March, 1851, p. 36*). A regular house of the Oblates was established (1851) at Rivière au Désert, now Maniwaki, and later on (1862) others were erected at Bethsaimits and Ville-Marie (Pontiac), whence, as well as from the residences on the St. Lawrence, not only the roving bands of the interior, Montagnais, Algonquins, and Nascapis, but even such as resorted to the trading-posts of Abbittibi, Albany, and Moose Factory, on Hudson Bay, were visited by the "Black-Robes". In spite of their precarious circumstances, those aborigines often enough repaid by a faithful discharge of their religious duties the devotedness of their spiritual guides. The same may be said of the Indians of the inhospitable steppes of the Far North, where the Tachés, Farauds, Grandins, Grolliers, and a host of others were gladly undergoing the pangs of hunger, and setting at defiance the rigours of Arctic winters and the fatigues of endless marches on snowshoes, for the sake of the souls entrusted to their care. Their courage and devotion to duty were so great, and their successes so striking, that they often elicited flattering encomiums from Protestant traders and explorers. On 30 November, 1859, Father Grandin was consecrated Bishop of Satala and coadjutor to Bishop Taché; yet he remained in the north, spending most of his time in incessant travelling. His presence there was all the more necessary as the preceding year had witnessed the arrival in the Mackenzie district of the first Protestant clergyman, the forerunner of numerous Anglican missionaries in the north. Father Grollier was immediately dispatched to Fort Simpson, the headquarters of the enemy, where, in spite of the inducements offered by the local Protestant trader, he had the consolation of seeing the great majority of the natives side with the representative of Catholicism. He then founded (1858) the missionary post of Our Lady of Good Hope, likewise on the Mackenzie and just within the Arctic Circle. Then he even went down as far as the first Eskimo village (Sept., 1860), while Father Gascon, a new recruit, was protecting the savages of the Liard River against the wiles of the preacher. Simultaneously the difficult station of Lake Caribou, just southwest of the Barren Grounds, was established under Father Végreville.

The year 1862 saw the beginning of what was to become a most important establishment under the title of the Divine Providence, on the Mackenzie, where Fathers Gascon and Petitot made the very first clearings. That same year a Protestant minister, Mr. Kirkby, despairing of success east of the Rocky Mountains, crossed that range into the Yukon. Hearing of this, an intrepid missionary, Father Séguin, immediately followed; but the conflict was unequal; the preacher, besides the powerful influence of the traders, had resources of which the priest could not dispose. Above all, he had the advantage of priority, and, despite two other visits of the Catholic missionaries, that of Father Petitot (1870) and that of Bishop Clut with Father Lecorre (1872), the Loucheux of the Far Northwest were, to a great extent, lost to the Church. Things were brighter on the Saskatchewan and in the adjoining region, where new posts, denoting constant progress, were being established on all sides. Even martyred Darveau's old mission of Duck Bay had been in a sense revived, though transferred to the northern extremity of Lake Manitoba under the name of St-Laurent. A still more important event was the erection of the Athabasca and Mackenzie districts into a separate vicariate Apostolic, with Father Faraud (consecrated 30 Nov., 1864) as first titular. The new prelate was (1866) given a coadjutor in the person of Bishop Isidore Clut. With this perfected organization the northern missions, served by such sterling missionaries as Fathers

Séguin, Grouard, and the learned explorer, linguist, and ethnographer, Father Petitot, managed, in the teeth of opposition and extreme poverty, not only to hold their own, but to increase the number of their stations and converts. In the course of 1866 Father Petitot procured for the natives of Great Bear Lake the visit of the first minister of the Gospel they had ever seen in their dreary wastes. In the south Fathers Lacombe, Gasté, Leduc, Fourmond, Bonnard, and others were neither less active nor less successful. While in the far East secular priests were looking after the spiritual interests of the Abenakis, the Oblates continued their visits to the Indians north of the St. Lawrence, and the Jesuits to the natives of the Lake Superior basin.

On the Pacific Coast, the work of evangelization inaugurated by Father Demers likewise advanced. That missionary, having been made Bishop of Vancouver Island (1847), called to his aid the Oblates lately established in Oregon. The stations of Esquimalt, Saniah, and Cowitchien, and the conversion of hosts of aborigines were the immediate results. From the island missionary work spread to the adjacent mainland. On 8 Oct., 1859, Father Charles M. Pandosy founded the Okanagan mission, and Fathers Casimir Chirouse, Léon Fouquet, Paul Durieu, and other Oblates powerfully helped their superior, Father Louis-Joseph d'Herbomez, in regenerating the Indians of the Lower Fraser. Most consoling were the results of their zeal, and it is doubtful if a more thorough change from habitual intemperance and other vices was ever effected in North America than that which rejoiced the hearts of the Oblates in British Columbia.

On 20 Dec., 1863, Father d'Herbomez became the first bishop of the mainland, and this circumstance gave a new impetus to the evangelization of that immense country. Shushwaps and Chilcotins were then granted the same spiritual advantages as had been for some time enjoyed by the natives of the Lower Fraser valley, for the special benefit of whom the mission of St. Mary's had been established (1861). In the course of 1868 Bishop d'Herbomez himself visited the whole of the northern interior of British Columbia, as far as Babine Lake, doing much good to the Dénés and other Indians he met. Fathers Le Jacq and McGuckin walked in his footsteps until the former established (1873) the mission of Stuart Lake, which was to become the great centre of missionary activities in the north of the Pacific province. In June, 1875, Father Pierre-P. Durieu was named coadjutor to Bishop d'Herbomez. On Vancouver Island a devoted secular priest, Father August Brabant, had long been battling at his own personal risk against the apathy of the less religiously inclined Indians of the west coast. He was finally successful, while secular priests, Fathers J. N. Lemmens, Joseph Nicolaye, and others, were gradually taking the places of the Oblates who had been the pioneers of the island diocese. In 1871 the Holy See formed the Province of St. Boniface with Archbishop Taché as metropolitan and three suffragans, Bishop Grandin, now titular of St. Albert, and the vicars Apostolic of Athabasca-Mackenzie (Mgr. Farraud) and of British Columbia (Mgr. d'Herbomez). The archdiocese lost importance as a missionary country in proportion as it saw the wave of white immigration roll over the soil tilled by so many devoted workers. The districts of the Saskatchewan, Athabasca, and the Mackenzie were long to remain rich fields for apostolic men zealous for the lowest in the social scale. That the difficulties and even dangers attending the evangelization of the Indians had not disappeared from those territories was made evident by the drowning in Lake Athabasca (1873) of a veteran of the northern missions, Father Emile Eynard, an ex-official of the French Government, the

freeing (1874) of Louis Dazé, a lay missionary of the St. Albert diocese, and the fate which befell Brother Alexis (July, 1875), killed and eaten by an Iroquois companion.

Yet there is no denying that local conditions were little by little undergoing some alterations. On the plains of what is now southern Alberta and southern Saskatchewan white immigration had commenced. At that time treaties were made with the Indians, entailing the establishment of new missionary posts and of industrial schools. While some of these were assigned to Protestant sects, the Church could not be content with a second place in a country where she had done most of the pioneer work. In spite of occasional ill-will on the part of those in power, she readily adapted herself to the new circumstances. Thus were founded the important Indian schools of (1) Dunbow, Alberta (1884); (2) Qu'Appelle, Saskatchewan (1884); (3) St. Boniface (1890); (4) Duck Lake, in Saskatchewan (1897), and other similar institutions for the benefit of the Indian youth. British Columbia already possessed the Indian industrial schools of St. Mary's, William's Lake, Kamloops, and Kootenay, all in the hands of the Catholic missionaries and nuns. Then came the Saskatchewan Rebellion (1885), which resulted not only in the destruction of seven Catholic missions, but even in the death at the hands of pagan Crees (2 April) of Fathers Fafard and Marchand, young Oblates then in charge of the posts of Frog Lake and Onion Lake respectively. Quite a few of the misguided Indians, however, eventually profited by these troubles, since their condemnation to death or confinement led them to join the Church they had so grievously injured.

Thenceforth the roving life of the pioneers became more or less a thing of the past for the missionaries of the western prairies, who, penned up with their charge in well-defined reservations, continued their ministrations without that element of romance which breaks the monotony of the daily routine and contributes to the making of history. It may now suffice for us to mention the labours of Fathers Gasté at Lake Caribou; Bonnard at Cumberland; Grouard (who replaced Bishop Farraud, d. Oct., 1892), at Lac la Biche and Athabasca; of Father Pascal (appointed vicar Apostolic of the newly created district of the Saskatchewan, 19 April, 1891), at Lake Athabasca and elsewhere; of Father Séguin, on the Lower Mackenzie, and of many other equally deserving missionaries. Even the lonely missions of the great northern stream and tributaries have had a share in the material progress so noticeable in the south. Thanks to the initiative of Bishop Grouard, a steamer has been built which annually saves to those poor missions large sums of money formerly paid to the Hudson Bay Company for their periodical outfitting. In the far East a new impetus was imparted to the missions of the faithful Micmacs by the arrival of the Capuchin Fathers in October, 1894, at Ste-Anne de Restigouche. In British Columbia material circumstances were never quite so precarious as in Mackenzie. Owing to the efforts of Bishop Durieu, the spiritual conditions of the Indians of the mainland of that province have ever been exceptionally bright. With the aid of such tried co-workers as Fathers Le Jacq, Fouquet, Chirouse junior, and others, the wonders of the Paraguayan Reductions have been reproduced, if not surpassed, among the Indians of the Pacific. Others working there were Rev. A. G. Morice, who directed Stuart's Lake mission during nineteen years and invented an Indian syllabary now widely known in the North; N. Coccolla, who did wonders in the Kootenay; Fr. Thomas, and V. Rohr.

Of a native population of 111,043, Canada officially counts to-day 40,820 Catholic Indians thus distributed: Prince Edward Island, 274; New Brunswick,

1871; Nova Scotia, 2103; Quebec, 7926; Ontario, 6319; Manitoba, 1734; Saskatchewan, 2939; Alberta, 1873; Northwest Territories, 2252; Yukon Territory, 59, and British Columbia, 11,470. These are the official figures, which represent only the treaty Indians. In so far at least as the present vicariates Apostolic of Athabasca and of Mackenzie are concerned, they are manifestly out of proportion with the actual population, since the Catholic Indians and halfbreeds of those territories alone are locally estimated at 11,000 and 5,000 respectively, with perhaps 500 native Protestants. 55,000 is a fairly accurate figure for the total of the Catholics among the Canadian Indians.

For books bearing on the Catholic missions in Canada see the bibliography after the article HURON. Also—

A. G. MORICE.

Missions, CATHOLIC INDIAN, OF THE UNITED STATES.—The spiritual welfare of the native tribes of America was a subject of deep concern to the Governments of Catholic Spain and France from the very discovery of the Western Continent. To this fact all the early patents bear witness. That granted to Ayllon in 1532 for exploration and settlement along the Florida coast, as quoted by Shea, is typical: "Whereas our principal intent in the discovery of new lands is that the inhabitants and natives thereof, who are without the light or knowledge of faith, may be brought to understand the truth of our holy Catholic Faith, that they may come to a knowledge thereof, and become Christians and be saved, and this is the chief motive that you are to bear and hold in this affair, and to this end it is proper that religious persons should accompany you, by these presents I empower you to carry to the said land the religious whom you may judge necessary, and the vestments and other things needful for the observance of Divine worship; and I command that whatever you shall thus expend in transporting the said religious, as well as in maintaining them and giving them what is needful, and in their support, and for the vestments and other articles required for the Divine worship, shall be paid entirely from the rents and profits which in any manner shall belong to us in the said land." With few exceptions secular priests and missionaries accompanied every Spanish expedition of discovery. The first Mass celebrated within the present limits of the United States was probably that offered up by the priests of Ponce de León's expedition at the south-western point of Florida in 1521. The next

was celebrated by the noted Dominican Antonio de Montesinos, the earliest opponent of Indian slavery, at Ayllon's temporary colony of San Miguel de Guadalupe in Virginia in 1526, eighty years before the founding of Jamestown.

I. SOUTH-EASTERN STATES (VIRGINIA TO ALABAMA, INCLUSIVE).—The whole south-eastern portion of the United States, extending westwards to or beyond the Mississippi, was known in the early Spanish period under the general name of Florida. Although at least fifteen priests had lost their lives in this region with the expeditions of Narváez and De Soto in 1527-28 and 1539-42, an attempt to evangelize the native tribes was made in 1549 by the Dominican Luis Cáncer, the apostle of Guatemala, under a royal commission granted at his own request for the conversion of Florida. Forced by the obstinacy of the ship-captain to land at Tampa Bay among the fierce Calusa, instead of being given an opportunity to search out a friendly tribe, Father Cáncer and his two companions had hardly touched the shore when they were killed by the assembled savages in sight of the ship, being thus the first missionary martyrs of the eastern United States. St. Augustine, Florida, the first permanent settlement in the eastern United States, was founded by Menéndez in 1565. In the next year, at the request of the King of Spain, three Jesuits were sent out, one of whom, Father Pedro Martínez, having landed with a small party on Cumberland Island on the Georgia coast, was attacked and murdered by the savages. The other two Jesuits, Father Juan Rogel and Brother Francisco de Villareal, after spending a winter studying the language, proceeded to work among the Calusa tribe in southern Florida. Reinforced by ten more Jesuits in 1568, they went over to Havana to establish there a school for Indian boys from Florida. Father Juan Bautista Segura, as Jesuit vice-provincial, then took charge of the Florida mission, establishing stations among the Calusa, Tegesta, and Tocobaga tribes of the south and west coasts, while Father Antonio Sedeño and Brother Domingo Báez began the first Georgia mission on Guale (St. Simon's?) Island among the Yamasee, in whose language Brother Báez prepared a grammar and a catechism. In 1569 Father Rogel with several other Jesuits began work in South Carolina among the Orista (Edisto) and others in the neighbourhood of the Spanish post of Santa Elena. After about a year, the results proving unsatisfactory, both the Orista and the Guale missions were abandoned, the missionaries returning to Havana with a number of boys for the Indian school.

In 1570 Father Segura, accompanied by Father Luis de Quiros and seven (?) novices and lay brothers, all Jesuits, together with four instructed Indian youths, undertook a mission among the Powhatan Indians in what is now Virginia. The guide and interpreter on whom they depended to bring them into touch with the natives was a young Indian of the region, who was the brother of a local chief and had been brought off by a Spanish expedition nine years before, educated under the Dominicans in Mexico and Spain, and baptized under the name and title of Don Luis de Velasco. Their destination was Axacan (Oshacon)—supposed by Shea to have been on the Rappahannock—but more probably situated farther south. They met with friendly reception, and a log chapel was erected (September, 1570), but, before the winter was over, Don Luis proved treacherous, and under his leadership the Indians attacked the mission (February, 1571) and massacred the entire party with the exception of one Indian boy, who was spared, and finally escaped to tell the tale. The massacre was avenged on the principals by Menéndez a year later. In consequence of the small result in Florida the Jesuits were shortly afterwards transferred to the more promising field of Mexico. Years afterwards, on

the establishment of the Catholic colony of Maryland, some attention was given to the neighbouring Indians of Virginia (see below). In 1577 several Franciscans under charge of Father Alonso de Reynoso arrived at St. Augustine and began work among the Timucua Indians near the city, of whom a number were soon regular attendants at the parish church. Fifteen years later four Franciscan priests and two lay brothers were at work in the towns of the Timucua and Yamasee from St. Augustine northwards into Georgia. In 1593 twelve more were sent out in charge of Father Juan de Silva, including the noted Father Francisco Pareja, to whom we are indebted for our most complete account of the Timucua people and language and for several devotional works, the first books printed in any Indian language of the United States.

In 1597 a chief of the Yamasee organized a conspiracy which seems to have included also a part of the Timucua tribe about St. Augustine. Five missions, stretching from St. Augustine to Ossabaw island in Georgia, were attacked and five of the six missionaries murdered, Father De Avila (or Dávila), although badly wounded, being rescued. The advance of the Indians was finally checked by some Spanish troops, after all the Yamasee missions had been destroyed. The missions among the more peaceful Timucua about the lower Saint John's River, Florida, continued to flourish, being in 1602 four in number, besides temporary stations, with 1200 Christian Indians. Other Franciscans arriving, the Yamasee missions were re-established in 1605, the Potano tribe on the Suwanee river almost entirely Christianized two years later, and a beginning made among the lower Creek bands. In 1633 missionaries were sent to the powerful Apalachee of western Florida in response to repeated requests from that tribe. In 1655 there were 35 Franciscan missions in Florida and Georgia with a Christian Indian population of 26,000 souls. This was the zenith of their prosperity. Two years later the Apalachee, in consequence of the unjust exactions of the governor, became involved in a war with the Spaniards, which compelled the abandonment of the eight flourishing missions in that territory. The fathers embarked for Havana, but were all drowned on the passage. In 1674, through the efforts of Bishop Calderón, the Apalachee mission was restored, and several new foundations established. In 1684 the Diocesan Synod of Havana promulgated regulations for the government and protection of the mission Indians. In the same year the Governor of Florida, alarmed at the growing strength of the English colony of Carolina, undertook to remove the Indians of the northern missions to more southern settlements with the result that the Yamasee again revolted and, being supplied with guns by the English, attacked and destroyed the mission on Saint Catherine island, Georgia, and carried off a troop of Christian Indians prisoners to sell as slaves in Carolina. In 1696 an attempt to establish missions about Cape Canaveral resulted in the killing of a religious and six companions. A like attempt in the next year among the fierce Calusa south of Tampa Bay also proved abortive.

For years the English slave-traders of Carolina had made a business of arming certain tribes with guns and sending them out to make raids upon other tribes to procure slaves for Carolina and the Barbadoes. The Spanish Government, on the contrary, refused guns even to the Christian Indians. The War of the Spanish Succession gave an opportunity for an attack upon the Florida missions. In May, 1702, the heathen Lower Creeks, armed and instigated by Governor Moore of Carolina, attacked Santa Fé, occupied by the Timucua, and burnt the church. In October of the same year a combined English and Indian land expedition, co-operating with a naval force, attacked the mission towns north of St. Augustine, burned three

of them with their churches, made prisoner the missionaries, and then, proceeding farther southward, burned the town of St. Augustine with the Franciscan church and convent and one of the finest libraries then in America. The fortress held out until relieved by a Spanish fleet. In January, 1704, Moore, at the head of about fifty Carolina men and a thousand or more well-armed Creek, Catawba, and other savages, ravaged the Apalachee country, destroyed ten of the eleven missions towns, slaughtered hundreds of the people, including a number of warriors who made a stand under the Spanish lieutenant Mexia, and carried off nearly 1400 Christian Indians to be sold as slaves in Carolina or distributed for torture or adoption among the savages. The missions, with their churches, gardens, and orange groves, were utterly demolished, the vestments and sacred vessels destroyed or carried off, and numbers of the neophytes burned at the stake. Four of the mission fathers were also killed (two being tortured and burned at the stake), and their bodies hacked to pieces by deliberate permission of Moore himself, who gave up Lieutenant Mexia and four Spanish soldiers to the same fate.

This was practically the end of the Florida missions, although for more than twenty years thereafter efforts were made, with some temporary success, to gather together again the remnants of the Apalachee, Timucua, and other Christian tribes, and in 1726 there were still counted more than 1000 Christian Indians. With the establishment of the English Georgia colony and the ensuing war of 1740 the attempt was abandoned, and the mission territory reverted to its original wild condition. In 1753 only 136 Indians remained in four mission stations close to St. Augustine. In 1743 the Jesuit Fathers José María Monaco and José Xavier de Alana began a mission near Cape Florida among the utterly savage Ais and Jobé with such success that a community of Christian Indians was built up, which continued until the Seminole War (1817-18).

II. MARYLAND.—The English Catholic colony of Maryland, founded in 1634, was served in its first years by the Jesuits, who made the Indians their special care. Under the superior, Father Andrew White, and his companions, several missions were established among the Piscataway (Conoy) and Patuxent of lower Maryland, west of Chesapeake Bay, and considerable attention was also given to the Potomac tribe in Virginia. The principal mission was begun in 1639 at Kittamaquindi, or Piscataway, near the mouth of the creek of that name. Other stations were Mattaponi on the Patuxent, Anacostan (Anacostia) adjoining the present Washington, and Potopaco (Port Tobacco), where nearly all the natives were baptized. In 1642, during an extended visit among the Potomac, on the Virginia side, Father White baptized the chief and principal men, with a number of others. The work was much hampered by the inroads of the hostile Susquehanna from the head of the bay, and was brought to a sudden and premature close in 1645 by the Puritans and other malcontents, who, taking advantage of the Civil War in England, repaid the generosity which had given them asylum in Maryland by seizing the Government, plundering the churches and missions and the houses of the principal Catholics, and sending Fathers White and Copley to England to be tried for their lives, while Father Martwell, the new superior, and two other missionaries escaped to Virginia. Later efforts to revive the mission had only temporary success owing to the hostility of the Protestant Government and the rapid wasting of the native tribes. Before 1700 the remnant of the Piscataway removed bodily from Maryland and sought refuge in the north with the Delawares and Iroquois, among whom they have long since become entirely extinct. To Father White's anonymous "*Relatio itineris ad Marylandiam*" (translation published in 1833 and again in 1874) we are indebted for the best account

of the western Maryland tribes. He also composed an Indian catechism, still extant, and a manuscript grammar of the Piscataway language, now unfortunately lost, the first attempt at an Indian grammar by an Englishman and antedating Eliot's Bible by at least a dozen years. (See *PISCATAWAY INDIANS*.)

NEW ENGLAND.—The earliest Christian mission on the soil of New England was that of Saint-Sauveur begun among the Abenakis in connexion with a French post on Mount Desert Island, Maine, by Father Pierre Biard and three other Jesuits in 1613. Both post and mission were destroyed a few months later by the English captain Argall, Brother Du Thet being killed in the attack and Fathers Biard and Quentin carried prisoners to Virginia. In 1619 the Recollects arrived to minister to the French fishermen scattered along the coast, and gave attention also to the Indians, chiefly in New Brunswick and Nova Scotia. In 1633 they were succeeded by the Capuchins, who made their headquarters at Port Royal (Annapolis), Nova Scotia, and had stations as far south as the Kennebec, the principal one being among the Penobscot, near the French Fort Pentagouet (Castine), at the mouth of the Penobscot. In 1655 the post was seized by the English, and the resident missionary, Father De Crespy, carried off. Although restored to France by treaty in 1667, the mission languished, and in 1693 was consigned to the Jesuits, who made the new mission of Sainte Anne (established by Father Louis Thury in 1684 higher up the river, near the present Oldtown) their chief residence among the Penobscot. The Capuchins had laboured also among the Etchemin (see *MALISEET INDIANS*) on the northern frontier of Maine, their chief station being at Medoctec on the Saint John, established by Father Siméon in 1688 and revived by the Jesuits in 1701. In 1646 the noted Jesuit, Gabriel Druillettes, was sent from Quebec, and established at Norridgewock (Indian Old Point) on the Kennebec the Assumption mission, which for nearly eighty years thereafter held its place as the principal of the Abenaki missions. The most noted worker at this post was Sebastian Rasle (Râle, Rasles), who laboured with the utmost zeal from 1695 until his heroic death in 1724 at the age of sixty-six.

The chronic warfare throughout all this period between the rival French and English colonies, in which the native tribes almost solidly took the side of the French, exposed the Indian missions to the constant attacks of the English and made the missionaries marked men, both as Catholic priests and as supposed agents of the French Government. In consequence many fugitives from the Abenaki bands retired to Canada, where they were joined by refugees from the Pennacook and other southern New England tribes, driven out by King Philip's War of 1675-76. In 1683 these were gathered by the Jesuit Father Jacques Bigot, into the new mission of Saint François de Sales (St. Francis) on the Chaudière, near Quebec. In 1700 the mission was removed to its present location. In spite of repeated demands by the New England Government (1698, 1701, 1712), the Abenaki refused either to send their missionaries away or to accept Protestant teachers. Realizing the danger, the Jesuits urged that the Abenaki Indians and missions be removed to a safer location in Canada, but the project was not favoured by the Canadian Government. In 1704-5 two New England expeditions ravaged the Abenaki, burning Norridgewock, with its church, and looting the sacred vessels. In 1713 some Indians removed to the St. Lawrence and settled at Bécancour, where their descendants still remain. Norridgewock was rebuilt, and in 1722 was again destroyed by the New England men. As part of the plunder the raiders carried off the manuscript Abenaki dictionary (preserved at Harvard and published in 1833), to which Father Rasle had devoted thirty years of labour, and which ranks as one of the greatest monuments of our aborigi-

nal languages. Earlier in the year the mission village and fine church on the Penobscot, placed under Father Lauverjat, had been destroyed by another party, following which event Massachusetts had summoned the Indians to deliver up every priest among them and had set a price on Rasle's head. Although repeatedly urged to seek safety in Canada, he refused to desert his flock. At last the blow fell. On 23 August, 1724, the New England men with a party of Mohawk Indians surprised Norridgewock while most of the warriors were away, killed several of the defenders, and plundered and burned the church and village. The devoted missionary, now old and crippled, was shot down at the foot of the cross, scalped, his skull crushed and his body almost hacked in pieces. A monument to his memory was erected on the spot in 1833, the year in which the greater monument, his Abenaki dictionary, was published.

Mission work was continued in some measure, although under difficulties, among the Indians of the Penobscot and the St. John, but most of the Norridgewock band retired to Saint Francis, which thus became one of the most flourishing missions in Canada. In 1759 it was attacked by a strong New England force under Colonel Rogers and completely destroyed, with its church and records, two hundred Indians being killed. The mission was re-established near the present Pierreville, Quebec, and still exists, numbering about 350 mixed bloods, while Bécancour has about 50 more. The Abenaki bands which remained in Maine espoused the cause of the Americans in the Revolution, and in 1775 made application to the new Government for the return of their French priests. The Massachusetts commissioners, although willing, were unable to supply them, but a later application to Bishop Carroll resulted in the appointment of the Sulpician Father, François Ciquard, to the Penobscot at Oldtown about 1785. For nearly ten years he ministered to them and the Passamaquoddy, when he was transferred to the Maliseet on the Saint John. After various changes the Maine missions reverted again to the Jesuits in the person of Father John Baptist, who arrived at Oldtown in 1848. The most distinguished of the later missionaries is Eugene Vetromile, S.J. (d. 1881), author of several works on the Abenaki tribe and language. The two tribes are entirely Catholic.

III. NEW YORK AND PENNSYLVANIA.—A large part of what is now New York State was held by the five confederated tribes of the fierce and powerful Iroquois (q. v.), numbering nearly two thousand fighting men. Through the unfortunate circumstances of Champlain's allying himself with a party of their enemies in 1609, they conceived a bitter hostility to the French which they gratified with deadly effect after procuring guns from the Dutch thirty years later. For this reason, and from the additional fact that their territory was within the sphere of English influence, no permanent Catholic mission was ever established within their limits, although several attempts were made, and large numbers were drawn off from the confederacy and formed into mission settlements under French control. So far as is known, the first missionary to enter this region was the Recollect father, Joseph de la Roche de Dailon, of the Huron mission in Ontario, who in 1626 made a perilous exploration of the country of the Neuter Nation, adjoining the Iroquois in western New York. In 1642 the heroic Jesuit, Isaac Jogues, was captured with two white companions and several Hurons by an Iroquois war party and taken to the Mohawk town of Caughnawaga (*alias* Ossernenon) near the present Auriesville, where the Hurons were burned at the stake, and the three Frenchmen cruelly tortured and mutilated, though not put to death. Father Jogues had his nails torn out, two fingers crushed by the teeth of the savages, and one thumb sawn off. One of his companions, the novice René

Goupil, was killed shortly afterwards for making the sign of the cross over a sick child. The third Frenchman, Couture, was finally adopted. After a terrible captivity of fifteen months during which he baptized many prisoners at the stake as well as dying infants, besides acquiring a knowledge of the language, Father Jogues was rescued by the Dutch and finally found his way to France. In the meantime another Huron missionary, Father Joseph Bressani, had been captured by the same Mohawks, tortured in even more terrible fashion at the same town, and likewise ransomed through the kindness of the Dutch (1644). In the summer of 1644 Father Jogues was back again in Canada, assisting in negotiating an uncertain peace with the Mohawks. In May, 1646, he was sent with a single white companion to the Mohawk country to consummate the agreement. This done, he returned to Canada to make his report, and then, with another Frenchman and a Huron guide, set out once more for the Mohawk to establish a mission. They were intercepted on the way by a war party of the same perfidious Mohawks, and carried to Caughnawaga, where, after various cruelties, all three were put to death on 18 October, 1646, the head of Father Jogues being set upon the palisades of the town, and his body thrown into the Mohawk River. The site of the Indian town is now the property of the Society of Jesus, and a memorial chapel marks the spot of their martyrdom.

In August, 1653, Father Joseph Ponce, S.J., was captured near Montreal by a Mohawk war party, carried to their towns, and there terribly tortured, but finally sent back with overtures of peace. Of the five confederated Iroquois tribes, the Onondaga, Oneida, and Cayuga were also now for peace with the French, and only the Seneca (who, however, nearly equalled all the others together) held back. Father Ponce reached Montreal late in the year, and peace was made. Father Simon Le Moyne, S.J., volunteered to go back to ratify the terms in the Iroquois towns, and arrived in the summer of 1654 at Onondaga, their capital, where he successfully effected his purpose and was invited to select a spot for a French settlement. As a result the Jesuit Fathers Joseph Chaumonot and Claude Dablon established the first Iroquois mission at Onondaga in November, 1654. In all the Iroquois tribes there were numerous Christian Huron captives (see HURON INDIANS), who gave the missionaries a warm welcome. In 1656 Father Le Moyne was again with the Mohawks. In July, 1655, a party of fifty French colonists with several more Jesuits arrived at Onondaga to found a settlement there, as requested by the Iroquois, although it was strongly felt that the latter were insincere and meditated treachery. Mission stations were established in each of the tribes, but almost before a year had passed the Iroquois raids along the St. Lawrence broke out afresh, and in March, 1658, the mission at Onondaga was abandoned.

Besides the Huron and other Indian captives, Christianity still had many friends among the Iroquois themselves, foremost of all being Garaconthié, the Onondaga chief and orator. Through his influence the Onondaga and Cayuga sought for peace in 1661, and Le Moyne was recalled to Onondaga. In 1666 an expedition under De Courcelles completely humbled the Mohawks. In the same year New York and the Iroquois country passed from Dutch to English control. Following the peace six Jesuit fathers (Jacques Fremin, Jean Pierron, Jacques Bruyas, Julien Garnier, Etienne de Carheil, and Pierre Milet) proceeded to the Iroquois, and, before the end of 1668, regular missions were established in each of the five tribes. Garaconthié publicly declared himself a Christian, and his example was followed by several other chiefs. As converts increased it was realized that the prevailing intemperance and debauchery consequent upon the presence of traders in the Indian towns were a serious obstacle to Christian-

ity, and many of the better-disposed removed to the neighbourhood of the mission settlements in Canada. In this way originated in 1668 the Iroquois mission village of La Prairie (St. François Xavier des Prés), the precursor of the modern Caughnawaga (q. v.). Among the names prominently identified with the mission are those of Fathers Bruyas and Marcoux, Iroquois philologists; Father Lafitau, ethnologist and historian; and the sainted Indian girl, Catherine Tegakwitha. In the same year a Sulpician mission was established among some Christian Iroquois, chiefly Cayuga, Quinté Bay, at Lake Ontario; but after a few years it was absorbed by the Iroquois mission of The Mountain, established in 1676 on the island of Montreal by the Sulpicians. This mission was transferred in 1704 to the Sault au Recollet, north of Montreal, and in 1720 to its present site at Lake of Two Mountains (*alias* Oka, or Canassadaga), on the island of Montreal, a number of Algonquin sharing the village. Among the missionaries was Father Jean-André Cuoq, author of a number of works in the two languages, the most notable of which is a standard Iroquois dictionary.

With the withdrawal of the greater part of the Christian element to Canada and the renewal of war in 1687 all missionary effort in the Iroquois territory was finally abandoned, although Father Milet continued with the Oneida until 1694. In the war of 1687-99 Catholic Iroquois from the Canada missions fought beside the French against their heathen kindred of the confederacy.

At the request of the Iroquois a mission was re-established at Onondaga and another among the Senecas in 1702 by the Jesuit fathers, Jacques de Lamber ville, Julien Garnier, and Vaillant du Gueslis, and had the effect of holding the Iroquois neutral in the next war between France and England, until broken up by the New York Government in 1709. In 1748 the Sulpician father, François Picquet, established the Presentation mission on the St. Lawrence near the French post of Oswegatchie, now Ogdensburg, New York, with the design of drawing off the last remaining Catholic Indians from among the Iroquois. Although raided by the Mohawks in the next year, it was at once rebuilt and grew rapidly until the opening of the war of 1754-63, which brought it to the verge of ruin, most of those who remained joining with others from the Caughnawaga mission (Canada) in 1756 to establish a new settlement under Jesuit auspices at Aquasasne, *alias* St. François Régis, which still exists under the name of St. Régis, on both sides of the New York-Canada boundary where it strikes the St. Lawrence. The Oswegatchie settlement was finally abandoned in 1807. The Catholic Iroquois now number about 4025 out of a total 18,725, Caughnawaga itself with 2175 souls being the largest Indian settlement north of Mexico.

About 1755 the first mission in western Pennsylvania was started among the Delawares at Sawcunk, on Beaver River, where also were some Shawnee and Mingo (detached Iroquois), by the Jesuit Claude-François Virot, but was soon discontinued.

IV. OHIO RIVER AND LAKE REGION.—Under this head we include the states carved out in whole or part from the old "Northwestern Territory", viz., Ohio, Indiana, Illinois, Michigan, Wisconsin, and Minnesota. As the mission history of this section is treated in detail under the principal tribal titles, we may confine ourselves here to a brief summary. Excepting southern Illinois and Indiana, all of this vast territory was originally included within the French jurisdiction of Canada, and up to the close of the French period in 1763 was confided generally to the spiritual charge of the Jesuits, who continued in the work into the American period. The first mission west of the Huron country was established in 1660, on Keweenaw Bay, a few miles north of the present L'Anse, Upper Michigan, by the veteran Huron missionary, Father René Menard, in

response to urgent requests from the Chippewas and Ottawas. The next year a call came from some fugitive Hurons, who had fled to Green Bay in Wisconsin, to escape the Iroquois. To the remonstrance of those who knew the dangers of the way he replied, "God calls me. I must go, if it cost me my life." In making a dangerous portage he became separated from his guides and was never seen again, but as the searchers came upon a hostile trail, and his Breviary and cassock were afterwards found with the Sioux, it is believed that he was killed by a lurking enemy. His place was filled by Father Claude Allouez, who, as vicar-general in the West, established the second Chippewa mission in 1665, under the name of Saint-Esprit at La Pointe Chegoimegon, now Bayfield, Wisconsin, on the south shore of Lake Superior. Other missions soon followed at Sault Sainte Marie (Sainte Marie) and Mackinaw (St. Ignace) in Upper Michigan; Green Bay (St-François Xavier), St. Marc, and St. Jacques in Wisconsin, among Chippewas, Ottawas, Hurons, Mascoutens, Kickapoos, Foxes, and Miami. Among the noted Jesuit workers were Fathers Claude Dablon, Gabriel Druillettes, and the explorer Jacques Marquette. In 1688 the mission of St. Joseph was founded by Allouez among the Potawatomi in northern Indiana. The mission at Lapointe was abandoned in 1671 on account of the hostile Sioux, but most of the others continued, with interruption, down to the expulsion of the Jesuits in 1764. In 1727 the Jesuit father, Louis Guignas, founded the mission of St. Michael among the Sioux, on Lake Pepin in Minnesota, which continued until some time after 1736, being abandoned probably on account of the war with the Foxes.

The first mission among the Illinois was that of the Immaculate Conception, founded by Marquette in 1674 near the present Rockford, Illinois, and known later as the Kaskaskia mission. Others were established later at Peoria Lake and at Cahokia, opposite St. Louis, until by 1725 the entire Illinois nation was enrolled as Christian. Among the Jesuit names prominently connected with the Illinois missions are those of Marquette, Rasle, and Jacques Gravier, author of the great manuscript Illinois dictionary.

Missions were also established later among the various branches of the Miami in Indiana as well as among the Potawatomi, which continued to flourish until the decree of expulsion, when the mission property was confiscated, although the Jesuits generally remained as secular priests until their death. Their successors continued to minister to Indians and whites alike till the removal of the tribes, 1820-40.

The majority of the Indians of Michigan and Wisconsin remained in their own homes, with missions maintained either as regular establishments or as visiting stations served by secular priests. Of the later missionaries one of the distinguished names is that of the author and philologist Bishop Frederick Baraga (d. 1865), best known for his grammar and dictionary of the Chippewa language. (See for more recent work, CHIPPEWA INDIANS; HURON INDIANS; ILLINOIS INDIANS; KICKAPOO INDIANS; MASCOUTENS INDIANS; MENOMINEE INDIANS; MIAMI INDIANS; OTTAWA INDIANS; POTAWATOMI INDIANS; SIOUX INDIANS; WINNEBAGO INDIANS; BARAGA; GRAVIER; MARQUETTE, DIOCESE OF; MARQUETTE, JACQUES.)

V. LOWER MISSISSIPPI REGION: THE LOUISIANA MISSION.—The "Louisiana Mission" of the French colonial period included the present States of Missouri, Arkansas, Louisiana, Mississippi, and Alabama, with the Tamarois foundation near Cahokia in Illinois, but excluding the Caddo establishments on the disputed Spanish frontier of Texas. For several reasons, rivalries and changes among the religious orders, intrigues of English traders, and general neglect or open hostility of the Louisiana colonial administration, these southern missions never attained any large measure of prosperity or permanent success. In 1673 the Jesuit

Marquette had descended the Mississippi as far as the villages of the Arkansas, later known as Quapaw, at the mouth of the river of the same name, making the earliest map of the region and indicating the position of the various tribes, but without undertaking a foundation.

In 1682 the Recollect Franciscan Father Zenobius Membre, with the party of the commander La Salle, descended the Mississippi to its mouth and returned, planting a cross among the Arkansas, and preaching to them and to the Taensa, Natches, and others farther down. In 1683 a French fort was built at the Arkansas, and the commander Tonty set apart a mission site and made formal request for a Jesuit missionary, but apparently without result.

In 1698, under authority of the Bishop of Quebec, the priests of the seminary of Quebec, an offshoot of the Paris Congregation of Foreign Missions, undertook the lower Mississippi field despite the protests of the Jesuits, who considered it partly at least within their own sphere. Early in 1699, three seminary priests having arrived, as many missions were established, viz., among the Tamarois (Tamarois), a tribe of the Illinois confederacy, at Cahokia, Illinois, by Father Jean-François de St-Cosme; among the Taensa, above the present Natches, Mississippi, by François-J. de Montigny; and among the Tonica, at the present Fort Adams, Mississippi, by Father Antoine Davion. Father de Montigny shortly afterwards transferred his mission to the kindred and more important Natches tribe, about the present city of that name, ministering thus to both tribes. Father Davion laboured also with the Yazoo and minor tribes on that river. Other priests of the same society arrived later. In the meantime Iberville, the father of the Louisiana colony, had brought out from France (1700) the Jesuit father, Paul du Ru, who, first at Biloxi, Mississippi, and later at Mobile, Alabama, ministered to the small tribes gathered about the French post, including a band of fugitive Apalachee from the revived Florida mission. In the same year another Jesuit, Father Joseph de Limoges, from Canada, planted a mission among the Huma and Bayagula, Choctaw bands about the mouth of Red River, Louisiana.

In 1702 Father Nicholas Foucault, of the Seminarists, who had established a mission among the Arkansas two years before, was murdered, with three companions, by the savage Koroa of Upper Mississippi while on his way to Mobile. Their remains were found and interred by Father Davion. In 1706 Father St-Cosme, then stationed at the Natches mission, was murdered by the Shetimasha, near the mouth of the Mississippi, while asleep in a night camp.

The Tonica station was abandoned in 1708, being threatened by the Chickasaw in the English interest. The whole southern work languished, the Indians themselves being either indifferent or openly hostile to Christianity, and when Father Charlevoix made his western tour in 1721 he found but one priest on the lower Mississippi, Father Juif, among the Yazoo. Partly in consequence of Father Charlevoix's report, the Louisiana Company, which had taken over control of the colony, gave permission to the Jesuits to undertake the Indian work, while the French posts and settlements were assigned to other priests. In 1726, therefore, Father Paul du Poisson restored the Arkansas mission, which had been vacant since 1702; Father Alexis de Guyenne undertook the Alibamon, a tribe of the Creek nation, above Mobile, and Father Mathurin le Petit began work among the Choctaw in southern Mississippi. The Ursuline convent foundation at New Orleans in 1727 is due to Jesuit effort. In the next year the Jesuit father, Michel Baudouin, undertook a mission among the warlike Chickasaw.

In 1729 the southern missions were almost ruined by the outbreak of war with the Natches, provoked by the arbitrary exactions of the French commandant in

their country. The war began on 28 November with a massacre of the French garrison, the first victim being Father du Poisson, who was struck down, and his head hacked off, while on his way to attend a dying man. Father Souel was killed on 11 December by the Ysao, who then turned upon the French garrison in their country. On New Year's Day, 1730, the Jesuit Father Doutreleau, on his way down the river with some boatmen, was fired upon at close range by some of the same tribe while saying Mass on shore, but escaped although badly wounded. The war involved the whole lower Mississippi, and ended in the extinction of the Natches as a people. A part of the refugees having fled to the Chickasaw, a war ensued with that tribe in 1736, during which a French expedition was cut to pieces, and the Jesuit chaplain, Father Antoninus Senat, was burnt at the stake.

In 1730 Father Gaston, a newly-arrived Seminarist, had been killed at the Tamarois (Cahokia) mission. In 1754 the last Seminarist was sent out as a parish priest. The Arkansas mission had been killed by official neglect. The missionary among the Alibamon Creeks was driven out by the French commander at Fort Toulouse (Montgomery, Alabama) for his opposition to the liquor traffic. Father Baudouin continued with good effect among the Choctaw for eighteen years until appointed vicar-general in 1757, when his place was filled by Father Nicholas le Febvre until 1764(?). The Alibamon mission was restored and continued under Father Jean Le Prédour from 1754 until the expulsion of the Jesuits in 1764, which brought the "Louisiana Mission" to a close. The Natches and Ysao are long since extinct, but a considerable portion of the Choctaw, Quapaw, and mixed-blood Huma still keep the Faith. (See also CADDO INDIANS; CHOCTAW INDIANS; NATCHEZ, DIOCESE OF; QUAPAW INDIANS; TONICA INDIANS; YAZOO INDIANS.)

VI. NORTHERN AND CENTRAL PLAINS.—The earliest labourer here was the Franciscan Father Juan de Padilla, who with four others of his order accompanied the famous expedition of Coronado in 1540-42, and on the return volunteered to remain behind with the Wichita in the "Province of Quivira," probably in southern Kansas. He was killed soon afterwards, apparently by Indians hostile to the Wichita. The latter, reduced to about 300 souls, are represented at the Catholic mission school at Anadarko, Oklahoma (see WICHITA).

The powerful Sioux, or Dakota, whose territory stretched from the Wisconsin border almost to the foot of the Rocky Mountains, were visited by the Jesuit Alloues as early as 1666, but tribal jealousies interrupted friendly communication and prevented any mission establishment. In 1680 the Recollect Franciscan, Father Louis Hennepin, spent some months with them as a captive on the upper Mississippi. In 1690 (?) the Jesuit Father Joseph Marest, and in 1728 the Jesuit Father Ignatius Guignas, made unsuccessful mission attempts in the tribe, and in 1736 the Jesuit Father Jean-Pierre Aulneau (or Amand) was one of a party of twenty-one Frenchmen massacred by them on the Lake of the Woods, just beyond the northern Minnesota boundary. In 1837 a regular mission was established among the eastern Sioux in Minnesota by Father Augustin Ravoux, and in 1848 the noted Jesuit missionary Father de Smet first preached to those west of the Missouri. Nearly one-fourth of the tribe is now Catholic (see SIOUX INDIANS).

The famous Flathead mission in Montana, established by Father de Smet in 1840, the Osage mission, Oklahoma, regularly established about 1847 by the Jesuit Fathers Schoenmaker and Bax, the Kiowa and Quapaw missions, and those among the immigrant Choctaw, Potawatomi, and Miami, also in Oklahoma, those of the Winnebago in Nebraska and the Mandan and associated tribes in North Dakota are all described elsewhere under the tribal titles. Besides

these, successful mission schools have been established within the past thirty years, and are now in operation, among the Northern Cheyenne (secular), Assiniboin (Jesuit), Crow (Jesuit), Grosventre (Jesuit), and Piegan Blackfeet (Jesuit) in Montana; the Arapaho and Shoshoni (Jesuit) in Wyoming; and the Southern Ute (Theatine) in Colorado (see UTE INDIANS).

VII. TEXAS, ETC.—Texas as a Spanish colony was connected with Mexico, and was ruled in missionary affairs from Querétaro and Zacatecas, instead of from Havana, as was Florida. Its immense area, four times as great as that of all New England, contained hundreds of petty tribes or bands—so many, in fact, that they have never been counted—speaking scores of languages or dialects, but mostly grouped into a few loose confederacies, based upon linguistic affiliation, of which the principal within the mission sphere may be designated as the Caddo, Hasinai, Karankawa, Tonkawa, Wichita, and Pakawá. Of these, the Caddo group extended into western Louisiana, while the tribes of the Wichita connexion ranged north into Kansas. The total Indian population within the present state limits was probably originally close to 40,000. The beginning of mission work in Texas was made by the Franciscan Father Andrés de Olmos, who in 1544 crossed the Rio Grande and, after gathering a large body of converts, led them back into Tamaulipas, where they were organized into a mission town, Olives. In 1685 the French commander La Salle erected a fort on Matagorda Bay, and two years later, after a succession of misfortunes, started to make his way overland to Illinois, leaving behind about twenty men, including the Recollect missionaries, Fathers Zenobius Membre and Maximus Le Clercq, and the Sulpician Father Chefdeville. A Spanish expedition which arrived later to dispossess the French found only blackened ruins and unburied bones. All but two men had been killed by the Indians, among whom the chalices and Breviaries of the murdered priests were afterwards recovered.

In 1690 a company of Spanish Franciscans from the Querétaro College, headed by Father Damian Masanet, established a mission among the friendly Hasinai (Ainai, Ceniz), in north-east Texas, and projected others, but the work was abandoned three years later. In 1699 the Franciscans of the Zacatecas College began a series of missions along the south bank of the Rio Grande, to which they gathered in a number of Indians of the Pakawá group in southern Texas. These were kept up until 1718, when the chief mission was transferred to San Antonio in Texas.

In 1715 the two colleges combined to restore the Texas missions, urged by the seal of the venerable founder of the Zacatecas college, Father Antonio Margil. The Hasinai mission (San Francisco) was restored and another, La Purísima, established among the cognate Hainai (Aynai) in the neighbourhood of the present Nacogdoches. Another (N. S. de Guadalupe) was founded by Margil himself among the Nacogdoches band of the Caddo in 1716, and others in 1717 among the Ais (N. S. de Dolores) and Adai or Adayes (San Miguel de Linares), the last being within the limits of Louisiana. In 1719, war having been declared between France and Spain, a French expedition under St-Denis plundered the mission at the Adai. In consequence the missions were abandoned until peace was declared two years later.

In 1718 the mission of San Francisco Solano was transferred to San Antonio de Valero. Other missions were established in the vicinity, making a total of four in 1731, including San Antonio de Padua, the celebrated Alamo. The principal tribes represented were Caddo and Hasinai from the East; Xarame from the Rio Grande; Pakawá (Pacoa) and a few Tonkawa of the immediate neighbourhood. In the meantime a lay brother had perished in a prairie fire, and another, Brother Jose Pita, in 1721, with a small party, had been massacred by the Lipan while on his way to his

station. In 1722 the mission of Guadalupe was established at Bahía, on Lavaca (Matagorda) Bay among the Karankawa. Nine years later it was moved to the Guadalupe River. In 1752 the Candelaria mission was attacked by the Coco, a Karankawa band, and Father José Ganazabal killed. In 1757 the mission of San Sabá was established by Father Alonso Terreros for the conversion of the wild and nomadic Lipan Apache, but they refused to settle in it; the following year the tribes destroyed the mission, killing Father Terreros and two other priests. Another attempted Lipan mission, in 1761, was broken up in 1769 by the Comanche. At this period the Texas missions had reached their highest point, with an Indian population of about 15,000. In 1760 Father Bartolomé García published his religious manual for the use of the San Antonio missions, which remains almost our only linguistic monument of the Pakawá tribes of central Texas. In 1791 another mission was established among the Karankawa.

Although constantly hampered by the Spanish authorities, the missions continued to exist until 1812, when they were suppressed by the revolutionary Government, and the Indians scattered (see PAKAWÁ INDIANS; TONKAWA INDIANS; WICHITA).

VIII. NEW MEXICO AND ARIZONA.—The earliest exploration in this territory was made by the Franciscan Marco de Niza (Marcos of Nizza) in 1539, and the first missions were undertaken in 1542 by the Franciscans who accompanied Coronado. (For the missions among the Pueblo and Hopi see PUEBLO INDIANS.) The most important event in this connexion is the great Pueblo revolt of 1680 in which twenty-one missionaries and some 400 others were massacred.

The missions among the Pima and Papajo of Arizona are of later foundation, beginning about 1732, and originated with the Jesuits, with whom they continued until the expulsion of the order in 1767, when they were taken over by the Franciscans (see PAPAJO INDIANS; PIMA INDIANS).

Attempts to evangelize the powerful tribe of the Navajo in northern Arizona and New Mexico were made by the Franciscans as early as 1746, but without result. Lately the work has been again taken up successfully by German Franciscans. To their scholarship and scientific interest we owe also a monumental "Ethnological Dictionary of the Navaho Language". (See NAVAJO INDIANS.) Secular mission work is also now conducted in the Mescalero tribe of about 450 souls at Tularosa, New Mexico.

IX. THE COLUMBIA REGION.—The first knowledge of Christianity among the tribes of this region came through the Catholic Iroquois and Canadian French employees of the Hudson Bay Company, by whose influence and teaching many of the Indians, particularly among the Flatheads and Nez Percés, were induced to embrace the principles and practices of Catholicism as early as 1820, leading some years later to a request for missionaries, in response to which the Flathead mission in Montana was founded by the Jesuit Father Peter de Smet in 1841, followed shortly afterwards by another among the Cœur d'Alène in Idaho, established by the Jesuit Father Nicholas Point. In 1839 Father Francis Blanchet, secular, who had come out to attend the Canadian residents, established St. Francis Xavier mission on the Cowlitz, in western Washington, and another on the lower Willamet at Champoege, Oregon, while about the same time Father J. B. Bolduc began work among the tribes on Puget Sound. In 1844 three Jesuit missions were established among the Pend d'Oreilles and Colvilles of the Upper Columbia, besides three others across the British line. In 1847 the Oblates arrived, and missions were established by Father Pandosy among the Yakima and by Father Ricard near the present Olympia. In 1848 the secular Fathers Rousseau and Mesplée founded a station among the Wasco, at the Dalles of the Columbia, in

Oregon. Work was also attempted among the degenerate Chinooks, with little result. The noted Oblate missionary, Father Casimir Chirouse (d. 1892), best known for his later work at Tulalip, reached Oregon in 1847 and began his labours among the tribes of Puget Sound and the lower Columbia about the same period.

With the exception of the Wasco and the Chinooks, these missions or their successors are still in successful operation, numbering among their adherents the majority of the Christian Indians of Washington and southern Idaho. To Fathers Saintonge and Pandosy we are indebted for important contributions to Yakima linguistics. (See CHINOOKS; KALISPEL INDIANS; KUTENAI INDIANS; LAKE INDIANS; LUMMI INDIANS; PUYALLUP INDIANS; SPOKAN INDIANS; TULALIP INDIANS; YAKIMA INDIANS.)

Besides these there are Jesuit missions of more recent establishment among the Nes Percés of Idaho; and among the Umatilla, Klamath, Warm Spring, and Siletz Indians in Oregon, besides another among the remnant tribes of Grand Ronde reservation, Oregon, served by a priest of the Society of the Divine Saviour. (See SILETZ INDIANS; UMATILLA INDIANS; WARM-SPRING INDIANS; YAMHILL INDIANS.)

X. CALIFORNIA.—For the mission history see CALIFORNIA; and MISSION INDIANS.

For a statement of the present organization of Indian mission work and the sources and methods of financial support, see article INDIAN MISSIONS, BUREAU OF CATHOLIC.

XI. THE MISSIONARY MARTYRS.—The following incomplete and tentative list of missionaries who died by violence or other untimely death in direct connexion with their work will show that even before the establishment of the republic the soil of the United States had been baptized in the blood of Catholic missionaries from ocean to ocean. A few other names are included for special reasons. Those who perished with the exploring expeditions under Narváez, De Soto, and others are not noted.

JAMES MOONEY.

Missions, CATHOLIC PAROCHIAL.—This term is used to designate certain special exertions of the Church's pastoral agencies, made, for the most part, among Catholics, to instruct them more fully in the truths of their religion, to convert sinners, rouse the torpid and indifferent, and lift the good to a still higher plane of spiritual effort. To distinguish them from those missions which represent the apostolic activity of the Church among pagans and heretics, these home missions are known in some communities of English-speaking Catholics as "parochial missions". Such missions usually consist of a systematic course of preaching and instruction, extending over a stated number of days, performed by authorized missionaries. The present article treats of: I. The Necessity and Utility of Popular Missions; II. Origin and History; III. Method.

I. NECESSITY AND UTILITY.—From the above definition it is evident that the primary object of a popular mission is not the making of converts to the Faith. However, owing to the familiar relations between Catholics and non-Catholics in the United States, this is so common a result that it may be regarded as normally a part of the work in that country, and, beginning from the last decade of the nineteenth century, an

organized missionary movement for the conversion of non-Catholics has been carried on throughout that country. (See MISSIONARY SOCIETY OF ST. PAUL THE APOSTLE.) But the converts whom a pastor most of all seeks during a regular parish mission are among his own people. And it cannot be denied that the clear, forcible, and consecutive exposition of the most important truths of salvation, together with a course of instructions to prepare the people for the worthy reception of the sacraments and enlighten them on the duties of their daily lives, affords a powerful means to renovate a parish spiritually. Everyone finds in these sermons and instructions something that appeals peculiarly to him, and is likely to bear fruit in the future. These missions are for the laity what retreats are for the clergy and religious communities. In fact they are an adaptation to the needs and capacities of the faithful of the spiritual exercises long traditional in the Church, and made use of especially during the Ages of Faith when people were in the habit of retiring to monasteries to devote themselves for a certain period of time to that renewal in the spirit of their mind, which the Apostle recommends: "And be renewed in the spirit of your mind: and put on the new man, who according to God is created in justice and holiness of truth" (Eph., iv, 23, 24). In view, then, of the many benefits that accrue from a retreat, it is no exaggeration to say that, in the ordinary course of Divine Providence, a mission is the greatest grace that God can confer upon any parish. "There is nothing", says St. Alphonsus, "that is better adapted than missions or retreats to enlighten the minds of men, to purify corrupt hearts and to lead all to the exercise of a truly Christian life".

The usefulness of missions, moreover, for the sanctification and salvation of souls has received not a little recognition from various popes during the last two centuries. Paul III recommended the Spiritual Exercises of St. Ignatius as "full of piety and sanctity and very useful and salutary for the edification and spiritual advancement of the faithful". Benedict XIV, after comparing missionaries to those whom the Apostles Peter and Andrew called to assist them in landing their nets, says that for "purifying corrupt morals . . . nothing is more effective than to solicit the aid of others, namely to establish everywhere (that is in every diocese) sacred missions. Nor can this be called a new and uncertain remedy which is proposed for purifying the morals of the people. It is an old one and indeed the only one suitably adapted to cure existing evils, one which many bishops have employed in their dioceses with extraordinary results" ("Gravissimum", 8 Sept., 1745). Pius VI condemned the proposition of those who called missions an empty noise with at most a transient effect (Auct. Fid., prop. 65). Leo XII granted a plenary indulgence to the missions given by the Fathers of the Society of Jesus. Gregory XVI extended this indulgence to the sick who could not attend the missions, but complied with the required conditions at their homes; and in 1834 the same pontiff extended it to all missions, irrespective of the orders to which the missionaries belonged. In 1849 Pius IX wrote to the bishops of Italy urging the work of spiritual exercises and missions, declaring them very useful for fostering piety and exciting confirmed sinners to repentance ("Nostris", 8 Dec., 1849); and he made this appeal again to the bishops of Austria in the "Singulari quidem", 17 March, 1856.

The mission is an appeal to the intellect and the will. The general end to be obtained is the enlightenment of the former and the movement and elevation of the latter. The necessity of these are apparent. It is the experience of missionaries that, owing to the pressing material necessities of modern life, much ignorance prevails among the Catholic laity as a class in matters pertaining to their religion. It is true, there is no dearth of good reading matter whereby the deficien-

cies of religious education might to some extent be supplied, but it is equally true that such reading is sadly neglected. To supply this defect is one of the aims of the mission. The missionary comes to instruct, to present the truths of salvation clearly, forcibly, consecutively, and in such language as shall reach the entire audience. The end of man, the need of grace, the Divine Attributes, the essential parts of the Sacraments of Penance and the Eucharist, and the conditions required for their worthy reception; matrimony, the laws of the Church governing it, and the right way of preparing for it and entering it—such are some familiar themes of the mission. In times like the present, and in the social conditions of modern life, the ordinary "cure of souls" hardly suffices to protect souls against the deadly influences of constant friction with a materialistic world, and against the all-pervading atmosphere of sensuality and worldliness. Passing their lives face to face with extraordinary spiritual perils, Catholics in the twentieth century need the extraordinary succour and protection which are furnished only by the mission. Thus the instructions given to the intelligences of the faithful at a mission are of no less importance than the sermons which are addressed to their wills. The duties and responsibilities of parents towards their children, and of children towards their parents, the mutual obligations of employers and employed, as the Church views them, are by no means to be taken for granted as fully grasped even by the more intelligent among average well-meaning Catholics.

Here, lastly, it is important to note one vital purpose which the parochial, or popular, mission serves in many dioceses of the United States. With a rapidly increasing Catholic population, the organization of new parishes is a frequent necessity. It is not assumed by any means that the majority of the faithful are grievous sinners, nor do the diocesan clergy lose sight of the truth that the popular mission is no less efficacious for making the good better, and stimulating further effort on the part of those who are already willing, than for reclaiming those who have taken the broad path of evil. In this view, it is the common practice to commence the life of a new parish with a mission conducted by priests of some specially chosen missionary institute. In such a mission the fervour of the new parishioners is not only increased, but effectively applied to the purpose of solidifying and organizing their corporate religious life. One chief means to this end is the erection of pious confraternities for which the mission affords opportunity. Thus the League of the Sacred Heart, the Holy Name Society, the Sodality of the Blessed Virgin, or the Rosary Confraternity becomes at the very outset the instrument of incalculable spiritual benefit, and a fulcrum by means of which the efforts of the new pastor attain more than double the results which might otherwise have been expected of them.

II. ORIGIN AND HISTORY.—In substance, missions are coeval with Christianity. The Founder of the Church was also its first missionary. His life was a missionary life, "teaching daily in the temple", "preaching to the multitude from the ship", and, at the close of His life's work, entrusting its continuation to His Apostles—"Going therefore, teach ye all nations; . . . Teaching them to observe all things whatsoever I have commanded you" (Matt., xxviii, 19, 20). Obedient to this injunction, the history of the Church has become a history of missionary activity, whether by it be understood the prolonged missionary labour among heathen tribes, or the exercise of regular mission work among the faithful.

It is true that until the beginning of the seventeenth century there existed no organized form of popular missionary work exactly as it is now understood. But even in the early ages of the Church we find such eminent saints and doctors as the two Gregories (of Nazi-

ansus and of Nyssa), Basil, and Chrysostom, Ambrose, Leo, Augustine, and Gregory the Great making special efforts on special occasions to strengthen faith and foster piety by extraordinary series of instructions, exhortations, and devotions. The good work of the wandering Celtic missionaries in the sixth and seventh centuries—e. g., Sts. Columbanus, Gall, Kilian, Fridolin—may also be taken as, in some sense, an early type of the popular mission. Sts. Bernard, Peter Damian, Peter the Hermit, and the other great preachers of the Crusades were eminent popular missionaries, and their appeals to the Christian zeal of Europe were splendid instances of popular missions adapted to the conditions of the age. With the rise of the mendicant orders began a new era in the history of missionary endeavour. The Dominicans and Franciscans were popular missionaries in the truest sense of the word. They went from town to town preaching to the people everywhere, in the public places as well as in the churches. They preached chiefly to the masses, the poor people, using simple, unadorned language. As a consequence, the people followed them in crowds, drawn by their simple eloquence. Their strict rule of life and renunciation exercised during the Middle Ages a most salutary social influence over the enslaved and unprivileged classes of the population. In the fourteenth century we have the eminent Dominican preachers, Tauler and Henry Suso; in the fifteenth, St. Vincent Ferrer and Savonarola; in the sixteenth, Louis of Granada. The acme of Franciscan preaching was reached by the Observants in the fifteenth century, especially in Italy and Germany. Famous popular missionaries of the Franciscan Order were Sts. Bernardino of Siena, John Capistran, and Peter of Alcantara. By the middle of the sixteenth century the Society of Jesus took up this work. St. Ignatius combatted chiefly the errors of the Reformers. In 1592 the Ven. César de Bus (q. v.) founded the “*Prêtres séculiers de la doctrine chrétienne*”, a congregation devoting itself entirely to the work of catechizing and preaching the Christian doctrine.

All these saints, religious institutes, and preachers may be said to have represented the work of popular missions in its rudimentary form. That work was not reduced to a system until the foundation of the Congregation of Priests of the Mission early in the seventeenth century by St. Vincent de Paul. The circumstances which led to St. Vincent's taking up this work, together with a full account of his institute (commonly called the Lazarists) and its methods, will be found under MISSIONS, CONGREGATION OF PRIESTS OF THE. The holy enterprise of St. Vincent de Paul had France for its birthplace; in Italy, a century later (1732), St. Alphonsus founded his congregation (see REDEEMER, CONGREGATION OF THE MOST HOLY). Their primary occupation is the apostolic ministry in the preaching of missions and retreats to all classes of Catholics, but especially to the most neglected. The congregation spread rapidly throughout Europe. About one hundred years later Venerable Gaspar Bufalo (d. 1837) founded in Rome the Congregation of the Most Precious Blood (see PRECIOUS BLOOD, CONGREGATION OF THE MOST), to devote itself exclusively to parochial mission work. The causes which have led to the rapid diffusion of this newly organized mission work in the last three centuries are not far to seek. Owing to the changed conditions, intellectual, social, as well as religious, the older style of popular preaching had become inadequate to the exigencies of the age. The increasing number of sects with itinerant representatives, and a corresponding spread of religious indifference, called for specially organized effort on the part of the Church.

The work, once begun, was soon taken up by other orders whose primary end was different. Notable among these were the Jesuits, who were the foremost labourers in the field, the Dominicans, Franciscans,

Capuchins. The apostolic labours of these missionaries were everywhere blessed with remarkable success. In France, the birthplace of popular missions, the Lazarists and the Jesuits were the pioneers of a missionary activity which stirred up the faithful to greater zeal and devotion in every part of the country. Other orders and congregations gradually came to their assistance, and, though there was a slight falling off in this respect during the period of the French Revolution, yet, in the reign of Napoleon I, the emperor himself arranged for missions in the dioceses of Troyes, Poitiers, La Rochelle, and Metz, to be conducted at the expense of the Government. After the Restoration in 1815, a new impetus was given to missionary work by the Abbé Forbin-Janson, who, with his friend the Abbé de Rauzan, founded the *Missionnaires de France*, and by Charles de Masenod, who founded the Oblates of Mary Immaculate, at Marseilles, in 1815. In Germany parochial missions had been given sporadically, chiefly by the Jesuits and the Redemptorists, before 1848; after that date they became more general. The bishops everywhere encouraged and urged them. The Cardinal Archbishop of Mechlin, in 1843, maintained that the people of every parish are entitled, at least *ex caritate*, to have the benefit of a mission. During this period the German Church could pride itself on many eminent missionaries—Redemptorists, Jesuits, Dominicans, Franciscans—who devoted themselves entirely to popular mission work: the names of Fathers Roh, Klinkhofström, Pottgiesser, and others are still held in benediction. On the expulsion of the Jesuits, Redemptorists and other orders from the German Empire, in 1872, there was a short interruption, but the work was soon taken up and carried on with the richest results by the congregations which had been permitted to remain. The Redemptorists, on their return in 1894, entered the field with renewed vigour.

In Italy systematic mission work was introduced by the Lazarists during the lifetime of their founder. With the rise of the Redemptorists, the Passionists, the Fathers of the Precious Blood, and several other congregations, the work spread rapidly over the entire peninsula, and, in spite of the disturbances of the nineteenth century, popular missions have flourished there. In Austria they developed during the reign of Maria Theresa, but under her successor, Joseph II, missions were to a great extent prohibited, and missionaries banished. The Redemptorists were recalled, but could labour only on condition of submitting to official persecution. It was only after the Revolution of 1848 had spent itself that the Redemptorists, Jesuits, Capuchins, and Franciscans could carry on the work of missions unmolested, especially in Bohemia and the Tyrol, in Westphalia, Bavaria, and Württemberg. On the expulsion of the Jesuits and Redemptorists, missions were again prohibited. Later, however, Capuchins and Franciscans took up the work, and diocesan priests also entered the field as missionaries and directors of retreats. In 1786, St. Clement Mary Hofbauer, second founder of the Redemptorists, with his friend Thadäus Hübl, founded a house of the congregation in Warsaw, where King Stanislaus Poniatowski placed the German national church of St. Benno at their disposal. The labours of St. Clement and his companions at Warsaw from 1786 to 1808 were crowned with extraordinary success.

After the death of St. Alphonsus, his missionaries evangelized the deserted Catholics in the Russian Provinces of Courland and Livonia, on the invitation of Monsignor Saluzzo, Apostolic Nuncio in Poland. In Belgium and in Holland the missionary spirit has, with one or two slight interruptions, always been active. The Lazarists laboured in Great Britain as early as 1640, and until the penal laws made organized mission work impossible. It was not until about 1850 that the work was effectively begun in that country. In Ireland, missions were recommended by national and

provincial synods—e. g., by the Plenary Synod of Thurles, in 1850; by the Synods of Cashel, 1853, and of Tuam, 1854, and the Plenary Synod of Maynooth, 1875. In England they were recommended by the Provincial Council of Westminster, in 1852, and again in 1859; in Scotland by the Plenary Council of 1886. The Provincial Council of Australia, held at Sydney in 1885, and, in Canada, the Provincial Council of Quebec, in 1863, strongly urged parochial missions.

In the United States there was no systematic popular missionary work until about 1860, though missions had been given earlier. The Lazarist Fathers arrived in 1816, the Redemptorists in 1832, and the Passionists in 1852; but, although missions and spiritual retreats are the special work of these congregations, the scarcity of priests in this country compelled them at first to postpone such work to the ordinary spiritual wants of a scattered population. In 1839 Gregory XVI sent the Abbé Forbin-Janson on a missionary tour through the United States, where, for two years, he gave missions to the people and retreats to the clergy, bringing the faithful to the sacraments in numbers which since then have scarcely been equalled. In the Second Provincial Council of Cincinnati (1858), the Second Plenary Council of Baltimore (1866), and the Tenth Provincial Council of Baltimore (1869), parochial missions are strongly recommended. Among the more active missionaries of this period, Fathers Smarius, Weninger, Damen, D. Young, O.P., and Hewit are still gratefully remembered.

With the increase in the number of priests, the parochial mission has, during the last century, become an extremely influential element in the life of the Catholic Church in the United States. Besides the Lazarists, Redemptorists, and Passionists already mentioned, Dominicans, Augustinians, Paulists, and Marists have been active in this field. To supply the lack of missionaries of the regular institutes, a highly satisfactory expedient has been devised in "diocesan apostolates". These groups of priests, selected from the secular clergy, are trained for mission work with special reference to the conversion of non-Catholics. They are exempted from ordinary pastoral work, and held in readiness to give missions whenever needed. Under various names—as "Apostolic Missionary Band", "Diocesan Mission Band", etc.—the system has become established in the Archdioceses of New York, St. Louis, St. Paul, and San Francisco, and the Dioceses of Alton, Burlington, Oklahoma, Peoria, Pittsburg, Providence, Richmond, San Antonio, Scranton, and Wheeling. In the average American parish there is a mission every three years, in some every second year, and many make it an annual event. In 1903 Pope Leo XIII addressed a letter to the Church in the Philippine Islands, in which he strongly recommended the giving of missions. For an account of the Church Extension Society founded by the Rev. Francis Kelley, of Lapeer, Mich., and organized at Chicago, 19 October, 1905, for the development of the missionary spirit among the faithful and the support of the Church in poor or pioneer localities, see SOCIETIES, CATHOLIC.

III. METHOD.—While all missionary bodies pursue the same end, their methods of conducting missions vary according to the genius of each institute and its traditions. In general, however, it may be said that purely dogmatic sermons are avoided, as well as mere appeals to the emotions and the assumption that all that is, is bad. The aim is rather to seek the virtue that lies in the middle course of sound doctrine and wholesome religious sentiment. It is with this end in view that the subjects of the mission sermons are chosen, and, as the number of sermons is limited, only the most practical topics, bearing on the everyday lives of the people, are selected. If the mission lasts two weeks, the first week is usually for women exclu-

sively and the second for men. If it is to continue four weeks, the first week is for married women, the second for unmarried women, the third for married men, and the fourth for unmarried men. As far as time will permit, the sermons usually deal with the following general subjects, which are varied to some extent according to circumstances: Salvation, Sin, Repentance, Hell, Death, Judgment, Heaven—with special instructions on matrimony, temperance, Christian education, etc. The instructions deal also with the essentials of the sacrament of penance, certain commandments of God and of the Church, Holy Communion, the Mass, devotion to the Blessed Virgin, prayer, duties of parents and children, etc. The style of these instructions is simple and didactic.

JOSEPH SCHROEDER.

Mississippi, one of the United States of America, takes its name from the Mississippi River that forms its western boundary from 35° to 31° N. lat. The Act of Congress of 1 March, 1817, creating the state, fixed its boundaries as follows: "Beginning on the Mississippi River at a point where the southern boundary of the State of Tennessee strikes the same, thence east along the said boundary line to the Tennessee River, thence up the same to the mouth of Bear Creek, thence by a direct line to the north-west corner of the County of Washington, thence due south to the Gulf of Mexico, thence westwardly, including all of the islands within six leagues of the shore, to the most eastern junction of Pearl River with Lake Borgne, thence up said River to the thirty-first degree of North latitude, thence west along said degree of latitude to the Mississippi River, thence up the same to the beginning." The state in its extreme length is 330 miles; its greatest width is 188 miles; its area 46,340 square miles. It has a coast-line on the Gulf of Mexico of about 75 miles. By government surveys begun in 1803, the state is divided into sections and townships.

Topography.—It contains no mountains, but there is a decided difference of levels between the alluvial lands lying between the Mississippi and Yazoo Rivers and the other sections of the state, which may be generally characterized as the uplands of the state. The latter comprise approximately five-sixths of the entire area of the state, constituting a plateau of an undulating character, the level of which gently descends in a general southerly direction to the coast. Its general elevation above the level of the Gulf of Mexico near the coast-line is about 150 feet, and the middle northern and north-eastern portions are from about 150 to 500 and 600 feet above the level of the Gulf of Mexico. The drainage on the west is the Mississippi River and its principal tributaries the Yazoo, Tallahatchie, Coldwater, Sunflower, Big Black, and Womochitto Rivers; in the middle part the Pearl, which empties into Lake Borgne, and in the eastern part, the Tombigbee River, the Chickasawha River, and the Escatawpa River, and in the south the Wolf, Pascagoula, Biloxie, Abolochitto, and Catahoula Rivers. The upland sections of the state are undulating, and successive ridges divide the area between the water courses. The north-eastern portion contains a large area of prairie formation which overlies a cretaceous sub-stratum, commonly known as rotten limestone. The middle comprises a large area of uplands with a sub-stratum of clay for-

mation. The southern portion is generally sandy and loamy.

The Yazoo-Mississippi Delta constitutes the cotton-producing region of the state, the finest and most fertile cotton lands in the world, not excepting the valleys of the Nile and the Ganges. It begins at the Tennessee line and follows on its eastern boundary a line of hills or bluffs to Vicksburg, and is bounded on the west by the Mississippi River. It lies low and its general average level is not higher than the high-water level of the Mississippi. It comprises an estimated area of 4,480,000 acres or 6480 square miles. It is now protected by a scientifically constructed system of levees extending on the Mississippi River from the Tennessee line to the hills at Vicksburg, and up the Yazoo River and its tributaries above the danger points. The levees are maintained by local assessments by the two levee boards in the delta and by appropriations from the Federal Government, made for the improvement of the rivers and for the maintenance of the levees. The cost of maintaining this levee system is great, but is far more than compensated for by the protection secured for this large area of cotton lands. These levees are substantially constructed of earth from 15 to 30 feet high with bases broad in proportion. With the levee system, it is the general opinion of levee engineers that any general overflow of the delta is impossible. In very high water an occasional break in a levee, called a "crevasse", may overflow a small local area, but with the present scientific skill and equipment, these breaks are generally closed promptly, with but little damage to land affected. The water level in the Mississippi and in the rivers of the delta varies very much during the year. The highest water is from January to April, followed often, in the Mississippi, by what is termed the June rise which is caused by the melting of the snow and ice in the upper Mississippi and in its tributaries. There are good landings at various points on the Mississippi River, among them being Greenville, Vicksburg, and Natches.

Climatic Conditions.—The climate is mild and temperate. In the summer, breezes from the Mexican Gulf in the middle and southern portions, and variable winds elsewhere in the state, render the heat moderate and tolerable. In the southern portion the temperature rarely falls as low as +32° Fahr., and generally does not exceed 95° Fahr. In the middle part the maximum is about 98° and the lowest is rarely lower than +20°. In the northern portion the temperature rarely falls to +10°, and for a few days, in an exceptionally cold winter, may go to +5°. There is a fair and moderate rainfall extended through the year, with a greater fall during the winter and spring. Near the coast the fall is about 65 inches per annum, and elsewhere it averages about 50 inches annually. The state is as healthy in all of its climatic and other conditions as any of the adjacent states. In the low-lying portions that are not well drained there are some malarial fevers, but these conditions are being steadily improved. The death rate for the state does not exceed, annually, 1.20 per cent. Yellow fever, that was the scourge of the state for years in recurring epidemics, no longer exists, since the discovery of the mosquito theory, except in rare and sporadic form. The yellow fever experts are unanimous in the opinion that with ordinary precautionary measures there can never be another yellow fever epidemic in the South.

Geology.—The geology of the state is not complicated and is similar to that of adjacent states. There are four groups of cretaceous strata: (1) The Entaw or Coffee group; (2) The Tombigbee group; (3) The Rotten Limestone group; (4) The Ripley group. Seven groups of the Tertiary strata have been distinguished as follows: (1) The Flat Woods group; (2) The La Grange group; (3) the Buhrstone group; (4) The Claiborne group; (5) The Jackson group; (6) The Vicksburg group; (7) The Grand Gulf group.

Fauna and Flora.—In Mississippi we meet with all the different animals that are found in the gulf states. There are about forty different species of mammalia in the state. Among them is the American opossum, which is abundant, and is highly prized as an article of food. The deer and the black bear, that once existed in great numbers, are disappearing owing to the clearing up of the country and the inefficient enforcement of the game laws. About one hundred and fifteen varieties of birds are found, about twenty of which are migratory, coming from the north during the fall and winter months. The mocking bird, exclusively a southern bird, and the most remarkable songster in the world, is found in the state, especially in the middle and southern portions, in great numbers. The wild turkey, a native of this country, is found in nearly all parts of the state. Quail are also very abundant. The game laws are more effective and are more vigorously enforced than heretofore. More than fifty species of reptilia are found here, prominent among them being the alligator (*A. Mississippiensis*), existing mainly in the middle and southern portions of the state on the rivers and lakes. It attains a maximum length of from 14 to 15 feet. There are at least sixty species of fish, the majority of which are edible. The oysters and crustaceans of the gulf exist in great quantities and are of the finest quality for food.

The state, in almost its entire area, was covered originally with a magnificent growth of forest trees. More than one hundred and twenty species exist at present. Among them are fifteen varieties of oak, including live oak and white and red oaks which are the most valuable. Cypress is still abundant in the river bottoms and on the lakes. Besides several species of hickory, the black walnut, chestnut, sweet gum, red cedar, red gum, elms of various varieties, maple, ash, sycamore exist here, among many other valuable varieties, all of large growth and valuable as timber. The long-leaf pine, the most valuable tree for timber for various uses, abounds in the southern portions of the state. The short-leaf pine, not quite so valuable, is widely distributed throughout the middle and northern sections. Next to cotton, timber is the most valuable product of the state. The value of the pine timber in the state was estimated in 1880, approximately, at \$250,000,000. Allowing for the cutting since that time and also for the increase in the price of lumber, a conservative approximate estimate of its value should not be less than \$300,000,000 at the present time.

Agriculture.—This is the principal industry in the state; of the male population 77.7% and of the female 71.8% are engaged in agricultural pursuits. Fully one half of the state is of extraordinary fertility. The only portion that is unproductive is the small strip of territory known geographically as Flat Woods, where only the bottom lands are fertile. Cotton is the principal product, being probably three times greater than the other industries of the state combined. The value of the cotton crop as shown by the census of 1900 was \$54,032,341. The crop of 1879-1880 was valued at \$46,000,000, showing an increase during that period of over \$8,000,000. Among other minor products are Indian corn, oats, hay, peas of every variety, wheat, cane, sorghum, rice, potatoes, and almost every variety of orchard and garden product. In the southern

SEAL OF MISSISSIPPI

part of the state, sub-tropical and several varieties of tropical fruits are successfully cultivated. The Yazoo-Mississippi Delta is the most remarkable agricultural section of the state. Its area is 6480 square miles, or 4,147,200 acres. With an alluvial soil that is practically inexhaustible, its cotton production exceeds that of any other land in the world. Its land produces from three quarters to a bale and a half an acre, and with careful tillage and in a good cotton year as much as a bale and three quarters to two bales to the acre. The increase in the value of the lands in the Delta, both timber and cultivated, is remarkable. In 1881 the state sold 1,500,000 acres of timber lands, by levee tax titles, which have been held valid, for six and one half cents per acre. These lands are now worth, on an average, \$20 per acre. Twenty years ago, cotton lands could be bought for from \$15 to \$25 an acre that are now worth from \$50 to \$75 per acre. The population of the delta is 195,346; of this number 24,137 are whites and 171,209 are negroes. The negroes generally cultivate the cotton farms and the large cotton plantations of the state, while the small farms are cultivated by white labour.

Population.—The population of the state, as shown by the census of 1900, is 1,551,270, of which 641,200 are white and 907,630 are negroes, with 2203 Indians and 237 Chinese. A small percentage of the population is foreign born. There are 5345 males and 2536 females foreign born; total, 7981. Of these 7625 are white. The total number of males of voting age is 349,179. Of these 150,530 are whites and 197,936 are negroes. There are 118,057 illiterate males of voting age, and of these 105,331 are negroes and 12,293 are whites. Illiteracy in the total population amounts to 32%. The illiteracy of the entire white population is 8% and of the total negro population, 49.1%. Under the influence of the extensive school facilities provided at the expense of the state, the percentage of illiteracy is steadily decreasing.

Administration.—The civil government of the state is structurally similar to that of the other states. There are three departments—executive, legislative, and judicial. The state officers and members of the legislature are elected by the people every four years. There are three supreme court judges, thirteen circuit court judges and eight chancellors, all appointed by the governor with the approval of the senate. The elective franchise contains the following conditions, viz: a voter must be twenty-one years old, he must be able to read or to understand the state Constitution when read to him (that is, a layman's and not an academician's understanding of the Constitution); he must have resided in the state two years and in the precinct one year, and have paid all taxes, including an annual poll tax of \$2 for two years preceding the election. Conviction of certain crimes against honesty entails the disfranchisement of a voter. This qualified suffrage has given the state a large white majority in its electoral body. The validity of these suffrage qualifications has been sustained by the Supreme Court of the United States in the case of *Williams vs. The State of Mississippi*, decided by a unanimous court in 1896. The state maintains institutions for the insane, the blind, and the deaf and dumb, affording ample facilities for both races. There is also a state hospital at Natchez and one at Vicksburg.

Education.—The public educational system of the state consists of a common school system in which each county is a school-district, and in which many of the municipalities constitute separate school-districts. This system is maintained at the public expense, by state, county, and school district; and separate educational facilities are extended to all of the educable children of both races in the state. In addition, the state maintains the Industrial Institute and College for girls, at Columbus, and maintains,

in large part, the University at Oxford, the Agricultural and Mechanical College at Starkville. For coloured students the state maintains the Alcorn Agricultural and Mechanical College near Brunsburg and Rodney College near Rodney, both in Claiborne County. The total number of children enrolled during 1906–1907 was 482,208, and the average attendance for the same period was 285,047. The total average attendance in 1905–1906 was 267,898, showing an increase in 1906–1907 of 17,149. There are 7241 schools in the school districts, and 117 schools in the separate school districts. In the session of 1906–1907, there was a larger attendance of negro pupils than white pupils by 15,335. For the session of 1906–1907, \$2,631,790.35 of public money went to the support of schools, as compared with \$2,482,426.33 for 1905–1906. There are the following private institutions for white students: Jefferson College, near Natchez; Rust University, Holly Springs; Millsaps College and Belhaven College, Jackson; Blue Mountain College, Blue Mountain; Mississippi College, Clinton; East Mississippi College, Meridian; Stanton College, Natchez. There are other private schools of lesser prominence.

Penitentiary System.—During the period of military government in the South, a prison system known as convict leasing was established in this and other southern states, and was continued in Mississippi until 1890, when it was abolished and the present system was adopted of working the prisoners on state lands at agricultural pursuits for the exclusive benefit of the state, and under exclusive official control. The state owns 20,900 acres of cotton and farm lands upon which the entire prison population of about 1200 prisoners are worked. The penitentiary lands cost originally \$145,600 and are now worth at least \$600,000. The annual cash income to the state from the labour of the prisoners is not less than \$150,000. In addition to this, valuable improvements are constantly being made on the property by the prisoners. The present system is a satisfactory solution of the convict problem, in which all conditions, moral and sanitary, are obtained. Alabama, Georgia, South Carolina, and Louisiana have adopted this system.

Transportation.—The railroad mileage in the state amounts to 3759 miles, according to the Report of the State Railroad Commission of 1908. The state is well supplied with water transportation, having the following navigable rivers: Mississippi, Yazoo, Tallahatchie, Sunflower, Pearl, Pascagoula, Big Black, Tombigbee, and some minor streams that are navigable during a portion of the year. There are deep-water harbours on the gulf coast at Horn Island opposite Pascagoula, and Ship Island opposite Gulf Port. There is a depth of water at the pier of the Gulf and Ship Island Railroad at Gulf Port of 23 feet at low tide, and 30 feet in the protected roadstead inside of Ship Island, which is accessible by tugs and lighters through a deep-water channel. There are also harbours at Bay of St. Louis and Biloxi.

History.—In 1540 Hernando De Soto, one of the most adventurous of the Spanish explorers, discovered the Mississippi River, and his expedition reached the present limits of this state, and remained until his death in 1542. The expedition, under the leadership of Moscoes, was withdrawn in 1543, descending the river to the sea and thence along the coast to Mexico. It is difficult to trace the exact route of De Soto. It is known, however, that he passed through Florida and Georgia as high as 35° N. lat., then went to the vicinity of Mobile and then north-west to the Mississippi River. In 1682 La Salle and Fonti descended to the mouth of the Mississippi River and claimed the entire region for the King of France. In 1698 D'Iberville came to Mississippi, authorized by the French king to colonize the lower Mississippi. He went to Ship Island and Cat Island, to the mainland on Biloxi Bay, to Bay of St. Louis, and to Mobile. The

colony did not prosper. D'Iberville returned to France, leaving his two brothers, Sauvolle and Bienville, in charge of the country. In 1699 D'Iberville returned and built a fort on the Mississippi about 400 miles below Natchez. He sent Fonti on an expedition to Natchez, who built Fort Rosalie near Natchez. At that time Louisiana belonged to France, and Florida to Spain by claim of discovery. In 1763 Spain ceded Florida to Great Britain. The northern line of Florida was claimed by Spain from the mouth of the Yazoo River east to the Chattahoochie River, a claim that was not conceded north of 31° N. lat. In 1772 Richard and Samuel Swase of New Jersey formed a permanent settlement on the Homochitto River in Adams County. In 1781 Spain, then at war with England, expelled the English from Florida, and took possession of that country. Florida was conceded to extend to 31° N. lat. and westward to the Perdido River. All south of that parallel and west of the Perdido River belonged to France. All east of the Mississippi River and north of 31° N. lat. was territory of the United States and was claimed by the State of Georgia.

In 1798 the Territory of Mississippi, established by Act of Congress, was bounded as follows: On the west by the Mississippi River, on the south by parallel 31° N. lat., on the north by a line running east from the mouth of the Yazoo River to the Chattahoochie River and along the latter river on the east. In 1802 the State of Georgia ceded to the United States its claim to all territory north of 31° N. lat. as far as the Tennessee line, and in 1804 Congress attached all north of 31° N. lat. and south of the Tennessee line to the Territory of Mississippi. In 1803 the Louisiana Purchase was effected. In 1812 Congress added what was then termed the District of Mobile to the Territory of Mississippi, being all that territory extending from the Pearl to the Perdido rivers, bounded on the north by 31° N. lat. and on the south by the Mexican Gulf. By the treaty of Madrid of 27 October, 1795, Spain had conceded that the southern boundary of the United States should extend to parallel 31° N. lat., thereby waiving all claim north of that line. By the treaty of 22 February, 1819, Spain ceded all Florida, including the whole territory south of parallel 31° N. lat. and east of the Mississippi River, to the United States. But the United States was then in possession of Florida east of the Perdido River, by conquest; General Jackson, having in 1818 invaded east Florida, conquered the Indians and expelled the Spaniards. Before that time the United States claimed *de jure* all west of the Perdido under the Louisiana Purchase. The present territory of Mississippi was acquired and claimed as follows: That portion south of 31° N. lat. and west of the Perdido River, and extending to Pearl River, was claimed by original title under the Louisiana Purchase. From parallel 31° N. lat. to the line from the mouth of Pearl River, east to the present Alabama line, by occupancy and proprietary right, and all north of parallel 31° N. lat. to the Tennessee line was territory of Georgia, and was ceded by that state to the United States. This is the *de jure* derivation of the titles of the United States Government. The State of Mississippi was created by Act of Congress of 1 March, 1817.

On 9 January, 1861, Mississippi passed the Ordinance of Secession and joined the Southern Confederacy immediately upon its establishment. The state furnished 80,000 troops to the Confederacy during the war, with a total population of 70,295 white males between the ages of eighteen and forty-five years. There were 545 whites and 79,000 negroes from the state enlisted in the Federal Army. Upon the surrender of the Confederacy the state was placed under military rule. In June, 1865, a provisional government was established by President Johnson, with William L. Sharkey as provisional governor. A civil state government was established by an elec-

tion by the people in October, 1865, under the auspices of President Johnson's plan of Reconstruction, with Benjamin G. Humphreys as governor. Under the Reconstruction Acts of Congress of March, 1867, the Humphreys government was abolished and a temporary military government established in its place until the Reconstruction government was established, under the Acts of Congress, with James L. Alcorn as governor, who was inaugurated 10 March, 1870. This Reconstruction period, with unlimited negro suffrage, lasted until 1876, when the white man regained control of the state. The ordinary annual expenses of the state government increased from \$463,209.71 in 1869, to \$1,729,046.34 in 1871, under negro rule. In 1876, under white rule, the expenses of the state were reduced to \$591,709.00 per annum. During the Reconstruction period taxation had reached the point of confiscation, and one-fifth of all the lands in the state had been forfeited to the state for taxes.

From 1876 to 1890, by various extra-legal methods the white men managed to maintain control of the state, and the constitutional convention of 1890 enacted a constitution that placed limitations on the elective franchise. The state suffered severely during the Civil War, being the theatre of extensive military operations. During the Reconstruction period there was an enormous loss in property values. At present the state is in a highly prosperous condition, and each year witnesses its steady improvement and development.

The Diocese of Natchez (q. v.) includes the entire state; the Catholic population in 1910 amounted to 25,701, including 2017 coloured and 233 Indian Catholics.

Laws of the State Affecting Religion.—The State Constitution of 1890 provides that no testamentary bequests of any property, real or personal, can be made to any religious or charitable uses. The statutes regulate by limitations the character of property that religious societies or associations, or ecclesiastical bodies, may own and hold, viz.: a church, a residence for a priest or minister, and a school or seminary each for male and female scholars, and also a cemetery; and a religious denomination may, in addition, own such colleges or seminaries of learning as it may deem proper, and also a place of residence for its superior clergymen. These limitations apply to all religious denominations, societies and ecclesiastical bodies, without discrimination. All divorce and marriage laws, and cognate laws, apply without discrimination to all citizens of the state irrespective of their religious beliefs and affiliations. All qualifications of the elective franchise and for office are of uniform character. So also are all laws regulating grand and petit jury duty, and road and street duty, and military service, and exempting all ministers of the Gospel from these duties. The State Constitution of 1890 provides that no religious tests as a qualification for office shall be required, and that no preference shall be given by law to any religious denomination or mode of worship. Absolute freedom in all matters of religion, or modes of worship, it is declared by the Constitution, "shall be held sacred". The Bible is not to be excluded from the public schools, meaning the schools maintained by the state. Secular and business pursuits, not of a necessary character, are prohibited on Sunday. Blasphemy and profanity in any public place is prohibited. The Senate and the House, as a matter of custom, are opened with prayer by some minister of the Gospel, on the invitation of the presiding officer of the body. The following legal holidays are designated by the statutes of the state, viz.: 1 January, 22 February (Washington's Birthday), 26 April, Memorial Day, 3 June, Jefferson Davis Day, 4 July, and Christmas Day.

The laws of the state do not preserve the inviolability of the confessional as matter of evidence. The only privileged communications are those between a

client and his lawyer. There is a general law by which the governor may grant charters of incorporation to religious congregations or societies. All property owned by religious denominations is exempt from taxation. The only Catholic who has held a state office in Mississippi is the Hon. Frank Johnston, who was attorney-general in the years 1893, 1894, 1895 under appointment by the governor to fill an unexpired term. (See NATCHEZ, DIOCESE OF.)

Missouri, STATE OF.—The State of Missouri was carved out of the Louisiana Territory, and derives its name from the principal river flowing through its centre. The name (pronounced *Miz-zoo'ri*) signifies "big muddy" in the Indian language. Geographically, Missouri is the central commonwealth of the Federal Union.

BOUNDARIES AND AREA.—The boundaries are the State of Iowa on the north; Arkansas on the south; on the east the Mississippi River separates it from Illinois, Kentucky, and Tennessee; on the west it is bounded by Nebraska, Kansas, and the new State of Oklahoma. It lies between 40° 30' and 36° 30' N. lat., except that a small projection, between the Rivers St. Francis and Mississippi, extends about 34 miles farther south between Tennessee and Arkansas. The area of the state is 69,415 square miles.

PHYSICAL CHARACTERISTICS.—The Missouri River follows the western boundary of the state as far south as Kansas City; then turning east, it flows across the state and empties itself into the Mississippi about twelve miles above St. Louis. The portion of the state lying north of the Missouri is a great extent of gently rolling prairie, intersected here and there by streams which are lined with timber and flow south into the Missouri or east into the Mississippi. The western portion of the state, north of the Missouri River, is generally level, but rises to about one thousand feet above sea-level in the north-western corner of the state. The eastern portion, north of the Missouri River, is more broken, with some hilly land bordering the Mississippi and Missouri rivers. The portion of the state south of the Missouri is more rolling; it is well wooded, especially in the south-east, with some swamp lands in the extreme south-eastern section. The Ozark Mountains break into the south central part of the state, but rise to no considerable height (highest elevation 1600 feet). West of these mountains the land is rolling, but arable and fertile, being especially adapted to fruit-growing. It is in this section that the famous Missouri red apples are grown in the greatest quantities.

POPULATION.—According to the first federal census of Missouri, taken in 1810, the state had then 20,845 inhabitants. The census of 1910 places the population at 3,293,335. According to the Missouri Bureau of Labor Statistics for 1909, the population of the state at the beginning of that year was 3,925,335.

RESOURCES.—*Agricultural and Farm Products.*—The value of the output of farm crops alone for the year 1908 was \$171,815,553. Of the total crop valuation \$98,607,605 consisted of Indian corn, in the production of which Missouri is the first state in the Union. The greater portion of the crop is consumed by live stock within the state; this portion is not estimated in the surplus given below. The surplus in live stock for

the year ending 31 December, 1908, consisting of cattle, horses, hogs, mules, and sheep, was 7,087,055 head, valued at \$112,535,494. Missouri is constantly gaining as a wool-producing state; in 1908 there was \$1,306,922 worth of wool sold. The farm-yard products are important items in the agricultural statistics; the surplus of poultry, eggs, and feathers for the year 1908 was \$44,960,973. Missouri has never been considered an important dairying state, but since 1904 there has been a remarkable growth in this industry. The statistics in 1904 show an estimated total value from the dairies of \$4,900,783, while the statistics of 1908 give a total value of \$20,651,778. The cotton crop of 1908 brought \$3,723,352.

Mines and Timber.—In 1907 the Federal authorities ranked Missouri the chief lead-producing state of the Union. The returns from the smelters for 1908 show that the state mined enough lead ore to produce 122,451 tons of primary lead. The total valuation of the lead produced in 1908 was \$8,672,873. For 1908 the State Mining Department placed the production of zinc ore at 197,499 tons, and its value at \$6,374,719.

Nickel, copper, and cobalt are among the valuable minerals produced in Missouri. According to the United States geological survey of 1907, Missouri and Oregon were the only states producing nickel: 400 tons of metallic nickel, 200 tons of metallic cobalt, and 700 tons of metallic copper were produced in 1908. Iron ore to the value of \$218,182 was produced in the year 1908. There was an output of \$26,204 in silver. In the production of clay and shale goods Missouri held seventh rank in 1908. In cement the state also held seventh place. The total output in lime, cement, brick, and tiling for 1908 aggregated a value of \$8,904,013. Petroleum wells exist in one or two counties close to the Kansas border, and some natural gas has been found in the state. Coal exists in abundance, the value of the output in 1908 being \$5,644,330. The products of the forests of Missouri produced in 1908 over 450,000,000 feet of assorted lumber with an estimated valuation of \$8,719,822, while over \$4,000,000 worth of railroad ties were also produced in that year.

COMMERCE.—The following table of surplus products, given out by the Bureau of Labour Statistics in 1909, is a concise statement of the surplus of the state which was added to the commerce of the world during 1908.

RÉSUMÉ OF VALUATIONS BY GROUPS	
Commodity	Value
Live stock.....	\$112,535,494
Farm crops.....	34,991,518
Mill products.....	30,283,689
Farmyard products.....	44,960,973
Apiary and cane products.....	117,694
Forest products.....	22,958,014
Dairy products.....	8,260,711
Missouri "Meerscham" products..	424,449
Nursery products.....	1,061,173
Liquid products.....	1,210,739
Fish and game products.....	636,629
Packing-house products.....	1,872,318
Cotton products.....	3,723,352
Medicinal products.....	95,398
Vegetable and canned goods.....	6,692,426

SEAL OF MISSOURI

Commodity	Value
Fresh fruit.....	\$5,089,384
Wool and mohair.....	1,308,812
Mine and quarry products.....	24,992,789
Stone and clay products.....	8,904,013
Unclassified products.....	4,623,953
Total value.....	\$314,743,528

MEANS OF COMMUNICATION.—Although the Mississippi River runs the full length of the eastern boundary of the state, and the Missouri flows directly through the state, neither of these streams is of any considerable commercial value as a means of communication or transportation. Railroad facilities, however, are ample, there being 7991 miles of main line with about 3000 miles of sidings. There are 63 steam systems operating in the state. There are one railroad bridge, one street-car bridge, and one combination railroad, street-car, and passenger bridge across the Mississippi River at St. Louis, and a municipal free bridge for the accommodation of railroads, electric roads, wagons, and foot traffic, is in process of construction.

EDUCATIONAL SYSTEM.—*State University.*—The State University of Missouri was established by legislative act approved on 11 February, 1839, and the university was located at Columbia, Boone County, on 24 June, 1839. The corner-stone of the main building was laid on 4 July, 1840. Courses of instruction in academic work were begun on 14 April, 1841, and a Normal Department was established in 1867 and opened in September, 1868. The College of Agriculture and Mechanic Arts and the School of Mines and Metallurgy were made departments of the university in 1870, the School of Mines and Metallurgy being located at Rolla. The law department was opened in 1872, the medical department in 1873, the engineering department in 1877, and the department of journalism in 1908. In 1888 the Experiment Station was established under Act of Congress, and the Missouri State Military School in 1890. For the scholastic year 1908 there were enrolled in the entire university 3033 students. The officers of instruction and administration consisted of 104 professors, 64 instructors, and 54 assistants. Apart from the above-mentioned institutions, which are all under the supervision of the University of Missouri proper, the state maintains the Lincoln Institution at Jefferson City for the education of negro children in agriculture and mechanic arts.

Public Schools.—The state is divided into 10,053 school districts. The total number of teachers in the public schools in the year 1908 was 17,998, the total number of pupils being 984,659. For the year ending 1 July, 1908, the public schools cost the tax-payers \$12,769,689.93. The law requires that every child with sound body and mind, from six to fourteen years of age, attend either a public or private school during each school year. Missouri has the largest permanent interest-bearing school-fund of any state in the Union. This fund in 1908 amounted to \$14,014,335.45. Apart from the primary and high schools there are six state normal institutions, of which one is located in each of the following cities: Columbia (Teachers' College), Kirksville, Warrensburg, Cape Girardeau, Springfield, and Maryville.

FIRST SETTLERS.—The first settlement was made at Ste. Genevieve in 1735 by the French, and the second by the French at St. Louis in 1764. The Spanish also came up the river in search of gold, and St. Louis was soon a busy trading centre for the citizens and the Indians inhabiting the surrounding territory. From the eastward soon came emigrants from other states—especially Kentucky, Tennessee, and the Virginias—and later came the emigrants from foreign shores, particularly the Germans, Irish, and some Scotch. The later growth of the state has been made up of settlers from almost all of the states lying to the eastward, but

more particularly from those mentioned, with many from Maryland and the Carolinas. There are settlements of Italians, Hungarians, and Bohemians, but on the whole these nationalities make up only a small part of the population. St. Louis is a cosmopolitan city, but the predominant strains of foreign blood are German and Irish.

ADMISSION TO THE UNION.—Missouri was admitted into the Union conditionally on 2 March, 1820, and was formally admitted as a state on 10 August, 1821, during the presidential administration of James Monroe. At a convention held at St. Louis on 19 July, 1820, the people passed on the Act of Congress, which was approved in March of the same year, and a constitution was drawn up and a new state established. Under this constitution, in August, 1820, the people held a general election, at which state and county officers were chosen and the state government organized. The constitution now in force was adopted by vote of the people on 30 October, 1875, and came into operation on 30 November of the same year.

NOTABLE EVENTS IN POLITICAL HISTORY.—The admission of Missouri as a state provoked much bitter discussion in Congress, and terminated in what has since been known as "The Missouri Compromise". This bill provided that Missouri should be admitted as a slave state, but forever prohibited slavery in the remainder of the Louisiana Territory lying north of 36° 30' N. lat., which line is the southern boundary of Missouri. The matter of slavery was the cause of many controversies during the early history of the state, and during the Civil War over 100,000 soldiers were contributed to the Union army and 50,000 to the Confederacy.

MATTERS DIRECTLY AFFECTING RELIGION.—*Freedom of Worship.*—Section 5, Article 2, of the Constitution of 1875 provides "that all men have a natural and inalienable right to worship Almighty God according to their own conscience; that no person can, on account of his religious opinions, be rendered ineligible to any office of trust or profit under this State, nor be disqualified from testifying, or from serving as a juror; that no human authority can control or interfere with the rights of conscience; that no person ought, by any law, to be molested in his person or estate, on account of his religious persuasion or profession; but the liberty of conscience hereby secured shall not be so construed as to excuse acts of licentiousness, nor to justify practices inconsistent with the good order, peace or safety of this State, or with the rights of others." The recognition of a God herein manifested does not in any way prejudice the interests of atheists. That a man is an atheist or has peculiar religious opinions does not prejudice him as a witness (11 Mo. App. 385). Sunday regulations are not void on account of peculiar religious opinions of certain citizens (20 Mo. 214); nor can a contract be voided by one voluntarily entering into it on the ground that it requires him to live up to certain religious beliefs (*Franta v. Bohemian Roman Catholic C. U.*, 164 Missouri, 304). The Constitution also provides that no person can be compelled to erect, support, or attend any place or system of worship, or to maintain or support any priest, minister, preacher, or teacher of any sect, church, creed, or denomination of religion; but if any person shall voluntarily make a contract for any such object, he shall be held to the performance of the same; that no money shall ever be taken from the public treasury directly or indirectly, in aid of any church, sect, or denomination of religion, or in aid of any priest, preacher, minister, or teacher thereof as such; and that no preference shall be given to nor any discrimination made against any church, sect, or creed of religion, or any form of religious faith or worship; that no religious corporation can be established in this state, except such as may be created under a general law for the purpose only of holding the title to such

real estate as may be prescribed by law for church edifices, parsonages, and cemeteries.

Sunday Observance.—The law provides that the Sabbath shall not be broken by the performance of any labour, other than works of necessity, on the first day of the week, commonly called Sunday, and the master is held to account for compelling or permitting his servants or apprentices to labour on that day. But any member of a religious society which observes any other day than Sunday as the Sabbath, is not bound to observe Sunday as such. Horse-racing, cock-fighting, and playing games, as well as hunting game, are forbidden on Sunday. The selling of any wares or merchandise, the opening of any liquor saloon, and the sale of fermented or distilled liquors are forbidden on Sunday.

Administering of Oaths.—Every public official is required to take an oath to perform the duties of his office and to support the Constitution of the United States and of the State of Missouri, and all witnesses in every court are required to give their testimony "under oath"; however, any person who declares that he has conscientious scruples against taking any oath or swearing in any form, is permitted to make his solemn declaration or affirmation concluding with the words "under the pain and penalty of perjury". Where it appears that the person to be sworn has any particular mode of swearing in addition to or in connexion with the usual form of administering oaths, which to him is a more solemn and binding obligation, the court or officer administering the oath is required to adopt the form most binding on the conscience of the person to be sworn. Any person believing in any other than the Christian religion, is sworn according to the prescribed ceremonies of his own religion, if there be any such (sec. 8840 to 8845 R. S. 1899).

Use of Prayer in Legislature.—There is no statutory provision for a chaplain for either branch of the legislature, but the rules of these bodies provide for a chaplain for each, who is paid out of a contingency fund. The chaplain is elected by the legislative body for each session. No Catholic priest has ever been elected to this position.

Seal of Confession.—Section 4659 R. S. 1899 provides that a minister of the Gospel or a priest of any denomination shall be incompetent to testify concerning the confession made to him in his professional character in the course of discipline enjoined by the rules or practice of such denomination.

MATTERS AFFECTING RELIGIOUS WORK.—**Incorporation of Churches.**—No religious corporation can be established in this state except such as may be created under the general law for the purpose only of holding the title of such real estate as may be necessary for churches, schools, parsonages, and cemeteries. There is no constitutional or statutory recognition, as in some states, of any churchman in his official capacity. The property of a diocese, for example, is vested in the individual and not in the bishop as such.

Exemption from Taxes and Public Duties.—The constitution of the state exempts from taxation church property to the extent of one acre in incorporated cities or towns, or within one mile from such cities or towns. Church property to the extent of five acres more than one mile from incorporated cities or towns is exempt from taxation. These exemptions are subject to the provision that such property is used exclusively for religious worship, for schools, or for purposes purely charitable.

The law also provides that no clergyman shall be compelled to serve on any jury. Ministers of the Gospel may select such books as are necessary for the practice of their profession, and the same are exempt from attachment under execution. It is not lawful for any city or municipality to exact a tax or licence fee from any minister of the Gospel for authorizing him to follow his calling.

Marriage and Divorce.—Marriages are forbidden and void between first cousins, or persons more nearly related than first cousins, such as uncles and nieces, etc. Any judge of a court of record or justice of the peace, or any ordained or licensed preacher of the Gospel, who is a citizen of the United States, may perform a marriage ceremony. A licence of marriage is required, and no licence will be issued to a male under the age of twenty-one or to a female under eighteen without the consent of the father of the minor or, if the father cannot act, of the mother or guardian. The law requires that the person performing the marriage ceremony shall return a certificate of the service to the state authorities. The causes for divorce are enumerated in the statute, and, besides the usual clause, it is provided that a divorce may be granted when it is proved that the offending person "has been guilty of conduct that makes the condition of the complaining party intolerable". This clause makes it possible to secure a divorce on any grounds that the judge considers sufficient, and is thought to be the source of some abuse. Residence of one year in the state is required before a petition for divorce may be filed. There is no statutory prohibition against divorced persons marrying at any time after a decree of divorce has been granted.

CATHOLIC EDUCATION.—Every parish of any considerable size in the state maintains a parochial school. There are 228 parochial schools in the state with 38,098 children in attendance. Each diocese has its own school-board, and a uniform system of text-books is used throughout the diocese. There are eight colleges and academies for boys with 1872 students in attendance, and 38 academies and institutions of higher education for girls with 4480 pupils in attendance. The St. Louis University, conducted by the Jesuit Fathers, is one of the leading educational institutions of the country. It conducts a school of divinity, a school of philosophy and science, a school of medicine, a school of dentistry, an institute of law, and an undergraduate and academic department. There is a total of 950 lay students in attendance. No parochial or private schools receive any assistance or support from the state, and all citizens are required to contribute to the support of the public schools regardless of whether their children attend a private or a public institution.

CHARITABLE INSTITUTIONS.—There are in the state 10 orphan asylums with 1248 inmates; 25 hospitals; 2 deaf-mute institutions with 60 inmates; 3 homes for aged persons; 1 industrial and reform school; 1 foundling asylum, and 1 newsboys' home—all under Catholic auspices. The state does not contribute anything to the Catholic orphanages, but the foundling asylum in St. Louis receives some remuneration for keeping waifs who are found by the police and intrusted to that institution.

There is a State Board of Charities and Corrections, of which the governor is a member *ex officio*. This board has general supervision over the charitable institutions conducted by the state. There is a state hospital at Fulton, at St. Joseph, at Nevada, and at Farmington. There is a state Confederate Soldiers' Home at Higginville, and a State Federal Soldiers' Home at St. James. A school for the deaf is maintained at Fulton, a school for the blind at St. Louis, and a colony for the feeble-minded and epileptic at Marshall. The Missouri State Sanitarium for the treatment of tuberculosis is located at Mt. Vernon on the crest of the Ozarks.

SALE OF LIQUOR.—Intoxicating liquors may be sold only by licensed saloon-keepers. In cities of two thousand or more inhabitants the application for licence must be accompanied by a petition asking that the licence be granted. This petition must be signed by a majority of the tax-paying citizens owning property on the block or square in which the saloon is to be

kept. In cities or towns of less than two thousand inhabitants the petition must be signed by a majority of the tax-paying citizens, and a majority in the block where the saloon is to be kept. The law provides that the licence may be revoked upon the application of any person showing to the county court that the licence-holder does not keep an orderly house, and it is provided that one (1) whose licence has been revoked, (2) who has violated any of the provisions of the licence law, (3) who has sold liquors to any minor, (4) who has employed in his business of saloon-keeper any person whose licence has been revoked, shall not be entitled to a licence. The law prohibits (1) the sale of intoxicating liquors to habitual drunkards, minors, or Indians, (2) the keeping of female employees in saloons, and (3) the keeping, exhibiting, or using of any piano, organ, or any other musical instrument in a saloon. These laws are generally enforced. The law provides that upon application by petition to the county court signed by one-tenth of the qualified voters of any county, who shall reside outside of the cities or towns having a population of 2500 or more, an election shall be held to determine whether or not spirituous liquors shall be sold within the limits of such county. In cities or towns with a population of 2500 or more, the petition is made by one-tenth of the qualified voters to the body having legislative functions therein. If a majority of the qualified voters at such election vote against the sale of intoxicating liquors, no licence can be issued for the sale of liquor within such jurisdiction. Section 3034 R. S. of 1899 provides among other things that nothing in the law shall be so construed as to prevent the sale of wine for sacramental purposes.

PRISONS AND REFORMATORIES.—The state penitentiary is at Jefferson City; there is a reformatory for boys at Booneville and an industrial home for girls at Chillicothe. The law provides for the appointment of a chaplain for the penitentiary by the warden and the board of inspectors, consisting of the state treasurer, auditor, and attorney-general. The law makes no reference to the religious denomination of the chaplain, but provides that his selection shall be governed by his special qualifications for the performance of the duties devolving upon him. He is required to conduct at least one service each Sunday; to visit convicts in their cells at least once a month, when practicable; to visit the sick in the hospital at least once a day; to hold religious services in the hospital once a week. He shall have charge of the prison library and the purchase of books; he shall officiate at the funeral of each convict, and be present at his burial; he is paid the salary of \$1200 per annum. The law further provides that clergymen of every denomination of the City of Jefferson shall at all times have free access to the prison, or may visit any convict confined therein—subject only to such rules as may be necessary for the good government and discipline of the penitentiary—and may administer rites and ceremonies of the Church to which such convict belongs, if it be so desired. There is no statutory provision for a chaplain at the reformatory or the industrial home. Such religious ceremonies as are held at these institutions are conducted by those interested in the work through arrangements made with the officials in charge. Such ceremonies are largely within the discretion of the officials, but the spirit of the law as laid down for the penitentiary prevails. This is also true of the state insane asylum and the reform schools and jails of the cities. In a majority of these institutions religious services are held by Catholic priests at regular intervals, and accommodations are provided for the celebration of Mass and the administration of the sacraments.

CHARITABLE BEQUESTS.—The courts are accustomed to permit every charitable use to stand, which comes fairly within the Statute of Elizabeth. While this statute has not been incorporated in the state

laws, its general provisions have been followed by the decisions. A case involving the Mullanphy will, which left a fund to furnish relief "to all poor emigrants and travellers coming to St. Louis on their way bona fide to settle in the West", reported in 29 Mo. 543, brought out an early discussion of charitable bequests; this provision was declared valid, and, as a precedent, has been generally followed. There is no statutory limitation, as in some states, upon the amount that may be bequeathed or devised to charity. The Constitution of 1865 prohibited all bequests and devises of land for religious purposes. A bequest for Masses was held void under this section of the constitution. An outright gift to the Archbishop of St. Louis was also held void because it was shown there was an understanding that the money was to be used for religious purposes (*Kenrick vs. Cole*, 61 Missouri, 572). This section was omitted from the Constitution of 1875, and the courts have been liberal since in construing such bequests as charitable and therefore valid.

DIOCESES AND CATHOLIC POPULATION.—The state is divided into three dioceses, those of St. Louis, Kansas City, and St. Joseph. The Diocese of St. Louis comprises all of the eastern half of the state; that of Kansas City the western portion of the state, south of the Missouri River, and the Diocese of St. Joseph the western portion of the state, north of the Missouri River. The Catholic population in 1909 was 452,703. There are about 3000 Catholic negroes in the state, with one church in St. Louis and one coloured priest. There is one coloured Catholic school with 110 pupils, and one orphan-asylum for coloured children, conducted by the Oblate Sisters of Providence.

FIRST CATHOLIC MISSIONS.—The Cross was planted among the Indians who inhabited the region now known as Missouri during the first half of the sixteenth century by De Soto, who was buried in the waters of the Mississippi in May, 1542. Marquette descended the Mississippi as far south as the thirty-fourth degree in 1673, more than a century and a quarter after De Soto had marched northward, and tells us that he preached the Gospel to all of the nations he met. It is thought by some that there was a white settlement at the mouth of the River Des Pères in Missouri, a few miles south of St. Louis, even before the historical settlement of Cahokia, Illinois (the sole centre of civilization in the Mississippi Valley for some time), but the first permanent settlement of which we have any record was made at Ste. Geneviève about 1734. Among the oldest records in the state are those of the Catholic church at Ste. Geneviève. There was also a mission in 1734 at Old Mines, which was a military station in Missouri. Ste. Geneviève and Old Mines were attended by priests from Cahokia. The first mission was established in St. Louis in 1764, and the first church was built in 1770. A mission was established at Carondelet in 1767. Fredericktown, New Madrid, St. Charles, and Florissant were missionary points during the last half of the eighteenth century. The Lazarist Fathers were established at Perryville in 1818, and the Jesuits at Florissant in 1823. The early settlements were made up of French, many of them coming from Canada. A great many German Catholics came to the state during the first part of the nineteenth century, but the first German sermon of which we have any record was preached by Rev. Joseph A. Lutz at St. Louis in 1832. During this same period a large portion of the immigration was made up of Irish Catholics. The names of many of the early settlements bear evidence of the Catholicism of those who were first established there. The later immigration into the state has been made up of almost every nationality, and almost all of the Catholic countries are represented. A famous episode in the state's history was Archbishop Kenrick's successful resistance to the test oath required by the Drake Constitution of

1865. He finally won the case in the Supreme Court of the United States (see OATH, MISSOURI TEST).

PRINCIPAL RELIGIOUS DENOMINATIONS.—According to the Bulletin issued by the Department of Commerce and Labour Bureau of the Census concerning religious bodies in 1906, the total population of church members in the State of Missouri was 1,199,239, and the principal religious denominations were as follows: Roman Catholics, 382,642; Baptists, 218,353; Congregationalists, 11,048; Disciples or Christians, 166,137; German Evangelical, 32,715; Lutherans, 46,868; Methodists, 214,004; Presbyterians, 71,999; Episcopalians, 13,328; Reformed Bodies, 1284; United Brethren bodies, 3316; other Protestant bodies, 23,166; Latter-day Saints, 8042; all other bodies, 6439. Thus, 33.9 per cent of the total number of church-going people in the state are Catholics, the Baptists having the next highest percentage (18.2), and the Methodists being third (17.8).

JOHN L. CORLEY.

Mithraism.—A pagan religion consisting mainly of the cult of the ancient Indo-Iranian Sun-god Mithra. It entered Europe from Asia Minor after Alexander's conquest, spread rapidly over the whole Roman Empire at the beginning of our era, reached its zenith during the third century, and vanished under the repressive regulations of Theodosius at the end of the fourth century. Of late the researches of Cumont have brought it into prominence mainly because of its supposed similarity to Christianity.

ORIGIN.—The origin of the cult of Mithra dates from the time that Hindus and Persians still formed one people, for the god Mithra occurs in the religion and the sacred books of both races, i. e. in the Vedas and in the Avesta. In Vedic hymns he is frequently mentioned and is nearly always coupled with Varuna, but beyond the bare occurrence of his name, little is known of him; only one, possibly two, hymns are dedicated to him (*Rigveda*, III, 59). It is conjectured (Oldenberg, "Die Religion des Veda," Berlin, 1894) that Mithra was the rising sun, Varuna the setting sun; or, Mithra, the sky at daytime, Varuna, the sky at night; or, the one the sun, the other the moon. In any case Mithra is a light or solar deity of some sort; but in Vedic times the vague and general mention of him seems to indicate that his name was little more than a memory. In the Avesta he is much more of a living and ruling deity than in Indian piety; nevertheless, he is not only secondary to Ahura Mazda, but he does not belong to the seven Amshaspands or personified virtues which immediately surround Ahura; he is but a Yazad, a popular demigod or genius. The Avesta however gives us his position only after the Zoroastrian reformation; the inscriptions of the Achaemenids (seventh to fourth century B. C.) assign him a much higher place, naming him immediately after Ahura Mazda and associating him with the goddess Anaitis (Anahata), whose name sometimes precedes his own. Mithra is the god of light, Anaitis the goddess of water. Independently of the Zoroastrian reform, Mithra retained his place as foremost deity in the north-west of the Iranian highlands. After the conquest of Babylon this Persian cult came into contact with Chaldean astrology and with the national worship of Marduk. For a time the two priesthoods of Mithra and Marduk (magi and chaldæi respectively) coexisted in the capital and Mithraism borrowed much from this intercourse. This modified Mithraism travelled farther north-westward and became the

State cult of Armenia. Its rulers, anxious to claim descent from the glorious kings of the past, adopted Mithradates as their royal name (so five kings of Georgia, and Eupator of the Bosphorus). Mithraism then entered Asia Minor, especially Pontus and Cappadocia. Here it came into contact with the Phrygian cult of Attis and Cybele from which it adopted a number of ideas and practices, though apparently not the gross obscenities of the Phrygian worship. This Phrygian-Chaldean-Indo-Iranian religion, in which the Iranian element remained predominant, came, after Alexander's conquest, in touch with the Western World. Hellenism, however, and especially Greece itself, remained remarkably free from its influence. When finally the Romans took possession of the Kingdom of Pergamum, occupied Asia Minor and stationed two legions of soldiers on the Euphrates, the success of Mithraism in the West was secured. It spread rapidly from the Bosphorus to the Atlantic, from Illyria to Britain. Its foremost apostles were the legionaries; hence it spread first to the frontier stations of the Roman army.

Mithraism was emphatically a soldier religion: Mithra, its hero, was especially a divinity of fidelity, manliness, and bravery; the stress it laid on good-fellowship and brotherliness, its exclusion of women, and the secret bond amongst its members have suggested the idea that Mithraism was Masonry amongst the Roman soldiery. At the same time Eastern slaves and foreign traders maintained its propaganda in the cities. When magi, coming from King Tiridates of Armenia, had worshipped in Nero an emanation of Mithra, the emperor wished to be initiated in their mysteries. As Mithraism passed as a Phrygian cult it began to share in the official recognition which Phrygian worship had long enjoyed in Rome. The Emperor Commodus was publicly initiated. Its greatest devotee however was the imperial son of a priestess of the sun-god at Sirmium in Pannonia, Valerian, who according to the testimony of Flavius Vopiscus, never forgot the cave where his mother initiated him. In Rome, he established a college of sun priests and his coins bear the legend "Sol, Dominus Imperii Romani". Diocletian, Galerius, and Licinius built at Carnuntum on the Danube a temple to Mithra with the dedication: "Fautori Imperii Sui". But with the triumph of Christianity Mithraism came to a sudden end. Under Julian it had with other pagan cults a short revival. The pagans of Alexandria lynched George the Arian, bishop of the city, for attempting to build a church over a Mithras cave near the town. The laws of Theodosius I signed its death warrant. The magi walled up their sacred caves; and Mithra has no martyrs to rival the martyrs who died for Christ.

DOCTRINE.—The first principle or highest God was according to Mithraism "Infinite Time"; this was called *Alôr* or *Sæculum*, *Kpōros* or Saturnus. This Kronos is none other than Zervan, an ancient Iranian conception, which survived the sharp dualism of Zoroaster; for Zervan was father of both Ormuzd and Ahriman and connected the two opposites in a higher unity and was still worshipped a thousand years later by the Manichees. This personified Time, ineffable, sexless, passionless, was represented by a human monster, with the head of a lion and a serpent coiled about his body. He carried a sceptre and lightning as sovereign god and held in each hand a key as master of the heavens. He had two pair of wings to symbolize the swiftness of time. His body was covered with zodiacal signs and the emblems of the seasons (i. e. Chaldean astrology combined with Zervanism). This first principle begat Heaven and Earth, which in turn begat their son and equal, Ocean. As in the European legend, Heaven or Jupiter (Oromasdes) succeeds Kronos. Earth is the Spēta Armaiti of the Persians or the Juno of the Westerns, Ocean is Apām-Napāt or Neptune. The Persian names were not for-

gotten, though the Greek and Roman ones were habitually used. Ahura Mazda and Spēta Armaiti gave birth to a great number of lesser deities and heroes: Artagnes (Hercules), Sharevar (Mars), Atar (Vulcan), Anaitis (Cybele), and so on. On the other hand there was Pluto, or Ahriman, also begotten of Infinite Time. This Incarnate Evil rose with the army of darkness to attack and dethrone Oromasdes. They were however thrown back into hell, whence they escape, wander over the face of the earth and afflict man. It is man's duty to worship the four simple elements, water and fire, air and earth, which in the main are man's friends. The seven planets likewise were beneficent deities. The souls of men, which were all created together from the beginning and which at birth had but to descend from the empyrean heaven to the bodies prepared for them, received from the seven planets their passions and characteristics. Hence the seven days of the week were dedicated to the planets, seven metals were sacred to them, seven rites of initiation were made to perfect the Mithraist, and so on. As evil spirits ever lie in wait for hapless man, he needs a friend and saviour who is Mithra. Mithra was born of a mother-rock by a river under a tree. He came into the world with the Phrygian cap on his head (hence his designation as Pileatus, the Capped One), and a knife in his hand. It is said that shepherds watched his birth, but how this could be, considering there were no men on earth, is not explained. The herogod first gives battle to the sun, conquers him, crowns him with rays and makes him his eternal friend and fellow; nay, the sun becomes in a sense Mithra's double, or again his father, but *Ἡλιος Μίθρας* is one god. Then follows the struggle between Mithra and the bull, the central dogma of Mithraism. Ahura Mazda had created a wild bull which Mithra pursued, overcame, and dragged into his cave. This wearisome journey with the struggling bull towards the cave is the symbol of man's troubles on earth. Unfortunately, the bull escapes from the cave, whereupon Ahura Mazda sends a crow with a message to Mithra to find and slay it. Mithra reluctantly obeys, and plunges his dagger into the bull as it returns to the cave. Strange to say, from the body of the dying bull proceed all wholesome plants and herbs that cover the earth, from his spinal marrow the corn, from his blood the vine, etc. The power of evil sends his unclean creatures to prevent or poison these productions but in vain. From the bull proceed all useful animals, and the bull, resigning itself to death, is transported to the heavenly spheres. Man is now created and subjected to the malign influence of Ahriman in the form of droughts, deluges, and conflagrations, but is saved by Mithra. Finally man is well established on earth and Mithra returns to heaven. He celebrates a last supper with Helios and his other companions, is taken in his fiery chariot across the ocean, and now in heaven protects his followers. For the struggle between good and evil continues in heaven between the planets and stars, and

on earth in the heart of man. Mithra is the Mediator (*Μεσσης*) between God and man. This function first arose from the fact that as the light-god he is supposed to float midway between the upper heaven and the earth. Likewise a sun-god, his planet was supposed to hold the central place amongst the seven planets. The moral aspect of his mediation between god and man cannot be proven to be ancient. As Mazdean dualists the Mithraists were strongly inclined towards asceticism: abstention from food and absolute continence seemed to them noble and praiseworthy, though not obligatory. They battled on Mithra's side against all impurity, against all evil within and without. They believed in the immortality of the soul; sinners after death were dragged to hell; the just passed through the seven spheres of the planets, through seven gates opening at a mystic word to Ahura Mazda, leaving at each planet a part of their lower humanity until, as pure spirits, they stood before God. At the end of the world Mithra will descend to

earth on another bull, which he will sacrifice, and mixing its fat with sacred wine he will make all drink the beverage of immortality. He will thus have proved himself *Nabarses*, i. e. "never conquered".

WORSHIP.—There were seven degrees of initiation into the Mithraic mysteries. The consecrated one (*myses*) became in succession crow (*corax*), occult (*cryptus*), soldier (*miles*), lion (*leo*), Persian (*Perses*), solar messenger (*heliodromos*), and father (*pater*). On solemn occasions they wore a garb appropriate to their name, and uttered sounds or performed

THE SACRIFICE OF MITHRA
Vatican Museum, Rome

gestures in keeping with what they personified. "Some flap their wings as birds imitating the sound of a crow, others roar as lions", says Pseudo-Augustine (Quest. Vet. N. Test. in P. L., XXXIV, 2214). Crows, occults and soldiers formed the lower orders, a sort of catechumens; lions and those admitted to the other degrees were participants of the mysteries. The fathers conducted the worship. The chief of the fathers, a sort of pope, who always lived at Rome, was called "Pater Patrum" or "Pater Patratus." The members below the degree of pater called one another "brother," and social distinctions were forgotten in Mithraic unity. The ceremonies of initiation for each degree must have been elaborate, but they are only vaguely known—lustrations and bathings, branding with red-hot metal, anointing with honey, and others. A sacred meal was celebrated of bread and *haoma* juice for which in the West wine was substituted. This meal was supposed to give the participants supernatural virtue. The Mithraists worshipped in caves, of which a large number have been found. There were five at Ostia alone, but they were small and could perhaps hold at most 200 persons. In the apex of the cave stood the stone representation of Mithra slaying the bull, a piece of sculpture usually of mediocre artistic merit and always made after the same Pergamean model. The light usually fell through openings in the top as the caves were near the surface of the ground. A hideous monstrosity representing Kronos was also

shown. A fire was kept perpetually burning in the sanctuary. Three times a day prayer was offered the sun towards east, south, or west according to the hour. Sunday was kept holy in honour of Mithra, and the sixteenth of each month was sacred to him as mediator. The 25 December was observed as his birthday, the *natalis invicti*, the rebirth of the winter-sun, unconquered by the rigours of the season. A Mithraic community was not merely a religious congregation; it was a social and legal body with its *decemprimi*, *magistri*, *curatores*, *defensores*, and *patroni*. These communities allowed no women as members. Women might console themselves by forming associations to worship Anaitis-Cybele; but whether these were associated with Mithraism seems doubtful. No proof of immorality or obscene practices, so often connected with esoteric pagan cults, has ever been established against Mithraism; and as far as can be ascertained, or rather conjectured it had an elevating and invigorating effect on its followers. From a chance remark of Tertullian (*De Præscriptione*, xl) we gather that their "Pater Patrum" was only allowed to be married once, and that Mithraism had its *virgines* and *continentes*; such at least seems the best interpretation of the passage. If, however, Dieterich's Mithras's liturgy be really a liturgy of this sect, as he ably maintains, its liturgy can only strike us as a mixture of bombast and charlatanism in which the *mystes* has to hold his sides, and roar to the utmost of his power till he is exhausted, to whistle, smack his lips, and pronounce barbaric agglomerations of syllables as the different mystic signs for the heavens and the constellations are unveiled to him.

RELATION TO CHRISTIANITY.—A similarity between Mithra and Christ struck even early observers, such as Justin, Tertullian, and other Fathers, and in recent times has been urged to prove that Christianity is but an adaptation of Mithraism, or at most the outcome of the same religious ideas and aspirations (e. g. Robertson, "Pagan Christs", 1903). Against this erroneous and unscientific procedure, which is not endorsed by the greatest living authority on Mithraism, the following considerations must be brought forward. (1) Our knowledge regarding Mithraism is very imperfect; some 600 brief inscriptions, mostly dedicatory, some 300 often fragmentary, exiguous, almost identical monuments, a few casual references in the Fathers or Acts of the Martyrs, and a brief polemic against Mithraism which the Armenian Eznig about 450 probably copied from Theodore of Mopsuestia (d. 428) who lived when Mithraism was almost a thing of the past—these are our only sources, unless we include the Avesta in which Mithra is indeed mentioned, but which cannot be an authority for Roman Mithraism with which Christianity is compared. Our knowledge is mostly ingenious guess-work; of the real inner working of Mithraism and the sense in which it was understood by those who professed it at the advent of Christianity, we know nothing. (2) Some apparent similarities exist; but in a number of details it is quite as probable that Mithraism was the borrower from Christianity. Tertullian about 200 could say: "hesterni sumus et omnia vestra implevimus" ("we are but of yesterday, yet your whole world is full of us"). It is not unnatural to suppose that a religion which filled the whole world, should have been copied at least in some details by another religion which was quite popular during the third century. Moreover the resemblances pointed out are superficial and external. Similarity in words and names is nothing; it is the sense that matters. During these centuries Christianity was coining its own technical terms, and naturally took names, terms, and expressions current in that day; and so did Mithraism. But under identical terms each system thought its own thoughts. Mithra is called a mediator; and so is Christ; but Mithra originally only in a cosmogonic or astronomical

sense; Christ, being God and man, is by nature the Mediator between God and man. And so in similar instances. Mithraism had a Eucharist, but the idea of a sacred banquet is as old as the human race and existed at all ages and amongst all peoples. Mithra saved the world by sacrificing a bull; Christ by sacrificing Himself. It is hardly possible to conceive a more radical difference than that between Mithra taurochtonos and Christ crucified. Christ was born of a Virgin; there is nothing to prove that the same was believed of Mithra born from the rock. Christ was born in a cave; and Mithraists worshipped in a cave, but Mithra was born under a tree near a river. Much has been made of the presence of adoring shepherds; but their existence on sculptures has not been proven, and considering that man had not yet appeared, it is an anachronism to suppose their presence. (3) Christ was an historical personage, recently born in a well known town of Judea, and crucified under a Roman Governor, whose name figured in the ordinary official lists. Mithra was an abstraction, a personification not even of the sun but of the diffused daylight; his incarnation, if such it may be called, was supposed to have happened before the creation of the human race, before all history. The small Mithraic congregations were like masonic lodges for a few and for men only and even those mostly of one class, the military; a religion that excludes the half of the human race bears no comparison to the religion of Christ. Mithraism was all comprehensive and tolerant of every other cult, the Pater Patrum himself was an adept in a number of other religions; Christianity was essentially exclusive, condemning every other religion in the world, alone and unique in its majesty.

J. P. ARENDZEN.

Mitre.—*Form, Material, and Use.*—The mitre is a kind of folding-cap. It consists of two like parts, each stiffened by a lining and rising to a peak; these are sewn together on the sides, but are united above by a piece of material that can fold together. Two lappets trimmed on the ends with fringe hang down from the back. The mitre is, theoretically, always supposed to be white. The official "Cæremoniale Romanum" distinguishes three kinds of mitres: the *mitra pretiosa*, *auriphygiata*, and *simplex*. The first two differ from each other only in the greater or less richness of the ornamentation; the *mitra simplex*, or simple mitre, is one of white silk or white linen entirely without ornament. The fringe on the lappets at the back should be red. The bishop must wear the *mitra pretiosa* on those days on which the hymn *Te Deum* is used in the Office, the *mitre auriphygiata* in the seasons of Advent and Lent, on fast days and during penitential processions, the *mitra simplex* on Good Fridays, at funerals, and at the blessing of the candles on Candlemas-day. When bishops attend a general council, or are present at solemn pontifical acts of the pope, they wear a plain linen mitre, while the cardinals on such occasions wear a simple mitre of silk damask. The right to wear the mitre belongs by law only to the pope, the cardinals, and the bishops. Others require for its use a special papal privilege. This privilege

is possessed, for example, by numerous abbots, the dignitaries of many cathedral chapters, and by certain prelates of the papal Curia, but, as a rule, the right is more or less limited: for instance, such prelates can only use a simple mitre of white linen, unless the contrary is expressly granted them. The mitre is distinguished from the other episcopal vestments in that it is always laid aside when the bishop prays; for example, at the *orations* of the Mass, of the Office, in conferring Holy Orders, at the Canon of the Mass, etc. The reason for this is to be found in the commandment of the Apostle that a man should pray with uncovered head (I Cor., xi, 4). The giving of the mitre is a ceremony in the consecration of a bishop. It occurs at the close of the Mass after the solemn final blessing, the consecrator having first blessed the mitre.

Antiquity.—From the seventeenth century much has been written concerning the length of time the mitre has been worn. According to one opinion its use extends back into the age of the Apostles; according to another, at least as far back as the eighth or ninth century, while a further view holds that it did not appear until the beginning of the second millennium, but that before this there was an episcopal ornament for the head, in form like a wreath or crown. In opposition to these and similar opinions, which cannot all be discussed here, it is, however, to be held as certain that an episcopal ornament for the head in the shape of a fillet never existed in Western Europe, that the mitre was first used at Rome about the middle of the tenth century, and outside of Rome about the year 1000. Exhaustive proof for this is given in the work (mentioned in bibliography below), "*Die liturgische Gewandung im Occident und Orient*" (pp. 431-48), where all that has been brought forward to prove the high antiquity of the mitre is exhaustively discussed and refuted. The mitre is depicted for the first time in two miniatures of the beginning of the eleventh century; the one is in a baptismal register, the other in an Exultet-roll of the cathedral at Bari, Italy. The first written mention of it is found in a Bull of Leo IX of the year 1049. In this the pope, who had formerly been Bishop of Toul, France, confirmed the primacy of the Church of Trier to Bishop Eberhard of Trier, his former metropolitan, who had accompanied him to Rome. As a sign of this primacy, Leo granted Bishop Eberhard the Roman mitre, in order that he might use

of a cone, the original shape of the mitre. The camelaucum was worn by the pope principally during solemn processions. The mitre developed from the camelaucum in this way: in the course of the tenth century the pope began to wear this head-covering not merely during processions to the church, but also during the subsequent church service. Whether any influence was exerted by the recollection of the sacerdotal head-ornament of the high-priest of the Old Testament is not known, but probably not—at least there is no trace of any such influence. It was not until the mitre was universally worn by bishops that it was called an imitation of the Jewish sacerdotal head-ornament.

Granting of the Mitre to Dignitaries other than Bishops.—The Roman cardinals certainly had already the right to wear the mitre towards the end of the eleventh century. Probably they possessed the privilege as early as

in the first half of the century. For if Leo IX granted the privilege to the cardinals of the cathedral of Besançon (see CARDINAL: I. *Cardinal Priests*) in 1051, the Roman cardinals surely had it before that date. The first authentic granting of the mitre to an abbot dates from the year 1063, when Alexander II conferred the mitre upon Abbot Egelsinus of the Abbey of St. Augustine at Canterbury. From this time on instances of the granting of the mitre to abbots constantly increased in number. At times also secular princes were granted permission to wear the mitre as a mark of distinction; for example, Duke Wratislav of Bohemia received this privilege from Pope Alexander II, and Peter of Aragon from Innocent III. The right also belonged to the German emperor.

GREEK MITRE

Development of the Shape.—As regards shape, there is such difference between the mitre of the eleventh century and that of the twentieth that it is difficult to recognize the same ornamental head-covering in the two. In its earliest form the mitre was a simple cap of soft material, which ended above in a point, while around the lower edge there was generally, although not always, an ornamental band (*circulus*). It would also seem that lappets were not always attached to the back of the mitre. Towards 1100 the mitre began to have a curved shape above and to grow into a round cap. In many cases there soon appeared a depression in the upper part similar to the one which is made when a soft felt hat is pressed down on the head from the forehead to the back of the head. In handsome mitres an ornamental band passed from front to back across the indentation; this made more prominent the puffs in the upper part of the cap to the right and left sides of the head. This calotte-shaped mitre was used until late in the twelfth century; in some places until the last quarter of the century. From about 1125 a mitre of another form and somewhat different appearance is often found. In it the puffs on the sides had developed into horns (*cornua*) which ended each in a point and were stiffened with parchment or some other interlining. This mitre formed the transition to the third style of mitre which is essentially the one still used to-day: the third mitre

DEVELOPMENT OF THE MITRE FROM THE ELEVENTH CENTURY TO THE PRESENT TIME

it according to Roman custom in performing the offices of the Church. By about 1100-50 the custom of wearing the mitre was general among bishops.

Origin.—The pontifical mitre is of Roman origin: it is derived from a non-liturgical head-covering distinctive of the pope, the *camelaucum*, to which also the tiara is to be traced. The camelaucum was worn as early as the beginning of the eighth century, as is shown by the biography of Pope Constantine I (708-815) in the "*Liber Pontificalis*". The same head-covering is also mentioned in the so-called "*Donation of Constantine*". The Ninth *Ordo* states that the camelaucum was made of white stuff and shaped like a helmet. The coins of Sergius III (904-11) and of Benedict VII (974-83), on which St. Peter is portrayed wearing a camelaucum, give the cap the form

is distinguished from its predecessor, not actually by its shape, but only by its position on the head. While retaining its form, the mitre was henceforth so placed upon the head that the *cornua* no longer arose above the temples but above the forehead and the back of the head. The lappets had, naturally, to be fastened to the under edge below the horn at the back. The first example of such a mitre appeared towards 1150. Elaborate mitres of this kind had not only an ornamental band (*circulus*) on the lower edge, but a similar ornamental band (*titulus*) went vertically over the middle of the horns. In the fourteenth century this form of mitre began to be distorted in shape. Up to

ornamented with about five hundred more or less costly precious stones; it weighs over five and a half pounds. Similar mitres are also mentioned in the inventory of 1295 of Boniface VIII. Eight medieval mitres are preserved in the cathedral of Halberstadt. In the seventeenth and eighteenth centuries the mitre was ornamented with rich, heavy embroidery in gold, which gave it a still more imposing appearance. A mitre of the eighteenth century preserved in the cathedral treasury at Limburg-on-the-Lahn is remarkable for the large number of precious stones that adorn it. The original material of the mitre appears to have been white linen alone, but as early as the thirteenth cen-

SIXTEENTH-CENTURY MITRE AND INFULE

then the mitre had been somewhat broader than high when folded together, but from this period on it began, slowly indeed, but steadily, to increase in height until, in the seventeenth century, it grew into an actual tower. Another change, which, however, did not appear until the fifteenth century, was that the sides were no longer made vertical, but diagonal. In the sixteenth century it began to be customary to curve, more or less decidedly, the diagonal sides of the horns. The illustration gives a summary of the development of the shape of the mitre. It should, however, be said that the changes did not take place everywhere at the same time, nor did the mitre everywhere pass through all the shapes of the development. A large number of mitres of the later Middle Ages have been preserved, but they all belong to the third form of mitre. Many have very costly ornamentation. For even in medieval times it was a favourite custom to ornament especially the mitre with embroidery, rich bands (*aurefrisia*), pearls, precious stones, small ornamental disks of the precious metals; and even to use painting. Besides several hundred large and small pearls, a mitre of the late Middle Ages in St. Peter's at Salzburg is also

tury (with the exception of course of the simple mitre) it was generally made of silk or ornamented with silk embroidery.

The Liturgical Head-Covering in the Greek Rite.—In the Orthodox Greek Rite (the other Greek Rites need not here be considered) a liturgical head-covering was not worn until the sixteenth century. Before this only the Patriarch of Alexandria, who wore one as early as the tenth century, made use of a head-covering, and his was only a simple cap. The Greek pontifical mitre is a high hat which swells out towards the top and is spanned diagonally by two hoops; on the highest point of the dome-shaped top is a cross either standing upright or placed flat.

JOSEPH BRAUN.

Mittarelli, NICOLA GIACOMO (in religion GIAN BENEDETTO), monastic historian, b. 2 September, 1707, at Venice; d. 4 August, 1777, in the monastery of

San Michele di Murano near Venice. After joining the Camaldolese Order at the early age of fourteen, he studied theology at Florence and Rome, whereupon he taught philosophy and theology at the monastery of San Michele di Murano. Because he relinquished the scholastic method, his superiors sent him to the monastery of San Parisio in Treviso where he became confessor and archivist. In 1760 he was elected Abbot of San Michele di Murano and in 1765, General of his Order for the space of five years during which he resided in Rome; in 1770 he returned to his monastery where he remained as abbot until his death. His monumental work, in the preparation of which he was assisted by his confrères Costadini and Calogera, is the "Annales Camaldulenses ordinis S. Benedicti, ab anno 907 ad annum 1770" 9 vols. folio (Venice, 1755-73). It follows the plan of Mabillon's "Annales ordinis S. Benedicti". His other works are: "Memorie della vita di San Parisio, e del monastero dei Santi Christina e Parisio di Treviso" (Venice, 1748), "Memorie del monastero della Santa Trinità di Fænse" (Fænse, 1749), "Ad Scriptores rerum Italicarum A. Muratorii accessiones historiæ Faventinæ" (Venice, 1771), "De litteratura Faventinorum" (Venice, 1775), and the posthumous work "Bibliotheca codicum Mss. monasterii St. Michaelis de Murano cum appendice librorum 15. sæculi" (Venice, 1779).

MICHAEL OTT.

Mitylene, a titular archbishopric in the island of Lesbos. Inhabited, first by the Pelasgians, then by the Æolians, it was ruled in turn by the Persians, the Athenians, the Macedonians, the Seleucidae, and the Romans. Included in the empire of the East after the time of Theodosius it suffered much from the different invasions of the Scythians in 376, the Slavs in 769, the Arabs in 821, 881, 1035, the Russians in 864 and 1027. In 1204 after the foundation of the Latin empire, the city became a possession of the French, only to be reconquered in 1248 by John Ducas Vatatzes. It belonged to the Genoese when the sultan, Mahomet II, conquered it in 1462. The home of many famous persons, among them Sappho, Alcæus, and the sage Pittacus, Mitylene was famous for its beauty and for the strength of its walls. St. Paul stopped there during his third journey (Acts, xx, 14). Among its bishops, whose names will be found in part in Le Quien, "Oriens christianus", I, 953-962, are Zacharias Rhetor, or the Scholastic, author of an Ecclesiastical History about the year 536; Saint George who died in exile at Cherson before 821 and whose feast occurs on 7 April and 16 May; another Saint George who died in 843 and is venerated by the Greeks on 1 February with his two brothers, Saint Simeon and Saint David (Analecta bollandiana XVIII, 209 sq.). Until this time Mitylene was only an autocephalous archbishopric; the "Notitia" of Leo the Wise about 900 describes it as a metropolitan see with five suffragans. Dorotheus of Mitylene stands out among the friends of the Union at the Council of Florence of which he wrote a history in Greek (Mansi, XXXI, 463 sq., 997, 1009). The list of the Latin titularies of 1205 to 1412 may be found in Le Quien, III, 991-994; Eubel, I, 370; Gams, 449. The present city of Metilin numbers 15,000 inhabitants, the greater number schismatic Greeks; the 760 Catholics of the island are chiefly grouped about Metilin and are included in the archbishopric of Smyrna. The parish is directed by the Franciscans; the Marist Brothers have a school for boys.

S. SALAVILLE.

Mivart, ST. GEORGE JACKSON, PH.D., M.D., F.R.S., V.P.Z.S., F.Z.S., Corresponding member of the Academy of Natural Sciences, Philadelphia; Member of the Council of Linnean Society, etc., b. in London, 30 November, 1827, d. there, 1 April, 1900.

Professor Mivart, whom Darwin styled the "distinguished biologist", third son of James Edward Mivart, owner of Mivart's Hotel in Brook Street, was born at 39 Brook St., Grosvenor Square, London. His parents were Evangelicals; and his early education was received at the Clapham Grammar School, at Harrow, and at King's College, London; from which latter institution he intended to go to Oxford. His enthusiasm for architecture led him, at the age of sixteen, to make a tour of Pugin's Gothic churches; and while visiting St. Chad's, in Birmingham, he met Dr. Moore (afterwards President of St. Mary's College, Oscott) who received him into the Catholic Church in 1844. Mivart's conversion is said to have been determined by Milner's "End of Religious Controversy". On his reception he proceeded to Oscott College, where he remained until 1846. On 15 January of that year he became a student at Lincoln's Inn, and was called to the Bar in 1851. He did not, however, follow a legal career, but gave himself to scientific and philosophical studies; and in 1862 was appointed Lecturer on Comparative Anatomy at St. Mary's Hospital Medical School. In 1874, he was appointed professor of Biology at the (Catholic) University College, Kensington. From 1890 to 1893 he gave a course of lectures on "The Philosophy of Natural History" in the University of Louvain. From 1849 he was a member of the Royal Institution; Fellow of the Zoological Society from 1858, and Vice-President twice (1869 and 1882); Fellow of the Linnean Society from 1862; Secretary of the same during the years 1874-80, and Vice-President in 1892. In 1867 he became a member of the Royal Society—elected on account of the merit of his work "On the Appendicular skeleton of the Primates". This work was communicated to the Society by Professor Huxley. Mivart was a member of the Metaphysical Society from 1874. He received the degrees of Doctor of Philosophy from Pope Pius IX in 1876, and of Doctor of Medicine from Louvain in 1884. His communications, dating from 1864, to the "proceedings" of learned Societies—notably the Royal, the Linnean, and the Zoological—are numerous and of great scientific value. He contributed articles to the "Encyclopædia Britannica," and to all the leading English and American reviews.

In 1871 he published his "Genesis of Species", in which work, foreshadowed by an article in the "Quarterly Review" of the same year, he took his stand as the leading opponent of the Darwinian hypothesis. This estranged him from Darwin and Huxley; but his reputation as a specialist in biological science was in no way impaired by the position he took up. In subsequent editions of his "Origin of Species" Darwin deals at great length with the objections raised by Mivart. His since published "Life and Letters" afford ample evidence of how weighty he felt them to be. Mivart, however, himself professed a theory of evolution; but he unhesitatingly and consistently asserted the irreconcilable difference between the inanimate and animate, as well as between the purely animal and the rational. By maintaining the creationist theory of the origin of the human soul he attempted to reconcile his evolutionism with the Catholic faith. In philosophical problems, towards which he turned more and more in later years, his attitude was rather that of a neo-scholastic as against the post-Cartesian philosophies; and he opposed with success a critical, or moderate realist, system of knowledge to the widely prevalent agnosticism of his time. Towards the close of his life Mivart's philosophical speculations began to verge on an "interpretation" of the theological dogma that was incompatible with the Faith. The crisis, however,

did not become acute before his articles in the "Nineteenth Century" ("Modern Catholics and Scientific Freedom" in July, 1885; "The Catholic Church and Biblical Criticism" in July, 1887; "Catholicity and Reason" in December, 1887; "Sins of Belief and Disbelief" in October, 1888; "Happiness in Hell" in December, 1892) were placed on the Index.

His orthodoxy was finally brought into the gravest suspicion by the articles "The Continuity of Catholicism" ("Nineteenth Century", January, 1900) and "Some Recent Apologists" ("Fortnightly Review", January, 1900). In the same month (18 January, 1900), after admonition and three formal notifications requiring him in vain to sign a profession of faith that was sent him, he was inhibited from the sacraments by Cardinal Vaughan "until he shall have proved his orthodoxy to the satisfaction of his ordinary." The letters that passed between Archbishop's House and Dr. Mivart were published by him in the columns of the "Times" newspaper (27 January, 1900); and in March a last article—"Scripture and Roman Catholicism"—repudiating ecclesiastical authority, appeared in the "Nineteenth Century".

Dr. Mivart died of diabetes 1 April, 1900, at 77 Inverness Terrace, Bayswater, London, W., and was buried without ecclesiastical rites. After his decease his friends, persuaded that the gravity and nature of the illness from which he suffered offered a complete explanation of the amazing inconsistency of Dr. Mivart's final position with that which he had maintained during the greater part of his life, approached the authorities with a view to securing for him burial in consecrated ground. Sir William Broadbent gave medical testimony as to the nature of his malady amply sufficient to free his late patient from the responsibility of the heterodox opinions which he had put forward and the attitude he had taken with regard to his superiors. His disease, not his will, was the cause of his aberration. But there were difficulties in the way. Cardinal Vaughan was ill and could not deal directly with the representations made. Misunderstandings arose about the publication of Sir William Broadbent's certificate; and the cardinal counselled a little patience and left the matter to the decision of his successor. So it was that, on the appointment of Archbishop Bourne, the case was reopened; and now the condition of the publication of the facts, at the archbishop's discretion, was accepted by the friends of Dr. Mivart. The burial took place in Kensal Green Catholic cemetery 18 January, 1904. The text of the certificate has not been published; but an account of the matter is to be found in the second volume of "Life of Cardinal Vaughan".

Dr. Mivart's chief works are the following:—"One Point of Controversy with the Agnostics" in Manning: "Essays on Religion and Literature" (1868); "On the Genesis of Species" (London, 1871); "An examination of Mr. Herbert Spencer's Psychology"; "Lessons in Elementary Anatomy" (London, 1873); "The Common Frog" in "Nature series" (1873); "Man and Apes" (London, 1873); "Lessons from Nature" (London, 1876); "Contemporary Evolution" (London, 1876); "Address to the Biological Section of the British Association" (1879); "The Cat" (London, 1881); "Nature and Thought" (London, 1882); "A Philosophical Catechism" (London, 1884); "On Truth" (London, 1889); "The Origin of Human Reason" (London, 1889); "Dogs, Jackals, Wolves and Foxes, Monograph of the Canidæ" (London, 1890); "Introduction Générale à l'Etude de la Nature: Cours professé à l'Université de Louvain" (Louvain and Paris, 1891); "Birds" (London, 1892); "Essays and Criticisms" (London, 1892); "Types of Animal Life" (London, 1893); "Introduction to the Elements of Science" (London, 1894); "Castle and Manor" (London, 1900); "A monograph of the Lories" (London, 1896); "The Groundwork of Science: a study of

Epistemology" (London, 1898); "The Helpful Science" (London, 1898); Article "Ape" in "Encyclopædia Britannica"; besides many notes and memoirs not collected, Transactions and Proceedings of the Zoological Society, of the Linnean Society, Proceedings of the Royal Society and articles in the "Popular Science Review," the "Contemporary Review," the "Fortnightly Review," the "Nineteenth Century," the "Dublin Review," etc.

FRANCIS AVELING.

Mixe Indians (also MIJE, Latin, Mi-she), a mountain tribe in southern Mexico, noted for their extreme conservatism, constituting together with the neighbouring Zoque, a distinct linguistic stock, the Zoquean. The Mixe occupy a number of towns and villages in the district of Yautepec, Villa Alta, and Tehuantepec in southern Oaxaca and number altogether about 25,000. They maintained their independence against both the Aztec Empire and the powerful Zapotec with whom they are still at enmity and even yet can hardly be said to have been subdued by the Spaniards, as they hold themselves aloof from the whites, retaining their own language almost to the exclusion of Spanish, keeping their old customs and adhering to many of their ancient rites and superstitions even while giving ostensible obedience to the Church and manifesting a docile attachment to their resident priests. With the other tribes of Oaxaca, the Mixe were brought under subjection by the Spaniards in 1521-4. In 1526 the work of evangelization was begun by the Dominicans under Father Gonzalo Lucero and continued with them, shared after 1575 by the Jesuits until turned over to secular priests under later settled conditions. The work of conversion was slow and uncertain for many years, in consequence of the exceptional attachment of these tribes to their ancient religion. Idols were frequently discovered buried under the cross erected in front of the chapel, so that they might be worshipped in secret under pretense of devotion to the Christian symbol, and heathen sacrifices were even offered up secretly from the very altars, under an impression, intelligible enough to the Indian, that the sacredness attaching to the Christian environment enhanced the efficacy of the pagan rite. This prevails to a great extent to-day.

Physically the Mixe are of good height and strongly built, not handsome in features, but hardy and active, and notable burden carriers. Many wear beards. Although described in ancient times as savage and warlike and addicted to cannibalism, they are commonly regarded to-day as timid, stupid, and suspicious, although industrious. It is probable, however, that the apparent stupidity is rather indifference and studied reserve, and Starr, their most recent visitor, expresses his surprise at their industry, neatness, and general prosperity, in view of what he had previously been told. It is characteristic of their stubborn disposition that their roads almost invariably run straight up and down the mountain instead of zigzagging to lessen the difficulties of the ascent. In the same way they still keep their villages upon the heights, while the other tribes, under Spanish influence, have generally moved their settlements down into the valleys. Their houses vary from light thatched structures in the country districts to well-built log or adobe, roofed with tile, in the towns. They are good farmers, producing corn, sugar, coffee, and bananas, and the women are noted for their pottery and weaving arts, producing beautiful fabrics in silk and cotton, with interwoven animal and bird designs and dyed in fadeless colours. From Starr we have an interesting account of their present

day customs and beliefs, including many pagan survivals, particularly bird and other animal sacrifices. Food is still buried with the dead and libations made to the earth, while offerings are still made secretly at heathen shrines and before idols hidden away in secret caves. One of these was discovered by the parish priest of their principal town a few years ago, and according to reliable testimony instances of cannibal sacrifice have occurred within living memory. Among their numerous dances is a dramatic performance founded upon the story of the Conquest, with characters representing Montezuma, Cortés, and Malinche.

The Mixe language is peculiarly harsh in sound and is spoken in several dialects. Its chief monument is the "Institución Cristiana, que contiene el Arte de la lengua Mije" of the Dominican Father Agustín Quintana (c. 1660-1734). It was published at Puebla in 1729 and reprinted at Oaxaca in 1891.

JAMES MOONEY.

Mixed Marriages. See MARRIAGE, MIXED.

Mixteca Indians (also MISTECA, Latin, *Mish-te-ca*), one of the most important civilized tribes of southern Mexico, occupying an extensive territory in western and northern Oaxaca and extending into Guerrero and Puebla. They number in all about 250,000 souls, or somewhat more than the whole Indian population of the United States together. Their eastern and southern neighbours are the rude Mixe and the cultured and powerful Zapotec, with the last named of whom they constitute a distinct linguistic stock, designated as the Zapotecan. The ancient culture and governmental forms of the Mixteca were practically the same as those of the Zapotec. They are now industrious farmers, weavers, and potters, the pottery manufacture, contrary to the Indian custom generally, being in the hands of the men. They stand high for industry and ingenuity, dignified and reliable disposition, hospitality and love of liberty. They were brought under Spanish dominion about the same time as the Zapotec and Mixe, in 1521-4, shortly after which the work of their conversion was begun by the Dominicans and prosecuted with such success that the whole nation may now be considered as Christian, notwithstanding some survivals from pagan times. They are active and enterprising, and have taken prominent part in Mexican politics, being particularly devoted to the Revolutionary cause in 1811. President Díaz of Mexico is of one-fourth Mixteca blood.

San Bartolo, one of their towns, is described by Starr as a delightful place, large and strung along two or three long straight streets. The houses were of poles set upright, with thick thatchings of palms, in yards completely filled with fruit trees, and garden beds of spinach, lettuce, and onions. Beehives in quantity were seen at nearly every house. Almost every woman was clad in native garments, many of which were beautifully decorated. The men wore brilliant sashes, woven in the town. At Teposcolula, "the great convent church historically interesting, is striking in size and architecture. The priest, an excellent man, is a pure-blooded Mixteca Indian, talking the language as his mother tongue. With great pride he showed us about the building, which was once a grand Dominican monastery. . . . The cura had ten churches in his charge. He seemed a devout man, and emphasized the importance of his preaching to his congregation in their native tongue and his. So convinced is he that the native idiom of the people is the shortest road to their heart and understanding,

that he has prepared a catechism and Christian doctrine in the modern Mixtec, which has been printed." The Mixteca language is spoken in a number of dialects and in spite of its peculiarly difficult character, has been much studied on account of the importance of the tribe. The standard authority is the "Arte en lengua Mixteca" of Fr. Antonio de los Reyes (Mexico, 1593, and reprinted at Mexico in 1750). The Indian priest author noted by Starr is Fr. Casiano Palacios, whose "Catecismo" was published in Oaxaca in 1896. Pimentel also devotes a chapter to the language. (See also ZAPOTEC.)

JAMES MOONEY.

Mixtecas. See HUAJUÁPAM DE LEÓN, DIOCESE OF.

Moab, Moabites.—In the Old Testament, the word Moab (מֹאָב) designates (1) a son of Lot by his elder daughter (Gen., xix, 37); (2) the people of whom this son of Lot is represented as the ancestor (Ex., xv, 15, etc.), and who are also called "the Moabites" (Gen., xix, 37); and possibly (3) the territory occupied by the Moabites (Num., xxi, 11). Its etymology: "from my father", which is added by the Septuagint to the Hebrew text in Gen., xix, 37, is more probable than any derivation suggested by modern scholars. The origin and race of the Moabites need not be discussed here, since according to Gen., xix they are the same as those of the Ammonites, which have been examined in the article AMMONITES.

From the mountainous district above Segor (Zoar), a town which lay in the plain near the south-eastern end of the Dead Sea (cf. Gen., xix, 30), Lot's children forcibly extended themselves in the region of eastern Palestine. Ammon settled in the more distant north-east country, Moab in the districts nearer to the Dead Sea. These were inhabited by the Emims, a gigantic people, whom, however, the Moabites succeeded in expelling (Deut., ii, 9, 10). Moab's territory was at first of considerable extent, some fifty miles long by thirty broad. It comprised the highlands east of the Dead Sea and the Jordan as far as the mountains of Galaad, together with the level stretch between the highlands and the river, and the well-watered and fertile land at the south end of the Dead Sea. On three sides, it had natural boundaries: on the west, the Dead Sea and the southern section of the Jordan; on the south, the Wady el-Hasy, separating the uplands of Moab from those of Edom; on the east, the Arabian desert. Only on the north, were there no natural features conspicuous enough to form a fixed boundary, and hence Moab's northern frontier fluctuated at different periods between the Arnon, and a diagonal running south-east from the torrent now called Wady Nimrin to the Arabian desert.

The highlands are the great bulk of this territory. They form a table-land about 3000 feet above the Mediterranean, or 4300 feet above the Dead Sea, rising slowly from north to south, having steep western slopes, and separated eastward from the desert by low, rolling hills. The geology of this almost treeless plateau is the same as that of the range of western Palestine; but its climate is decidedly colder. In spring, its limestone hills are covered with grass and wild flowers, and parts of the plateau are now sown with corn. It is traversed by three deep valleys, the middle of which, the Arnon, is the deepest, and it abounds in streams. It is dotted with dolmens, menhirs, and stone circles, and also with ruins of villages and towns, mostly of the Roman and Byzantine periods. In Old Testament times, Moab was an excellent pasture land (IV Kings, iii, 4), and its population was

much more considerable than at the present day, as is proved by the numerous cities, such as Ar Moab, Galim, Kir Moab, Luith, Nemrim, Segor, Nophe, Or-naim, Qiriat Hussoth (A.V. Kirjath-husoth), Aroer, Baalmeon, Beer Elim, Bethgamul, Bethsimoth, Bethphogor, Bosor, Cariath, Dibon, Eleale, Helon, Hesebon, Jassa, Medaba, Mephaath, Sabama etc., which the Bible mentions as at one time or another Moabite.

Shortly before Israel's final advance towards Palestine, the Moabites had been deprived of their territory north of the Arnon by the Amorrites, coming probably from the west of the Jordan (Num., xxi, 13, 26). Moab's king at the time was Balaac who, in his unfriendliness towards the Hebrew tribes, hired Balaam to curse them, but who failed in this attempt, the expected curses being divinely changed into blessings (see BALAAM). Another fiendish attempt in a different direction was only too successful; the daughters of Moab enticed the Israelites into their idolatry and immorality, and thereby brought upon them a heavy retribution (Num., xxv). Moab's subsequent relations with the Hebrew tribes (Ruben, Gad) who had settled in its ancient territory north of the Arnon, were probably those of a hostile neighbour anxious to recover this lost territory. In fact, in the early history of the Judges, the Moabites had not only regained control of at least a part of that land, but also extended their power into western Palestine so as to oppress the Benjamites. The Moabite yoke over Benjamin was finally put an end to by Aod, the son of Gera, who assassinated Eglon, Moab's king, slaughtered the Moabites, and recovered the territory of Jericho to Israel (Judges, iii, 12-30). To this succeeded a period of friendly intercourse, during which Moab was a refuge for the family of Elimelech, and the Moabites Ruth was introduced into the line from which David was descended (Ruth, i, 1; iv, 10-22). Saul again fought against Moab (I Kings, xiv, 47), and David, who, for a while confided his parents to a Moabite king (xxii, 3, 4), ultimately invaded the country and made it tributary to Israel (II Kings, viii, 2). The subjugation apparently continued under Solomon, who had Moabite women in his harem and "built a temple for Chamos the idol of Moab" (III Kings, xi, 1, 7). After the disruption, the Moabites were vassals of the northern kingdom; but on the death of Achab, they broke into an open revolt the final result of which was their independence, and the full circumstances of which are best understood by combining the data in IV Kings, i, 1 and iii, 4-27, with those of the "Moabite Stone", an inscription of Mesa, King of Moab, found in 1868 at the ancient Dibon, and now preserved in the Louvre.

It seems that after this, they made frequent incursions into Israel's territory (cf. IV Kings, xiii, 20), and that after the captivity of the trans-Jordanic tribes, they gradually occupied all the land anciently lost to the Amorrites. Their great prosperity is frequently referred to in the prophetic writings, while their exceeding pride and corruption are made the object of threatening oracles (Is., xv-xvi; xxv, 10; Jer., xlviii; Ezech., xxv, 8-11; Amos, ii, 1-3; Soph., ii, 8-11; etc.). In the cuneiform inscriptions, their rulers are repeatedly mentioned as tribute-payers to Assyria. This was indeed the condition of their continuous prosperity. It can hardly be doubted, however, that they sided at times with other Western countries against the Assyrian monarchs (Fragment of Sargon II; opening chapters of Judith). In the last days of the Kingdom of Juda, they transferred their allegiance to Babylon, and fought for Nabuchodonosor against Joakim (IV Kings, xxiv, 2). Even after the fall of Jerusalem, Moab enjoyed a considerable prosperity under Nabuchodonosor's rule; but its utter ruin as a state was at hand. In fact, when the Jews returned from Babylon, the Nabathean Arabs occupied the territory of Moab, and the Arabians instead of the Moabites were the allies of the Ammonites (cf.

II Esd., iv, 7; I Mach., ix, 32-42; Josephus, "Antiq.," xiii, 13, 5, xiv, 1, 4).

As is shown by the Moabite Stone, the language of Moab was "simply a dialect of Hebrew". Its use of the *vav* consecutive connects most intimately the two languages, and almost all the words, inflections, and idioms of this inscription occur in the original text of the Old Testament. The same monument bears witness to the fact that while the Moabites adored Chamos as their national god, they also worshipped Ahtar as his consort. Besides these two divinities, the Old Testament mentions another local deity of the Moabites, viz. Baal of Mount Phegor (Peor: Beelphegor) (Num., xxv, 3; Deut., iv, 3; Osee, ix, 10; etc.). The Moabites were therefore polytheists. And although their religion is not fully known, it is certain that human sacrifices and also impure rites formed a part of their worship (IV Kings, iii, 27; Num., xxv; Osee, ix, 10).

Moabite Stone. See MESA.

Mobile (Fr. MOBILE, Sp. MAUBILA), DIOCESE OF (MOBILIENSIS), suffragan of New Orleans, comprises the State of Alabama (51,540 sq. miles) and western Florida (7281 square miles), and derives its name from Mauvila, the fort and chief city of the Gulf Indians, who with their "emperor", Tuscaloosa, "black warrior", were conquered by the Spanish soldier and explorer, Hernando de Soto, in 1540.

EARLY HISTORY.—De Soto's expedition was accompanied by "twelve priests, eight ecclesiastics and four religious". Mass was certainly offered near the present city of Mobile as early as 1540. From 1540 to 1703 Dominican, Capuchin, and Jesuit missionaries went from post to post along the Mississippi Valley, ministering to the wants of the scattered Spanish, French, and English settlers and to the native Indian converts. The published records of their heroism, sealed at times with the martyrs' blood, are very meagre, their names even, in great part, being lost in the obscurity of that long and troublous period. Not until the beginning of the eighteenth century, have we anything like a historical account of this diocese. "Fort St. Louis de la Mobile" was founded by Iberville, the illustrious French-Canadian explorer (1702), at some distance from the present city of Mobile, the site of which was selected (1710) by Iberville's brother, Bienville. Mobile was formally erected into a parish (20 July, 1703), subject to the Seminary of Foreign Missions in Paris and Quebec.

The Rev. Henry Roulleaux de la Vente was the first parish priest (July, 1704), his curate, the Rev. Alexander Huvé. The first entry found in the records of the new parish is that of the baptism of an Apalache girl (6 September, 1703), by the Rev. A. Davion. The Rev. J. B. de St. Cosme was murdered by savages on his way to Mobile from Natchez late in 1706. The last record of the secular clergy (13 January, 1721), that of the Rev. Alexander Huvé, appears in the ancient register of Mobile. The work was then resumed by the religious orders. The Quebec Act of 1774 conferred on the parish priest of Mobile among others, a legal title to his tithes. With the surrender of Mobile to Spain (12 March, 1780), the records are kept in Spanish, and the church in Mobile is definitely known as the church of the Immaculate Conception. Pius VII erected the diocese of St. Louis of New Orleans (25 April, 1793), usually styled Louisiana and the Floridas. The jurisdiction, therefore, of the ordinaries of Quebec and Santiago de Cuba over that immense territory ceased with the selection of its first

bishop, the Right Rev. Luis Pefalver y Cardenas, who arrived in New Orleans 17 July, 1795. From 1792 to 1800 the parish priest of Mobile was the Rev. Constantine McKenna, and its last incumbent under Spanish rule, the Rev. Vincent Genin.

BISHOPS.—(1) MICHAEL PORTIER, b. at Montbrison, France, 1795; d. at Mobile, 4 May, 1859. He came to the United States 4 September, 1817. Completing his studies at St. Mary's Seminary, Baltimore, Md., he was ordained priest by Bishop Dubourg at St. Louis (1818), and eight years later, in the same city was consecrated titular Bishop of Oleno by Bishop Rosati, and became first vicar Apostolic of the new Vicariate of Alabama and the Floridas. At the time of his accession he was the only clergyman in the vicariate and had practically only three congregations with churches, Mobile, Ala., and the old Spanish cities of St. Augustine, Fla. (founded 1565), and Pensacola, Fla. (founded 1696). The first priest who came to his assistance was the Rev. Edward T. Mayne, a student of Mt. St. Mary's College, Emmitsburg, Md., sent by Bishop England of Charleston, to take charge of the deserted church of St. Augustine. Bishop Portier began his administration by riding through his vicariate and visited Pensacola, Tallahassee, and St. Augustine, offering the Holy Sacrifice, preaching, and administering the Sacraments as he went. He sailed for Europe (1829) in quest of assistants, and returning with two priests and four ecclesiastics, found the vicariate raised to the Diocese of Mobile. His cathedral was a little church twenty feet wide by fifty feet deep, his residence a still smaller two-roomed frame structure. By 1850 there were churches and congregations in Mobile, Spring Hill, Summerville, Mount Vernon, Fish River, Pensacola, Tuscaloosa, and Montgomery.

He was somewhat relieved in the same year by the detachment of the eastern portion of Florida and its annexation to the newly-created See of Savannah, Ga. To add to his relief the new cathedral of the Immaculate Conception, built mainly through the untiring efforts of the Rev. J. McGarahan, was finished at a cost of over eighty thousand dollars, and consecrated 8 December, 1850. About 1830 Bishop Portier established Spring Hill College and Seminary, at the head of which was the Rev. Mathias Loras until he was consecrated Bishop of Dubuque (10 December, 1837) by Bishop Portier, who also consecrated another president of Spring Hill, the Rev. John S. Bazin, third Bishop of Vincennes, 24 October, 1847. Spring Hill College, for a time in charge of the Eudist Fathers, was taken over by the Jesuit Fathers (1846) and has since been managed successfully by them. Bishop Portier held there a diocesan synod (19 January, 1835). In 1833 he secured from the Visitation convent, Georgetown, a colony of nuns who established in Mobile a house and academy, which is in a very flourishing condition. He brought the Brothers of the Sacred Heart from France (about 1847), and the Sisters of Charity from Emmitsburg, Md., to manage orphan asylums for boys and girls respectively. One of his last acts was the foundation of an infirmary at Mobile conducted by the Sisters of Charity.

(2) JOHN QUINLAN, second Bishop of Mobile, b. in County Cork, Ireland, 19 October, 1826; d. at Mobile, 9 March, 1883. He came to the United States, 1844, studied for the priesthood in Mt. St. Mary's College, Emmitsburg, Md., and was ordained by Archbishop Purcell (1853), with a fellow student, Richard Gilmour, afterwards second Bishop of Cleveland. He was consecrated Bishop of Mobile, 4 Dec., 1859, by Archbishop Blanc in St. Louis' cathedral, New Orleans, La. In his diocese he found twelve churches and fourteen schools for which he had only eight secular priests, and he therefore brought from Ireland eleven young candidates for the priesthood. Two of

the priests who came to Bishop Quinlan at this time are zealous workers in the diocese to-day, the Very Rev. C. T. O'Callaghan, D.D., V.G., pastor of St. Vincent's church, Mobile, several times administrator of the diocese, and the Very Rev. D. Savage, D.D., pastor of St. Peter's church, Montgomery, a member of the bishop's council. Bishop Quinlan's administration fell upon the stormy days of internecine strife. After the battle of Shiloh, he hastened on a special train to the blood-stained battle-ground and ministered to the temporal and spiritual wants of North and South. After the war diocesan activities were crippled. Nevertheless, besides repairing ruined churches, Bishop Quinlan built the portico of the Mobile cathedral, founded St. Patrick's and St. Mary's churches in the same city, and established churches in Huntsville, Decatur, Tuscumbia, Florence, Cullman, Birmingham, Eufaula, Whistler, and Toulminville. April, 1876, Bishop Quinlan invited the Benedictines from St. Vincent's Abbey, Pa., to the diocese, and they settled at Cullman. The first abbot of the new settlement was the Rt. Rev. Benedict Menges, O.S.B., succeeded (1905) by Rt. Rev. Bernard Menges, O.S.B., under whose capable management the monastery and college are progressing and extending their influence considerably.

(3) DOMINIC MANUCY, third Bishop of Mobile, b. in St. Augustine, Fla., 20 December, 1823; d. at Mobile, 4 December, 1885. He was educated at Spring Hill College, and ordained (1850) by Bishop Portier, and for twenty-four years laboured in Montgomery and Mobile. He was consecrated at Mobile (8 Dec., 1874), Bishop of Dulma, and appointed vicar Apostolic of Brownsville, Tex., and was transferred to the Diocese of Mobile (9 March, 1884), without being relieved, however, from his duties as vicar Apostolic, but finding the burden too great he resigned and was appointed to the titular see of Maronea.

(4) JEREMIAH O'SULLIVAN, fourth Bishop of Mobile, b. in County Cork, Ireland, 1844; d. at Mobile, 10 August, 1896. He came to the United States, 1863, entered St. Charles College, Ellicott City, Md., whence he proceeded to St. Mary's Seminary, Baltimore, Md., was ordained priest (June, 1868) by Archbishop Spalding, and consecrated Bishop of Mobile (20 Sept., 1885), by Cardinal, then Archbishop, Gibbons. The present towers of the Mobile cathedral were built by Bishop O'Sullivan, who successfully strove to restore the ruined financial status of the diocese. A gifted administrator, an admired orator, an extremely zealous and holy bishop, Bishop O'Sullivan travelled and laboured unceasingly in the diocese, and left to posterity a monument of noble results, temporal and spiritual, quietly and unostentatiously achieved.

(5) EDWARD PATRICK ALLEN, fifth and present Bishop of Mobile, was born in Lowell, Mass., 17 March, 1853, and educated at Mt. St. Mary's College, Emmitsburg, Md., where he was ordained priest by Bishop Becker, 17 Dec., 1881. He was appointed president of Mt. St. Mary's (1884), and filled that office most acceptably until his consecration as Bishop of Mobile, by Cardinal Gibbons, in the cathedral, Baltimore, Md. (16 May, 1897). Under the able and prudent management of Bishop Allen, the diocese has advanced with great strides, and is still developing at a rapid growth. Many churches and missions have been erected, hospitals, orphanages, and schools established, the number of priests more than doubled, and considerable property acquired with a view to the further development of his rapidly increasing charge. The diocese was sorely tried by a fearful storm and tidal wave (Sept., 1906). Many churches either totally or partially destroyed have been rebuilt or repaired. But the complete results of Bishop Allen's prosperous administration are best noticed by a comparison between the standing of the diocese

when he assumed control and its existing admirable state.

STATISTICS.—1897 (year of Bishop Allen's arrival).—Churches with resident priests, 22; parishes with parochial schools, 15; children under Catholic care in colleges, academies, and schools, 2526; hospitals, 2; orphanages, 2; baptisms, infants, 820, converts, 60; marriages, 163; Catholic population, 17,000; priests, secular and religious, 48.

1910.—Priests, secular, 49, religious, 52, total, 101; churches with resident priests, 43; missions with churches, 31; total churches, 74; stations, 149; chapels, 25; brothers, 41; religious women, 274; children under Catholic care, 5039; colleges, 3; high school, 1; academies, 7; schools, 31, and orphanages, 3; hospitals, 4; home for aged poor, 1; baptisms, infants, 1478, converts, 552; marriages, 302; Catholic population, 38,000.

Bishop Allen takes a lively interest in the Negro Missions, and is largely responsible for the good work being done by the Josephite Fathers in Mobile and vicinity, Birmingham, and Montgomery. Near the latter city is St. Joseph's College, founded (1901) by the Very Rev. T. B. Donovan, lately deceased, the primary object of which "is to educate young colored men to be catechists and teachers." With Bishop Allen's sanction a colored fraternal organization was instituted in Mobile, 1909, by the Rev. C. Rebesch, which gives promise of universal good.

Benefactors.—The chief benefactors of the diocese were Messrs. Felix and Arthur McGill—the McGill Institute, a high school for boys, bears their name. The Hannan Home for the aged poor is a tribute to the generosity of Major P. C. Hannan, who built it along the lines of Bishop Allen's choosing.

Religious Orders.—In the Diocese of Mobile are the Jesuits, Benedictines, Josephite Fathers, and Brothers of the Sacred Heart. Also the Sisters of the Visitation, Sisters of Charity, Sisters of Mercy, Sisters of Loretto, Sisters of St. Joseph, Sisters of St. Benedict, Little Sisters of the Poor, and Sisters of Perpetual Adoration. There are three Catholic cemeteries, one in Mobile, one in Birmingham, and one in Montgomery. The intrepid Admiral Semmes and Father Ryan, the poet-priest, are buried in the Catholic Cemetery, Mobile. By a singular coincidence the first priest who came to labour in the new Diocese of Mobile and the last and ruling Bishop of Mobile were students of Mt. St. Mary's College, Emmitsburg, Md., while the first Bishop of San Antonio, Tex., the Rt. Rev. Anthony D. Pellicer, and its present coadjutor, the Rt. Rev. John W. Shaw, were native priests of the diocese, both having been consecrated in its cathedral (the former, 8 Dec., 1874, the latter, 14 April, 1910), of which each in turn was pastor.

THOMAS J. EATON.

Mocissus, a titular metropolitan see of Cappadocia. Procopius (*De ædific.*, V, iv) informs us that this fortified site, in north-western Cappadocia, was constituted metropolis of Cappadocia Tertia by Justinian, when he divided that province into three parts. The emperor gave it the name of Justinianopolis. Nothing is known of its history, and its name should perhaps be written *Mocessus*. There is no doubt that the site of Mocissus, or Mocessus, is that occupied by the modern town of Kir-Sheir, chief town of a sanjak in the vilayet of Angora, which possesses 8000 inhabitants, most of them Mussulmans. In the

neighbourhood of Kir-Sheir there are some important ancient ruins. This metropolis figures in the "Notitiæ episcopatum" until the twelfth or thirteenth century. Only a few of its titulars are known: the earliest, Peter, attended the Council of Constantinople (536); the last, whose name is not known, was a Catholic, and was consecrated after the Council of Florence by Patriarch Metrophanes of Constantinople.

S. PÉTRIDÈS.

Mocoví Indians.—The name is also written MACOBIO, MBOCOBÍ, MOCOBIO. They are a warlike and predatory tribe of Guaycuran stock, and are closely related linguistically to the Toba, Mbaya, and Abipon, their usual allies, settled principally along the middle and upper Vermejo River, in the Chaco region of northern Argentina, although they formerly extended their forays as far south as Santa Fé and even to the gates of Buenos Aires. In habit of life and general characteristics they resembled the rest of the tribes just mentioned, but were distinguished even beyond them, as Dobrizhoffer says, "in atrocity and steady hatred to the Spaniards. They seemed to conspire to ruin Tucuman, proving themselves formidable, not to solitary estates merely, but to whole cities". They entirely destroyed the town of Concepcion and massacred its inhabitants.

This special hostility to the people of Tucuman was due to the fact that years before a large number of Mocoví, who had been induced through the efforts of the Jesuit Fathers Altamirano and Diaz to come in from the war-path and had been organized into the mission of San Xavier, had been treacherously seized and distributed as slaves by the governor of that province. They received a temporary check in 1710 from Governor Urizar, who led a great expedition of over three thousand men against the Chaco tribes, with the result that several tribes made peace, while the Mocoví retired to the south-west and continued their raids in that quarter. Thirty years later, during a period of truce, some of the Mocoví became acquainted with the Jesuits of the College of Santa Fé, through whose influence they were won to friendship with the Spaniards, and the chiefs Aletin and Chitalin consented to receive Christian instruction together with their people. As a result the Mocoví mission colony of San Xavier was established in 1743 by Father Francisco Burges Navarro, thirty leagues from the city, and from a small beginning increased rapidly by accessions from the roving bands of the tribe, who were, from time to time, won over by the persuasions of the new converts. Prisoners captured in the various expeditions were also brought into the new mission, while many voluntarily took refuge there to escape pursuit.

The Mocoví proved devout, tractable, and willing workers, and particularly competent musicians under the instruction of the German Father Florian Pauke, who organized a band and chorus whose services were in demand on church occasions even in Buenos Aires. With bell in hand, the chief himself, Aletin, acted as crier every morning to call his people to Mass, and took the lead in every task of difficulty. A third chief, who had long held out against the Spaniards and made war upon his mission kinsmen in revenge for their abandonment of the old life, finally came in voluntarily. In 1765 a second Mocoví mission, San Pedro y Pablo, was established by Father Pauke with another portion of the tribe which had until then continued hostile.

At the time of the expulsion of the Jesuits in 1767 the two missions contained about 1200 Mocoví, of whom all but a few were Christians. Deprived of their accustomed teachers, most of them finally rejoined their wild kinsmen in the forests of the Chaco.

In 1800 the tribe was still loosely estimated at 2000 warriors or over 6000 souls. They are now reduced far below that number, but retain their tribal organization and habits, though no longer hostile, and range generally along the western banks of the Paraná. The best study of their language is Father Tavolini's "Introducción al Arte Mocoví". (See also TOBA.)

Modena, ARCHDIOCESE OF (MUTINENSIS), in central Italy, between the rivers Secchia and Panaro. The city contains many fine buildings. The Romanesque cathedral, begun in 1099, consecrated by Lucius III in 1184, bears on its interior façade scenes from the Old and from the New Testament sculptured in white marble, and the high altar possesses a Purification by Guido Reni; the inlaid work of the choir, by the Lendinara brothers (1465), is very beautiful; in the belfry, called the Ghirlandina, is kept the famous wooden pail taken from the Bolognese after the battle of Zappolino (1325); this pail is the subject of the heroic-comic epic of Tassoni, "La Secchia Rapita"; the pulpit is a noteworthy work of Arrigo del Campione. Notable churches of Modena are San Agostino, which contains the tombs of the historians Sigonius and Muratori; San Pietro, with its beautiful specimens of the art of Giambellini, Dossi, and Francia; San Stefano della Pomposa, of which Muratori was provost, and others, all rich in works of art. The magnificent Ducal Palace, built in 1635 by Duke Francesco I, according to the plans of Avanzini, besides a valuable gallery of pictures, contains frescos by Franceschini, Tintoretto, Dossi, and others, and a library with more than three thousand manuscripts. The Royal, Communal, and Capitular archives possess many important documents. The university was founded by Duke Francesco III in 1738, but Modena, as early as 1182, had a *studium generale* which rivalled that of Bologna. The citadel, pentagonal in shape, dates from 1635; its walls and bastions were transformed into a public promenade in 1816. There has been a military school for infantry and for cavalry in the royal palace of Modena since 1859; it was established by the last duke, Francesco V. The various beneficent institutions of this city are under the *Opera Pia Generale*.

At the time of the Gallic War, Mutina, the Latin name of Modena, was already in the power of the Romans, who were besieged there in 223 B. C. A Roman colony was taken from Modena, 234 B. C., and a decade later, the town was in the power of the Ligurians for a year. It was there, also, that Spartacus defeated the consul Cassius in 71 B. C. The famous *bellum Mutinense* (42 B. C.) decided the fate of the republic at Rome. During the Empire Modena was one of the most prosperous cities in Italy, but in the war between Constantine and Maxentius, the city was besieged, and fell into great decadence until 698, when it was revived by King Cunibert.

Charlemagne made it the capital of a line of counts, whose authority, however, was before long eclipsed by that of the bishops, one of whom, St. Lodoinus, in 897 surrounded the city with walls, to protect it against Hungarian incursions, while Bishop Ingone was formally invested with the title of count by Emperor Conrad I. Later, Modena was a possession of the Countess Matilda, after whose death (1115) the city became a free commune, and in time joined the Lombard League against Barbarossa. In the strug-

gle between the popes and Frederick II Modena was Ghibelline, and in conflict with the Guelph cities; nevertheless, it harboured a strong Guelph party, under the leadership of the Aigoni family, while the Ghibellines were led by the Grasolfi. In 1288, to put an end to internal dissensions, Modena gave its allegiance to Obizzo II of Este, Lord of Ferrara, who also became master of Reggio in 1291. After the death of his son Azzo VIII (1308), Modena became free again, but lost a part of its territory. On the arrival of Henry VII, the town received an imperial vicar; in 1317, it welcomed a pontifical legate, choosing later for its lord John of Bohemia, while, in 1336, it was ceded by Manfredo Pio of Carpi to Obizzo III of Este and Ferrara in whose family it remained until 1859. Among his successors were Nicolò III, who recov-

FAÇADE (XII CENTURY), THE CATHEDRAL, MODENA

ered Reggio and the Garfagnana for Modena. Borso, a natural son of Nicolò III, received the title of Duke of Modena from the emperor in 1452, and later that of Duke of Ferrara, from Paul II. In the sixteenth century, in the palace of the Grillenzoni family, there flourished an academy of letters. The city submitted to Julius II in 1510, but was restored to the Duke of Parma in 1530 by Charles V at the death of Alfonso II; however, in 1597 Ferrara returned to immediate dependency upon the Holy See, but Modena, with Reggio and its other lands, as a fief of the Empire, passed to Cesare, cousin of Alfonso II.

From that time a new era began for Modena, henceforth the home of a court devoted to the arts and letters, and solicitous for the public weal. The son of Cesare, Alfonso III, after a reign of only one year (1529), became a Capuchin monk in the convent of Castelnuovo di Garfagnana, founded by him, and died in 1614. Alfonso IV, in 1662, was succeeded by the young Francesco II, whose regents were his mother Laura and his great-uncle Cardinal Rinaldo. He built the Ducal Palace and the citadel and added Coreggio to his territory. As Francesco II died without progeny (1658), Modena came into the possession of his uncle Rinaldo, a cardinal also, who married

Carlotta of Brunswick, and after a reign frequently troubled by French incursions, left the ducal throne to his son Francesco III in 1737, when the latter was fighting against the Turks in Hungary. Francesco III also governed Milan for Maria Theresa. Ercole III, who by his marriage acquired the duchy of Massa and Carrara, succeeded to that of Modena in 1780, and at the approach of Napoleon, sought refuge at Venice. Modena became the capital of the Cispadan, united later to the Cisalpine republic, and eventually was incorporated into the Kingdom of Italy. In 1803 Ercole received, as compensation for the loss of Modena, Breisgau and Ortenau. His daughter and only child, Maria Beatrice, married the Archduke Ferdinand of Austria, and their son Francesco IV, in 1814 received the Duchy of Modena, while Maria Beatrice governed Massa and Carrara until her death. In 1831 occurred the famous conspiracy of Ciro Menotti on the night of the third and fourth of February; it was discovered, and Menotti was imprisoned, taken to Milan by the duke, who had been constrained to flee to that city by the revolt of Bologna, and was hanged on 16 May, after the duke's return to Modena. In 1846 Francesco V succeeded to the duchy, and in the troubles of 1848 was compelled to seek refuge in Austria, but returned in the following year. In 1859, however, having declared for Austria, he was again obliged to leave his states, and the provisional government, under Carlo Farini, decreed the annexation of Modena to the Kingdom of Italy.

Among the famous men of Modena are the astronomer Geminiano Montanari, the anatomist Gabriele Falloppio, the great Austrian general Montecucoli, Cardinal Savoieto, Sigonius, Muratori, Tiraboschi, and the poet Tassoni. According to local tradition, the first Bishop of Modena was St. Cletus—probably sent there by Pope Dionysius about 270. After him, there is mention of another bishop, Antonius or Antoninus, to whom reference is made in the life of St. Geminianus his predecessor; this great bishop and protector of the city sheltered in 334 St. Athanasius and died in 349. Other bishops of Modena were St. Theodulus (about 398), formerly a *notarius* or secretary of St. Ambrose; St. Geminianus II (III according to Capelletti) who is said to have induced Attila to spare Modena (452); St. Lupicinus (749), in whose time the famous abbey of Nonantola was founded by Duke Anselm of Friuli; and Ægidius (1097), who began the construction of the cathedral. In 1148 the Diocese of Modena was suppressed for a time on account of discord with the Abbots of Nonantola. William, bishop in 1221, frequently served the popes, Honorius III and Gregory IX, as legate, especially among the Prussians, the Livonians, the Esthonians, etc.; eventually he resigned his see to devote himself to the conversion of those peoples (cf. Balan, "Sulle legazioni compiute nei paesi nordici da Guglielmo vescovo di Modena," *ibid.*, 1872). Bonadaneo Boschetti, bishop in 1311, was driven from his diocese by the Ghibellines; Nicolò Boiardo (1401) did much for ecclesiastical discipline; Nicolò Sandonnino (1479) was pontifical legate in Spain; Giovanni Morone (1529) founded the seminary, and is famous for missions on which he was sent to Germany in the beginnings of Lutheranism. Under him, through the "Accademia", Protestantism obtained a footing in Modena, and was eradicated with difficulty; Ægidio Foscarari (1550), to whom the Council of Trent entrusted the correction of the Roman Missal and the preparation of its Catechism for Parish Priests; Roberto Fontana (1646) and Giuseppe M. Folignano (1757) both restorers of the episcopal palace, while the second did much for the endowment of the seminary.

In 1821 the Abbey of Nonantola, a *prælatura nullius diocesae*, was united to the Diocese of Modena; and the latter, a suffragan of Milan until 1852, was then raised to the dignity of a metropolitan see,

with Carpi, Guastalla, Massa, and Reggio Emilia for its suffragans. The Abbey of Nonantola was famous, once, as a center of discipline and ecclesiastical learning, and through it a great impetus was given to agriculture in the surrounding country. Politically, Nonantola entered into an alliance with Bologna to preserve its independence, especially against Modena, but like the latter it became a possession of the house of Este in 1411. Until 1449 the administration of Nonantola was confided to commendatory abbots, one of whom was St. Charles Borromeo. The literary treasures of the abbey gradually found their way into the various libraries of Italy.

The Archdiocese of Modena, with Nonantola, contains 179 parishes, in which there are 220,400 faithful, with 455 secular and 50 regular priests; 8 religious houses of men, and 13 of women; 5 schools for boys and 7 for girls; 60 seminarians; 450 churches or chapels.

UNIVERSITY OF MODENA.—At the end of the twelfth century there existed at Modena in Italy, a flourishing school of jurisprudence. Pilius, who established himself there as a teacher in 1182, compares its renown to that of Bologna. During the whole of the thirteenth century professors of great repute taught there, with only a brief interruption between 1222 and 1232, though even during that interval Albertus Papiensis and Hubertus de Bonaccursis still lectured. Other famous professors of this period were Martinus de Fano, Guilelmus Durantis, Albertus Galeottus, Guido de Suzaria, Nicolaus Matarellus, and, probably, Bonifacius a Mutina, who afterwards became Bishop of Modena (1337) and of Bergamo (1340). In the fourteenth century the Studium fell into decay, in spite of the efforts which the commune of Modena put forth to maintain it. A communal enactment provided, in 1328, that three professors—one each for law, medicine, and the training of notaries—were to be engaged by contract every year; this statute is the only extant documentary evidence that medicine as well as law was taught at Modena, and the Modenese School was never called a Studium Generale. Its decay was hastened, not only by political vicissitudes, but by the creation of other universities in the neighbouring states. With the restitution of Ferrara to the Papal States (1597), Modena became the capital of the House of Este, and once more there was a possibility of reviving the extinct Studium. This was not realized, however, until a century later (1678).

This new university, which owed much to the priest Cristoforo Borghi, was joined to the college (*convitto*) of the Congregation of St. Charles. It was inaugurated in 1683 by Duke Francis II. In 1772, Francis III increased the number of chairs, took steps to secure able professors, and endowed it with the property of the suppressed Society of Jesus. His most important service was the drafting of a constitution for the university. With the French invasion of 1796 the University of Modena was reduced to the rank of a lyceum, and in 1809 nothing remained of it but the faculty of philosophy. When Francis IV recovered his throne (1815) he restored the university, but the disturbances of 1821 caused him to modify its organization by distributing the students in various *convitti* scattered through his states. In 1848, however, the earlier organization was revived. In 1859 the provisional Government suppressed the theological faculty, and in 1862 the courses in philosophy and literature disappeared. The university now has faculties of jurisprudence, medicine, surgery, science

(mathematics, natural sciences, and chemistry), schools of pharmacy, of veterinary medicine, and of obstetrics.

It numbers 51 instructors with 12 assistants, who treat 95 different subjects; the attendance in 1908, was 431; in 1909, 422. Annexed to the university are the museum of experimental physics, founded, in 1760, by Fra Mario Morini; the chemical laboratory and cabinet founded by Michele Rosa; the museum of natural history founded, in 1786, by a bequest of Giuseppe M. Fogliani, Bishop of Modena; the museum of anatomy founded by Torti in 1698, and Ant. Scarpa in 1774; the cabinet of *materia medica* founded in 1773 by Gius. M. Savanti; the laboratories of pathological anatomy, experimental physics, and pharmaceutical chemistry; the botanical garden founded by Francis III in 1765; an observatory, a veterinary institute and museum, clinics, and a library. Besides those already mentioned, the following professors of this university have attained high distinction: Virginio Natta, O.P., O. Gherli, O.P., Scozia (afterwards minister to Francis IV), Girolamo Tiraboschi (historian of Italian letters), Agostino Paradisi, Giuliano Cassiani, Padre Pompilio Pozzetti, the Abbate Spallanzani, Bonaventura Curti, G. B. Venturi, Bernardino Ramazzini (seventeenth century), Gio. Cinelli, Luigi Emiliani, Paolo Gaddi, and the later deceased Galvagni.

U. BENIGNI.

Modernism.—ORIGIN OF THE WORD.—Etymologically, modernism means an exaggerated love of what is modern, an infatuation for modern ideas, "the abuse of what is modern", as the Abbé Gaudaud explains (*La Foi catholique*, I, 1908, p. 248). The modern ideas of which we speak are not as old as the period called "modern times". Though Protestantism has generated them little by little, it did not understand from the beginning that such would be its sequel. There even exists a conservative Protestant party which is one with the Church in combating modernism. In general we may say that modernism aims at that radical transformation of human thought in relation to God, man, the world, and life, here and hereafter, which was prepared by Humanism and eighteenth-century philosophy, and solemnly promulgated at the French Revolution. J. J. Rousseau, who treated an atheistical philosopher of his time as a modernist, seems to have been the first to use the word in this sense ("Correspondance à M. D.", 15 Jan., 1769). Littré (*Dictionnaire*), who cites the passage, explains: "Modernist, one who esteems modern times above antiquity". After that, the word seems to have been forgotten, till the time of the Catholic publicist Périn (1815-1905), professor at the University of Louvain, 1844-1889. This writer, whilst apologizing for the coinage, describes "the humanitarian tendencies of contemporary society" as modernism. The term itself he defines as "the ambition to eliminate God from all social life". With this absolute modernism he associates a more temperate form, which he declares to be nothing less than "liberalism of every degree and shade" ("*Le Modernisme dans l'Eglise d'après les lettres inédites de Lamennais*", Paris, 1881).

During the early years of the present century, especially about 1905 and 1906, the tendency to innovation which troubled the Italian dioceses, and especially the ranks of the young clergy, was taxed with modernism. Thus at Christmas, 1905, the bishops of the ecclesiastical provinces of Turin and Vercelli, in a circular letter of that date, uttered grave warnings against what

they called "Modernismo nel clero" (Modernism among the clergy). Several pastoral letters of the year 1906 made use of the same term; among others we may mention the Lenten charge of Cardinal Nava, Archbishop of Catania, to his clergy, a letter of Cardinal Bacilieri, Bishop of Verona, dated 22 July, 1906, and a letter of Mgr Rossi, Archbishop of Acerenza and Matera. "Modernismo e Modernisti", a work by Abbate Cavallanti which was published towards the end of 1906, gives long extracts from these letters. The name "modernism" was not to the liking of the reformers. The propriety of the new term was discussed even amongst good Catholics. When the Decree "Lamentabili" appeared, Mgr Baudrillart expressed his pleasure at not finding the word "modernism" mentioned in it (*Revue pratique d'apologétique*, IV, p. 578). He considered the term "too vague". Besides it seemed to insinuate "that the Church condemns everything modern". The Encyclical "Pascendi" (8 Sept., 1907) put an end to the discussion. It bore the official title, "De Modernistarum doctrinis". The introduction declared that the name commonly given to the upholders of the new errors was not inapt. Since then the modernists themselves have acquiesced in the use of the name, though they have not admitted its propriety (Loisy, "Simple réflexions sur le décret 'Lamentabili' et sur l'encyclique 'Pascendi' du 8 Sept., 1907", p. 14; "Il programma dei modernisti": note at the beginning).

THEORY OF THEOLOGICAL MODERNISM.—(1) *The essential error of Modernism.*—A full definition of modernism would be rather difficult. First it stands for certain tendencies, and secondly for a body of doctrine which, if it has not given birth to these tendencies (practice often precedes theory), serves at any rate as their explanation and support. Such tendencies manifest themselves in different domains. They are not united in each individual, nor are they always and everywhere found together. Modernist doctrine, too, may be more or less radical, and it is swallowed in doses that vary with each one's likes and dislikes. In the Encyclical "Pascendi", Pius X says that modernism embraces every heresy. M. Loisy makes practically the same statement when he writes that "in reality all Catholic theology, even in its fundamental principles, the general philosophy of religion, Divine law, and the laws that govern our knowledge of God, come up for judgment before this new court of assize" (*Simple réflexions*, p. 24). Modernism is a composite system: its assertions and claims lack that principle which unites the natural faculties in a living being. The Encyclical "Pascendi" was the first Catholic synthesis of the subject. Out of scattered materials it built up what looked like a logical system. Indeed friends and foes alike could not but admire the patient skill that must have been needed to fashion something like a co-ordinated whole. In their answer to the Encyclical, "Il programma dei Modernisti", the Modernists tried to retouch this synthesis. Previous to all this, some of the Italian bishops, in their pastoral letters, had attempted such a synthesis. We would particularly mention that of Mgr Rossi, Bishop of Acerenza and Matera. In this respect, too, Abbate Cavallanti's book, already referred to, deserves mention. Even earlier still, German and French Protestants had done some synthetical work in the same direction. Prominent among them are Kant, "*Die Religion innerhalb der Grenzen der reinen Vernunft*" (1803); Schleiermacher, "*Der christliche Glaube*" (1821-1822); and A. Sabatier, "*Esquisse d'une philosophie de la religion d'après la psychologie et l'histoire*" (1897).

The general idea of modernism may be best expressed in the words of Abbate Cavallanti, though even here there is a little vagueness: "Modernism is modern in a false sense of the word; it is a morbid state of conscience among Catholics, and especially young Catholics, that professes manifold ideals, opin-

ions, and tendencies. From time to time these tendencies work out into systems, that are to renew the basis and superstructure of society, politics, philosophy, theology, of the Church herself and of the Christian religion". A remodelling, a renewal according to the ideas of the twentieth century—such is the longing that possesses the modernists. "The avowed modernists", says M. Loisy, "form a fairly definite group of thinking men united in the common desire to adapt Catholicism to the intellectual, moral and social needs of to-day" (op. cit., p. 13). "Our religious attitude", as "Il programma dei modernisti" states (p. 5, note 1), "is ruled by the single wish to be one with Christians and Catholics who live in harmony with the spirit of the age". The spirit of this plan of reform may be summarized under the following heads: (a) A spirit of complete emancipation, tending to weaken ecclesiastical authority; the emancipation of science, which must traverse every field of investigation without fear of conflict with the Church; the emancipation of the State, which should never be hampered by religious authority; the emancipation of the private conscience, whose inspirations must not be overridden by papal definitions or anathemas; the emancipation of the universal conscience, with which the Church should be ever in agreement; (b) A spirit of movement and change, with an inclination to a sweeping form of evolution such as abhors anything fixed and stationary; (c) A spirit of reconciliation among all men through the feelings of the heart. Many and varied also are the modernist dreams of an understanding between the different Christian religions, nay, even between religion and a species of atheism, and all on a basis of agreement that must be superior to mere doctrinal differences.

Such are the fundamental tendencies. As such, they seek to explain, justify, and strengthen themselves in an error, to which therefore one might give the name of "essential" modernism. What is this error? It is nothing less than the perversion of dogma. Manifold are the degrees and shades of modernist doctrine on the question of our relations with God. But no real modernist keeps the Catholic notions of dogma intact. Are you doubtful as to whether a writer or a book is modernist in the formal sense of the word? Verify every statement about dogma; examine his treatment of its origin, its nature, its sense, its authority. You will know whether you are dealing with a veritable modernist or not, according to the way in which the Catholic conception of dogma is travestied or respected. Dogma and supernatural knowledge are correlative terms; one implies the other as the action implies its object. In this way then we may define modernism as "the critique of our supernatural knowledge according to the false postulates of contemporary philosophy".

It will be advisable for us to quote a full critique of such supernatural knowledge as an example of the mode of procedure. (In the meantime however we must not forget that there are partial and less advanced modernists who do not go so far). For them, external intuition furnishes man with but phenomenal, contingent, sensible knowledge. He sees, he feels, he hears, he tastes, he touches this something, this phenomenon that comes and goes without telling him aught of the existence of a suprasensible, absolute and unchanging reality outside all environing space and time. But deep within himself man feels the need of a higher hope. He aspires to perfection in a being on whom he feels his destiny depends. And so he has an instinctive, an affective yearning for God. This necessary impulse is at first obscure and hidden in the subconsciousness. Once consciously understood, it reveals to the soul the intimate presence of God. This manifestation, in which God and man collaborate, is nothing else than revelation. Under the influence of its yearning, that is of its religious feelings, the

soul tries to reach God, to adopt towards Him an attitude that will satisfy its yearning. It gropes, it searches. These gropings form the soul's religious experience. They are more easy, successful and far-reaching, or less so, according as it is now one, now another individual soul that sets out in quest of God. Anon there are privileged ones who reach extraordinary results. They communicate their discoveries to their fellow men, and forthwith become founders of a new religion, which is more or less true in the proportion in which it gives peace to the religious feelings.

The attitude Christ adopted, reaching up to God as to a father and then returning to men as to brothers—such is the meaning of the precept, "Love God and thy neighbour"—brings full rest to the soul. It makes the religion of Christ the religion *par excellence*, the true and definitive religion. The act by which the soul adopts this attitude and abandons itself to God as a father and then to men as to brothers, constitutes the Christian Faith. Plainly such an act is an act of the will rather than of the intellect. But religious sentiment tries to express itself in intellectual concepts, which in their turn serve to preserve this sentiment. Hence the origin of those formulæ concerning God and Divine things, of those theoretical propositions that are the outcome of the successive religious experiences of souls gifted with the same faith. These formulæ become dogmas, when religious authority approves of them for the life of the community. For community life is a spontaneous growth among persons of the same faith, and with it comes authority. Dogmas promulgated in this way teach us nothing of the unknowable, but only symbolize it. They contain no truth. Their usefulness in preserving the faith is their only *raison d'être*. They survive as long as they exert their influence. Being the work of man in time, and adapted to his varying needs, they are at best but contingent and transient. Religious authority too, naturally conservative, may lag behind the times. It may mistake the best methods of meeting needs of the community, and try to keep up worn-out formulæ. Through respect for the community, the individual Christian who sees the mistake continues in an attitude of outward submission. But he does not feel himself inwardly bound by the decisions of higher powers; rather he makes praiseworthy efforts to bring his Church into harmony with the times. He may confine himself, too, if he cares, to the older and simpler religious forms; he may live his life in conformity with the dogmas accepted from the beginning. Such is Tyrrell's advice in his letter to Fogazzaro, and such was his own private practice. (2) *Catholic and Modernist Notions of Dogma Compared.*—The tradition of the Catholic Church, on the other hand, considers dogmas as in part supernatural and mysterious, proposed to our faith by a Divinely instituted authority on the ground that they are part of the general revelation which the Apostles preached in the name of Jesus Christ. This faith is an act of the intellect made under the sway of the will. By it we hold firmly what God has revealed and what the Church proposes to us to believe. For believing is holding something firmly on the authority of God's word, when such authority may be recognized by signs that are sufficient, at least with the help of grace, to create certitude.

Comparing these notions, the Catholic and the modernist, we shall see that modernism alters the source, the manner of promulgation, the object, the stability, and the truth of dogma. For the modernist, the only and the necessary source is the private consciousness. And logically so, since he rejects miracles and prophecy as signs of God's word (Il programma, p. 96). For the Catholic, dogma is a free communication of God to the believer made through the preaching of the Word. Of course the truth from without, which is above and beyond any natural want, is preceded by a certain interior finality or perfecti-

bility which enables the believer to assimilate and live the truth revealed. It enters a soul well-disposed to receive it, as a principle of happiness which, though an unmerited gift to which we have no right, is still such as the soul can enjoy with unmeasured gratitude. In the modernist conception, the Church can no longer define dogma in God's name and with His infallible help; the ecclesiastical authority is now but a secondary interpreter, subject to the collective consciousness which she has to express. To this collective consciousness the individual need conform only externally; as for the rest he may embark on any private religious adventures he cares for. The modernist proportions dogma to his intellect or rather to his heart. Mysteries like the Trinity or the Incarnation are either unthinkable (a modernist Kantian tendency), or are within the reach of the unaided reason (a modernist Hegelian tendency). "The truth of religion is in him (man) implicitly, as surely as the truth of the whole physical universe, is involved in every part of it. Could he read the needs of his own spirit and conscience, he would need no teacher" (Tyrrell, "Scylla and Charybdis", p. 277).

Assuredly Catholic truth is not a lifeless thing. Rather is it a living tree that breaks forth into green leaves, flowers, and fruits. There is a development, or gradual unfolding, and a clearer statement of its dogmas. Besides the primary truths, such as the Divinity of Christ and His mission as Messiah, there are others which, one by one, become better understood and defined, e. g. the dogma of the Immaculate Conception and that of the Infallibility of the Pope. Such unfolding takes place not only in the study of the tradition of the dogma but also in showing its origin in Jesus Christ and the Apostles, in the understanding of the terms expressing it and in the historical or rational proofs adduced in support of it. Thus the historical proof of the dogma of the Immaculate Conception has certainly been strengthened since the definition in 1854. The rational conception of the dogma of Divine Providence is a continual object of study; the dogma of the Sacrifice of the Mass allows the reason to inquire into the idea of sacrifice. It has always been believed that there is no salvation outside the Church, but as this belief has gradually come to be better understood, many are now considered within the soul of the Church who would have been placed without, in a day when the distinction between the soul and the body of the Church had not generally obtained. In another sense, too, dogma is instinct with life. For its truth is not sterile, but always serves to nourish devotion. But whilst holding with life, progress, and development, the Church rejects transitory dogmas that in the modernist theory would be forgotten unless replaced by contrary formulae. She cannot admit that "thought, hierarchy, cult, in a word, everything has changed in the history of Christianity", nor can she be content with "the identity of religious spirit" which is the only permanency that modernism admits (II programma dei Modernisti).

Truth consists in the conformity of the idea with its object. Now, in the Catholic concept, a dogmatic formula supplies us with at least an analogical knowledge of a given object. For the modernist, the essential nature of dogma consists in its correspondence with and its capacity to satisfy a certain momentary need of the religious feeling. It is an arbitrary symbol that tells nothing of the object it represents. At most, as M. Leroy, one of the least radical of modernists, suggests, it is a positive prescription of a practical order (Leroy, "Dogme et critique", p. 25). Thus the dogma of the Real Presence in the Holy Eucharist means: "Act as if Christ had the local presence, the idea of which is so familiar to you". But, to avoid exaggeration, we add this other statement of the same writer (loc. cit.), "This however does not mean that dogma bears no relation to thought; for (1) there are duties concern-

ing the action of thinking; (2) dogma itself implicitly affirms that reality contains in one form or another the justification of such prescriptions as are either reasonable or salutary".

VARIOUS DEGREES OF MODERNISM AND ITS CRITERION.—Modernist attacks on dogma, as we have already remarked, vary according to the degree in which its doctrines are embraced. Thus, in virtue of the leading idea of their systems, Father Tyrrell was an agnostic modernist, and Campbell (a Congregationalist minister) is a symbolic modernist. Again the tendency to innovation is at times not at all general, but limited to some particular domain. Along with modernism in the strict sense, which is directly theological, we find other kinds of modernism in philosophy, politics, and social science. In such cases a wider meaning must be given to the term.

Here, however, it is needful to speak a word of warning against unreasonable attacks. Not every novelty is to be condemned, nor is every project of reform to be dubbed modernist because it is untimely or exaggerated. In the same way, the attempt fully to understand modern philosophic thought so as to grasp what is true in such systems, and to discover the points of contact with the old philosophy, is very far from being modernism. On the contrary, that is the very best way to refute modernism. Every error contains an element of truth. Isolate that element and accept it. The structure which it helps to support, having lost its foundation, will soon crumble. The name modernist then will be appropriate only when there is question of opposition to the certain teaching of ecclesiastical authority through a spirit of innovation. The words of Cardinal Ferrari, Archbishop of Milan, as cited in "La Revue Pratique d'Apologétique" (VI, 1908, p. 134), will help to show the point of our last remark. "We are deeply pained", he says, "to find that certain persons, in public controversy against modernism, in brochures, newspapers and other periodicals, go to the length of detecting the evil everywhere, or at any rate of imputing it to those who are very far from being infected with it". In the same year, Cardinal Maffei had to condemn "La Penta azurea", an anti-modernist organ, on account of its exaggeration in this respect. On the other hand, it is regrettable that certain avowed leaders of modernism, carried away perhaps by the desire to remain within the Church at all costs—another characteristic of modernism—have taken refuge in equivocation, reticence, or quibbles. Such a line of action merits no sympathy; while it explains, if it does not altogether justify, the distrust of sincere Catholics.

PROOFS OF THE FOREGOING VIEWS.—But does the principle and the quasi-essential error of modernism lie in its corruption of dogma? Let us consult the Encyclical "Pascendi". The official Latin text calls the modernist dogmatic system a leading chapter in their doctrine. The French translation, which is also authentic, speaks thus: "Dogma, its origin and nature, such is the ground principle of modernism." The fundamental principle of modernism is, according to M. Loisy, "the possibility, the necessity and the legitimacy of evolution in understanding the dogmas of the Church, including that of papal infallibility and authority, as well as in the manner of exercising this authority" (op. cit., p. 124). The character and leaning of our epoch confirm our diagnosis. It likes to substitute leading and fundamental questions in the place of side issues. The problem of natural knowledge is the burning question in present-day metaphysics. It is not surprising therefore that the question of supernatural knowledge is the main subject of discussion in religious polemics. Finally, Pius X has said that modernism embraces all the heresies. (The same opinion is expressed in another way in the encyclical "Editæ" of 16 May, 1910.) And what error, we ask, more fully justifies the pope's statement than that which alters dogma in its root and es-

sence? It is furthermore clear—to use a direct argument—that modernism fails in its attempt at religious reform, if it makes no change in the Catholic notion of dogma. Moreover, does not its own conception of dogma explain both a large number of its propositions and its leanings towards independence, evolution, and conciliation?

MODERNIST AIMS EXPLAINED BY ITS ESSENTIAL ERROR.—The definition of an unchangeable dogma imposes itself on every Catholic, learned or otherwise, and it necessarily supposes a Church legislating for all the faithful, passing judgment on State action—from its own point of view of course—and that even seeks alliance with the civil power to carry on the work of the Apostolate. On the other hand, once dogma is held to be a mere symbol of the unknowable, a science which merely deals with the facts of nature or history could neither oppose it nor even enter into controversy with it. If it is true only in so far as it excites and nourishes religious sentiment, the private individual is at full liberty to throw it aside when its influence on him has ceased; nay, even the Church herself, whose existence depends on a dogma not different from the others in nature and origin, has no right to legislate for a self-sufficing State. And thus independence is fully realized. There is no need to prove that the modernist spirit of movement and evolution is in perfect harmony with its concept of ever-changing dogma and is unintelligible without it; the matter is self-evident. Finally, as regards the conciliation of the different religions, we must necessarily distinguish between what is essential to faith regarded as a sentiment, and beliefs which are accessory, mutable, and practically negligible. If therefore you go as far as making the Divinity a belief, that is to say, a symbolical expression of faith, then docility in following generous impulses may be religious, and the atheist's religion would not seem to differ essentially from yours.

MODERNIST PROPOSITIONS EXPLAINED BY ITS ESSENTIAL ERROR.—We make a selection of the following propositions from the Encyclical for discussion: (a) The Christ of faith is not the Christ of history. Faith portrays Christ according to the religious needs of the faithful; history represents Him as He really was, that is, in so far as His appearance on earth was a concrete phenomenon. In this way it is easy to understand how a believer may, without contradiction, attribute certain things to Christ, and at the same time deny them in the quality of historian. In the "Hibbert Journal" for Jan., 1909, the Rev. Mr. Robert wished to call the Christ of history "Jesus" and reserve "Christ" for the same person as idealized by faith; (b) Christ's work in founding the Church and instituting the sacraments was mediate, not immediate. The main point is to find supports for the faith. Now, as religious experience succeeds so well in creating useful dogmas, why may it not do likewise in the matter of institutions suited to the age? (c) The sacraments act as eloquent formulae which touch the soul and carry it away. Precisely; for if dogmas exist only in so far as they preserve religious sentiment, what other service can one expect of the sacraments? (d) The Sacred Books are in every religion a collection of religious experiences of an extraordinary nature. For if there is no external revelation, the only substitute possible is the subjective religious experience of men of particular gifts, experiences such as are worthy of being preserved for the community.

THE MODERNIST MOVEMENT.—The late M. Périn dated the modernist movement from the French Revolution. And rightly so, for it was then that many of those modern liberties which the Church has reproved as unrestrained and ungoverned, first found sanction. Several of the propositions collected in the Syllabus of Pius IX, although enunciated from a rationalist point of view, have been appropriated by modernism. Such, for example, are the fourth proposition, which derives

all religious truth from the natural force of reason; the fifth, which affirms that revelation, if it joins in the onward march of reason, is capable of unlimited progress; the seventh, which treats the prophecies and miracles of Holy Scripture as poetical imaginings; propositions sixteen to eighteen on the equal value of all religions from the point of view of salvation; proposition fifty-five on the separation of Church and State; propositions seventy-five and seventy-six, which oppose the temporal power of the pope. The modernist tendency is still more apparent in the last proposition, which was condemned on 18 March, 1861: "The Roman Pontiff can and ought to conform with contemporary progress, liberalism, and civilization."

Taking only the great lines of the modernist movement within the Church itself, we may say that under Pius IX its tendency was politico-liberal, under Leo XIII and Pius X social; with the latter pontiff still reigning, its tendency has become avowedly theological.

It is in France and Italy above all that modernism properly so-called, that is, the form which attacks the very concept of religion and dogma, has spread its ravages among Catholics. Indeed, some time after the publication of the Encyclical of 8th September, 1907, the German, English, and Belgian bishops congratulated themselves that their respective countries had been spared the epidemic in its more contagious form. Of course, individual upholders of the new error are to be found everywhere, and even England as well as Germany has produced modernists of note. In Italy, on the contrary, even before the Encyclical appeared, the bishops have raised the cry of alarm in their pastoral letters of 1906 and 1907. Newspapers and reviews, openly modernist in their opinions, bear witness to the gravity of the danger which the Sovereign Pontiff sought to avert. After Italy it is France that has furnished the largest number of adherents to this religious reform or ultra-progressive party. In spite of the notoriety of certain individuals, comparatively few laymen have joined the movement; so far it has found adherents chiefly among the ranks of the younger clergy. France possesses a modernist publishing house (*La librairie Nourry*). A modernist review founded by the late Father Tyrrell, "*Nova et Vetera*", is published at Rome. "*La Revue Moderniste Internationale*" was started this year (1910) at Geneva. This monthly periodical calls itself "the organ of the international modernist society". It is open to every shade of modernist opinions, and claims to have co-workers and correspondents in France, Italy, Germany, England, Austria, Hungary, Spain, Belgium, Russia, Rumania, and America. The Encyclical "*Pascendi*" notes and deprecates the ardour of the modernist propaganda. A strong current of modernism is running through the Russian Schismatic Church. The Anglican Church has not escaped. And indeed liberal Protestantism is nothing but a radical form of modernism that is winning the greater number of the theologians of the Reformed Church. Others who oppose the innovation find refuge in the authority of the Catholic Church.

THE PHILOSOPHICAL ORIGIN AND CONSEQUENCES OF MODERNISM.—(1) *The Origin.*—Philosophy renders great service to the cause of truth; but error calls for its assistance too. Many consider the philosophic groundwork of modernism to be Kantian. This is true, if by Kantian philosophy is meant every system that has a root connexion with the philosophy of the Königsberg sage. In other words, the basis of modernist philosophy is Kantian if, because Kant is its father and most illustrious moderate representative, all agnosticism be called Kantism (by agnosticism is meant the philosophy which denies that reason, used at any rate in a speculative and theoretical way, can gain true knowledge of supersensible things). It is not our business here to oppose the application of the name Kantian to modernist philosophy. Indeed if we compare the two systems, we shall find that they have

two elements in common, the negative part of the "Critique of Pure Reason" (which reduces pure or speculative knowledge to phenomenal or experiential intuition), and a certain argumentative method in distinguishing dogma from the real basis of religion. On the positive side, however, modernism differs from Kantism in some essential points. For Kant, faith is a really rational adhesion of the mind to the postulates of practical reason. The will is free to accept or reject the moral law; and it is on account of this option that he calls its acceptance "belief". Once it is accepted, the reason cannot but admit the existence of God, liberty, and immortality. Modernist faith, on the other hand, is a matter of sentiment, a flinging of oneself towards the Unknowable, and cannot be scientifically justified by reason. In Kant's system, dogmas and the whole positive framework of religion are necessary only for the childhood of humanity or for the common people. They are symbols that bear a certain analogy to images and comparisons. They serve to inculcate those moral precepts that for Kant constitute religion. Modernist symbols, though changeable and fleeting, correspond to a law of human nature. Generally speaking, they help to excite and nourish the effective religious sentiment which Kant (who knew it from his reading of the pietists) calls *schwärmerei*. Kant, as a rationalist, rejects supernatural religion and prayer. The modernists consider natural religion a useless abstraction; for them it is prayer rather that constitutes the very essence of religion. It would be more correct to say that modernism is an offshoot of Schleiermacher (1768-1834), who though he owed something to Kant's philosophy, nevertheless built up his own theological system. Ritschl called him the "legislator of theology" (*Rechtf. und Vers.*, III, p. 486). Schleiermacher conceives the modernist plan of reforming religion with the view of conciliating it with science. Thus would he establish an *entente cordiale* among the various cults, and even between religion and a kind of religious sentimentality which, without recognizing God, yet tends towards the Good and the Infinite. Like the modernists, he has dreams of new religious apologetics; he wants to be a Christian; he declares himself independent of all philosophy; he rejects natural religion as a pure abstraction, and derives dogma from religious experience. His principal writings on this subject are "Ueber die Religion" (1799: note the difference between the first and the later editions) and "Der Christliche Glaube" (1821-22). Ritschl, one of Kant's disciples, recognizes the New Testament as the historical basis of religion. He sees in Christ the consciousness of an intimate union with God, and considers the institution of the Christian religion, which for him is inconceivable without faith in Christ, as a special act of God's providence. Thus has he prepared the way for a form of modernism more temperate than that of Schleiermacher. Though he predicted a continual development of religion, Schleiermacher admitted a certain fixity of dogma. For this reason it seems to us that modernists owe their radical evolutionary theory to Herbert Spencer (1820-1903). It was through the writings of A. Sabatier (1839-1901), a French Protestant of the Broad Church type, that the religious theories we have spoken of, spread among the Latin races, in France and in Italy. It is in these countries, too, that modernism has done greatest harm among the Catholics. Sabatier is a radical modernist. He has especially drawn upon Schleiermacher for the composition of his two works on religious synthesis ("Esquisse d'une philosophie de la religion d'après la psychologie et l'histoire", Paris, 1897; "Les religions d'autorité et la religion de l'esprit", Paris, 1902).

The fundamental error of the modernist philosophy is its misunderstanding of the scholastic formula which takes account of the two aspects of human knowledge. Doubtless, the human mind is a vital faculty endowed

with an activity of its own, and tending towards its own object. However, as it is not in continual activity, it is not self-sufficient; it has not in itself the full principle of its operations, but is forced to utilize sensible experience in order to arrive at knowledge. This incompleteness and falling short of perfect autonomy is due to man's very nature. As a consequence, in all human knowledge and activity, account must be taken both of the intrinsic and of the extrinsic side. Urged on by the finality that inspires him, man tends towards those objects which suit him, while at the same time objects offer themselves to him. In the supernatural life, man acquires new principles of action and, as it were, a new nature. He is now capable of acts of which God is the formal object. These acts, however, must be proposed to man, whether God deigns to do so by direct revelation to man's soul, or whether, in conformity with man's social nature, God makes use of intermediaries who communicate exteriorly with man. Hence the necessity of preaching, of motives of credibility, and of external teaching authority. Catholic philosophy does not deny the soul's spontaneous life, the sublimity of its suprasensible and supernatural operations, and the inadequacy of words to translate its yearnings. Scholastic doctors give expression to mystical transports far superior to those of the modernists. But in their philosophy they never forget the lowliness of human nature, which is not purely spiritual. The modernist remembers only the internal element of our higher activity. This absolute and exclusive intrinsicism constitutes what the Encyclical calls "vital immanence". When deprived of the external support which is indispensable to them, the acts of the higher intellectual faculties can only consist in vague sentiments which are as indetermined as are those faculties themselves. Hence it is that modernist doctrines, necessarily expressed in terms of this sentiment, are so intangible. Furthermore, by admitting the necessity of symbols, modernism makes to extrinsicism a concession which is its own refutation.

(2) *The Consequences.*—The fact that this radically intrinsic conception of the spiritual or religious activity of man (this perfect autonomy of the reason *vis-à-vis* of what is exterior) is the fundamental philosophical conception of the modernists, as the alteration of dogma is the essential characteristic of their heresy, can be shown without difficulty by deducting from it their entire system of philosophy. First of all, of their agnosticism: the vague nature which they attribute to our faculties does not permit them, without scientific observation, to arrive at any definite intellectual result. Next, of their evolutionism: there is no determined object to assure to dogmatic formulae a permanent and essential meaning compatible with the life of faith and progress. Now, from the moment that these formulae simply serve to nourish the vague sentiment which for modernism is the only common and stable foundation of religion, they must change indefinitely with the subjective needs of the believer. It is a right and even a duty for the latter freely to interpret, as he sees fit, religious facts and doctrines. We meet here with the *a priori*isms to which the Encyclical "Pascendi" drew attention.

We wish to insist a little on the grave consequence that this Encyclical puts especially before our eyes. In many ways, modernism seems to be on the swift incline which leads to pantheism. It seems to be there on account of its symbolism. After all, is not the affirmation of a personal God one of these dogmatic formulae which serve only as symbolic expressions of the religious sentiment? Does not the Divine Personality then become something uncertain? Hence radical modernism preaches union and friendship, even with mystical atheism. Modernism is inclined to pantheism also by its doctrine of Divine Immanence, that is, of the intimate presence of God within us. Does this God declare Himself as distinct from

us? If so, one must not then oppose the position of modernism to the Catholic position and reject exterior revelation. But if God declares Himself as not distinct from us, the position of modernism becomes openly pantheistic. Such is the dilemma proposed in the Encyclical. Modernism is pantheistic also by its doctrine of science and faith. Faith having for object the Unknowable cannot make up for the want of proportion that modernists put between the intellect and its object. Hence, for the believer as well as for the philosopher, this object remains unknown. Why should not this "Unknowable" be the very soul of the world? It is pantheistic also in its way of reasoning. Independent of and superior to religious formulæ, the religious sentiment on the one hand originates them and gives them their entire value, and, on the other hand, it cannot neglect them, it must express itself in them and by them; they are its reality. But we have here the ontology of pantheism, which teaches that the principle does not exist outside of the expression that it gives itself. In the pantheist philosophy, Being or the Idea, God, is before the world and superior to it, He creates it, and yet He has no reality outside the world; the world is the realization of God.

THE PSYCHOLOGICAL CAUSES OF MODERNISM.—Curiosity and pride are, according to the Encyclical "Pascendi", two remote causes. Nothing is truer; but, apart from offering an explanation common to all heretical obstinacy, we ask ourselves here why this pride has taken the shape of modernism. We proceed to consider this question. In modernism we find, first of all, the echo of many tendencies of the mentality of the present generation. Inclined to doubt, and distrustful of what is affirmed, men's minds tend of their own accord to minimize the value of dogmatic definitions. Men are struck by the diversity of the religions which exist on the face of the earth. The Catholic religion is no longer, in their eyes, as it was in the eyes of our ancestors, the morally universal religion of cultured humanity. They have been shown the influence of race on the diffusion of the Gospel. They have been shown the good sides of other cults and beliefs. Our contemporaries find it hard to believe that the greater part of humanity is plunged in error, especially if they are ignorant that the Catholic religion teaches that the means of salvation are at the disposal of those who err in good faith. Hence they are inclined to overlook doctrinal divergencies in order to insist on a certain fundamental conformity of tendencies and of aspirations.

Then again they are moved by sentiments of liberalism and moderation, which reduce the importance of formal religion, as they see in the various cults only private opinions which change with time and place, and which merit an equal respect from all. In the West, where people are of a more practical turn, a non-intellectual interest explains the success of heresies which win a certain popularity. Consider the countries in which modernism is chiefly promulgated: France and Italy. In these two countries, and especially in Italy, ecclesiastical authority has imposed social and political directions which call for the sacrifice of humanitarian and patriotic ideas or dreams. That there are important reasons for such commands does not prevent discontent. The majority of men have not enough virtue or nobility to sacrifice for long, to higher duties, a cause which touches their interest or which engages their sympathy. Hence it is that some Catholics, who are not quite steady in their faith and religion, attempt to revolt, and count themselves fortunate in having some doctrinal pretexts to cover their secession.

The founder of the periodical "La Foi Catholique", a review started for the purpose of combating modernism, adds this explanation: "The insufficient cultivation of Catholic philosophy and science is the second deep

explanation of the origin of modernist errors. Both have too long confined themselves to answers which, though fundamentally correct, are but little suited to the mentality of our adversaries, and are formulated in a language which they do not understand and which is no longer to the point. Instead of utilizing what is quite legitimate in their positive and critical tendencies, they have only considered them as so many abnormal leanings that must be opposed . . ." (Gau-
deau, "La Foi Catholique", I, pp. 62-65). Another point is that the intrinsic nature of the movement of contemporary philosophy has been too much despised or ignored in Catholic schools. They have not given it that partial recognition which is quite consonant with the best scholastic tradition: "In this way, we have failed to secure a real point of contact between Catholic and modern thought" (Gau-
deau, *ibid.*). For lack of professors who knew how to mark out the actual path of religious science, many cultured minds, especially among the young clergy, found themselves defenceless against an error which seduced them by its speciousness and by any element of truth contained in its reproaches against the Catholic schools. It is scholasticism ill-understood and calumniated that has incurred this disdain. And for the pope, this is one of the immediate causes of modernism. "Modernism", he says, "is nothing but the union of the faith with false philosophy". Cardinal Mercier, on the occasion of his first solemn visit to the Catholic University of Louvain (8 December, 1907), addressed the following compliment to the professors of theology: "Because, with more good sense than others, you have vigorously kept to objective studies and the calm examination of facts, you have both preserved our Alma Mater from the strayings of modernism and have secured for her the advantages of modern scientific methods." ("Annuaire de l'Université Catholique de Louvain", 1908, p. XXV, XXVI.) Saint Augustine (De Genesi contra Manicheos, I, Bk. I, i) in a text that has passed into the Corpus Juris Canonici (c. 40, c. xxiv, q. 3) had already spoken as follows: "Divine Providence suffers many heretics of one kind or another, so that their challenges and their questions on doctrines that we are ignorant of, may force us to arise from our indolence and stir us with the desire to know Holy Scripture." From another point of view, modernism marks a religious reaction against materialism and positivism, both of which fail to satisfy the soul's longing. This reaction however, for reasons that have just been given, strays from the right path.

PONTIFICAL DOCUMENTS CONCERNING MODERNISM.—The semi-rationalism of several modernists, such as Loisy for instance, had already been condemned in the Syllabus; several canons of the Vatican Council on the possibility of knowing God through his creatures, on the distinction between faith and science, on the subordination of human science to Divine revelation, on the unchangeableness of dogma, deal in a similar strain with the tenets of modernism. The following are the principal decrees or documents expressly directed against modernism. (1) The pope's address on 17 April, 1907, to the newly-created cardinals. It is a résumé which anticipates the Encyclical "Pascendi". (2) A letter from the Congregation of the Index of 29 April, 1907, to the Cardinal Archbishop of Milan with regard to the review "Il Rinnovamento". In it we find more concrete notions of the tendencies which the popes condemn. The letter even goes so far as to mention the names of Fogazzaro, Father Tyrrell, von Hügel, and the Abbate Murri. (3) Letters from Pius X, 6 May, 1907, to the archbishops and bishops and to the patrons of the Catholic Institute of Paris. It shows forth clearly the great and twofold care of Pius X for the restoration of sacred studies and Scholastic philosophy, and for the safeguarding of the clergy. (4) The decree "Lamentabili" of the Holy Office, 3-4 July, 1907, condemning 65 distinct

propositions. (5) The injunction of the Holy Office, "Recentissimo", of 28 August, 1907, which with a view to remedying the evil, enjoins certain prescriptions upon bishops and superiors of religious orders. (6) The Encyclical "Pascendi", of 8 Sept., 1907, of which we shall speak later on. (7) Three letters of the Cardinal Secretary of State, of 2 and 10 October, and of 5 November, 1907, on the attendance of the clergy at secular universities, urging the execution of a general regulation of 1896 on this subject. The Encyclical had extended this regulation to the whole Church. (8) The condemnation by the Cardinal-Vicar of Rome of the pamphlet "Il programma dei modernisti", and a decree of 29 October, 1907, declaring the excommunication of its authors, with special reservations. (9) The decree *Motu Proprio* of 18 Nov., 1907, on the value of the decisions of the Biblical Commission, on the decree "Lamentabili", and on the Encyclical "Pascendi". These two documents are again confirmed and upheld by ecclesiastical penalties. (10) The address at the Consistory of 16 Dec., 1907. (11) The decree of the Holy Office of 13 Feb., 1908, in condemnation of the two newspapers, "La Justice sociale" and "La Vie Catholique". Since then several condemnations of the books have appeared. (12) The Encyclical "Editæ" of 26 May, 1910, renewed the previous condemnations. (13) Still stronger is the tone of the *Motu Proprio* "Sacrorum Antistitum", of 1 September, 1910, declared (14) by a decree of the Consistorial Congregations of 25 September, 1910. This *Motu Proprio* inveighs against modernist obstinacy and specious cunning. After having quoted the practical measures prescribed in the Encyclical "Pascendi", the pope urges their execution, and, at the same time, makes new directions concerning the formation of the clergy in the seminaries and religious houses. Candidates for higher orders, newly appointed confessors, preachers, parish priests, canons, the beneficed clergy, the bishop's staff, Lenten preachers, the officials of the Roman congregations, or tribunals, superiors and professors in religious congregations, all are obliged to swear according to a formula which reprobates the principal modernist tenets. (15) The pope's letter to Prof. Decurtins on literary modernism. (All these documents are contained in Vermeersch, op. cit. infra.)

These acts are for the most part of a disciplinary character (the *Motu Proprio* of September, 1910, is clearly of the same nature); the decree "Lamentabili" is entirely doctrinal; the Encyclical "Pascendi" and the *Motu Proprio* of 18 March, 1907, are both doctrinal and disciplinary in character. Writers do not agree as to the authority of the two principal documents; the decree "Lamentabili" and the Encyclical "Pascendi". In the present writer's opinion, since the new confirmation accorded to these decrees by the *Motu Proprio*, they contain in their doctrinal conclusions the infallible teaching of the Vicar of Jesus Christ. (For a more moderate opinion cf. Choupin in "Etudes", Paris, CXIV, p. 119-120.) The decree "Lamentabili" has been called the new Syllabus, because it contains the proscription by the Holy Office of 65 propositions, which may be grouped under the following heads: Prop. 1-8, errors concerning the teaching of the Church; Prop. 9-19, errors concerning the inspiration, truth, and study of Holy Writ, especially the Gospels; Prop. 20-36, errors concerning revelation and dogma; Prop. 27-28, Christological errors; Prop. 39-51, errors relative to the sacraments; Prop. 52-57, errors concerning the institution and organization of the Church; Prop. 58-65, errors on doctrinal evolution. The Encyclical "Pascendi" in the introduction laid bare the gravity of the danger, pointed out the necessity of firm and decisive action, and approved of the title "Modernism" for the new errors. It gives us first a very methodical exposition of modernism; next

follows its general condemnation with a word as to corollaries that may be drawn from the heresy. The pope then goes on to examine the causes and the effects of modernism, and finally seeks the necessary remedies. Their application he endeavours to put into practice by a series of energetic measures. An urgent appeal to the bishops fittingly closes this striking document.

A. VERMEERSCH.

Modigliana, DIOCESE OF (MUTILIANENSIS), in the Province of Florence, in Tuscany. The city is situated on the banks of the Tramazza, and is the Castrum Mutilum of Livy. In the ninth century it was owned by the counts of Ravenna; later it was ruled by the Guidi until 1377, when it owed allegiance to the Florentines. The academy of the Incamminati flourished there in the sixteenth century. The episcopal see dates only from 1850 and was at first suffragan of Faenza. The cathedral, originally a collegiate church, was rebuilt in the sixteenth century and was dedicated by Julius II. The first bishop was Mario Melini. The

diocese is now suffragan of Florence; has 84 parishes, 46,200 parishioners; two religious houses of men, and seven of women; one school for boys, and three for girls.

CAPPILLETTI, *Le Chiese d'Italia*, XVII (Venice, 1857).

U. BENTIGNI.

Modra, a titular see of Bithynia Secunda, suffragan of Nicæa. The city of Modra figures only in Strabo (XII, 543), who places it in Phrygia Epicteta, at the sources of the Gallus. It was probably situated at or near Aine Gueul, in the vilayet of Broussa. The region is called Medrena by Theophanes the Chronographer and Constantine Porphyrogenitus (*De themat.*, vi). Several "Notitiæ episcopatum" mention the See of Medrena, or Mela. The name of this second place is also written Melina, and was called for a time Justinianopolis Nova in honour of Justinian. As from the twelfth century we find only Melagina, Melangeia, or Melania, it is evident that the earlier Mela is the Malagina often mentioned by Byzantine historians as the first large station of the imperial armies in Asia Minor on the road from Constantinople to Dorylæum, and an important strategic point. This city must have been located between Lefke and Vezirkhan, two railway stations on the Constantinople-Bagdad line. The bishops recorded are: Macedonius of Justinianopolis Nova, present at the Council of Constantinople (555); Theodorus of Justinianopolis Nova or Mela, present at Constantinople (680); Nectarius, or Nicetas of Mela, present at Nicæa (787); Constantius of Mela, present at Constantinople (869); Paul of Mela, present at Constantinople (879); John of Malagina (1256); Constantine of Melangeia (thirteenth century); N. of Melaneia (1401).

Mohammedan Confraternities.—The countries where Mohammedanism prevails are full of religious associations, more or less wrapped in secrecy, which are also political, and which may prove troublesome at some future time. The oldest of them, the Kadriya, dates from the twelfth century of our era, having been called into existence by the necessity of united counsels in order to make head against the Crusades. The name given to it was that of its founder, the Persian Sidi-abd-el-Kader-el-Djilani, who died at Bagdad in 1166. His disciples speak of him as "The Sultan of the Saints". One of the more recent association, and a very aggressive one, is that of the Senoussiya, founded by an Algerian, Sheikh Senoussi (d. 1859). In contrast to the exclusive spirit of the other orders, this one has opened its doors to all of them, allowing them to keep their own names, doctrines, usages, and privileges. The rallying principle of this combination is hatred of Christians; it isolates them in anticipation of the uprising which, on the appointed day of the Lord, will drive them out of "the Land of Islam" (*dar el Islam*, as opposed to *dar el harb*, "Land of the Infidels", or, literally, "Land of the Holy War"). Its motto is: "Turks and Christians, I will break them all with one blow". Those affiliated to the confraternities are called *khouans* (brethren) in North Africa; *dervishes* (poor men) in Turkey and Central Asia; *fakirs* (beggars) in India; *mourids* (disciples) in Egypt, Arabia, and Syria. Since the conquest of Algeria by the French (1830) the reaction has resulted in an immense development of confraternities in all Mohammedan countries. Except among the wealthy and sceptical of the great cities, very few Mussulmans escape the infection of this movement, and M. Pommerol num-

bers the total membership at 170,000,000. Leaving aside the excellent administrative and financial organization of the confraternities, we will here discuss only their religious side.

As is well known, at the call of the muezzins every Mohammedan is bound to recite daily certain prayers at stated hours. The khouans are also bound to follow these prayers with others, peculiar to their association. Among the chief of these is a kind of litany, called *dikr* (repeated utterance), for which a chaplet is used. Fundamentally, it is the same for all the orders, but with slight variations, by which the initiated are enabled to recognize each other easily. In general, it contains the Mohammedan symbol or Credo: "There is no God but the true God" (*La ilaha ill' Allah*, literally, "No god except God"), which is repeated, say a hundred times. Other terse phrases or invocations are added, such as "God sees me", "God pardon", part of a verse of the Koran, or names of the Divine attributes, as "O Living One", a hundred times, or simply the syllable *Houa* (Him). When the recitation in chorus becomes accelerated, the syllables of *La ilaha ill' Allah* are gradually reduced to *la hou, la ha, la hi*, or even *hou, ha, hi*, or *hou-hou*. The phrase *La ilaha*, etc., must be repeated by the Kadriya one hundred and sixty-five times after each of the five daily prayers; by the Kerzazy, five hundred times; for the Aissaoua, the daily total of repetitions is thirteen thousand and six hundred. Many of the confraternities have mystical tendencies, and make it their object to attain, on certain days and during certain moments, a profound union with God. This union (*ittisdl*), which is described by the Persian and Hindu sufi of the ninth century, resembles the Nirvana of the Buddhists. It is the annihilation of the personality by the identification (*djam* or *ittihad*) of the subject with God. Sidi-abd-el-Kader-el-Djilani proclaimed that "happiness is in unconsciousness of existence". Sheikh Senoussi defined ecstasy as "the annihilation of a man's individuality in the Divine Essence", and Abd-el-Kerim summed it up in two words, "unconsciousness and insensibility". Such teaching cannot shock Mussulmans, for they venerate madmen as saints, and believe that God dwells in empty brains, which explains why they allow demented persons a liberty which, to us, seems excessive. Sometimes the initiated person endeavours to obtain union with the founder of his order, whom he regards as a superior emanation of the Godhead and His all-powerful intermediary. In this way *Refaya* are made.

As to the method of arriving at this pseudo-ecstatic union: Sufism, which preceded the confraternities, and from which many of them are derived, was content to teach the moral method of renunciation-detachment carried as far as possible. This was the essence of primitive Sufism, which was simply a "way" (*tariqa*), a method of sanctification, not a dogmatic system or an organization. The confraternities added special exercises, and in this lies the great difference from Christian mysticism. The latter confesses the impossibility of attaining a true mystical state by one's own efforts; God must produce it, and then it comes unexpectedly, whether during prayer or in the midst of some indifferent occupation. The Mussulman thinks otherwise: there is a physical process which consists in the manner of reciting the *dikr* in common and which takes effect especially on Friday, the weekly holy day of Islam. There are various prescriptions as to how the breath should be held and its respiration prolonged. A more important detail is the exhausting bodily exercise which is enjoined to produce a kind of vertigo or hysterical intoxication, followed either by convulsions or by extreme weakness. Thus, among the Kadriya, says Le Chatelier, "the khouans give themselves up to a rhythmic and gradually accelerated swaying of the

upper part of the body which superinduces congestion of the cerebro-spinal system. Under the double influence of this purely physical cause and the concentration of all the intellectual faculties upon the same idea, that of the majesty of God, the phenomena of religious hysteria are produced in many of the adepts. . . . They are much in evidence in the convents of the order" (p. 29). The founder had prescribed that the faithful should confine their recitation to "*ha*, turning the head to the right, *hou*, turning it to the left, *hi*, bowing it, and prolonging each sound as much as the breath permits. It is easy to imagine the effect that may be produced on the most soundly constituted temperament by the repetition of these syllables accompanied by violent movements of the head" (ibid., p. 33). At the present time the Zaheriya go through the same movements with the formula, *La ilaha ill' Allah*, spoken in one breath, and sometimes as often as twenty-one times without a respiration. The Sarehourdiya, founded in the thirteenth century, repeat an indefinite number of times without interruption the phrase *La ilaha*, etc., while raising the head from the navel to the right shoulder, and thus they fall into a dumb state of unconsciousness. The Zaheriya add the left shoulder. The Nakechabendiya sometimes help the process with opium and similar drugs. Among the Beioumiya the body is bent, at each invocation, down to the waist, while the arms are crossed; they are uncrossed while the body is raised again, and then the hands are clapped together at the level of the face.

Some confraternities deserve special mention for the intense nervous paroxysms attained by their members. First, among the Kheluoatiya, founded in the fourteenth century, the members from time to time retire into deep solitude (whence their name, from *kheloua*, retreat); thus separated from the world, the disciple can communicate with others only by signs or in writing; he fasts from sunrise to sunset, and takes only such nourishment as is strictly necessary. By the use of coffee, he reduces his sleep to two or three hours. He recites certain sacred words, such as *Houa* (Him), *Qayyoun* (Immutable), *Haqq* (Truth), which have to be repeated from 10,000 to 30,000 times a day, according to the directions of the initiator. "The upper eyelid is briskly pressed down on the lower, to produce a titillation in the organ of sight which acts on the optic nerve and, through it, on the cerebral system. . . . The word *Qayyoun* is recited, say, 20,000 times, while the disciple sways and bows the head, with closed eyes. The rapidity of repetition cannot exceed once in every second, and the duration of such a prayer is from five to six hours. Supposing that the candidate is given three names to repeat in this way, it must take him eighteen hours a day. . . . The teachers of the order compare the Kheloua initiation to a deadly poison when taken in too large doses at first, and which can be assimilated by progressive use. . . . All the members who make frequent retreats, even if the duration is not prolonged, are seriously affected in mind. Emaciated, haggard-eyed, they return to ordinary life still retaining the traces of their harsh trials. . . . An extreme exaltation, then, is the characteristic of this order, and it, more than any other, must be regarded as the focus of an intense fanaticism" (ibid., 62 sqq.). Another very remarkable confraternity is that of the Alssaoua, founded in the fifteenth century by Sidi-Mohammed-ben-Alssa. The *dikr* takes the shape of raucous cries, "to the cadence of a muffled music in rapid time. Inclinations of the body down to the hips, increasing in rapidity, accompany each of these cries, or circular movements of the head, which are also calculated to shake the nervous system. The nervous crises thus superinduced are soon expressed in cerebral intoxication and anæsthesia variously lo-

calized in different subjects. As these phenomena are successively recognized by the practised eye of the presiding sheikh, the khouans, at a given signal, pierce their hands, arms, and cheeks with darts. Others slash their throats or bellies with sabres. Some crunch pieces of glass between their teeth, eat venomous creatures, or chew cactus leaves bristling with thorns. All, one after another, fall exhausted, into a torpor which a touch from the *moqaddem* (presiding initiator) transforms, in certain cases, into hypnosis" (ibid., 101).

In another confraternity, that of the Refaya, founded in the twelfth century by Refal, a nephew of Sidi-abd-el-Kader, most of the devotees faint when the hysterical intoxication supervenes; others "eat serpents and live coals, or roll themselves about

DANCE OF WHIRLING DERVISHES
Constantinople

among burning braziers. They accustom themselves moreover, to casting themselves down on the points of darts, to piercing their arms and cheeks, and to being trodden under foot by their sheikh" (ibid., 204, 206). The howling and the whirling dervishes, who give public exhibitions at Constantinople and at Cairo, belong to the Refaya. Their ceremony begins with shouting accompanied by oscillations and leaps keeping time to the beating of drums. "Forming a chain", writes Théophile Gautier, "they produce, from deep down in their chests, a hoarse and prolonged howling: *Allah hou!* which seems to have nothing of the human voice in it. The whole band, acting under a single impulse, springs forward simultaneously, uttering a hoarse, muffled sound, like the growling of an angry menagerie, when the lions, tigers, panthers, and hyenas think that their feeding-time is being delayed. Then, by degrees, the inspiration comes, their eyes shine like those of wild beasts in the depths of a cave; an epileptic froth comes at the corners of their mouths; their faces become distorted and livid, shining through the sweat; the whole line lies down and rises up under an invisible breath, like blades of wheat under a storm, and still, with every movement, that terrible *Allah-hou* is repeated with increasing energy. How can such bellowings be kept up for more than an hour without bursting the osseous frame of the breast and spilling the blood out of the broken vessels?" (Constantinople, xii). The whirling dervishes, founded in the thirteenth century, are Maoulaniya, also called Mevlevi. "They waltz with arms extended, head inclined on the shoulder, eyes half-closed, mouth half-opened, like confident swimmers who are letting themselves be borne away on the stream of ecstasy. . . . Sometimes the head is thrown back, showing the whites of their eyes, and lips flecked with a light foam" (Constantinople, xi). At last they fall on their knees, exhausted, face to the earth, until the chief touches them, sometimes having to rub their arms and legs. No beholder, without previous information, would suspect the religious significance of these physical exercises of the

howling and the whirling dervishes, or that they constitute a process for arriving at union with God. This union does not consist, as with the saints of Christianity, in a higher knowledge and love of God, attained in silence and repose. In the orders which affect ecstasy, the khouan, on the contrary, is satisfied with the preposterous notion of using violent means to produce physiological effects which bring on intoxication to the point of unconsciousness.

RINN, *Marabouts et Khouan* (Algiers, 1884); LE CHATELIER, *Les confréries musulmanes* (Paris, 1887); DE PONT AND COPPOLANI, *Les confréries religieuses musulmanes* (Algiers, 1887); POMMEBOL, *Ches ceux qui guentent* (Paris, 1902); PETIT, *Les confréries musulmanes*, an excellent summary (Paris, 1902).

AUG. POULAIN.

Mohammed and Mohammedanism.—I. THE FOUNDER.—Mohammed, "the Praised One", the prophet of Islam and the founder of Mohammedanism, was born at Mecca (20 August ?) A. D. 570. Arabia was then torn by warring factions. The tribe of Fihir, or Quraish, to which Mohammed belonged, had established itself in the south of Hijás (Hedjaz), near Mecca, which was, even then, the principal religious and commercial centre of Arabia. The power of the tribe was continually increasing; they had become the masters and the acknowledged guardians of the sacred *Kaaba*, within the town of Mecca—then visited in annual pilgrimage by the heathen Arabs with their offerings and tributes—and had thereby gained such preeminence that it was comparatively easy for Mohammed to inaugurate his religious reform and his political campaign, which ended with the conquest of all Arabia and the fusion of the numerous Arab tribes into one nation, with one religion, one code, and one sanctuary. (See ARABIA, *Christianity in Arabia*.) Mohammed's father was Abdallah, of the family of Hashim, who died soon after his son's birth. At the age of six the boy lost his mother and was thereafter taken care of by his uncle Abu-Talib. He spent his early life as a shepherd and an attendant of caravans, and at the age of twenty-five married a rich widow, Khadeejah, fifteen years his senior. She bore him six children, all of whom died very young except Fatima, his beloved daughter.

On his commercial journeys to Syria and Palestine he became acquainted with Jews and Christians, and acquired an imperfect knowledge of their religion and traditions. He was a man of retiring disposition, addicted to prayer and fasting, and was subject to epileptic fits. In his fortieth year (A. D. 610), he claimed to have received a call from the Angel Gabriel, and thus began his active career as the prophet of Allah and the apostle of Arabia. His first converts were about forty in all, including his wife, his daughter, his father-in-law Abu Bakr, his adopted son Ali Omar, and his slave Zayd. By his preaching and his attack on heathenism, Mohammed provoked persecution which drove him from Mecca to Medina in 622, the year of the Hejira (Flight) and the beginning of the Mohammedan Era. At Medina he was recognized as the prophet of God, and his followers increased. He took the field against his enemies, conquered several Arabian, Jewish, and Christian tribes, entered Mecca in triumph in 630, demolished the idols of the Kaaba, became master of Arabia, and finally united all the tribes under one emblem and one religion. In 632 he made his last pilgrimage to Mecca at the head of forty thousand followers, and soon after his return died of a violent fever in the sixty-third year of his age, the eleventh of the Hejira, and the year 633 of the Christian era.

The sources of Mohammed's biography are numerous, but on the whole untrustworthy, being crowded with fictitious details, legends, and stories. None of his biographies was compiled during his lifetime, and the earliest were written a century and a half after his death. The Koran is perhaps the only reliable source

for the leading events in his career. His earliest and chief biographers are Ibn Ishaq (A. H. 151=A. D. 768), Wakidi (207=822), Ibn Hisham (213=828), Ibn Sa'd (230=845), Tirmidhi (279=892), Tabari (310=929), the "Lives of the Companions of Mohammed", the numerous Koranic commentators (especially Tabari, quoted above, Zamakhshari (538=1144), and Baidawi (691=1292)), the "Musanad", or collection of traditions of Ahmad ibn Hanbal (241=855), the collections of Bokhari (256=870), the "Isabah", or "Dictionary of Persons who knew Mohammed", by Ibn Hajar, etc. All these collections and biographies are based on the so-called Hadiths, or "traditions", the historical value of which is more than doubtful. These traditions, in fact, represent a gradual, and more or less artificial, legendary development, rather than supplementary historical information. According to them, Mohammed was simple in his habits, but most careful of his personal appearance. He loved perfumes and hated strong drink. Of a highly nervous temperament, he shrank from bodily pain. Though gifted with great powers of imagination, he was taciturn. He was affectionate and magnanimous, pious and austere in the practice of his religion, brave, zealous, and above reproach in his personal and family conduct. Palgrave, however, wisely remarks that "the ideals of Arab virtue were first conceived and then attributed to him". Nevertheless, with every allowance for exaggeration, Mohammed is shown by his life and deeds to have been a man of dauntless courage, great generalship, strong patriotism, merciful by nature, and quick to forgive. And yet he was ruthless in his dealings with the Jews, when once he had ceased to hope for their submission. He approved of assassination, when it furthered his cause; however barbarous or treacherous the means, the end justified it in his eyes; and in more than one case he not only approved, but also instigated the crime.

Concerning his moral character and sincerity contradictory opinions have been expressed by scholars in the last three centuries. Many of these opinions are biased either by an extreme hatred of Islam and its founder or by an exaggerated admiration, coupled with a hatred of Christianity. Luther looked upon him as "a devil and first-born child of Satan". Maracci held that Mohammed and Mohammedanism were not very dissimilar to Luther and Protestantism. Spanheim and D'Herbelot characterize him as a "wicked impostor", and a "dastardly liar", while Prideaux stamps him as a wilful deceiver. Such indiscriminate abuse is unsupported by facts. Modern scholars, such as Sprenger, Noldeke, Weil, Muir, Koelle, Grimme, Margoliouth, give us a more correct and unbiased estimate of Mohammed's life and character, and substantially agree as to his motives, prophetic call, personal qualifications, and sincerity. The various estimates of several recent critics have been ably collected and summarized by Zwemer, in his "Islam, A Challenge to Faith" (New York, 1907). According to Sir William Muir, Marcus Dods, and some others, Mohammed was at first sincere, but later, carried away by success, he practised deception wherever it would gain him end. Koelle "finds the key to the first period of Mohammed's life in Khadija, his first wife", after whose death he became a prey to his evil passions. Sprenger attributes the alleged revelations to epileptic fits, or to "a paroxysm of cataleptic insanity". Zwemer himself goes on to criticize the life of Mohammed by the standards, first, of the Old and New Testaments, both of which Mohammed acknowledged as Divine revelation; second, by the pagan morality of his Arabian compatriots; lastly, by the new law of which he pretended to be the "divinely appointed medium and custodian". According to this author, the prophet was false even to the ethical traditions of the idolatrous brigands among whom he lived, and grossly violated the easy sexual morality of

Mohammedanism now comprises various theological schools and political factions. The Orthodox (Sunni) uphold the legitimacy of the succession of the first three caliphs, Abu Bakr, Omar, and Uthman, while the Schismatics (Shiah) champion the Divine right of Ali as against the succession of these caliphs whom they call "usurpers", and whose names, tombs, and memorials they insult and detest. The Shiah number at present about twelve million adherents, or about one-twentieth of the whole Mohammedan world, and are scattered over Persia and India. The Sunni are subdivided into four principal theological schools, or sects, viz., the Hanifites, found mostly in Turkey, Central Asia, and Northern India; the Shafites in Southern India and Egypt; the Malikites, in Morocco, Barbary, and parts of Arabia; and the Hanbalites in Central and Eastern Arabia and in some parts of Africa. The Shiah are also subdivided into various, but less important, sects. Of the proverbial seventy-three sects of Islam, thirty-two are assigned to the Shiah. The principal differences between the two are: (1) as to the legitimate successors of Mohammed; (2) the Shiah observe the ceremonies of the month of fasting, Muharram, in commemoration of Ali, Hasan, Husain, and Bibi Fatimah, whilst the Sunnites only regard the tenth day of that month as sacred, and as being the day on which God created Adam and Eve; (3) the Shiah permit temporary marriages, contracted for a certain sum of money, whilst the Sunnites maintain that Mohammed forbade them; (4) the Shi'ites include the Fire-Worshippers among the "People of the Book", whilst the Sunnites acknowledge only Jews, Christians, and Moslems as such; (5) several minor differences in the ceremonies of

There are also minor sects, the principal of which are the Alites, or Fatimites, the Asharians, Azaragites, Babakites, Babis, Idrisites, Ismailians and Assassins, Jabrians, Kaissanites, Karmathians, Kharijites, followers of the Mahdi, Mu'tazilites, Qadrians, Safrians, Sifatians, Sufis, Wahabis, and Zaidites. The distinctive features of these various sects are political as well as religious; only three or four of them now possess any influence. In spite of these divisions, however, the principal articles of faith and morality, and the ritual, are substantially uniform.

[illegible]

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ
الرَّحْمَنِ الرَّحِيمِ

Africa.—Egypt, 9,000,000; Tripoli, 1,250,000; Tunis, 1,700,000; Algeria, 4,000,000; Morocco, 5,600,000; Eritrea, 150,000; Anglo-Egyptian Sudan, 1,000,000; Senegambia-Niger, 18,000,000; Abyssinia, 350,000; Kamerun, 2,000,000; Nigeria, 6,000,000.

Dahomey, 350,000; Ivory Coast, 800,000; Liberia, 600,000; Sierra Leone, 333,000; French Guinea, 1,500,000; French, British, and Italian Somaliland, British East African Protectorate, Uganda, Togoland, Gambia and Senegal, about 2,000,000; Zanzibar, German East Africa, Portuguese East Africa, Rhodesia, Congo Free State, and French Congo, about 4,000,000; South Africa and adjacent islands, about 235,000.—Approximate total, 60,000,000.

Europe.—Turkey in Europe, 2,100,000; Greece, Servia, Rumania, and Bulgaria, about 1,369,000.

Total, about 3,500,000.

America and Australia, about 70,000.

About 7,000,000 (i. e., four-fifths) of the Persian Mohammedans and about 5,000,000 of the Indian Mohammedans are Shiāhs; the rest of the Mohammedan world—about 221,000,000—are almost all Sunnites.

B. Tenets.—The principal tenets of Mohammedanism are laid down in the Koran (q. v.). As aids in interpreting the religious system of the Koran we have: first, the so-called "Traditions", which are supposed to contain supplementary teachings and doctrine of Mohammed, a very considerable part of which, however, is decidedly spurious; second, the consensus of the doctors of Islam represented by the most celebrated imāms, the founders of the various Islamic sects, the Koranic commentators and the masters of Mohammedan jurisprudence; third, the analogy, or deduction, from recognized principles admitted in the Koran and in the Traditions. Mohammed's religion, known among its adherents as Islam, contains practically nothing original; it is a confused combination of native Arabian heathenism, Judaism, Christianity, Sabiism (Mandæanism), Hæmism, and Zoroastrianism.

The system may be divided into two parts: dogma, or theory; and morals, or practice. The whole fabric is built on five fundamental points, one belonging to faith, or theory, and the other four to morals, or practice. All Mohammedan dogma is supposed to be expressed in the one formula: "There is no God but the true God; and Mohammed is His prophet." But this one confession implies for Mohammedans six distinct articles: (a) belief in the unity of God; (b) in His angels; (c) in His Scripture; (d) in His prophets; (e) in the Resurrection and Day of Judgment; and (f) in God's absolute and irrevocable decree and predetermination both of good and of evil. The four points relating to morals, or practice, are: (a) prayer, ablutions, and purifications; (b) alms; (c) fasting; and (d) pilgrimage to Mecca.

(1) **Dogma.**—The doctrines of Islam concerning God—His unity and Divine attributes—are essentially those of the Bible; but to the doctrines of the Trinity and of the Divine Sonship of Christ Mohammed had the strongest antipathy. As Nöldeke remarks, Mohammed's acquaintance with those two dogmas was superficial; even the clauses of the Creed that referred to them were not properly known to him, and thus he felt that it was quite impossible to bring them into harmony with the simple Semitic Monotheism; probably, too, it was this consideration alone that hindered him from embracing Christianity (Sketches from Eastern History, 62). The number of prophets sent by God is said to have been about 124,000, and of apostles, 315. Of the former, 22 are mentioned by name in the Koran—such as Adam, Noe, Abraham, Moses, Jesus. According to the Sunnī, the Prophets and Apostles were sinless and superior to the angels, and they had the power of performing miracles. Mohammedan angelology and demonology are almost wholly based on later Jewish and early Christian traditions. The angels are believed to be free from all sin; they neither eat nor drink; there is no distinction of sex among them. They are, as a rule, invisible, save to animals,

although, at times, they appear in human form. The principal angels are: Gabriel, the guardian and communicator of God's revelation to man; Michael, the guardian of men; Azrail, the angel of death, whose duty is to receive men's souls when they die; and Israfil, the angel of the Resurrection. In addition to these there are the Seraphim, who surround the throne of God, constantly chanting His praises; the Secretaries, who record the actions of men; the Observers, who spy on every word and deed of mankind; the Travellers, whose duty it is to traverse the whole earth in order to know whether, and when, men utter the name of God; the Angels of the Seven Planets; the Angels who have charge of hell; and a countless multitude of heavenly beings who fill all space. The chief devil is Iblīs, who, like his numerous companions, was once the nearest to God, but was cast out for refusing to pay homage to Adam at the command of God. These devils are harmful both to the souls and to the bodies of men, although their evil influence is constantly checked by Divine interference. Besides angels and devils, there are also jinns, or genii, creatures of fire, able to eat, drink, propagate, and die; some good, others bad, but all capable of future salvation and damnation.

God rewards good and punishes evil deeds. He is merciful and is easily propitiated by repentance. The punishment of the impenitent wicked will be fearful, and the reward of the faithful great. All men will have to rise from the dead and submit to the universal judgment. The Day of Resurrection and of Judgment will be preceded and accompanied by seventeen fearful, or greater, signs in heaven and on earth, and eight lesser ones, some of which are identical with those mentioned in the New Testament. The Resurrection will be general and extend to all creatures—angels, jinns, men, and brutes. The torments of hell and the pleasures of Paradise, but especially the latter, are proverbially crass and sensual. Hell is divided into seven regions: Jahannam, reserved for faithless Mohammedans; Laza, for the Jews; Al-Hutama, for the Christians; Al-Sair, for the Sabians; Al-Saqar, for the Magians; Al-Jahm, for idolaters; Al-Hāwiyat, for hypocrites. As to the torments of hell, it is believed that the damned will dwell amid pestilential winds and in scalding water, and in the shadow of a black smoke. Draughts of boiling water will be forced down their throats. They will be dragged by the scalp, flung into the fire, wrapped in garments of flame, and beaten with iron maces. When their skins are well burned, other skins will be given them for their greater torture. While the damnation of all infidels will be hopeless and eternal, the Moslems, who, though holding the true religion, have been guilty of heinous sins, will be delivered from hell after expiating their crimes.

The joys and glories of Paradise are as fantastic and sensual as the lascivious Arabian mind could possibly imagine. "As plenty of water is one of the greatest additions to the delights of the Bedouin Arab, the Koran often speaks of the rivers of Paradise as a principal ornament thereof; some of these streams flow with water, some with milk, some with wine and others with honey, besides many other lesser springs and fountains, whose pebbles are rubies and emeralds, while their earth consists of camphor, their beds of musk, and their sides of saffron. But all these glories will be eclipsed by the resplendent and ravishing girls, or houris, of Paradise, the enjoyment of whose company will be the principal felicity of the faithful. These maidens are created not of clay, as in the case of mortal women, but of pure musk, and free from all natural impurities, defects, and inconveniences. They will be beautiful and modest and secluded from public view in pavilions of hollow pearls. The pleasures of Paradise will

be so overwhelming that God will give to everyone the potentialities of a hundred individuals. To each individual a large mansion will be assigned, and the very meanest will have at his disposal at least 80,000 servants and seventy-two wives of the girls of Paradise. While eating they will be waited on by 300 attendants, the food being served in dishes of gold, whereof 300 shall be set before him at once, containing each a different kind of food, and an inexhaustible supply of wine and liquors. The magnificence of the garments and gems is conformable to the delicacy of their diet. For they will be clothed in the richest silks and brocades, and adorned with bracelets of gold and silver, and crowns set with pearls, and will make use of silken carpets, couches, pillows, etc., and in order that they may enjoy all these pleasures, God will grant them perpetual youth, beauty, and vigour. Music and singing will also be ravishing and everlasting" (Wollaston, "Muhammed, His Life and Doctrines").

The Mohammedan doctrine of predestination is equivalent to fatalism. They believe in God's absolute decree and predetermination both of good and of evil; viz., whatever has been or shall be in the world, whether good or bad, proceeds entirely from the Divine will, and is irrevocably fixed and recorded from all eternity. The possession and the exercise of our own free will is, accordingly, futile and useless. The absurdity of this doctrine was felt by later Mohammedan theologians, who sought in vain by various subtle distinctions to minimize it.

(2) Practice.—The five pillars of the practical and of the ritualistic side of Islam are the recital of the Creed and prayers, fasting, almsgiving, and the pilgrimage to Mecca. The formula of the Creed has been given above, and its recital is necessary for salvation. The daily prayers are five in number: before sunrise, at midday, at four in the afternoon, at sunset, and shortly before midnight. The forms of prayer and the postures are prescribed in a very limited Koranic liturgy. All prayers must be made looking towards Mecca, and must be preceded by washing, neglect of which renders the prayers of no effect. Public prayer is made on Friday in the mosque, and is led by an imam. Only men attend the public prayers, as women seldom pray even at home. Prayers for the dead are meritorious and commended. Fasting is commended at all seasons, but prescribed only in the month of Ramadan. It begins at sunrise and ends at sunset, and is very rigorous, especially when the fasting season falls in summer. At the end of Ramadan comes the great feast-day, generally called Bairam, or Fitr, i. e., "Breaking of the Fast". The other great festival is that of Asha, borrowed with modifications from the Jewish Day of Atonement. Almsgiving is highly commended: on the feast-day after Ramadan it is obligatory, and is to be directed to the "faithful" (Mohammedans) only. Pilgrimage to Mecca once in a lifetime is a duty incumbent on every free Moslem of sufficient means and bodily strength; the merit of it cannot be obtained by deputy, and the ceremonies are strictly similar to those performed by the Prophet himself (see Mecca). Pilgrimages to the tombs of saints are very common nowadays, especially in Persia and India, although they were absolutely forbidden by Mohammed.

(2) Morals.—It is hardly necessary here to emphasize the fact that the ethics of Islam are far inferior to those of Judaism and even more inferior to those of the New Testament. Furthermore, we cannot agree with Nöldeke when he maintains that, although in many respects the ethics of Islam are not to be compared even with such Christianity as prevailed, and still prevails, in the East, nevertheless, in other points, the new faith—simple, robust, in the vigour of its youth—far surpassed the religion of the

Syrian and Egyptian Christians, which was in a stagnating condition, and steadily sinking lower and lower into the depths of barbarism (op. cit., Wollaston, 71, 72). The history and the development, as well as the past and present religious, social, and ethical condition of all the Christian nations and countries, no matter of what sect or school they may be, as compared with these of the various Mohammedan countries, in all ages, is a sufficient refutation of Nöldeke's assertion. That in the ethics of Islam there is a great deal to admire and to approve, is beyond dispute; but of originality or superiority, there is none. What is really good in Mohammedan ethics is either commonplace or borrowed from some other religions, whereas what is characteristic is nearly always imperfect or wicked.

The principal sins forbidden by Mohammed are idolatry and apostasy, adultery, false witness against a brother Moslem, games of chance, the drinking of wine or other intoxicants, usury, and divination by arrows. Brotherly love is confined in Islam to Mohammedans. Any form of idolatry or apostasy is severely punished in Islam, but the violation of any of the other ordinances is generally allowed to go unpunished, unless it seriously conflicts with the social welfare or the political order of the State. Among other prohibitions mention must be made of the eating of blood, of swine's flesh, of whatever dies of itself, or is slain in honour of any idol, or is strangled, or killed by a blow, or a fall, or by another beast. In case of dire necessity, however, these restrictions may be dispensed with. Infanticide, extensively practised by the pre-Islamic Arabs, is strictly forbidden by Mohammed, as is also the sacrificing of children to idols in fulfilment of vows, etc. The crime of infanticide commonly took the form of burying newborn females, lest the parents should be reduced to poverty by providing for them, or else that they might avoid the sorrow and disgrace which would follow, if their daughters should be made captives or become scandalous by their behaviour.

Religion and the State are not separated in Islam. Hence Mohammedan jurisprudence, civil and criminal, is mainly based on the Koran and on the "Traditions". Thousands of judicial decisions are attributed to Mohammed and incorporated in the various collections of Hadith. Mohammed commanded reverence and obedience to parents, and kindness to wives and slaves. Slander and backbiting are strongly denounced, although false evidence is allowed to hide a Moslem's crime and to save his reputation or life. As regards marriage, polygamy, and divorce, the Koran explicitly (sura iv, v. 3) allows four lawful wives at a time, whom the husband may divorce whenever he pleases. Slave-mistresses and concubines are permitted in any number. At present, however, owing to economic reasons, concubinage is not as commonly practised as Western popular opinion seems to hold. Seclusion of wives is commanded, and in case of unfaithfulness, the wife's evidence, either in her own defence or against her husband, is not admitted, while that of the husband invariably is. In this, as in other judicial cases, the evidence of two women, if admitted, is sometimes allowed to be worth that of one man. The man is allowed to repudiate his wife on the slightest pretext, but the woman is not permitted even to separate herself from her husband unless it be for ill-usage, want of proper maintenance, or neglect of conjugal duty; and even then she generally loses her dowry, which she does not if divorced by her husband, unless she has been guilty of immodesty or notorious disobedience. Both husband and wife are explicitly forbidden by Mohammed to seek divorce on any slight occasion or the prompting of a whim, but this warning was not heeded either by Mohammed himself or by his followers. A divorced wife, in order to ascertain the paternity of a possible

or probable offspring, must wait three months before she marries again. A widow, on the other hand, must wait four months and ten days. Immorality in general is severely condemned and punished by the Koran, but the moral laxity and depraved sensualism of the Mohammedans at large have practically nullified Koranic ethics.

Slavery is not only tolerated in the Koran, but is looked upon as a practical necessity, while the manumission of slaves is regarded as a meritorious deed. It must be observed, however, that among Mohammedans, the children of slaves and of concubines are generally considered equally legitimate with those of legal wives, none being accounted bastards except such as are born of public prostitutes, and whose fathers are unknown. The accusation often brought against the Koran that it teaches that women have no souls is without foundation. The Koranic law concerning inheritance insists that women and orphans be treated with justice and kindness. Generally speaking, however, males are entitled to twice as much as females. Contracts are to be conscientiously drawn up in the presence of witnesses. Murder, manslaughter, and suicide are explicitly forbidden, although blood revenge is allowed. In case of personal injury, the law of retaliation is approved.

In conclusion, reference must be made here to the sacred months, and to the weekly holy day. The Arabs had a year of twelve lunar months, and this, as often as seemed necessary, they brought roughly into accordance with the solar year by the intercalation of a thirteenth month. The Mohammedan year, however, has a mean duration of 354 days, and is ten or eleven days shorter than the solar year, and Mohammedan festivals, accordingly, move in succession through all the seasons. The Mohammedan Era begins with the Hegira, which is assumed to have taken place on the 16th day of July, A. D. 622. To find what year of the Christian Era (A. D.) is represented by a given year of the Mohammedan Era (A. H.), the rule is: Subtract from the Mohammedan date the product of three times the last completed number of centuries, and add 621 to the remainder. (This rule, however, gives an exact result only for the first day of a Mohammedan century. Thus, e. g., the first day of the fourteenth century came in the course of the year of Our Lord 1883.) The first, seventh, eleventh and twelfth months of the Mohammedan year are sacred; during these months it is not lawful to wage war. The twelfth month is consecrated to the annual pilgrimage to Mecca, and, in order to protect pilgrims, the preceding (eleventh) month and the following (first of the new year) are also inviolable. The seventh month is reserved for the fast which Mohammed substituted for a month (the ninth) devoted by the Arabs in pre-Islamic times to excessive eating and drinking. Mohammed selected Friday as the sacred day of the week, and several fanciful reasons are adduced by the Prophet himself and by his followers for the selection; the most probable motive was the desire to have a holy day different from that of the Jews and that of the Christians. It is certain, however, that Friday was a day of solemn gatherings and public festivities among the pre-Islamic Arabs. Abstinence from work is not enjoined on Friday, but it is commanded that public prayers and worship must be performed on that day. Another custom dating from antiquity and still universally observed by all Mohammedans, although not explicitly enjoined in the Koran, is circumcision. It is looked upon as a semi-religious practice, and its performance is preceded and accompanied by great festivities.

In matters political Islam is a system of despotism at home and of aggression abroad. The Prophet commanded absolute submission to the imām. In no case was the sword to be raised against him. The rights of non-Moslem subjects are of the vaguest and

most limited kind, and a religious war is a sacred duty whenever there is a chance of success against the "Infidel". Medieval and modern Mohammedan, especially Turkish, persecutions of both Jews and Christians are perhaps the best illustration of this fanatical religious and political spirit.

GABRIEL OUSSANI.

Mohileff, ARCHDIOCESE OF (MOHYLOVIENSIS), Latin Catholic archdiocese and ecclesiastical province in Russia. For the few Catholics in Russia before the partition of Poland, some mission stations sufficed. The Jesuits, who came in ambassadorial suites, laboured in Moscow from 1648, and in 1691 built the first Catholic church there. The free exercise of the Catholic religion, granted in 1706 by Peter the Great, was also allowed by his immediate successors, on condition that the missionaries did not attempt to secure converts. The Capuchins, Franciscans, and Dominicans also laboured among the immigrant Catholics with fruitful results. When the Jesuits were suppressed in 1773, many of them found a refuge in Russia. However, no special diocese for Catholics was erected. The partitions of Poland brought under Russian sway many hundred thousand Catholics, whose treatment was in striking contrast to that meted out to the Uniates. While Uniate churches and monasteries were confiscated and delivered to the Orthodox, and such Uniates as refused to join the Orthodox Church were subjected to flogging, imprisonment, and confiscation of property, policy and shrewdness led the empress to treat the Latin Church very differently. Wishing to attach it to herself, she entrusted the Franciscans with the parishes of St. Petersburg and the neighbourhood, permitted the foundation of schools, and released churches and schools from all taxes.

As in the first partition of Poland none of the old Polish sees fell to Russia, the empress decided to found a diocese for her Latin Catholic subjects, and to exclude all foreign priests from Russia. Without consulting the pope, she erected the Diocese of White Russia with Mohileff as its see (1772), and appointed as first bishop

Stanislaus Siestrzencewicz Bohusz, Auxiliary Bishop of Vilna (1773). At first Pius VI refused to recognise this see, mainly on account of the empress's arbitrary action and her persecution of the Uniates, but finally appointed the bishop vicar Apostolic of the new diocese. In 1782 Catharine arbitrarily raised the bishopric to an archdiocese. After some negotiations, the pope recognized the new Archdiocese of Mohileff by the Bull "Onerosa pastoralis officii" of 15 April, 1783, which reserved to the pope the foundation of other dioceses in the territory of the archdiocese, extending from the Baltic to the Pacific Ocean. At the second partition of Poland (1793) five Latin sees fell to Russia, Kamenetz, Kieff, Livonia, Lutzk, and Vilna. Although Catharine had promised in the Treaty of Grodno (1793) to maintain the *status quo* as regards the Catholic Church, she arbitrarily suppressed these dioceses and founded two new ones in places with hardly any Catholics. Part of the property of the suppressed bishoprics was confiscated by the State and the rest given to favourites of the empress.

Catharine's son and successor, Paul I, began, directly after his accession, negotiations with Pius VI, with a view to reorganizing the Latin and Uniat Churches. Four of the five suppressed dioceses (Kamenetz, Vilna, Lutzk, and Livonia, the last under the title of Samogitia) were restored, and the new Diocese of Minsk was founded to replace Kieff. Part of the confiscated property was restored to the Church. The four old dioceses, with the new Diocese of Minsk, were made suffragans of Mohileff, which now became a proper ecclesiastical province. Pius VI confirmed this arrangement on 15 November, 1798, by the Bull "Maximis undique pressi", which forms the substantial basis of the constitution of the Latin Church in Russia to-day. The Archdiocese of Mohileff did not escape the persecutions to which both the Latin and Uniat Churches were almost constantly exposed, especially during the reigns of Nicholas I and Alexander II (see RUSSIA). In the hope of weakening the Catholic religion, which it hated and barely tolerated, the Government regularly selected aged or compliant men for Mohileff, leaving the pope no option but to confirm its choice. The first archbishop, Siestrzencewicz (b. 1730; d. 1 Dec., 1826), was one of its most pliable tools. Sprung from a noble but impoverished family of Lithuanian Calvinists, Siestrzencewicz, after serving in the army, became acquainted with Bishop Massalki of Vilna, and through his influence entered the Catholic Church and became a priest. Massalki, who never recognized Siestrzencewicz's lack of character, made him a canon and Auxiliary Bishop of Vilna.

Ambitious, uninfluenced by motives of honour or conscientious scruples, and greedy for power, Siestrzencewicz's sole aim was to curry favour with the secular authorities and thus secure despotic power over the Catholic Church in Russia. To limit as far as possible the power of his clergy, he persuaded Tsar Paul I to establish the "College of the Roman Catholic Church", to decide, as final court of appeal, all important matters concerning the Catholic dioceses. Its decisions had to receive the approval of the ruling senate, and it was furthermore declared the duty of the clergy to submit unconditionally to the will of the emperor in all matters, secular or ecclesiastical. The presiding officer of the college was Siestrzencewicz, who now established an absolute ecclesiastical despotism, appointing to the council only unworthy and subservient men. He granted unlawful divorces for money, induced Alexander I, Paul's successor, to expel the nuncio (who had reported to Rome the archbishop's unscrupulous conduct), and did not enter the feeblest protest against the expulsion of the Jesuits from the capital in 1815, and from Russia in 1820. Casper Casimir Kolumna Cieciszewski (b. 1745), Bishop of Lutzk, succeeded Siestrzencewicz (28 February, 1827; d. 16 April, 1831). His great age pre-

vented him from doing much in face of the series of oppressive measures of Nicholas I, a fanatical adherent of the Orthodox Church. These measures which were intended to reduce the Catholic Church to a condition of servitude, and if possible to exterminate it completely in Russia, were furthered by the practice of leaving the archdiocese vacant for long periods—e. g. after the death of Cieciszewski and of his successor, Ignaz Ludwig Pawlowski (1841–42; b. 1775).

An expository address presented by Pope Gregory XVI to the tsar during his visit to Rome in 1845 led to a Concordat, ratified by Russia in 1848 and promulgated by Pius IX, in accordance with which the Diocese of Tiraspol, with Saratoff as its see, was founded for the Catholic colonists in Southern Russia and made a suffragan of Mohileff. In December, 1848, Casimir Dmochowski (b. 1772; d. 11 January, 1851) was appointed archbishop. He was succeeded by Ignaz Holowiński (1851–5) and Wenceslaus Zylinski (1856–63), a tool of the government. Persecution, suppression, and confiscation continued even after the Concordat, especially under Alexander II. The Diocese of Kamenetz was arbitrarily suppressed in 1866, and Minsk has been vacant since 1869. Under Nicholas II free exercise of religion was granted in 1905, while the edicts of toleration of 17 April and 17 October, 1905, weakened in some measure the privileged position of the Orthodox Church. These alleviations have, however, been since whittled down by the arbitrary conduct of subordinate officials, acting with the tacit approval of the government. The recent archbishops are: Antonius Fialkowski (1871–83); Alexander Casimir Dziewaltowski Gintowt (1883–9); Simon Martin Kozlowski (1891–9); Boleslaw Hieronymous Klopotoski (1901–03); George Joseph Elesäus a Slupóff Szembek (1903–5); Appolinarius Wnukowski (1909), and Vincentius Kluczński (appointed 5 June, 1910).

II. STATISTICS.—The suffragans of Mohileff are: Samogitia, Lutzk-Zhitomir, Vilna, and Tiraspol. From 1866 Kamenetz has been administered by the Bishop of Lutzk, and from 1869 Minsk by the archbishop. The ecclesiastical province is the largest in the world, including three-fourths of European (the ecclesiastical province of Warsaw is excluded) and the whole of Asiatic Russia (5,450,400 sq. miles). According to the diocesan statistics for 1910 the archdiocese contains 28 deaneries, 245 parish churches, 399 priests, 1,023,347 Catholics. The administrators of thirty-four other parishes and chapels are immediately under the jurisdiction of the archbishop. Among these the most important are: Chernigoff (10,600), Tashkent (15,000); and in Siberia: Krasnoyarsk (13,000), Tomsk (10,000), Vladivostok (10,500), etc. The see of the archdiocese is St. Petersburg. The archbishop presides over the Roman Catholic Collegium, which regulates the relations between the respective dioceses and the Department of Public Worship, and administers the property of the Catholic Church. The Metropolitan Curia consists of a secretary and four other members; the archdiocesan chapter of a provost, dean, archdeacon, and six canons; the General Consistory of an official (secular administrator for the bishop), vice-official, three assessors, visitor of monasteries, *Defensor matrimoniorum*, and twelve lay members. The Roman Catholic ecclesiastical academy at St. Petersburg has a rector, spiritual director, sixteen clerical and seven secular professors, and 58 students. The seminary has 2 provisors, a rector, spiritual director, inspector, 14 clerical and 5 secular professors, 33 theological students, 59 philosophical, and 31 in the preparatory course. There are no statistics as to the monasteries of the diocese. From 1908 a Catholic monthly has been published at St. Petersburg.

THEINER, *Die neuesten Zustände der kath. Kirche beider Ritus in Polen u. Russland* (Augsburg, 1841); LESCEUR, *L'église cathol. en Pologne sous le gouvernement russe 1773–1870* (Paris, 1870); FIERLING, *La Russie et le Saint-Siège* (4 vols., Paris, 1896–1907);

and Church history. He was always greatly devoted to such studies, and in his lectures often drew attention to the lite ry treasures of Christian antiquity. To him they stood as the unbroken series of witnesses to the doctrine, worship, and constitution of the Church—the successive evidences of her many victories, as he puts it in the introduction to his "Patrologie oder christlichen Literaturgeschichte", the first volume of which, dealing with the first three centuries, was edited by Reithmayr with additions of his own (Ratisbon, 1840). Less important is the "Kommentar über den Römerbrief" (Ratisbon, 1845), also edited by Reithmayr after Möhler's death; it is difficult to say how much of it is Möhler's own work. The same may be said of the "Kirchengeschichte von J. A. Möhler" (3 vols., Ratisbon, 1867-8; index vol., 1870), laboriously compiled from class notes by the Benedictine Pius Gams, and later translated into French.

PATRICIUS SCHLAGER.

Mohr, CHRISTIAN, b. at Andernach, 1823; d. at Cologne, 1888. He practised his profession of sculptor chiefly at Cologne under the cathedral architect Zwirner. After some early ornamental work at Mainz and Coblenz, Mohr settled in Cologne in 1845. He first executed the statuettes on the tomb of Archbishop Conrad of Hochstaden, the founder of the cathedral. Of importance are his figures of Christ, the Evangelists, and fifty-nine angels on the south portal of the cathedral, where the rich variety of the added symbols excites admiration. On the commission of Emperor William I the eight statues in the middle hall were executed. The "St. Peter" for the middle portal won Mohr the first-class medal at the Paris Exhibition of 1855. He also carved the statue of the first Cologne cathedral architect, Gerhard Riele, and that of the veteran painter of the Cologne school, Stephan Lochner. He undertook many commissions outside of Cologne: the panoramic figures for the assembly-hall at Düsseldorf, the thirty-four figures of the emperors for the Rathaus at Aachen, the equestrian statues for the Fürstenbergische Schloss at Herdringen, the portrait effigies of the Princes of Hohenzollern-Sigmaringen, the figures for the fountain on the market-place at Lübeck, etc. For more than forty years he was thus engaged at Cologne, executing commissions for that city and other places. The cathedral is indebted to him for the best of its sculptural decoration; the Rathaus for the statues of the emperors, and the Museum for the bust of Michelangelo, which in 1873 secured for Mohr the honour of being made a regular member of the K. K. Akademie of Vienna. Mohr was equally esteemed as an art-collector and connoisseur of classical and German antiquities. His household furniture represented the art of the Dürer period. That he was not opposed to the Renaissance is proved by a beautiful silver epergne in that style. Finally, he appears as a writer on art in the works "Köln in seiner Glanzzeit" and "Kölner Torburgen". For his knowledge and his achievements he was indebted for the most part to his personal exertions, since he was practically self-educated; and, even though in many cases he only executed the plans of Schwanthaler, still numerous independent works display both talent and taste.

Zeitschr. für bildende Kunst, XXIV, 100 sqq.; *Illustrierte Zeitung*, no. 866 (1860).

G. GIETMANN.

Mohr, JOSEPH, b. at Siegburg, Rhine Province, 11 Jan., 1834; d. at Munich, 7 February, 1892. Father Mohr did more than any other within the

last century towards restoring to general use, especially in German-speaking countries, those virile melodies and texts sung in the vernacular by the people prior to the Reformation—some dating from the twelfth century—which had been displaced by a sentimental class of hymns more in keeping with modern taste. While at first Father Mohr stood practically alone in the pioneer work of research, he later found powerful assistance in the labours of Rev. Dr. Wm. Bäumker and Rev. Guido Maria Dreves, at that time a Jesuit, both of whom became famous specialists in this field. Among his many works may be mentioned: "Lasset uns beten"; "Treatise on Psalmody"; "Cäcilia", a hymn-book and prayer-book; "Cantate", a hymn and prayer-book; "Psalmi Officii hebdomadæ sanctæ"; "Vesperbüchlein"; "Laudate Dominum", a hymn-book and prayer-book intended more especially for institutions of higher education; "Manuale Cantorum", and "Psalterlein", a hymn-book and prayer-book. Most of these collections—model hymn-books as well as prayer-books—have had large circulations; the "Cantate" has had forty-two editions, and the thirty-third edition of the collection, "Cäcilia", has recently appeared. Several of Father Mohr's collections became the official hymn-books of certain dioceses; others served as the basis for the compilation of official diocesan hymn-books. Mohr had the gift, rare at the present time, of writing genuine hymn-tunes, some of which are in his collections.

Cäcilienvereins-Catalog (Ratisbon, 1870); KORNMÜLLER, *Lektionen der kirchlichen Tonkunst* (Ratisbon, 1895).

JOSEPH OTTEN.

Moigno, FRANÇOIS-NAPOLÉON-MARIE, physicist and author, b. at Guéméné (Morbihan), 15 April, 1804; d. at Saint-Denis (Seine), 14 July, 1884. He received

his early education at the Jesuit college at Sainte-Anne d'Auray and entered the novitiate of the order 2 Sept., 1822. He made his theological studies at Montrouge, devoting his leisure to mathematics and physics in which he achieved much success. Upon the outbreak of the Revolution of 1830, he fled with his brethren to Brieg in Switzerland.

FRANÇOIS-NAPOLÉON-MARIE MOIGNO

Here he continued his studies and, being endowed with a remarkable memory, acquired at the same time several foreign languages, including Hebrew and Arabic. In 1836 he was appointed professor of mathematics at the well-known college of Ste-Geneviève, Rue des Postes, in Paris. Here he became widely known not only as a scholar, but also as a preacher and writer of ability. He wrote numerous articles for the press and was much esteemed by the scientific men of the time, including Cauchy, Arago, Dumas, Ampère, etc. He was engaged on one of his best known works, "Leçons de calcul différentiel et de calcul intégral", based chiefly on Cauchy's methods, and had already published the first volume, when he left the Society in 1843. Shortly afterwards he undertook a tour of Europe, contributing numerous letters to the journal "L'Époque". He acted as chaplain of the Lycée Louis-le-Grand from 1848 to 1851. He became scientific editor of the "Presse" in 1850 and of the "Pays" in 1851 and in 1852 founded the well-known scientific

Journal "Cosmos". In 1862 he founded "Les Mondes" and became associated with the clergy of St-Germain des Prés. In 1873 he was appointed one of the canons of the chapter of Saint-Denis. Moigno was a man of great industry and throughout his long career was a prolific writer, being distinguished rather as an exponent of science than as an original investigator. He not only wrote a large number of scientific and apologetical works of merit but also translated numerous English and Italian memoirs on science into French. He also edited the "Actualités scientifiques". Among his more important works may be mentioned "Répertoire d'optique moderne" (Paris, 1847-50); "Traité de télégraphie électrique" (Paris, 1849); "Leçons de mécanique analytique" (Paris, 1868); "Saccharimétrie" (Paris, 1869); "Optique moléculaire" (Paris, 1873); "Les splendeurs de la foi" (Paris, 1879-83); "Les livres saints et la science" (Paris, 1884), etc., and numerous articles in the "Comptes Rendus", "Revue Scientifique", "Cosmos", etc.

Cosmos, 3rd series, VIII, 443. HENRY M. BROCK.

Molai (MOLAY), JACQUES DE, b. at Rahon, Jura, about 1244; d. at Paris, 18 March, 1314. A Templar at Beaune since 1265, Molai is mentioned as Grand Master of the Templars as early as 1298. He was, as he described himself at his trial, an unlettered soldier (*miles illetratus*); profiting, however, by the collective experience of his order, he presided in 1306 or 1307 at the drawing up of a very important plan of crusade and went to Poitiers to lay it before Clement V, who had summoned him from the East. This crusading project, based upon personal knowledge of the Orient and the Italian cities, is considered by Renan superior to any other scheme of its kind formulated during that epoch. In it Molai shows his implicit confidence in the King of France, whose victim he was soon to become. At the same time Molai presented to the pope a memorial against the amalgamation of the Hospitallers and the Templars under discussion since the Council of Lyons and accepted in principle by Gregory X. On learning from Clement V the accusations brought against his order, Molai begged the pope to do justice and returned to Paris. On 13 October, 1307, he was arrested there, together with all the Templars of the central house of Paris, by the lawyer Nogaret. Nogaret's captious interrogatories necessarily disconcerted Molai, who, knowing neither law nor theology, was unable to defend himself.

On 24 October, 1307, on his first appearance before the inquisitor general of the kingdom, Molai pleaded guilty to some of the imputed crimes, notably the alleged obligation of the Templars on joining the order to deny Christ and to spit upon the crucifix; but he refused to admit the crimes against chastity. On 25 October, 1307, he repeated these same admissions and denials. It is supposed that his object in making these partial admissions was to save his comrades from the extreme penalty. In 1308 a commission of inquiry of eight cardinals was appointed by the pope; it was a new form of procedure, and torture was excluded from it. Molai caused to be surreptitiously circulated in some of the dungeons a wax tablet calling upon his brethren to retract their confessions, and in August, 1308, appeared before this commission. What then took place is a most obscure point of history. According to the record of his trial as it appears in the Bull of Clement V, "*Faciens misericordiam*", Molai would seem to have repeated his admissions of guilt, but, when the Bull was read to him on his appearance before another commission in November, 1309, he was stupefied, made the sign of the Cross twice, and exclaimed: "Would to God that such scoundrels might receive the treatment they receive from the Saracens and Tartars!" From this Viollet concludes that the cardinals of the com-

mission of 1308 attributed to Molai admissions which he had not made. But did they intend to injure him? Quite the contrary, M. Viollet thinks: had they reported that Molai would not repeat the admissions made in 1307, Philip IV the Fair would have had a reason for sending him to the stake as "relapsed"; so, from motives of humanity, they perpetrated a falsehood to save him. Before this commission of 1309 Molai displayed true courage. When they spoke to him of the sodomy of the Templars, and of their transgressions against religious law, he answered that he had never heard of anything of the kind, and asked permission to hear Mass. The trial dragged on. In March, 1313, he, with three other high dignitaries of the order, underwent a last interrogatory in Paris before a new commission of cardinals, prelates, and theologians, authorized to pronounce sentence. He was condemned to imprisonment for life, proudly denying the crimes with which the Temple had been charged. Philip the Fair sent him to die at the stake as "relapsed", and he continued unflinching until the last (see *TEMPLARS, KNIGHTS*).

Hist. litt. de la France, XXVII, 292-3, 382-6, two chaps. written by RENAN; VIOLLET, *Les Interrogatoires de Jacques de Molai* (Paris, 1910); BESSON, *Etude sur Jacques de Molai* (Besançon, 1877); SCHOTTMÜLLER, *Der Untergang des Templerordens* (2 vols., Berlin, 1887); LAVOCAT, *Procès des Frères de l'ordre du Temple* (Paris, 1888); RAETOU, *Les Templiers* (Paris, 1906).

GEORGES GOYAU.

Molesme, NOTRE-DAME DE, a celebrated Benedictine monastery in a village of the same name, Canton of Laignes (Côte d'Or), ancient Burgundy, on the confines of the Dioceses of Langres and Troyes. St. Robert, Abbot of St-Michael de Tonnerre, not finding his monks disposed to observe the Rule of St. Benedict in its original simplicity, left them, accompanied by a few monks and hermits, and selected a spot on the declivity of a hill, to the right of the River Leignes, where, having obtained a grant of land from Hugo de Merlennac, they built a house and oratory from the boughs of trees. Here they lived in extreme poverty until a certain bishop visited them, and, seeing their need, sent them a supply of food and clothing. Members of the noblest families, hearing of the saintly lives of these religious, soon hastened from all parts of the country to join them, bringing in many cases their worldly possessions, which, added to numerous other benefactions, enabled them to erect a church, the most beautiful in the country around, and suitable monastic buildings. The increase in numbers and possessions caused a temporary relaxation in fervour, in so far that the monks ceased to relish the work of the fields, being willing to live on the alms given them. Matters having gone even so far as open rebellion, St. Robert and the most fervent religious left Molesme (1098) and founded Cîteaux, which, though intended as a Benedictine monastery, became the first and mother-house of the Cistercian Order. The monks of Molesme, repenting of their faults, begged Urban II to oblige St. Robert to return to them, and this request was acceded to (1099); Robert continued to govern them until his death (1110). Besides Cîteaux, Molesme founded seven or eight other monasteries, and had about as many monasteries of Benedictine nuns under its jurisdiction. The church and monastery were destroyed and their possessions confiscated in 1472 during the war between France and Burgundy. The buildings were again burned by the heretics towards the close of the sixteenth century. In the seventeenth century the fervour of the monastery was renewed on the introduction of the reform of St. Maur (1648). All the glory of Molesme has now vanished. The magnificent church is razed to the ground, and the monastic buildings are used, a small part as a school, and the rest as common dwellings.

EDMUND M. OBRECHT.

Molfetta, Terlizzi, and Giovinazzo, Diocese of (MELPHICENSIS, TERLITENSIS ET JUVENACENSIS).—Molfetta is a city of the province of Bari, in Apulia, southern Italy, on the Adriatic Sea; its origin is unknown, but many objects of the neolithic, bronze, and the Mycenaean epoch have been found at a place called Pulo, which shows that the site of Molfetta was inhabited in prehistoric times. The town has a beautiful cathedral, and beyond its limits is the sanctuary of the Virgin of the Martyrs containing an image brought to it by some Crusaders in 1188. The first bishop of this city of whom there is any record was John, whose incumbency is referred to the year 1136. The see was at first suffragan of Bari, but in 1484 it became immediately dependent upon Rome. In 1818, it was enlarged with the territory of the suppressed sees of Giovinazzo and Terlizzi, which were re-established in 1835, remaining united, *aeque principaliter*. In the opinion of some people, Giovinazzo is the ancient Egnatia; it has been an episcopal see since 1071. Terlizzi was a city in the Diocese of Giovinazzo, and in 1731, to put an end to certain questions of its independence, it was declared an episcopal see, but united with Giovinazzo. The city was a fortress of the Hohenstaufens and of the Aragonese.

The Diocese of Molfetta contains 4 parishes; 80 secular and 6 regular priests; 42,000 Catholics. Terlizzi contains 3 parishes; 40 secular and 6 regular priests; 24,100 Catholics. Giovinazzo contains 2 parishes; 37 secular and 3 regular priests; 12,150 Catholics. In the united dioceses there are 6 convents for women, 4 for men, 2 schools for boys, and 4 for girls.

CAPPALLETTI, *Le Chiese d'Italia*, XXI.

U. BENIGNI.

Molière (properly, JEAN-BAPTISTE POQUELIN, the name by which he became known to fame having been assumed when he went on the stage, to avoid embarrassing his family), French comic poet; b. at Paris, 15 Jan., 1622; d. there 17 Feb., 1673. He was the son of a Paris furniture dealer who was also a valet-de-chambre to the king, and succeeded his father in the latter of these two capacities. After making his studies with the Jesuits at the Collège de Clermont, he seems to have studied law in some provincial town—perhaps Orléans. It is not known, however, if he ever took his licentiate. The stage very soon attracted him and absorbed him. At twenty-one he entered the theatrical company, organized under the name of "L'illustre Théâtre", in which were Madeleine Béjart and her brothers. The troupe engaged a band of four musicians at the cost of one *livre* per day, and a dancer, who was to receive thirty-five *sols* per day and five *sols* extra for every day when there was a performance. The business started with a deficit, and Molière, who appears to have then been chosen president by his associates, was arrested for debt. He was imprisoned in the Châtelet, but released on his own recognizances.

In the course of the subsequent wanderings through different parts of France, Molière composed some small comic pieces of no importance, of which two have been preserved—"La Jalousie de Barbouillé" and "Le Médecin Volant". Afterwards, about 1653 or 1655, he staged, at Lyons, "L'Etourdi". In this he began to use the language of fine comedy which Corneille had created ten or twelve years before. "Le Dépit Amoureux", produced at Béziers in 1656, should also be mentioned here. Before long the "illustre Théâtre" regained confidence to face the Parisian public; we find it in Paris in 1658. Next year the troupe, now authorized to call itself "Troupe de Monsieur, Frère du Roi" performed "Les Précieuses Ridicules". In this comedy Molière declared

war against the spirit of refined humbuggery (*l'esprit précieux*), and he never ceased to be its enemy, as witness "Les Femmes Savantes" (1672), one of his last pieces. The last twelve years of his life saw the production of his most famous works. "L'Ecole des Maris" (1661) shows the beauty of a confiding and gentle character in a man; "Les Fâcheux" (also 1661) was written in fifteen days; "L'Ecole des Femmes" (1662) gives another lesson to husbands—which was very creditable to the playwright, for he himself, at the age of forty, had just married a girl of twenty, Madeleine Béjart's sister, the volatile Armande who was to give him so much trouble. The "Critique de L'Ecole des Femmes" and the "Impromptu de Versailles" (1663) are two little prose pieces in which the writer defends his comedy of the preceding year and attacks his critics. "Tartufe" (1664), the famous comedy, at first in three acts, afterwards in five, deals trenchant blows at hypocrisy, unfortunately, however, often striking true virtue at the same time. After its first production the public performance of this piece was forbidden, and the ban was not removed for five years.

In the interval Molière wrote: "Don Juan" (or "Le Festin de Pierre") (1665), apparently intended as a revenge for the suppression of "Tartufe"; "Le Misanthrope" (1669) a great comedy of character; "Amphitryon" (1668), three acts in verse of various measures, where Jupiter assumes the form of the Theban general, Amphitryon, in order to betray his wife, Alcemena; lastly, "L'Avare" (1668). Excepting "Les Femmes Savantes", already mentioned, the comedies of his last four years exhibit a great deal of gaiety, but not so much breadth—"Monsieur de Pourceaugnac" and "Le Bourgeois Gentilhomme", in 1669, "Les Fourberies de Scapin", in 1671 and "Le Malade Imaginaire" (1673). While on the stage playing in "Le Malade Imaginaire", the author was seized with a violent hæmorrhage; he was carried home, and died.

In him France lost the greatest of the comic writers whom her history has produced. Judging Molière exclusively from a literary point of view, it must be admitted that he does not owe his reputation to the quantity of dramatic entanglement in his plays; he owes it above all to the truth of his portraiture. His friend Boileau called him "the looker-on" (*le contemplateur*). He knew how to look at the world, to note its vices and its failings, and his genius had the power of combining what he saw, melting all his observations together, adding to them, and thus creating beings who are no longer particular individuals, but are recognizable as men of their whole period—often of all periods of humanity. Moreover, the characters are his chief concern: with him, as with Racine, the characters carry the whole piece, they are its soul. His art may at times fail in other points—as in his *dénouements*, which are often ill contrived—but in that one respect he is always admirable. His plays, then, present a portrait of the heart of man, but a profile portrait drawn by a satirist, whose business is to see only the defective side of it, and a dramatic writer, who is obliged by the laws of stage optics to emphasize certain lines. This

MOLIÈRE
Painting by Pierre Mignard

verisimilitude—or, as his friend La Fontaine expressed it, carefulness “not to go one step away from nature”—is found in all Molière's works. It is particularly visible in his style. Good critics, it is true, have found fault with Molière's style, particularly in his verse; Boileau, Fénelon, and La Bruyère did so in the seventeenth century; Vauvenargues, in the eighteenth; Théophile Gautier and others, in the nineteenth. On the other hand, a whole school has arisen in the last fifty years to extol this writer: for the Moliéristes, as they have been called, Molière is above all criticism; they preach a sort of cultus of Molière. To be more judicious, we must be more moderate. Admitting that the language of comedy, which is that of familiar conversation, permits him certain liberties, which he cannot be fairly blamed for using, still, making all due allowance for the nature of his medium, there is no denying that his style suffers from real carelessness—useless repetitions, incoherent metaphors, heavy and entangled phrases. Molière was obliged to write quickly; he was an improviser, but a genius of improvisation. For his style, in spite of its faults, is still, as Boileau said to Louis XIV, a “rare” style. Frank and natural, he excels in making reason and good sense talk. It is the style of a poet, too—warm, highly coloured, brilliant. Lastly, one finds in him striking words and striking touches, which come spontaneously, and add to his charm.

As for morality, it owes Molière much less than literature does. Although he gave out, in his prefaces, that it was his wish and duty as a dramatic poet, to be of service to morality, he has been severely censured in this regard, from Bossuet to Jean-Jacques Rousseau. While he never put on the stage—as is so often done in these days—a woman guilty of violating her marriage vows, or about to violate them, yet he has been reproached with the presentation of other dangerous pictures. Furthermore, he is always on the side of the young people, who surely need no encouragement in their evil propensities. All his sermons, all his satires, are for parents; all the unpleasant failings depicted by his comedies reside in the fathers and the old people; the laugh is always at their expense, except when their egoism excites horror. It must be confessed that, while the passions of the young king, Louis XIV, had only too much reason to be pleased with the author of “Amphitryon”, religion had no cause to approve the author of “Tartuffe”. Molière's Christianity was not as profound as that of Corneille, Racine, Boileau, and nearly all the illustrious writers of his time. And yet, when there was question of his being given Christian burial, and the curé hesitated, on the ground that the priest had arrived too late to give absolution to the comedian, who, it may almost be said, passed from the stage to the tribunal of God, his widow proved that he had received the sacraments in the last previous paschal season.

See the edition of Molière by DESFOIS AND MEYER in the *Collection des grands écrivains* (Paris, 1873-1900), also an English translation of his works with French text by WALLER, 8 vols. (London, 1902-7), and English version with memoir by WALL in *Bohn's Library* (3 vols., London, 1876-77); LACROIX, *Bibliog. moliériste* (Paris, 1875); VEUILLOT, *Molière et Bourdaloue* (Paris, 1877); LONGHAYE, *Hist. de la litt. franç. au XVII^e siècle* (Paris); CLARETIE, *Molière and Shakespeare in Fortnightly Review*, LVIII (London, 1900), 317; MATTHEWS, *Molière* (New York, 1910).

GEORGES BERTRIN.

Molina, ALONSO DE, Franciscan friar, b. probably 1511 or 1512, at Escalona, province of Toledo, Spain; d. 1584, in the city of Mexico. In 1523 his parents came to New Spain, where he learned the Nahuatl, or Mexican language. The first twelve Franciscan missionaries who arrived in 1524, seeing how thoroughly versed he was in the language of the natives, begged Cortés to use his influence with the child's mother that he might be allowed to help them in their preaching and catechizing. The mother readily consented, and young Alonso became so at-

tached to the fathers that he never left them. When he reached the required age he joined the Franciscan order, and for fifty years was indefatigable in his work among the Indians, devoting also some time to the numerous works which he left. In order to allow him to follow uninterruptedly his chosen work, his superiors relieved him of all cares of office, although there is record of his having been superior of the convent of Texcoco, in 1555. Although no great actions mark the life of Molina, he is nevertheless remarkable for his untiring zeal, and for the wonderful constancy with which, for half a century, he continued his work, resisting its monotony, overcoming all hardships and the opposition he often encountered. He left numerous works, the following unpublished: “Traducción mexicana de las Epístolas y Evangelios de todo el año”; “Horas de Ntra. Sra. en mexicano”; many prayers and devotions for the Indians; “De Contemptu Mundi”; also a treatise on the sacraments. The following have been published: “Doctrina breve mexicana” (1571); “Vocabulario castellano mexicano” (1555); “Confesionario menor” (1565); “Confesionario mayor” (1565); “Doctrina Cristiana” (1578); “Arte mexicano” (1571); and “Vocabulario castellano mexicano y mexicano castellano” (1571, reprinted, Leipzig, 1880), the most important of his works.

J. García Icazbalceta* (Mexico, 1896), III.

CAMILLUS CRIVELLI.

Molina, ANTONIO DE, a Spanish Carthusian and celebrated ascetical writer, b. about 1560, at Villanueva de los Infantes; d. at Miraflores, 21 September, 1612 or 1619. In 1575 he entered the Order of Augustinian Hermits, was elected superior at one of their houses in Spain, and for some time taught theology. But wishing to join an order of stricter discipline, he became a Carthusian at Miraflores, where he died prior of the monastery. He wrote in Spanish a few ascetical works, especially adapted for priests, which became the most popular books of their kind in Spain, and were translated into various foreign languages. The most famous of these is a manual for priests and bears the title: “Instrucción de Sacerdotes, en que se dá doctrina muy importante para conocer la alteza del sagrado oficio Sacerdotal, y para exercitarle debidamente”. Twenty editions of this work are known to have been published, among them a Latin translation by the Belgian Dominican Nicolas Janssen Boy, which received five editions (Antwerp, 1618, 1644; Cologne, 1626, 1711, and 1712), and an Italian translation (Turin, 1865). It was severely attacked by the Jansenist Antoine Arnauld (*De la fréquente Communion*, 1643) but ably defended against him by Petavius (“*Dogmata theologica, De Penitentia*”, lib. III, cap. vi; new ed., Paris, 1865-7, VIII, 286-8). He is also the author of two ascetical works adapted for laymen. The one, “*Exercicios espirituales para personas ocupadas de cosas de su salvacion*”, was published at Burgos in 1613; the other, “*Exercicios espirituales de la excelencias, provecho y necesidad de la oracion mental*”, etc., was first published at Burgos in 1615, and was translated into Latin.

ANTONIO, *Bibliotheca hispana nova* (Madrid, 1783-8), I, 145; HURTER, *Nomenclator*, 3rd ed., III, 608-9. MICHAEL OTT.

Molina (MOL. or MOLIN), JUAN IGNACIO, naturalist and scientist; b. 20 July, 1740, at Guaraculen near Talca (Chile); d. 23 Oct. (12 Sept.?), 1829, at Imola or Bologna (Italy). Molina first studied in Santiago and became a Jesuit when only fifteen. The young scholastic excelled in languages (he composed a number of poems), and in the natural sciences. In 1767 he was sent to Italy which grew to be his second home; he was ordained at Imola soon after, and then lived as

a tutor in Bologna. In his leisure time he devoted himself especially to the study of the natural sciences, although his chief distinction lies in having become the most prominent historian and geographer of his native American home. Molina published his works in Italian; they all appeared at Bologna, the first one anonymously. He treats of Chile in: (1) "Compendio della storia geografica, naturale e civile del regno del Chile" (1776), 8vo, 245 pp., 1 map, 10 tables; (2) "Saggio sulla storia naturale del Chile" (1782), 8vo, 368 pp., 1 map, 2nd enlarged edition (1810), 4to; (3) "Saggio della storia civile del Chile" (1787), 8vo, 333 pp., 2nd enlarged edition (1810), 4to, 306 pp. These three works have been translated into German (Leipzig, 1786-91); French (Paris); Spanish (2 vols., Madrid, 1788-95), the most complete edition; English (Middletown, Conn., 1808; London, 1809, 1825). The original and several of the translations contain Molina's portrait. As an expression of her gratitude Chile named the town of Molina after him. If these works evidence his learning as a student of natural history, this is equally true of his "Memorie di storia naturale lette in Bologna" (Bologna, 1821, 8vo, 2 vols. with 16 essays), which Molina as a member laid before the *Istituto Pontificio*. Another work, "Analogia de los tres reinos de la naturaleza", is of considerable interest, as it was written by Molina in Spanish, and because it was not published, although Mezzofanti procured the *imprimatur* in 1820. Molina was highly esteemed by the botanists; Schrank in 1789 named after him a genus of the *Gramineæ*, well known throughout Europe, *Molina*; and Jussieu in the same year classified the genus *Molinæa*; other generic names (as *Molina*) are no longer used.

JOSEPH ROMPEL.

Molina, LUIS DE, one of the most learned and renowned theologians of the Society of Jesus, b. of noble parentage at Cuenca, New Castile, Spain, in 1535; d. at Madrid, 12 October, 1600. At the age of eighteen, he entered the Society of Jesus at Alcalá, and, on finishing his novitiate, was sent to take up his philosophical and theological studies at Coimbra in Portugal. So successful was he in his studies that, at the close of his course, he was installed as professor of philosophy at Coimbra, and promoted a few years later to the chair of theology at the flourishing University of Evora. For twenty years, marked by untiring labour and devotion, he expounded with great success the "Summa" of St. Thomas Aquinas to eager students. In 1590 he retired to his native city of Cuenca to devote himself exclusively to writing and preparing for print the results of his long continued studies. Two years later, however, the Society of Jesus opened a special school for the science of moral philosophy at Madrid, and the renowned professor was called from his solitude and appointed to the newly established chair. Here death overtook him before he had held his new post for half a year. By a strange coincidence on the same day (12 Oct., 1600) the "Congregatio de auxiliis", which had been instituted at Rome to investigate Molina's new system of grace, after a second examination of his "Concordia", reported adversely on its contents to Clement VIII. Molina was not only a tireless student, but also a profound and original thinker. To him we are indebted for important contributions in speculative, dogmatic and moral theology as well as in jurisprudence. The originality of his mind is shown quite as much by his novel treatment of the old scholastic subjects as by his labours along new lines of theological inquiry.

Molina's chief contribution to the science of theology is the "Concordia", on which he spent thirty years of the most assiduous labour. The publication

of this work was facilitated by the valuable assistance of Cardinal Albert, Grand Inquisitor of Portugal and brother of Emperor Rudolf II. The full title of the now famous work reads: "Concordia liberi arbitrii cum gratiæ donis, divina præscientia, providentia, prædestinatione et reprobatione" (Lisbon, 1588). As the title indicates, the work is primarily concerned with the difficult problem of reconciling grace and free will. In view of its purpose and principal contents, the book may also be regarded as a scientific vindication of the Tridentine doctrine on the permanence of man's free will under the influence of efficacious grace (Sess. VI, cap. v-vi; can., iv-v). It is also the first attempt to offer a strictly logical explanation of the great problems of grace and free will, foreknowledge and providence, and predestination to glory or reprobation, upon an entirely new basis, while meeting fairly all possible objections. This new basis, on which the entire Molinistic system rests, is the Divine *scientia media*. To make clear its intrinsic connexion with the traditional teachings, the work takes the form of a commentary upon several portions of the "Summa" of St. Thomas (I, Q. xiv, a. 13; Q. xix, a. 16; QQ. xxii-iii). Thus Molina is the first Jesuit to write a commentary upon the "Summa". As to style, the work has little to recommend it. The Latinity is heavy, the sentences are long and involved, and the prolix exposition and frequent repetition of the same ideas are fatiguing; in short, the "Concordia" is neither easy nor agreeable reading. Even though much of the obscurity of the book may be attributed to the subject-matter itself, it may be safely said that the dispute concerning Molina's doctrine would never have attained such violence and bitterness, had the style been more simple and the expressions less ambiguous. And yet Molina was of opinion that the older heresies concerning grace would never have arisen or would have soon passed away, if the Catholic doctrine of grace had before been treated according to the principles which he followed for the first time in his "Concordia" and with the minuteness and accuracy which characterized that work. But he was greatly mistaken. For not only was his doctrine powerless to check the teachings of Baius, which began to spread soon after the publication of his work, and to prevent the rise of Jansenism, which sprang from early Protestant ideas, but it was itself the cause of that historic controversy which has raged for centuries between Thomists and Molinists, and which has not wholly subsided even to this day. Thus, the "Concordia" became a bone of contention in the schools, and brought on a deplorable discord among the theologians, especially those of the Dominican and Jesuit orders.

The "Concordia" had scarcely left the press, and had not yet appeared on the market, when there arose against it a violent opposition. Some theologians, having got a knowledge of its contents, endeavoured by every means in their power to prevent its publication. Molina himself withheld the edition for a year. In 1589 he placed it on the market together with a defence of it, which he had in the meantime prepared and which was to answer the chief objections made against his work even before it appeared. The defence was published separately under the title: "Appendix ad Concordiam, continens responsiones ad tres objectiones et satisfactiones ad 17 animadversiones" (Lisbon, 1589). This precaution, however, was of little avail, and the controversy grew apace. Not only his principal adversaries among the Dominicans, Bañez and de Lemos, but even his own brothers in religion, Henriquez and Mariana, opposed his doctrine most bitterly. Soon the whole of Spain rang with the clamour of this controversy, and Molina was even denounced to the Spanish Inquisition. When the dispute was growing too bitter, Rome intervened and took the matter into its own hands. In 1594 Clement VIII imposed silence upon the contend-

ing parties, and in 1596 demanded that the documents be sent to the Vatican. To settle the controversy he instituted in 1598 a special "Congregatio de auxiliis", which at the early stages of its investigation showed a decided opposition to Molina's doctrine. Doubtless Molina took to the grave the impression that Molinism was doomed to incur the censure of the Holy See, for he did not live to see his new system exonerated by Paul V in 1607. (For further details see the article CONGREGATIO DE AUXILIIS.)

Undisturbed by the heat and bitterness of the attack, Molina published a complete commentary upon the first part of the Summa of St. Thomas, which he had prepared at Evora during the years 1570-73 ("Commentaria in primam partem D. Thomæ", 2 vols., Cuenca, 1592). The chief characteristic of this work, which has been repeatedly re-edited, is the insertion where opportunity offered of most of the dissertations of the "Concordia", which thus became an integral part of the commentary. The increasing bitterness and confusion of ideas occasioned by the controversy induced Molina to publish a new edition of the "Concordia" with numerous additions, in which he endeavoured to correct the misconceptions and misrepresentations of his doctrine, and at the same time to dispel the important misgivings and accusations of his adversaries. This edition bears the title: "Liberi arbitrii cum gratia donis etc. concordia, altera sui parte auctor" (Antwerp, 1595, 1609, 1705; new edition, Paris, 1876). To-day this is the only standard edition. After the lapse of nearly a century the Dominican Fr. Hyacinth Serry, in his "Historia Congregationis de auxiliis" (Louvain, 1700; Antwerp, 1709) accused Molina of having omitted many assertions from his Antwerp edition of the "Concordia", which were parts of the Lisbon edition. But Father Livinus de Meyer, S.J., subjected the two editions to a critical comparison, and succeeded in showing that the omissions in question were only of secondary moment, and that Serry's accusation was thus groundless. Meyer's work bears the title, "Historia controversiarum de auxiliis" (Antwerp, 1708). De Molina was not less eminent as a moralist and jurist than as a speculative theologian. A proof of this is his work "De Justitia et jure" (Cuenca, 1593), which appeared complete only after his death. This work is a classic, referred to frequently even at the present time (7 vols., Venice, 1614; 5 vols., Cologne, 1733). On broad lines Molina not only develops therein the theory of law in general and the special juridical questions arising out of the political economies of his time (e. g., the law of exchange), but also enters very extensively into the questions concerning the juridical relations between Church and State, pope and prince, and the like. It is a sad fact, that, in order to justify the brutal persecution of the Jesuits in France, the Benedictine Clémencet ("Extraits des assertions pernicieuses" etc., Paris, 1672) ransacked even this solid work and fancied he found therein lost principles of morality. This is but one of the many misfortunes which at that time of unrest fell so heavily, and as a rule so undeservedly, on the Society of Jesus (cf. Döllinger, "Moralstreitigkeiten", I, Munich, 1889, p. 337). The work "De Hispanorum primigeniorum origine et natura" (Alcalá, 1573; Cologne, 1588) is often attributed to Molina; in reality it is the work of another jurist of the same name, who was born at Ursaon in Andalusia.

As a man, priest, and religious, Molina commanded the respect and esteem of his bitterest adversaries. During his whole life his virtues were a source of edification to all who knew him. To prompt obedience he joined true and sincere humility. On his death-bed, having been asked what he wished done with his writings, he answered in all simplicity: "The Society of Jesus may do with them what it wishes". His love for

evangelical poverty was most remarkable; in spite of his bodily infirmity, brought on by overwork, he never sought any mitigation in the matter of either clothing or food. He was a man of great mortification to the very end of his life.

A biography and bibliography together with a portrait of Molina may be found in the Cologne edition of his *De justitia et jure*, I (1733). It bears the title *L. Molina, S.J. vita morumque brevis adumbratio atque operum Catalogus*. There is no modern critical biography. See MORGOTT in *Kirchenlex.*, s. v.; SOMMERVOEGEL, *Bibl. des écrivains de la C. de J.*, V, 1167-79; HURTER, *Nomenclator*, I (2nd ed.), 47 sqq. J. POHLE.

Molinism, the name used to denote one of the systems which purpose to reconcile grace and free will. This system was first developed by Luis de Molina, and was adopted in its essential points by the Society of Jesus. It is opposed by the Thomistic doctrine of grace—the term Thomism has a somewhat wider meaning—whose chief exponent is the Dominican Bafiez. Along lines totally different from those of Molina, this subtle theologian endeavours to harmonize grace and free will on principles derived from St. Thomas. Whereas Molinism tries to clear up the mysterious relation between grace and free will by starting from the rather clear concept of freedom, the Thomists, in their attempt to explain the attitude of the will towards grace, begin with the obscure idea of efficacious grace. The question which both schools set themselves to answer is this: Whence does efficacious grace (*gratia efficax*), which includes in its very concept the actual free consent of the will, derive its infallible effect; and how is it that, in spite of the infallible efficacy of grace, the freedom of the will is not impaired? It is evident that, in every attempt to solve this difficult problem, Catholic theologians must safeguard two principles: first, the supremacy and causality of grace (against Pelagianism and Semipelagianism), and second, the unimpaired freedom of consent in the will (against early Protestantism and Jansenism). For both these principles are dogmas of the Church, clearly and emphatically defined by the Council of Trent. Now, whilst Thomism lays chief stress on the infallible efficacy of grace, without denying the existence and necessity of the free cooperation of the will, Molinism emphasizes the unrestrained freedom of the will, without detracting in any way from the efficacy, priority, and dignity of grace. As in the tunnelling of a mountain, galleries started by skilful engineers from opposite sides meet to form but one tunnel, thus it might have been expected that, in spite of different and opposite starting-points, the two schools would finally meet and reach one and the same scientific solution of the important problem. If we find, however, that this is not the case, and that they passed each other along parallel lines, we are inclined to attribute this failure to the intricate nature of the subject in question, rather than to the inefficiency of the scholars. The problem seems to lie so far beyond the horizon of the human mind, that man will never be able fully to penetrate its mystery. In the following we shall first consider Molinism as it came from its author's hands, and then briefly review the phases of its later historical development.

I. MOLINISM IN ITS ORIGINAL FORM.—Molinism combats the heresy of the Reformers, according to which both sinners and just have lost freedom of will. It maintains and strenuously defends the Tridentine dogma which teaches: (1) that freedom of will has not been destroyed by original sin, and (2) that this freedom remains unimpaired under the influence of Divine grace (cf. Sess. VI, can. iv-v, in Denzinger, "Enchiridion", ed. Bannwart, Freiburg, 1908, nn. 814-15). Freedom is the power of the will to act or not to act, to act this or that way; whereas it is the characteristic of necessary causes, as animals and inanimate beings, to produce their effects by an intrinsic necessity. Freedom of the will is a consequence of intelligence, and as such the most precious gift of man, an endow-

ment which he can never lose without annihilating his own nature. Man must of necessity be free in every state of life, actual or possible, whether that state be the purely natural (*status puræ naturæ*), or the state of original justice in paradise (*status iustitiæ originalis*), or the state of fallen nature (*status naturæ lapsæ*), or the state of regeneration (*status naturæ reparatæ*). Were man to be deprived of freedom of will, he would necessarily degenerate in his nature and sink to the level of the animal. Since the purely natural state, devoid of supernatural grace and lacking a supernatural justice, never existed, and since the state of original justice has not been re-established by Christ's Redemption, man's present state alone is to be taken into consideration in solving the problem of the relation between grace and free will. In spite of original sin and concupiscence man is still free, not only with reference to ethical good and evil in his natural actions, but also in his supernatural salutary works in which Divine grace co-operates with his will. Molinism escaped every suspicion of Pelagianism by laying down at the outset that the soul with its faculties (the intellect and will) must be first constituted by prevenient grace a supernatural principle of operation *in actu primo*, before it can, in conjunction with the help of the supernatural concursus of God, elicit a salutary act *in actu secundo*. Thus, the salutary act is itself an act of grace rather than of the will; it is the common work of God and man, because and in so far as the supernatural element of the act is due to God and its vitality and freedom to man. It must not be imagined, however, that the will has such an influence on grace that its consent conditions or strengthens the power of grace; the fact is rather that the supernatural power of grace is first transformed into the vital energy of the will, and then, as a supernatural concursus, excites and accompanies the free and salutary act. In other words, as a helping or co-operating grace (*gratia adiuvans seu cooperans*), it produces the act conjointly with the will. According to this explanation, not only does Divine grace make a supernatural act possible, but the act itself, though free, is wholly dependent on grace, because it is grace which makes the salutary act possible and which stimulates and assists in producing it. Thus the act is produced entirely by God as First Cause (*Causa prima*), and also entirely by the will as second cause (*causa secunda*). The unprejudiced mind must acknowledge that this exposition is far from incurring the suspicion of Pelagianism or Semipelagianism.

When the Thomists propound the subtler question, through what agency does the will, under the influence and impulse of grace, cease to be a mere natural faculty (*actus primus*) and produce a salutary act (*actus secundus*), or (according to Aristotelean terminology) pass from potency into act, the Molinists answer without hesitation that it is no way due to the Thomistic predetermination (*predeterminatio sive præmotio physica*) of the will of God. For such a causal predetermination, coming from a will other than our own, is a denial of self-determination on the part of our own will and destroys its freedom. It is rather the will itself which by its consent, under the restrictions mentioned above, renders the prevenient grace (*gratia præveniens*) co-operative and the completely sufficient grace (*gratia vere sufficiens*) efficacious; for, to produce the salutary act, the free will need only consent to the prevenient and sufficient grace, which it has received from God. This theory reveals forthwith two characteristic features of Molinism, which stand in direct opposition to the principles of Thomism. The first consists in this, that the *actus primus* (i. e. the power to elicit a supernatural act) is, according to Molinism, due to a determining influx of grace previous to the salutary act (*influxus prævius, gratia præveniens*), but that God enters into the salutary act itself (*actus secundus*) only by means of a

concomitant supernatural concursus (*concursum simultaneum, gratia cooperans*). The act, in so far as it is free, must come from the will; but the *concursum prævius* of the Thomists, which is ultimately identical with God's predestination of the free act, makes illusory the free self-determination of the will, whether in giving or withholding its consent to the grace. The second characteristic difference between the two systems of grace lies in the radically different conception of the nature of merely sufficient grace (*gratia sufficiens*) and of efficacious grace (*gratia efficax*). Whereas Thomism derives the infallible success of efficacious grace from the very nature of this grace, and assumes consequently the grace to be efficacious intrinsically (*gratia efficax ab intrinseco*), Molinism ascribes the efficacy of grace to the free co-operation of the will and consequently admits a grace which is merely extrinsically efficacious (*gratia efficax ab extrinseco*). It is the free will that by the extrinsic circumstance of its consent makes efficacious the grace offered by God. If the will gives its consent, the grace which in itself is sufficient becomes efficacious; if it withholds its consent, the grace remains inefficacious (*gratia inefficax*), and it is due—not to God, but—solely to the will that the grace it reduced to one which is merely sufficient (*gratia mere sufficiens*).

This explanation gave the Molinists an advantage over the Thomists, not only in that they safeguarded thereby the freedom of the will under the influence of grace, but especially because they offered a clearer account of the important truth that the grace, which is merely sufficient and therefore remains inefficacious, is nevertheless always really sufficient (*gratia vere sufficiens*), so that it would undoubtedly produce the salutary act for which it was given, if only the will would give its consent. Thomism, on the other hand, is confronted by the following dilemma: Either the grace which is merely sufficient (*gratia mere sufficiens*) is able by its own nature and without the help of an entirely different and new grace to produce the salutary act for which it was given, or it is not: if it is not able, then this sufficient grace is in reality insufficient (*gratia insufficiens*), since it must be supplemented by another; if it is able to produce the act by itself, then sufficient and efficacious grace do not differ in nature, but by reason of something extrinsic, namely in that the will gives its consent in one case and withholds it in the other. If then, when possessed of absolutely the same grace, one sinner is converted and another can remain obdurate, the inefficacy of the grace in the case of the obdurate sinner is due, not to the nature of the grace given, but to the sinful resistance of his free will, which refuses to avail itself of God's assistance. But for Thomism, which assumes an intrinsic and essential difference between sufficient and efficacious grace, so that sufficient grace to become efficacious must be supplemented by a new grace, the explanation is by no means so easy and simple. It cannot free itself from the difficulty, as is possible for Molinism, by saying that, but for the refractory attitude of the will, God would have bestowed this supplementary grace. For, since the sinful resistance of the will, viewed as an act, is to be referred to a physical pre-motion on the part of God, as well as the free co-operation with grace, the will, which is predetermined *ad unum*, is placed in a hopeless predicament. On the one hand the physical pre-motion in the form of an efficacious grace, which is necessary to produce the salutary act, is lacking to the will, and, on the other, the entity of the sinful act of resistance is irrevocably predetermined by God as the Prime Mover (*Motor primus*). Whence then is the will to derive the impulse to accept or to reject the one pre-motion rather than the other? Therefore, the Molinists conclude that the Thomists cannot lay down the sinful resistance of the will as the cause of the inefficacy of the grace, which is merely sufficient.

At this stage of the controversy the Thomists urge with great emphasis the grave accusation that the Molinists, by their undue exaltation of man's freedom of will, seriously circumscribe and diminish the supremacy of the Creator over His creatures, so that they destroy the efficacy and predominance of grace and make impossible in the hands of God the infallible result of efficacious grace. For, they argue, if the decision ultimately depends on the free will, whether a given grace shall be efficacious or not, the result of the salutary act must be attributed to man and not to God. But this is contrary to the warning of St. Paul, that we must not glory in the work of our salvation as though it were our own (I Cor., iv, 7), and to his teaching that it is Divine grace which does not only give us the power to act, but "worketh" also in us "to will and to accomplish" (Phil., ii, 13); it is contrary also to the constant doctrine of St. Augustine, according to whom our free salutary acts are not our own work, but the work of grace.

The consideration of these serious difficulties leads us to the very heart of Molina's system, and reveals the real Gordian knot of the whole controversy. For Molinism attempts to meet the objections just mentioned by the doctrine of the Divine *scientia media*. Even Molinism must and does admit that the very idea of efficacious grace includes the free consent of the will, and also that the decree of God to bestow an efficacious grace upon a man involves with metaphysical certainty the free co-operation of the will. From this it follows that God must possess some infallible source of knowledge by means of which he knows from all eternity, with metaphysical certainty, whether in the future the will is going to co-operate with a given grace or to resist it. When the question has assumed this form, it is easy to see that the whole controversy resolves itself into a discussion on the foreknowledge which God has of the free future acts; and thus the two opposing systems on grace are ultimately founded upon the general doctrine on God and His attributes. Both systems are confronted with the wider and deeper question: What is the medium of knowledge (*medium in quo*) in which God foresees the (absolute or conditioned) free operations of His rational creatures? That there must be such a medium of Divine foreknowledge is evident. The Thomists answer: God foresees the (absolute and conditioned) free acts of man in the eternal decrees of His own will, which with absolute certainty produce *præmoendo* as definite *prædeterminationes ad unum*, all (absolute and conditional) free operations. With the same absolute certainty with which He knows His own will, He also foresees clearly and distinctly in the decrees of His will all future acts of man. However, the Molinists maintain that, since, as we remarked above, the pre-determining decrees of the Divine Will must logically and necessarily destroy freedom and lead to Determinism, they cannot possibly be the medium in which God infallibly foresees future free acts. Rather these decrees must presuppose a special knowledge (*scientia media*), in the light of which God infallibly foresees from all eternity what attitude man's will would in any conceivable combination of circumstances assume if this or that particular grace were offered it. And it is only when guided by His infallible foreknowledge that God determines the kind of grace He shall give to man. If, for example, He foresees by means of the *scientia media* that St. Peter, after his denial of Christ, shall freely co-operate with a certain grace, He decrees to give him this particular grace and none other; the grace thus conferred becomes efficacious in bringing about his repentance. In the case of Judas, on the other hand, God, foreseeing the future resistance of this Apostle to a certain grace of conversion, decreed to allow it, and consequently bestowed upon him a grace which in itself was really sufficient, but remained inefficacious solely on account of the refrac-

tory disposition of the Apostle's will. Guided by this *scientia media* God is left entirely free in the disposition and distribution of grace. On His good pleasure alone it depends to whom He will give the supreme grace of final perseverance, to whom He will refuse it; whom He will receive into Heaven, whom He will exclude from His sight for ever. This doctrine is in perfect harmony with the dogmas of the gratuity of grace, the unequal distribution of efficacious grace, the wise and inscrutable operations of Divine Providence, the absolute impossibility to merit final perseverance, and lastly the immutable predestination to glory or rejection; nay more, it brings these very dogmas into harmony, not only with the infallible foreknowledge of God, but also with the freedom of the created will. The *scientia media* is thus in reality the cardinal point of Molinism; with it Molinism stands or falls. This doctrine of the *scientia media* is the battle-field of the two theological schools; the Jesuits were striving to maintain and fortify it, while the Dominicans are ever putting forth their best efforts to capture or turn the position. The theologians who have come after them, unhampered by the traditions of either order, have followed some the doctrine of the Jesuits, some the Dominican system.

The chief objection directed against Molinism at its rise was, that its shibboleth, the *scientia media*, was a sheer invention of Molina and therefore a suspicious innovation. The Molinists on the other hand did not hesitate to hurl back at the Thomists this same objection with regard to their *præmoio physica*. In reality both accusations were equally unfounded. As long as there is an historical development of dogma, it is natural that, in the course of time and under the supernatural guidance of the Holy Ghost, new ideas and new terms should gain currency. The deposit of faith, which is unchangeable in substance but admits of development, contains these ideas from the beginning, and they are brought to their full development by the tireless labours of the theological schools. The idea of the *scientia media* Molina had borrowed from his celebrated professor, Pedro da Fonseca, S.J. ("Commentar. in Metaphys. Aristotelis", Cologne, 1615, III), who called it *scientia mixta*. The justification for this name Molina found in the consideration that, in addition to the Divine knowledge of the purely possible (*scientia simplicis intelligentiæ*) and the knowledge of the actually existing (*scientia visionis*), there must be a third kind of "intermediate knowledge", which embraces all objects that are found neither in the region of pure possibility nor strictly in that of actuality, but partake equally of both extremes and in some sort belong to both kinds of knowledge. In this class are numbered especially those free actions, which, though never destined to be realized in historical fact, would come into existence if certain conditions were fulfilled. A hypothetical occurrence of this kind the theologians call a conditional future occurrence (*actus liber conditionate futurus seu futuribilis*). In virtue of this particular kind of Divine knowledge, Christ, for example, was able to declare with certainty to His obstinate hearers that the inhabitants of Tyre and Sidon would have done penance in sackcloth and ashes, if they had witnessed the signs and miracles which were wrought in Corozain and Bethsaida (cf. Matt., xi, 21 sq.). We know, however, that such signs and miracles were not wrought and that the inhabitants of Tyre and Sidon were not converted. Yet God had infallibly foreseen from all eternity that this conversion would have taken place if the condition (which never was realized) of Christ's mission to these cities had been fulfilled. Who will doubt that God in His omniscience foresees distinctly what any inhabitant of New York would do throughout the day, if he were now in London or Paris instead of America? It is true that a number of Thomists, for example Ledesma ("De div. gratia auxil.", Salamanca, 1611,

pp. 574 sqq.), denied, if not the existence, at least the infallibility of God's knowledge concerning the conditioned free future, and attributed to it only great probability. But, from the time that such eminent theologians as Alvarez, Gonet, Gotti, and Billuart succeeded in harmonizing the infallibility of this Divine knowledge with the fundamental tenets of Thomism by the subtle theory of hypothetical Divine decrees, there has been no Thomist who does not uphold the omniscience of God also with regard to conditioned events. But have they not then become supporters of the *scientia media*? By no means. For it is precisely the Molinists who most sternly repudiate these Divine predetermining decrees, be they absolute or conditioned, as the deathknell of man's freedom. For the very purpose of securing the freedom of the will and in no way to do violence to it by a physical pre-motion of any sort, the Molinists insisted all along that the knowledge of God precedes the decrees of His will. They thus kept this knowledge free and uninfluenced by any antecedent absolute or conditioned decree of God's will. Molinism is pledged to the following principle: The knowledge of God precedes as a guiding light the decree of His will, and His will is in no way the source of His knowledge. It was because by their *scientia media* they understood a knowledge independent of any decrees, that they were most sharply assailed by the Thomists.

II. LATER DEVELOPMENT OF MOLINISM.—Thus far we have learned that the central idea of Molinism lies in the principle that the infallible success of efficacious grace is not to be ascribed to its own intrinsic nature, but to the Divine *scientia media*. The Society of Jesus has ever since clung tenaciously to this principle, but without considering itself bound to maintain all the assertions and arguments of Molina's "Concordia"; on many points of secondary importance its teachers are allowed perfect freedom of opinion.

First of all it was clear to the Jesuits from the beginning and the disputations before the Congregatio de Auxiliis (q. v.) did but strengthen the conviction, that a more perfect, more fully developed, and more accurate exposition of the Molinistic system on grace was both possible and desirable. As a modification of Molinism we are usually referred in the first place to that expansion and development, which afterwards took the name of Congruism (q. v.), and which owes its final form to the joint labours of Bellarmine, Suarez, Vasquez, and Lessius. As the article on Congruism shows in detail, the system received its name from the *gratia congrua*, i. e. a grace accommodated to circumstances. By such is understood a grace which, owing to its internal relationship and adaptation to the state of the recipient (his character, disposition, education, place, time, etc.), produces its effect in the light of the *scientia media* with infallible certainty, and thus is objectively identical with efficacious grace. The expression is borrowed from St. Augustine, as when he says: "Cujus autem miseretur, sic eum vocat, quomodo scit ei congruere, ut vocantem non respuat" (Ad Simplicianum, I, Q. ii, n. 13). Consistently then with this terminology, the grace which is merely sufficient must be called *gratia incongrua*, i. e. a grace which has not a congruity with the circumstances, and is therefore inefficacious. This term also is sanctioned by St. Augustine (l. c.), for he says: "Illi enim electi, qui congruentur vocati; illi autem, qui non congruebant neque contemperabantur vocationi, non electi, quia non secuti, quamvis vocati". This doctrine seems to have advanced beyond "extreme Molinism" to this extent, that inefficacious grace and merely sufficient grace are made to differ even in *actu primo*—not indeed in their internal nature and physical entity, but in their moral worth and ethical nature—inasmuch as the bestowal of an ever so weak *gratia congrua* is an incomparably greater benefit of God than that of an ever so powerful *gratia incongrua*, the actual inefficacy

of which God foresaw from all eternity. Though Molina himself had taught this doctrine ("Concordia", Paris, 1876, pp. 450, 466, 522, etc.), it seems that among his followers some extreme Molinists unduly emphasized the power of the will over grace, thus drawing upon themselves the suspicion of Semipelagianism. At least Cardinal Bellarmine attacks some who propagated such one-sided Molinistic views, and who cannot have been mere imaginary adversaries; against them he skilfully strengthened the tenets of Congruism by numerous quotations from St. Augustine.

As was natural the later Molinism underwent considerable changes, and was improved by the unwearying labours of those who sought to establish the *scientia media*—the most important factor in the whole system—on a deeper philosophical and theological basis, and to demonstrate its worth from a dogmatic point of view. The task was a very difficult one. The theory of the Thomistic decrees of the Divine will having been eliminated as the infallible source of God's knowledge of free acts belonging to the conditional future, some other theory had to be substituted. Molina's doctrine, which Bellarmine and Becanus had made their own, was soon abandoned as savouring of Determinism. Molina (Concordia, pp. 290, 303) transferred the medium of God's infallible knowledge to the *supercomprehensio cordis* (καρδιουργία, the searching of hearts). In virtue of this supercomprehension, God knows the most secret inclinations and penetrates the most hidden recesses of man's heart, and is thus enabled to foresee with mathematical certainty the free resolves latent in man's will. This unsatisfactory explanation, however, met with the natural objection that the mathematically certain foreknowledge of an effect from its cause is nothing more or less than the knowledge of a necessary effect; consequently the will would no longer be free (cf. Kleutgen, "De Deo Uno", Rome, 1881, pp. 322 sqq.). Therefore, the opinion, gradually adopted since the time of Suarez (but repudiated in Molina's work), maintains that, by the *scientia media*, God sees the conditioned future acts in themselves, i. e. in their own (formal or objective) truth. For, since every free act must be absolutely determined in its being, even before it becomes actual or at least conditionally possible, it is from all eternity a definite truth (*determinata veritas*), and must consequently be knowable as such by the omniscient God with metaphysical certainty. Ruiz ("De scientia Dei", Paris, 1629), with a subtlety beyond his fellows, laid a deeper foundation for this theory, and succeeded in getting it permanently adopted by the Molinists. Further proofs for the *scientia media* may be found in Pohle's "Dogmatik", I (4th ed., 1908), pp. 206 sq. However, when further investigations were made, so great and well-nigh insurmountable were the difficulties which arose against the establishing of the absolute independence of the *scientia media* in regard to the Divine Will, that the greater number of the modern Molinists either give up the attempt to indicate a medium of Divine knowledge (*medium in quo*), or positively declare it to be superfluous; nevertheless, there are a few (e. g. Kleutgen, Cornoldi, Régnon) who make a sharp distinction between the question of the actual existence of the *scientia media* and that of its process. While vigorously maintaining the existence of the *scientia media*, they frankly acknowledge their ignorance with regard to its process of operation. Thus, the *scientia media*, which was meant to solve all the mysteries concerning grace, seems to have become itself the greatest mystery of all. The most favourable statement that may be made in its favour is that it is a necessary postulate in any doctrine of grace in which the freedom of the will is to be safeguarded; in itself it is but a *theologoumenon*. If we then consider that the Thomists also, with Billuart (De Deo dissert., VIII, art. iv, §2 ad 6) at their head, call the reconciliation of their *præmonition*

physica with the freedom of the will a "mystery," it would seem that man is not capable of solving the problem of the harmony between grace and free will.

Another phase in the development of this system is the fact that, in the course of time, some of the Molinists have made concessions to the Thomists in the question regarding predestination, without however abandoning the essentials of Molinism. The theory of the *præmotio physica* agrees admirably with the idea of an absolute predestination to glory irrespective of foreseen merits (*prædestinatio ante prævisa merita*). This is the reason why this theory appears, except in the case of a few theologians, as a characteristic feature of the Thomistic doctrine on grace. Now, absolute predestination to glory necessarily involves the rather harsh doctrine of reprobation, which, though only negative, is nevertheless equally absolute. For, if God determines to bestow efficacious graces only upon those whom He has from all eternity predestined to glory, then those not contained in his decree of predestination are a priori and necessarily damned.

Some leading Molinists like Bellarmine and Suarez may possibly have been tempted to show the practical possibility of reconciling Molinism with the eternal and unchangeable decree of predestination by siding with the Thomists in this question of secondary consideration, without, however, sacrificing their allegiance to the *scientia media*. But the majority of Molina's followers, under the lead of Lessius and Vasquez, most consistently held to the opposite view. For they admitted only a conditioned predestination to glory which becomes absolute only consequent upon the foreseen merits of man (*prædestinatio post—et propter—prævisa merita*), and roundly condemned negative reprobation on the ground that it not only limited but even ran counter to the salvific will of God. To-day there is scarcely a convinced Molinist who does not take alone this reasonable standpoint. A modification of Molinism of minor importance arose with regard to the so-called predefinition of good works (*prædefinitio bonorum operum*). By predefinition, in contradistinction to predestination to glory, theologians understand the absolute, positive, and efficacious decree of God from all eternity, that certain persons shall at some time in the future perform certain good works (cf. Franzelin, "De Deo Uno," Rome, 1883, pp. 444 sqq.). This predefinition to good works is either formal or virtual, according as God's decree governing these works and the bestowal of efficacious grace is either formal or merely virtual: Molina, Vasquez, and Gregory de Valencia defended virtual, while Suarez, Tanner, Silvester Maurus, and others upheld formal predefinition. (See CONGRUISM; GRACE, CONTROVERSIES ON.)

J. POHLE.

Molinos, MIGUEL DE, founder of Quietism, b. at Muenia, Spain, 21 Dec., 1640; d. at Rome, 28 Dec., 1696. In his youth he went to Valencia, where, having been ordained priest and received the degree of doctor, he held a benefice in the church of Santo Tomás and was confessor to a community of nuns. He pretended to be a disciple of the Jesuits and quoted them as his authority in his differences with the university. In 1662 he went to Rome as procurator in the cause of the beatification of Venerable Jerónimo Simón. Here, after residing in various other places, he finally took up his abode at the church of Sant' Alfonso which belonged to the Spanish Discalced Augustinians. The Jesuits and Dominicans having accused him of pernicious teachings, the Inquisition ordered his books to be examined. He defended himself well and was acquitted; but again Cardinal d'Estrées, French ambassador at Rome, acting on instructions from Paris, denounced him to the authorities. In May, 1685, the Holy Office formulated charges against him and ordered his arrest. The report of the process was read on 3 September, 1687, in the Dominican church of Santa Maria sopra Minerva, in the presence of an immense concourse of people gathered for the occasion by means of grants of indulgences; he was declared a dogmatic heretic, sentenced to life imprisonment, to be perpetually clothed in the penitential garb, to recite the Credo and one-third of the Rosary, and to make confession four times every year. He received the sacraments on his deathbed. He taught interior annihilation, asserting that this is the means of attaining purity of soul, perfect contemplation, and the rich treasure of interior peace: hence follows the licitness of impure carnal acts, inasmuch as only the lower, sensual man, instigated by the demon, is concerned in them. In the cases of seventeen penitents he excused their lascivious acts, and claimed that those committed by himself were not blameworthy, as free will had had no part in them.

Innocent XI, in the Bull "Cælestis Pastor" (2 November, 1687), condemned as heretical, suspect, erroneous, scandalous, etc., sixty-eight propositions which Molinos admitted to be his, being convicted of having asserted them in speech and in writing, communicated them to others, and believed them—propositions which are not those of the "Gula Espiritual" alone. Moreover, the pope prohibited and condemned all his works, printed or in manuscript. Molinos had followers in abundance; when he was arrested, it is said that twelve thousand letters from persons who consulted him were found in his possession. More than two hundred persons at Rome found themselves implicated in the affair; several communities of nuns practised the "prayer of quiet", while the inquisitorial proceedings in Italy lasted until the eighteenth century. In Spain, the Bishop of Oviedo, taken to Rome and imprisoned in the Castle of Sant' Angelo, the priest Juan de Causadas, and the Carmelite lay brother Juan de Longas, who corrupted a convent of religious women, were all punished as disciples of

Molinism. In France, the semiquietism of Fénelon and Jeanne Guyon (q. v.) took from Molinos only the teaching of "pure love". Among the writings of Molinos may be mentioned the following: (1) "La devoción de la buena muerte" (published at Valencia, 1662, under the name of Juan Bautista Catalá); (2) "La Gufa espiritual" (published first in Italian, at Rome, 1675, then, in Spanish, at Madrid, 1676), approved by various theologians and by ecclesiastical authority, so much so that twenty editions appeared in twelve years, in Latin (1687), French, English (1685), German (1699), etc.; (3) "Tratado de la Comunión cotidiana" (1687).

ANTONIO PÉREZ GOYENA.

Molitor, WILHELM (pseudonyms, ULRIC RIESLER and BENNO BRONNER), poet, novelist, canonist and publicist, b. at Zweibrücken in the Rhine Palatinate, 24 August, 1819; d. at Speyer, 11 January, 1880. After studying philosophy and jurisprudence in Munich and Heidelberg (1836-40), he held various juridical positions in the service of the State from 1843-9. But feeling himself called to the priesthood, the pious young jurist studied theology at Bonn (1849-51) and was ordained priest on 15 March, 1851. In the same year he became secretary to Bishop Weis of Speyer; on 11 November, 1857, he was elected canon of the cathedral chapter and, soon after, appointed *custos* of the cathedral, and professor of archæology and homiletics at the episcopal seminary. He took part in the consultations of the German bishops at Bamberg (1867), Würzburg (1868), and Fulda (1869). In 1868 Pius IX summoned him to Rome as a consultant in the labours preparatory to the Vatican Council. From 1875-7 he was a member of the Bavarian Landtag. He was the chief promoter of the Catholic movement in the Palatinate, and advanced the Catholic cause especially by founding the "Pfälzischer Pressverein", the daily paper "Rheinpfalz" and the "Katholische Vereinsdruckerei". His pronounced ultramontane principles made him unacceptable to the Bavarian Government, which in consequence repeatedly prevented his election to the See of Speyer. He is the author of numerous poems, dramas, novels, sketches on the questions of the day, and a few juridical treatises. A collection of his poems was published in 1884; his "Domlieder" in 1846. His dramas are: "Kynast" (1844); "Maria Magdalena" (1863, 1874); "Das alte deutsche Handwerk" (1864); "Die Freiglassene Neros" (1865); "Claudia Procula" (1867); "Julian der Apostat" (1867); "Des Kaisers Guentling", a tragedy of the times of the martyrs (1874); "Die Blume von Sicilien" (1880, 1897); "Dramatische Spiele", containing the dramatic legend "Sankt Ursulas Rheinfahrt", the comedy "Die Villa bei Amalfi", and the dramatic tale "Schön Gundel" (1878); and his three festive plays,—"Weihnachtsbaum" (1867), "Das Haus zu Nazareth" (1872), and "Die Weisen des Morgenlands" (1877). His novels are: "Die schöne Zweibrückerin", 2 vols. (1844); "Der Jesuit" (1873); "Herr von Syllabus" (1873); "Memoiren eines Totenkopfs", 2 vols. (1875); "Der Caplan von Friedlingen" (1877); "Der Gast im Kyffhäuser" (1880). His juridical works are: "Ueber kanonisches Gerichtsverfahren gegen Cleriker" (1856); "Die Immunität des Domes zu Speyer" (1859); "Die Decretale *Per Venerabilem*" (1876). He also wrote three volumes of sermons (1880-2); "Das Theater in seiner Bedeutung und in seiner gegenwärtigen Stellung" (1866); "Ueber Goethes Faust" (1869); "Brennende Fragen" (1874); "Die Gross-

macht der Presse" and "Die Organisation der Katholischen Presse" (1866); and a few other works of minor importance. In collaboration with Huelkamp he wrote "Papst Pius IX in seinem Leben und Wirken", 4th ed. (1875) and in collaboration with Wittmer "Rom, Wegweiser durch die ewige Stadt" (1866, 1870).

MICHAEL OTT.

Molloy (O'Molloy), FRANCIS, theologian, grammarian, b. in King's County, Ireland, at the beginning of the seventeenth century; d. at St. Isidore's, Rome, about 1684. At an early age he entered the Franciscan Order, and in the year 1642 he was appointed lecturer in philosophy at the college of Klosterneuburg, near Vienna, and in 1645 passed to the chair of theology at Gratz. Here he published a Scotist work on the Incarnation.

About 1650 he was called to Rome and appointed primary professor of theology in the College of St. Isidore. During his residence in Rome he wrote several works on theological subjects and a long Latin poem on Prince Prosper Philip of Spain. In 1676 he published an Irish catechism under the title of "Lucerna Fidelium seu Fasciculus decerptus de Doctrina Christiana". This work, in the Irish language and characters, was printed at the office of the Congregation of the Propaganda, and was dedicated to Cardinal Altieri, Protector of Ireland. Father Molloy is best known as the author of the first Latin-Irish printed grammar (*Grammatica Latino-Hibernica*). This book also came from the press of the Propaganda (1677), and is dedicated to Cardinal Massimi, a great friend of the Irish. It is highly esteemed by writers on the Celtic languages, and is largely drawn upon by modern writers on Irish grammar.

History of Ireland*; RYAN, *Worthies of Ireland* (London, 1821); ANDERSON, *Historical Sketches of the Native Irish* (London, 1846); DOUGLAS HYDE, *Literary History of Ireland* (London, 1903); O'MOLLOY, *Irish Prosody*, tr. O'FLANNIGHAILE (Dublin, 1908).

GREGORY CLEARY.

Molloy, GERALD, theologian and scientist, b. at Mount Tallant House, near Dublin, 10 Sept., 1834; d. at Aberdeen, 1 Oct., 1906. Monsignor Molloy was a distinguished Irish priest and for many years a very popular and much admired figure in the intellectual life of Ireland. He was educated at Castleknock College, where he was very successful in his studies, and subsequently went to Maynooth College. Here he applied himself with enthusiasm to the study of theology and the physical sciences. In both departments his record was a brilliant one. He was barely twenty-three years of age when in 1857 he became professor of theology at Maynooth, and continued to hold that chair until 1874, when he accepted the professorship of natural philosophy at the Catholic University of Ireland. In 1883 he succeeded Dean Neville of Cork as Rector of the Catholic University, which office he occupied up to the day of his death. The varied nature of Monsignor Molloy's work in connexion with Irish education is very striking. He acted on the commission on manual training in primary schools, and filled the post of assistant commissioner under the Educational Endowments Act. As early as 1880 he became a member of the Senate of the Royal University of Ireland, and remained so till 1882, when he was appointed to a fellowship in the same university. In 1890 he became a member of the governing board of that institution and at the time of his death was its vice-chancellor. He was also a member of the Board of Intermediate Education. As a lecturer and skilled experimentalist, Molloy was very successful in dealing with difficult scientific subjects and rendering them

easily intelligible and interesting to his hearers. Under the auspices of the Royal Dublin Society, of whose council he was a member, he delivered a series of lectures on natural science, and in particular on electricity, in which he was an acknowledged expert. On one occasion he joined issue on the subject of lightning conductors with no less an adversary than Sir Oliver Lodge. Among his works are: "Geology and Revelation" (1870), a fuller and maturer treatment of a series of papers on geology in its relation with revealed religion, which appeared from time to time in the "Irish Ecclesiastical Record", and dealt with the supposed conflict between geology and revelation, solving the problem of reconciliation; "Outlines of a course of Natural Philosophy" (1880); "Gleanings in Science" (1888), an interesting series of popular lectures on scientific subjects; "The Irish Difficulty, Shall and Will" (1897). He also translated a number of passages from Dante's "Purgatorio", wrote of the Passion Play at Oberammergau, and was a frequent contributor to several magazines. At the time of his sudden death, due to heart failure, Father Molloy was representing the Catholic University at the celebration of the fourth centenary of the Aberdeen University, and was one of those on whom the honorary degree of Doctor of Laws was conferred by the latter university a few days before. His career is another striking contradiction of the theory that a Catholic clergyman must necessarily be an opponent of scientific progress.

PETER F. CUSICK.

Molo, GASPARO (he wrote his name also MOLA and MOLU), skilful Italian goldsmith and planisher, chiefly known as a medalist, b. (according to Forrer) in Breglio near Como or (according to older records) in Lugano; date of death unknown. He was first active at Milan, then at Mantua, from 1608 at Florence, from which latter period we possess his first signed medal. Here he was *maestro delle stampe della moneta*. In 1609 he became well known by his medals commemorating the marriage and the accession of Cosmo II. In 1609 and 1610 he cut the dies for the talers and the "medals of merit" conferred by the grand duke. According to Kenner, it is not necessary to suppose that he gave up his connexion with the Florentine court at this time, because, in the following years, he struck medals for the court in Mantua, as well as coins for Guastalla and Castiglione, especially as he was again working in Florence in 1614 (certainly in 1615). The medals also, which he made after 1620 for Prince Vincenzo II of Mantua, may very well have been struck at Florence. His further sojourn in Tuscany seems to have been rendered distasteful to him by intrigues. About 1623 he moved to Rome, where he became die-cutter at the papal mint in place of J. A. Moro, who died in 1625. Here he made a great many coins and medals for Urban VIII (1623-44), Innocent X (1644-55), and Alexander VII (1655-57). His last works date from 1664. As it seems strange that Molo should, at the age of eighty-four, still continue working with unabated strength, it is thought that another artist of his name—perhaps his son—continued Gasparo's work. Indeed, we find in 1639 a G. D. Molo, who might have been a son of Gasparo and who apparently died young; but it is more likely that Gasparo founded a school in Rome, and that his engravers worked according to his instructions and in his style, but passed off their works under his name and with his signature. One of his numerous pupils is his successor at the Zecca, the famous Hamerani (Hameran, a German), the founder of that long-lived family of artists, Hamerani. Molo is a good and faithful delineator of character (cf. the

medal of Pope Innocent VII); he is also excellent in figure compositions. The dragon-killer St. George, as Kenner remarks, by its natural and beautiful filling in of space, reminds us of classical coins. As long as cast medals were generally used, public interest in the portrait predominated, and the reverse was usually neglected; this changed with the introduction of the stamping technique. We know only a few cast medals of Molo; he preferred the stamped medal, and his works of this kind are among the best of that time. It may be stated that he was directly responsible for the new ideas in stamping technique. Molo's biography is still very obscure.

KENNER in *Jahrb. der kunsthistor. Sammlungen des A. H. Kaiserhauses*, XII (Vienna, 1891), 137-49; FORRER, *Biogr. Dict. of Medallists*, etc. (4 vols., London, 1902-09).

K. DOMANIG.

Moloch (Heb. *Môlēch*, king).—A divinity worshipped by the idolatrous Israelites. The Hebrew pointing *Môlēch* does not represent the original pronunciation of the name, any more than the Greek vocalization *Moloch* found in the LXX and in the Acts (vii, 43). The primitive title of this god was very probably *Mêlēch*, "king", the consonants of which came to be combined through derision with the vowels of the word *Bôshêth*, "shame". As the word Moloch (A. V. Molech) means king, it is difficult in several places of the Old Testament to determine whether it should be considered as the proper name of a deity or as a simple appellation. The passages of the original text in which the name stands probably for that of a god are Lev., xviii, 21; xx, 2-5; III (A. V. I) Kings, xi, 7; IV (II) Kings, xxiii, 10; Is., xxx, 33; lvii, 9; Jer., xxxii, 35. The chief feature of Moloch's worship among the Jews seems to have been the sacrifice of children, and the usual expression for describing that sacrifice was "to pass through the fire", a rite carried out after the victims had been put to death. The special centre of such atrocities was just outside of Jerusalem, at a place called Tophet (probably "place of abomination"), in the valley of Geennom. According to III (I) Kings, xi, 7, Solomon erected "a temple" for Moloch "on the hill over against Jerusalem", and on this account he is at times considered as the monarch who introduced the impious cult into Israel. After the disruption, traces of Moloch worship appear in both Juda and Israel. The custom of causing one's children to pass through the fire seems to have been general in the Northern Kingdom [IV (II) Kings, xvii, 17; Ezech. xxiii, 37], and it gradually grew in the Southern, encouraged by the royal example of Achaz [IV Kings, xvi, 3] and Manasses [IV (II) Kings, xvi, 6] till it became prevalent in the time of the prophet Jeremias (Jerem. xxxii, 35), when King Josias suppressed the worship of Moloch and defiled Tophet [IV (II) Kings, xxiii, 13 (10)]. It is not improbable that this worship was revived under Joakim and continued until the Babylonian Captivity.

On the basis of the Hebrew reading of III (I) Kings, xi, 7, Moloch has often been identified with Milcom, the national god of the Ammonites, but this identification cannot be considered as probable: as shown by the Greek Versions, the original reading of III (I) Kings, xi, 7, was not Molech but Milchom [cf. also III (I) Kings, xi, 5, 33]; and according to Deut., xii, 29-31; xviii, 9-14, the passing of children through fire was of Chanaanite origin [cf. IV (II) Kings, xvi, 3]. Of late, numerous attempts have been made to prove that in sacrificing their children to Moloch the Israelites simply thought that they were offering them in holocaust to Yahweh. In other words, the *Melch* to whom child-sacrifices were offered was Yahweh under another name. To uphold this view appeal is made in particular to Jer., vii, 31; xix, 5, and to Ezech., xx, 25-31. But this position is to say the least improbable. The texts appealed to may well be understood otherwise, and the prophets expressly treat the cult of

Moloch as foreign and as an apostasy from the worship of the true God. The offerings by fire, the probable identity of Moloch with Baal, and the fact that in Assyria and Babylonia Malik, and at Palmyra Malach-bel, were sun-gods, have suggested to many that Moloch was a fire- or sun-god.

FRANCIS E. GIGOT.

Molokai, an interesting island, one of the North Pacific group formerly known as the Sandwich Islands, or as the Kingdom of Hawaii, then as the Republic of Hawaii, and since annexation by the United States of America as the Territory of Hawaii. This annexation was determined by joint resolution of Congress, signed by the President 7 July, 1898, the completed organization taking effect 14 June, 1900. Of the eight principal islands, Molokai is fifth in size, 261 sq. miles; also fifth in population (2504, Census of 1900). Its location is between the islands of Oahu and Maui, separated from the latter by a channel only eight miles in width, and having no great depth. Molokai is about thirty-eight miles in length from east to west, and its average width is about seven miles. The island, however, was larger in its original volcanic formation. The mountain backbone was split or displaced, the northern part being submerged in the ocean; and there now remains a line of majestic cliffs and noble headlands that for unique grandeur can hardly be surpassed, the great ocean beating at their base except where the few valleys or gulches form open places and where the cliffs recede. This somewhat irregular line of bold mountain face varies in height from 2200 feet in the central part of the island to 3500 feet towards the east. Some higher peaks lie farther back in the eastern part, the highest being almost 5000 feet. All of these highlands are strangely seamed by erosion; verdure has crept in, covering the protected parts, and in some places good-sized trees are growing. Except in the very dry times, many rivulets appear, disappear, come again to the surface or in the open places in kaleidoscopic variety. After heavy rains these little streams become torrents and from overhanging places leap into the open, and are caught and carried away by the winds. In the mountains back of the open-faced northern coast, many wild deer are found. A coral reef, about half a mile in width, fringes the southern coast. The slopes to the south and lower-lying parts are used for grazing. Owing to the uncertainty of the supply of water, the island is not well adapted to agriculture. Honey is an important export. Some attempt has been made at sugar planting, without much success. This picturesque group of islands is favoured in being out of the cyclone belt, and in having no snakes.

LEPER SETTLEMENT.—The entire northern coast of Molokai has but one projection of land. The gulches are merely open places, like the mouth of a pocket, but

just about in the central part of the coast, where the cliff is 2200 feet, there is at its base the Leper Settlement Peninsula (52 miles from Honolulu), somewhat of a horseshoe shape, about two miles wide near the cliff (*pali*), and projecting about two miles into the ocean. Around the extreme point this new coast line is from 100 to 150 feet high; nearer the *pali* it is not so much; at Kalawao, the eastern side, about fifty feet only; and at Kalaupapa, the western side, it is even less. An old and very difficult trail over the *pali* has been improved so that carrying the mails twice a week to and from the steamer landing of Kaunakakai, on the southern side of the island, is practicable, and occasionally a passenger (usually an official) comes or goes that way. The steamer comes around to the landing at Kalaupapa once a week. This peninsula has been formed by the action of a local volcano long since the

main island was formed. The dead crater, Kauhako, occupies a central part of the peninsula, and has a well of brackish water, the surface keeping on a level with the ocean, its greatest depth being 750 feet. The entire formation is very porous, with many caverns and crevices. Just off Kalawao, and fronting the mouth of Waikalo Valley, are two masses of rock projecting from the sea, one known as Mokapu, one as Okala.

Leprosy first appeared in the Hawaiian Islands in 1853. In 1864 its spread had become so alarming that 3

BALDWIN HOME, KALAWAO, MOLOKAI

The row of houses toward the sea was destroyed and the site is now occupied by the United States Leprosarium

Jan., 1865, in the reign of Kamehameha V, the Legislature passed "An act to prevent the spread of leprosy", the execution of the law being in the hands of the Board of Health. In 1865-6, there were 274 persons on the islands reported to be lepers. Under the act of 3 Jan., 1866, segregation was begun, and plans were made for a separate hospital. Land was purchased for this in Palolo Valley, Island of Oahu, but when it became known in the neighbourhood, objections were so strong that the effort was abandoned. A site was then secured at Kalihi, near Honolulu, well separated from the other habitations, and in November, 1865, the hospital was established there. This was for retention, examination, and to some extent medical treatment of the lepers or suspects. This was indeed good; but the need was felt of a larger and more permanent settlement, isolated for those declared to be lepers, to be operated in connexion with the Kalihi Hospital, where efforts would continue for the cure of cases in the early stages. In locating a leper settlement the search was soon directed to the Molokai Peninsula, so well protected by the sea in front and by the towering cliff behind. Favoured as it is by the wholesome trade-winds from the north-east, a place better adapted could hardly have been found. The Board of Health established its authority here on 6 Jan., 1866. Waikalo Valley, connected with the peninsula on the eastern side, and not accessible from other directions, was first selected, as the rich land there could be cultivated, and the little colony might become self-supporting. This attempt did not succeed, the deep valley being rather moist for habita-

tion. Therefore, a good part of the holdings upon the eastern and middle portions of the peninsula were secured, and improvements were begun. Waikalo Valley has not been useless, however, but has been used for cultivation of taro. The non-leper residents still remained at Kalaupapa, the steamer landing. In the time of these beginnings (1865-68) Dr. F. W. Hutchinson was President of the Board of Health, and was Minister of the Interior from 26 April, 1865, until 11 Dec., 1872. Mr. R. W. Meyer, a resident of the mountain-top above the settlement, was Board of Health Agent and attended to the business. He continued as agent, the practical and very efficient business manager of the Leper Settlement until his death, 12 June, 1897.

The physician at Kalihi Hospital reported 2 March, 1866, having received 158 lepers, 57 of whom were sent to Molokai Asylum, 101 remaining at Kalihi Hospital for treatment. In sending to Molokai, some difficulty attended the separating of relatives. Therefore, a few non-leper relatives were allowed to go along as helpers or *Kokuas*. Some cattle and sheep were also sent to Molokai. For Kalihi Hospital, and Molokai Asylum (or Settlement, as it generally became known later), the total amount of expenses in 1866 was \$10,-012.48.

Matters went on pretty well at first, but after some time an ugly spirit developed at Molokai. Drunken and lewd conduct prevailed. The easy-going, good-natured people seemed wholly changed. Thus the President of the Board of Health reported at some length in 1868; but he was able to state that a change for the better had come. Improvements had been made at Molokai, including the building of an hospital. Mr. and Mrs. Walsh had been employed to take charge in February, 1867, relieving Mr. Leparat, who had resigned, Mr. Walsh to act as schoolmaster and magistrate, Mrs. Walsh as nurse. This 1868 report gives the number of lepers received at Molokai as 179, the number remaining at the Kalihi Hospital as 43, the total amount of expenses for Kalihi Hospital and Molokai Settlement since 1866 amounting to \$24,803.-60. From this time on, efforts were continually made to render the segregation and treatment of lepers more effective. Many difficulties were met and overcome. To keep good order in these early years was always difficult. The lepers were increasing in number. Nearly all who came to the settlement were located at Kalawao, on the eastern side of the peninsula, the leper settlement practically continuing there for many years. In 1890 a better supply of water was brought from Waikalo Valley; the pipe was soon extended to Kalaupapa, the steamer landing. A reservoir was constructed midway on the ridge between Kalawao and Kalaupapa. Previous to that time a pipe was laid from a small reservoir in Waialeia Valley, between Waikalo and Kalawao, and extended only partly through Kalawao. At Kalaupapa, two miles distant, the people brought their water from Waihanau Valley in containers upon horses and donkeys. The people at Kalaupapa were chiefly non-lepers who lived there before settlement times. Their holdings (*kuleanas*) had not yet been secured for the lepers as those at Kalawao had been. This was done, however, in 1894, since, after the waterpipe was laid to Kalaupapa, the people had begun to drift that way, and the public buildings also, the shops, etc., had gradually been moved to that place. Therefore it was wisely determined that, in the interest of good order, as well as for convenience, the Government should own and control the entire peninsula and all of its approaches, the non-lepers being sent away. This was quite thoroughly accomplished in 1894.

FATHER DAMIEN AND THE FRANCISCAN SISTERS.—It is the name of Father Damien, however, that has made Molokai known throughout the whole world. He came to the Molokai Settlement to remain, 11 May,

1873. Good order in the settlement was somewhat precarious. Damien's determined character proved to be of great value. Besides his priestly offices, there was opportunity for his efforts at every turn. With a hungry zeal for work, he accomplished many things for the good of the place; he helped the authorities, and brought about a good spirit among the people. Ten years later (1883) the Franciscan Sisters came to Honolulu from Syracuse, N. Y., having been engaged by the Hawaiian Government. They expected coming to the settlement at once, but the authorities concluded that conditions there were unsuitable, that better order must be secured, and some improvements made in buildings, etc. So the sisters remained at Kakaako Branch Hospital, near Honolulu, for about six years, a certain number of newly gathered lepers being retained there. This hospital was given up

EXTERIOR, ST. FRANCIS' CHURCH, KALAUPAPA, MOLOKAI
Built in 1906

when the sisters came to Molokai. At the settlement in 1883 conditions would indeed have been intolerable for the sisters, and the same was true in 1886 when the writer joined Father Damien; but matters were being gradually improved. At last three sisters came to Kalaupapa 15 Nov., 1888. Bishop Home for girls and women had been built. Two more sisters came 6 May, 1889, Robert Louis Stevenson coming by the same boat for a visit. Father Damien died 15 April, 1889. His death, after such a life, arrested the world's attention. A spontaneous outburst of applause from everywhere at once followed. The sixteen years of labour on Molokai made a record that seemed unique to the world at large. The world knew very little about lepers, and Father Damien's life came as a startling revelation of heroic self-sacrifice. He is acknowledged the Apostle of the lepers, and whatever others may do in the same field will help to perpetuate his fame and honour. A monument was offered by the people of England, and accepted by the Hawaiian Board of Health. It was given a place at Kalaupapa, not far from the steamer landing, near the public road now called "Damien Road", adjoining the sisters' place at Bishop Home. The monument in itself is interesting, being an antique cross, fashioned and adapted from stone cutting of about the sixth century, such as was found in the ruins of the Seven Churches of Clonmacnoise on the river Shannon, Ireland. It was transferred by the Board of Health to the Catholic Mission on 11 Sept., 1893, the Bishop coming to receive and bless it. Two miles away, at the other end of the Damien Road, in Kalawao, the body of Father Damien lies, close by the church, where the Pandanus tree stood that sheltered him on his arrival in 1873. Over this grave stands a simple cross with the inscription on one side, "Father Damien"; on the other,

"Damien Deveuster". The strong wooden coffin was placed in an excavation, and imbedded in a solid block of concrete. Since Father Damien's time, two priests have usually been on duty at the settlement, one at Kalawao, the other at Kalaupapa. Father Pamphile Deveuster, Damien's brother, was here in 1895-7; he returned to Belgium, and died there 29 July, 1909.

GOVERNMENT AND THE LEPERS.—Public sentiment over the islands has always supported the Government in carrying out the law concerning lepers; official activity, although somewhat varying, has on the whole made fair progress; at times political interests have not been entirely favourable. The first home at Kalawao, for orphan boys and helpless men, was begun in 1886 under Father Damien, with a few old cabins at first, two large buildings being added in 1887-8, all irregular and provisional. The Government, however, recognized it as a home 1 January, 1889. Three Franciscan Sisters came to this Kalawao Home, 15 May, 1890, and the mother-superior visited it occasionally. In 1892-4 the present Baldwin Home was constructed, and put into use in May and June, 1894. The sisters were replaced 1 December, 1895, by four Brothers of the Picpus Order. Up to the present time (1910) the home has had, including those still living, 976 inmates. The Board of Health has always employed an experienced physician and other officials for the settlement. For many years the Hawaiians had strange ideas about regular physicians. Very few would call for one, and this continued at the settlement up to about 1902. They would, however, always take medicine from the brothers or sisters, and have had a friendly feeling for the Japanese treatment. It has been put in use, dropped, and revived many times. The elder Dr. Goto introduced it at Kakaako in 1886. Good order and favourable conditions in general were specially noteworthy from 1893. A glance over the records of the next ten years shows continued improvements in the water supply, enlarging of medical service, etc. Total expenses for segregation, support, and treatment of lepers for six years, ending 31 December, 1903, were \$876,888.86. In 1906 the buildings owned by the Government numbered 298; those owned by private parties numbered 150. In 1908 the lepers at Molokai numbered 791: of these, 693 were Hawaiians, 42 Chinese, 26 Portuguese, 6 Americans, 5 Japanese, 6 Germans, 2 South Sea Islanders, 1 Dane, 1 French Canadian, 1 Swede, 2 Porto Ricans, 1 Filipino, 1 Tahitian, 1 Russian, 1 Corean, 1 British Negro, 1 Hollander. In 1866 the total number of lepers at the settlement on 31 December was 115; it kept increasing until in 1890 the number reached 1213. Since then there has been a decrease until, 31 December, 1908, the number was 771. In 1908 the plan adopted in the earliest days (1865-69), of attempting to cure new cases, or any that seemed promising, before being sent to Molokai, has been revived. The renewal should be more effective than in the early time because of the great advances science has made in the past forty years. This new work is now carried on at Kalihia as it was over forty years ago, but in better buildings and under far greater advantages. The general outfit at the Molokai Settlement is about complete: establishments for the medical department, hospital, dispensary, nursery, etc. There are bath houses and drug departments at the homes, and special houses for the sick. At Kalaupapa there are the pot factory, the shops, and warehouses, and the residences of the officials pleasantly located and well supplied with conveniences. A large building is under construction for white lepers, the funds being furnished by generous friends throughout the islands. There are two Catholic churches, and several of other denominations. At Kalawao the most prominent features are Baldwin Home and the U. S. Leprosarium. This leprosarium is probably the greatest institution

of its kind in the world. The appropriation by Congress was generous. The buildings are extensive, and supplied with a very elaborate outfit of the best quality and latest invention, and everything in fact that present-day science can provide. Another new addition recently added by the U. S. Government is a fine lighthouse, a pyramidal concrete structure, the light of which is visible for about twenty-four miles.

JOSEPH DUTTON.

Molyneux, SIR CARYLL, Baronet of Sefton, and third Viscount Molyneux of Maryborough in Ireland, b. 1624; d. 1699. He joined the Royalist army at the outbreak of the civil war, and served with his brother, the second viscount, in the Lancashire Regiment, which was mostly Catholic, though almost all the fighting from Manchester (1642) to Worcester (1651). After succeeding to the title he, as a well-known Catholic cavalier, experienced very harsh treatment from the victors; and the family estates suffered severely. It was not until the reign of James II that his fortunes improved. He was then made Lord Lieutenant of Lancashire, and was one of the few who fought with any success on James's side against the Prince of Orange, for he seized and held the town of Chester, until all further resistance was in vain. Some years later he was arrested on a fictitious charge of treason, called "The Lancashire plot", was imprisoned in the Tower with other Catholics, but upon trial was victoriously acquitted (1694).

Many other members of this notable and conspicuously Catholic family deserve mention. John Molyneux, of Mellington, was a constant confessor for the Faith under Queen Elizabeth, and his son and grandson both died in arms fighting for King Charles at Newbury. Father Thomas Molyneux, S.J., probably of Alt Grange, Ince Blundell, was a confessor of the Faith at the time of Oates's Plot, meeting death from ill-treatment in Morpeth gaol, 12 January, 1681. The family is of itself exceedingly interesting. It came from Molineaux in Seine Inferieure about the time of the Conquest, and can be shown to have held the manor of Sefton without interruption from about 1100 to the present day, while other branches of the family (of which those of Haughton in Nottinghamshire and Castle Dillon in Ireland are the most conspicuous) have spread all over the world. The main stem remained staunch through the worst times. William, seventh viscount, was a Jesuit, and there were in his time not less than seven Molyneux in the Society of Jesus alone. Arms: azure, a cross moline, or.

J. H. POLLEN.

Mombrittius, BONINO, philologist, humanist, and editor of ancient writings, b. 1424; d. between 1482 and 1502. He was descended from a noble but not very wealthy family of Milan, and studied the Latin and Greek classics at Ferrara, with zeal and success. Later he became a teacher of Latin at Milan, and was highly esteemed, not only for his extensive knowledge and his literary works, but also for his earnest religious life, as may be gleaned from the letters of his contemporaries. He suffered many misfortunes, which, how-

ever, did not affect his industry. His literary importance lies especially in his editions of ancient writings. The following may be mentioned: "Chronica Eusebii, Hieronymi, Prosperi et Matthæi Palmerii" (Milan, 1475); "Scriptores rei Augustæ" (1475); "Papiæ Glossarium" (1476); "Mirabilia mundi" of Solinus (s. l. a.). A very notable contribution to hagiography is his collection of records of the martyrdom and lives of saints, which appeared under the title: "Sanctuarium" (2 folio vols., s. l. a.), probably printed in 1480, and recently edited (Paris, 1910) by the Benedictines of Solesmes (Boninus Mombricitus, Sanctuarium seu vitæ Sanctorum. Novam editionem cur. monachi Solesmenses. 2 tomi). He also composed poems, some of which were published in his editions of the ancient writings, and some printed separately. Of the latter may be particularly mentioned "De passione Domini" (reprinted, Leipzig, 1499).

De vita et operibus Bonini Mombricii testimonio selecta in the above-mentioned new edition of the Sanctuarium. I (Paris, 1910), xlii-xlix; Fabricius, Bibl. lat. V (Hamburg, 1738), 257; Bibl. script. Mediolan., I (Milan, 1754), cxlv-cxlii; Huxter, Nomenclator, II (3rd ed., Innsbruck, 1906), 1055.

J. F. KIRSCH.

Monaco, PRINCIPALITY AND DIOCESE OF, situated on the Mediterranean Sea, on the skirts of the Turbie and the Tête de Chien mountains, is surrounded on all sides by the French department of the Maritime Alps, and has an area of 5337 acres. On account of its beautiful climate, it is one of the most popular winter resorts in Europe. Its principal resources are the fishery of the gulf, the cultivation of fruit trees (olive, orange, lemon), and the Casino of Monte Carlo, established in 1856, whose revenues are sufficient to free the inhabitants of the principality from the burden of taxation. The capital consists of three large boroughs: the old Monaco, which is built on a promontory that extends 875 yards into the sea and encloses the harbour; the other two are Condamine and Monte Carlo. From ancient times until the nineteenth century the port of Monaco was among the most important of the French Mediterranean coast, but now it has lost all commercial significance. Among the notable constructions of the principality are the ancient fortifications, the old ducal palace which contains beautiful frescoes by Annibale Carracci, Orazio Ferrar, and Carlone, the cathedral, built (1884-87) in the Byzantine style, by Prince Albert III, the Casino of Monte Carlo, and the monumental fountain of the public square. Monaco dates from the time of the Phœnicians, who, on the promontory upon which the old town is built, erected a temple to the god Melkarth, called Monoicos, solitary, that is, not connected with the cult of Ashtoreth; whence the town derived its name, which is Moneque, in Provençal. In the early Middle Ages the neighbouring lords often contended with each other for the possession of this important port, which later was occupied by the Saracens; it was taken from them in the tenth century by Count Grimaldi, in whose family the principality remains to this day. Formerly, it comprised Mentone and Roquebrune. The Grimaldis often had to defend themselves against Spanish or Genoese fleets; the most famous blockade of the town was that of 1506, which failed. In 1619 Prince Honoratus II, with the assistance of the French, drove the Spaniards from Monaco, and since that time the principality has been under the protection of France. During the Revolution, Monaco was annexed to France, but the principality was re-established in 1814. A revolution broke out in 1848 against the misgovernment of Prince Honoratus V, who lost Mentone and Roquebrune, these cities declaring themselves free republics, and (1860) voting for their annexation to France.

Monaco belonged to the Diocese of Nice, but, in 1868, it became an abbey *nullius*, and at the instance of Prince Charles III, Leo XIII raised it to a diocese,

immediately dependent upon the Holy See, making the abbot, Mgr Bonaventure Theuret, its first bishop.

U. BENIGNI.

Monad (from the Greek *μονάς*, *monâdos*), in the sense of ultimate, indivisible unit, appears very early in the history of Greek philosophy. In the ancient accounts of the doctrines of Pythagoras, it occurs as the name of the unity from which, as from a principle ($\phi\epsilon\chi\eta$), all number and multiplicity are derived. In the Platonic "Dialogues" it is used in the plural (*monâdes*) as a synonym for the Ideas. In Aristotle's "Metaphysics" it occurs as the principle ($\phi\epsilon\chi\eta$) of number, itself being devoid of quantity, indivisible and unchangeable. The word *monad* is used by the neo-Platonists to signify the One; for instance, in the letters of the Christian Platonist Synesius, God is described as the Monad of Monads. It occurs both in ancient and medieval philosophy as a synonym for atom, and is a favourite term with such writers as Giordano Bruno, who speak in a rather indefinite manner of the minima, or minutely small substances which constitute all reality. In general, it may be affirmed that while the term atom, not only in its physical, but also in its metaphysical meaning, implies merely corporeal, or material attributes, the monad, as a rule, implies something incorporeal, spiritual, or, at least, vital. The term monad is, however, generally understood in reference to the philosophy of Leibniz, in which the doctrine of monadism occupies a position of paramount importance. In order to understand his doctrine (see **LEIBNIZ**) on this point, it is necessary to recall that he was actuated by a twofold motive in his attempt to define substance. He wished, in accordance with his general irenic plan, to reconcile the doctrine of the atomists with the scholastic theory of matter and form, and besides he wished to avoid on the one hand the extreme mechanism of Descartes, who taught that all matter is inert, and on the other the monism of Spinoza, who taught that there is but one substance, God. All this he hoped to accomplish by means of his doctrine of monads. Descartes had defined substance in terms of independent existence, and Spinoza was merely inferring what was implicitly contained in Descartes's definition when he concluded that therefore there is only one substance, the supremely independent Being, who is God. Leibniz prefers to define substance in terms of independent action, and thus escapes Descartes's doctrine that matter is by nature inert. At the same time, since the sources of independent action may be manifold, he escapes Spinoza's pantheistic monism. The atomists had maintained the existence of a multiplicity of minute substances, but had invariably drifted into a materialistic denial of the existence of spirits and spiritual forces. The scholastics had rejected this materialistic consequence of atomism and, by so doing, had seemed to put themselves in opposition to the current of modern scientific thought. Leibniz thinks he sees a way to reconcile the atomists with the scholastics. He teaches that all substances are composed of minute particles which, in every case, in the lowest minerals as well as in the highest spiritual beings, are partly material and partly immaterial. Thus, he imagines, the sharp contrast between atomistic materialism and scholastic spiritualism disappears in presence of the doctrine that all differences are merely differences of degree.

The monads are, therefore, simple, unextended substances, if by substance we understand a centre of force. They cannot begin or end except by creation or annihilation. They are capable of internal activity, but cannot be influenced in a physical manner by anything outside themselves. In this sense they are independent. Moreover, each monad is unique; that

is, there are no two monads alike. At the same time the monads must have qualities; "otherwise", says Leibniz (*Monadol.*, n. 8), "they would not even be entities". There must, therefore, be in each monad the power of representation, by which it reflects all other monads in such a manner that an all-seeing eye could, by looking into one monad, observe the whole universe mirrored therein. This power of representation is different in different monads. In the lowest kind of substances it is unconscious—Leibniz finds fault with the Cartesians because they overlooked the existence of unconscious perception. In the highest kind it is fully conscious. We may, in fact, distinguish in every monad a zone of obscure representation and a zone of clear representation. In the monad of the grain of dust, for example, the zone of clear representation is very restricted, the monad manifesting no higher activity than that of attraction and repulsion. In the monad of the human soul the region of clear representation is at its maximum, this kind of monad, the "queen monad", being characterized by the power of intellectual thought. Between these two extremes range all the monads, mineral, vegetable, and animal, each being differentiated from the monad below it by possessing a larger area of clear representation, and each being separated from the monad above it by having a larger area of obscure representation. There is then in every created monad a material element, the region of obscure representation, and an immaterial element, the area of clear representation. Everything in the created world is partly material and partly immaterial, and there are no abrupt differences among things, but only differences in the extent of the immaterial as compared with the material. Minerals shade off insensibly (in the case of crystals) into living things, plant life into animal life, and animal sensation into human thought. "All created monads may be called souls. But, as feeling is sometimes more than simple perception, I am willing that the general name monads, or entelechies, shall suffice for those simple substances which have perception only, and that the term souls shall be confined to those in which perceptions are distinct, and accompanied by memory" (*Monadol.*, n. 19). "We ascribe action to the monad in so far as it has distinct perceptions, and passivity, in so far as its perceptions are confused" (*ibid.*, n. 49). If this is the only kind of activity that the monad possesses, how are we to account for the order and harmony everywhere in the universe? Leibniz answers by introducing the principle of Pre-established Harmony. There is no real action or reaction. No monad can influence another physically. At the beginning, however, God so pre-arranged the evolution of the activity of the myriads of monads that according as the body evolves its own activity, the soul evolves its activity in such a way as to correspond to the evolution of the activity of the body. "Bodies act as if there were no souls, and souls act as if there were no bodies; and yet both act as if one influenced the other" (*ibid.*, n. 81). This pre-established harmony makes the world to be a cosmos, not a chaos. The principle extends, however, beyond the physical universe, and applies in a special manner to rational souls, or spirits. In the realm of spirits there is a subordination of souls to the beneficent rule of Divine Providence, and from this subordination results the "system of souls", which constitutes the City of God. There is, therefore, a moral world within the natural world. In the former God is ruler and legislator; in the latter He is merely architect. "God as architect satisfies God as legislator" (*ibid.*, n. 89), because even in the natural world no good deed goes without its recompense, and no evil deed escapes its punishment. Order among monads is thus ultimately moral.

Since Leibniz' time the term monad has been used

by various philosophers to designate indivisible centres of force, but as a general rule these units are not understood to possess the power of representation or perception, which is the distinguishing characteristic of the Leibnizian monad. Exception should, however, be made in the case of Renouvier, who, in his "*Nouvelle monadologie*", teaches that the monad has not only internal activity but also the power of perception.

WILLIAM TURNER.

Monaghan, JOHN JAMES. See WILMINGTON, DIOCESE OF.

Monarchians, heretics of the second and third centuries. The word, *Monarchian*, was first used by Tertullian as a nickname for the Patripassian group (*adv. Prax.*, x), and was seldom used by the ancients. In modern times it has been extended to an earlier group of heretics, who are distinguished as Dynamistic, or Adoptionist, Monarchians from the Modalist Monarchians, or Patripassians.

I. DYNAMISTS, OR ADOPTIONISTS.—All Christians hold the unity (*μοναρχία*) of God as a fundamental doctrine. By the Patripassians this first principle was used to deny the Trinity, and they are with some reason called Monarchians. But the Adoptionists, or Dynamists, have no claim to the title, for they did not start from the monarchy of God, and their error is strictly Christological. An account of them must, however, be given here simply because the name Monarchian has adhered to them in spite of the repeated protests of historians of dogma. But their ancient and accurate name was Theodotians. The founder of the sect was a leather-seller of Byzantium named Theodotus. He came to Rome under Pope Victor (c. 190-200) or earlier. He taught (*Philosophumena*, VII, xxxv) that Jesus was a man born of a virgin according to the counsel of the Father, that He lived like other men, and was most pious; that at His baptism in the Jordan the Christ came down upon Him in the likeness of a dove, and therefore wonders (*δυνάμεις*) were not wrought in Him until the Spirit (which Theodotus called Christ) came down and was manifested in Him. They did not admit that this made Him God; but some of them said He was God after His resurrection. It was reported that Theodotus had been seized, with others, at Byzantium as a Christian, and that he had denied Christ, whereas his companions had been martyred; he had fled to Rome, and had invented his heresy in order to excuse his fall, saying that it was but a man and not God that he had denied. Pope Victor excommunicated him, and he gathered together a sect in which we are told much secular study was carried on. Hippolytus says that they argued on Holy Scripture in syllogistic form. Euclid, Aristotle, and Theophrastus were their admiration, and Galen they even adored. We should probably assume, with Harnack, that Hippolytus would have had less objection to the study of Plato or the Stoics, and that he disliked their purely literal exegesis, which neglected the allegorical sense. They also emended the text of Scripture, but their versions differed, that of Asclepiodotus was different from that of Theodotus, and again from that of Hermophilus; and the copies of Apolloniades did not even tally with one another. Some of them "denied the law and the Prophets", that is to say, they followed Marcion in rejecting the Old Testament.

The only disciple of the leather-seller of whom we know anything definite is his namesake Theodotus the banker (*ὁ τραπεζίτης*). He added to his master's doc-

trine the view that Melchisedech was a celestial power, who was the advocate for the angels in heaven, as Jesus Christ was for men upon earth (a view found among later sects.—See MELCHISEDECHIANS). This teaching was of course grounded on Hebrews, vii, 3, and it is refuted at length by St. Epiphanius as Heresy 55, "Melchisedechians", after he has attacked the leather-seller under Heresy 54, "Theodotians". As he meets a series of arguments of both heretics, it is probable that some writings of the sect had been before Hippolytus, whose lost "Syntagma against all heresies" supplied St. Epiphanius with all his information. After the death of Pope Victor, Theodotus, the banker, and Asclepiodotus designed to raise their sect from the position of a mere school like those of the Gnostics to the rank of a Church like that of Marcion. They got hold of a certain confessor named Natalius, and persuaded him to be called their bishop at a salary of 150 *denarii* (24 dollars) a month. Natalius thus became the first antipope. But after he had joined them, he was frequently warned in visions by the Lord, Who did not wish His martyr to be lost outside the Church. He neglected the visions, for the sake of the honour and gain, but finally was scourged all night by the holy angels, so that in the morning with haste and tears he betook himself in sackcloth and ashes to Pope Zephyrinus and cast himself at the feet of the clergy, and even of the laity, showing the weals of the blows, and was after some difficulty restored to communion. This story is quoted by Eusebius II (VI, xxviii) from the "Little Labyrinth" of the contemporary Hippolytus, a work composed against Artemon, a late leader of the sect (perhaps c. 225-30), whom he did not mention in the "Syntagma" or the "Philosophumena". Our knowledge of Artemon, or Artemas, is limited to the reference to him made at the end of the Council of Antioch against Paul of Samosata (about 266-268), where that heretic was said to have followed Artemon, and in fact the teaching of Paul is but a more learned and theological development of Theodotianism (see PAUL OF SAMOSATA).

The sect probably died out about the middle of the third century, and can never have been numerous. All our knowledge of it goes back to Hippolytus. His "Syntagma" (c. 205) is epitomized in Pseudo-Tertullian (*Præscript.*, lii) and Philastrius, and is developed by Epiphanius (*Hæc.*, liv. iv); his "Little Labyrinth" (written 139-5, cited by Eusebius, V, 28) and his "Philosophumena" are still extant. See also his "Contra Noetum" 3, and a fragment "On the Melchisedechians and Theodotians and Athingani", published by Caspari (*Tidskr. für der Evangel. Luth. Kirke*, Ny Raekke, VIII, 3, p. 307). But the Athingani are a later sect, for which see MELCHISEDECHIANS. The Monarchianism of Photinus (q. v.) seems to have been akin to that of the Theodotians. All speculations as to the origin of the theories of Theodotus are fanciful. At any rate he is not connected with the Ebionites. The Alogi have sometimes been classed with the Monarchians. Lipsius in his "Quellenkritik des Epiphanius" supposed them to be even Philanthropists, on account of their denial of the Logos, and Epiphanius in fact calls Theodotus an *ἀλόγιστος* of the Alogi; but this is only a guess, and is not derived by him from Hippolytus. As a fact, Epiphanius assures us (*Hæc.*, 51) that the Alogi (that is, Gaius and his party) were orthodox in their Christology (see MONTANISTS).

II. MODALISTS.—The Monarchians properly so-called (Modalists) exaggerated the oneness of the Father and the Son so as to make them but one Person; thus the distinctions in the Holy Trinity are energies or modes, not Persons: God the Father appears on earth as Son; hence it seemed to their opponents that Monarchians made the Father suffer and die. In the West they were called Patripassians, whereas in the East they are usually called Sabellians. The first

to visit Rome was probably Praxeas, who went on to Carthage some time before 206-08; but he was apparently not in reality a heresiarch, and the arguments refuted by Tertullian somewhat later in his book "Adversus Praxean" are doubtless those of the Roman Monarchians (see PRAXEAS).

A. History.—Noetus (from whom the Noetians) was a Smyrnanæan (Epiphanius, by a slip, says an Ephesian). He called himself Moses, and his brother Aaron. When accused before the presbyterate of teaching that the Father suffered, he denied it; but after having made a few disciples he was again interrogated, and expelled from the Church. He died soon after, and did not receive Christian burial. Hippolytus mockingly declares him to have been a follower of Heraclitus, on account of the union of opposites which he taught when he called God both visible and invisible, passible and impassible. His pupil Epigonus came to Rome. As he was not mentioned in the "Syntagma" of Hippolytus, which was written in one of the first five years of the third century, he was not then well known in Rome, or had not yet arrived. According to Hippolytus (*Philos.*, IX, 7), Cleomenes, a follower of Epigonus, was allowed by Pope Zephyrinus to establish a school, which flourished under his approbation and that of Callistus. Hagemann urges that we should conclude that Cleomenes was not a Noetian at all, and that he was an orthodox opponent of the incorrect theology of Hippolytus. The same writer gives most ingenious and interesting (though hardly convincing) reasons for identifying Praxeas with Callistus; he proves that the Monarchians attacked in Tertullian's "Contra Praxean" and in the "Philosophumena" had identical tenets which were not necessarily heretical; he denies that Tertullian means us to understand that Praxeas came to Carthage, and he explains the nameless refuter of Praxeas to be, not Tertullian himself, but Hippolytus. It is true that it is easy to suppose Tertullian and Hippolytus to have misrepresented the opinions of their opponents, but it cannot be proved that Cleomenes was not a follower of the heretical Noetus, and that Sabellius did not issue from his school; further, it is not obvious that Tertullian would attack Callistus under a nickname.

Sabellius soon became the leader of the Monarchians in Rome, perhaps even before the death of Zephyrinus (c. 218). He is said by Epiphanius to have founded his views on the Gospel according to the Egyptians, and the fragments of that apocryphon support this statement. Hippolytus hoped to convert Sabellius to his own views, and attributed his failure in this to the influence of Callistus. That pope, however, excommunicated Sabellius c. 220 ("fearing me", says Hippolytus). Hippolytus accuses Callistus of now inventing a new heresy by combining the views of Theodotus with those of Sabellius, although he excommunicated them both (see CALLISTUS I, POPE). Sabellius was apparently still in Rome when Hippolytus wrote the *Philosophumena* (between 230 and 235). Of his earlier and later history nothing is known. St. Basil and others call him a Libyan from Pentapolis, but this seems to rest on the fact that Pentapolis was found to be full of Sabellianism by Dionysius of Alexandria, c. 260. A number of Montanists led by Æschines became Modalists (unless Harnack is right in making Modalism the original belief of the Montanists and in regarding Æschines as a conservative). Sabellius (or at least his followers) may have considerably amplified the original Noetianism. There was still Sabellianism to be found in the fourth century. Marcellus of Ancyra developed a Monarchianism of his own, which was carried much further by his disciple, Photinus. Priscillian was an extreme Monarchian and so was Commodian ("Carmen Apol.", 89, 277, 771). The "Monarchian Prologues" to the Gospels found in most old MSS. of the Vulgate, were attrib-

uted by von Dobschütz and P. Corssen to a Roman author of the time of Callistus, but they are almost certainly the work of Priscillian. Beryllus, Bishop of Bostra, is vaguely said by Eusebius (H. E., VI, 33) to have taught that the Saviour had no distinct pre-existence before the Incarnation, and had no Divinity of His own, but that the Divinity of the Father dwelt in Him. Origen disputed with him in a council and convinced him of his error. The minutes of the disputation were known to Eusebius. It is not clear whether Beryllus was a Modalist or a Dynamist.

B. Theology.—There was much that was unsatisfactory in the theology of the Trinity and in the Christology of orthodox writers of the Ante-Nicene period. The simple teaching of tradition was explained by philosophical ideas, which tended to obscure as well as to elucidate it. The distinction of the Son from the Father was so spoken of that the Son appeared to have functions of His own, apart from the Father, with regard to the creation and preservation of the world, and thus to be a derivative and secondary God. The unity of the Divinity was commonly guarded by a reference to the unity of origin. It was said that God from eternity was alone, with His Word, one with Him (as Reason, *in vulca cordis, λόγος ἐνδίδθετος*), before the Word was spoken (*ex ore Patris, λόγος προφορικῶς*), or was generated and became Son for the purpose of creation. The Alexandrians alone insisted rightly on the generation of the Son from all eternity; but thus the Unity of God was even less manifest. The writers who thus theologize may often expressly teach the traditional Unity in Trinity, but it hardly squares with the Platonism of their philosophy. The theologians were thus defending the doctrine of the Logos at the expense of the two fundamental doctrines of Christianity, the Unity of God and the Divinity of Christ. They seemed to make the Unity of the Godhead split into two or even three, and to make Jesus Christ something less than the supreme God the Father. This is eminently true of the chief opponents of the Monarchians, Tertullian, Hippolytus, and Novatian. (See Newman, "The Causes of Arianism", in "Tracts theol. and eccles.") Monarchianism was the protest against this learned philosophizing, which to the simplicity of the faithful looked too much like a mythology or a Gnostic emanationism. The Monarchians emphatically declared that God is one, wholly and perfectly one, and that Jesus Christ is God, wholly and perfectly God. This was right, and even most necessary, and whilst it is easy to see why the theologians like Tertullian and Hippolytus opposed them (for their protest was precisely against the Platonism which these theologians had inherited from Justin and the Apologists), it is equally comprehensible that guardians of the Faith should have welcomed at first the return of the Monarchians to the simplicity of the Faith, "ne videantur deos dicere, neque rursum negare salvatoris deitatem" ("Lest they seem to be asserting two Gods or, on the other hand, denying the Saviour's Godhead"—Origen, "On Titus", frag. II). Tertullian in opposing them acknowledges that the uninstructed were against him; they could not understand the magic word *οὐκ ὁμοῦλα* with which he conceived he had saved the situation; they declared that he taught two or three Gods, and cried "Monarchiam tenemus." So Callistus reproached Hippolytus, and not without reason, with teaching two Gods.

Already St. Justin knew of Christians who taught the identity of the Father and the Son ("Apol.", I, 63; "Dial.", cxxviii). In Hermas, as in Theodotus, the Son and the Holy Ghost are confused. But it was reserved for Noetus and his school to deny categorically that the unity of the Godhead is compatible with a distinction of Persons. They seem to have regarded the *Λόγος* as a mere name, or faculty, or attribute, and to have made the Son and the Holy Ghost merely aspects or modes of existence of the Father, thus emphat-

ically identifying Christ with the one God. "What harm am I doing", was the reply made by Noetus to the presbyters who interrogated him, "in glorifying Christ?" They replied: "We too know in truth one God; we know Christ; we know that the Son suffered even as He suffered, and died even as He died, and rose again on the third day, and is at the right hand of the Father, and cometh to judge the living and the dead; and what we have learned we declare" (Hippol., "Contra Noetum", 1). Thus they refuted Noetus with tradition—the Apostles' Creed is enough; for the Creed and the New Testament indeed made the distinction of Persons clear, and the traditional formulas and prayers were equally unmistakable. Once the Monarchian system was put into philosophical language, it was seen to be no longer the old Christianity. Ridicule was used; the heretics were told that if the Father and the Son were really identified, then no denial on their part could prevent the conclusion that the Father suffered and died, and sat at His own right hand. Hippolytus tells us that Pope Zephyrinus, whom he represents as a stupid old man, declared at the instance of Callistus: "I know one God Christ Jesus, and besides Him no other Who was born and Who suffered"; but he added: "Not the Father died, but the Son". The reporter is an unsympathetic adversary; but we can see why the aged pope was viewing the simple assertions of Sabellius in a favourable light. Hippolytus declares that Callistus said that the Father suffered *with* the Son, and Tertullian says the same of the Monarchians whom he attacks. Hagemann thinks Callistus-Praxeas especially attacked the doctrine of the Apologists and of Hippolytus and Tertullian, which assigned all such attributes as impassibility and invisibility to the Father and made the Son alone capable of becoming passible and visible, ascribing to Him the work of creation, and all operations *ad extra*. It is true that the Monarchians opposed this Platonizing in general, but it is not evident that they had grasped the principle that all the works of God *ad extra* are common to the Three Persons as proceeding from the Divine Nature; and they seem to have said simply that God as Father is invisible and impassible, but becomes visible and passible as Son. This explanation brings them curiously into line with their adversaries. Both parties represented God as one and alone in His eternity. Both made the generation of the Son a subsequent development; only Tertullian and Hippolytus date it before the creation, and the Monarchians perhaps not until the Incarnation. Further, their identification of the Father and the Son was not favourable to a true view of the Incarnation. The very insistence on the unity of God emphasized also the distance of God from man, and was likely to end in making the union of God with man a mere indwelling or external union, after the fashion of that which was attributed to Nestorius. They spoke of the Father as "Spirit" and the Son as "flesh", and it is scarcely surprising that the similar Monarchianism of Marcellus should have issued in the Theodotianism of Photinus.

It is impossible to arrive at the philosophical views of Sabellius. Hagemann thought that he started from the Stoic system as surely as his adversaries did from the Platonic. Dörner has drawn too much upon his imagination for the doctrine of Sabellius; Harnack is too fanciful with regard to its origin. In fact we know little of him but that he said the Son was the Father (so Novatian, "De Trin." 12, and Pope Dionysius relate). St. Athanasius tells us that he said the Father is the Son and the Son is the Father, one in hypostasis, but two in name (so Epiphanius): "As there are divisions of gifts, but the same Spirit, so the Father is the same, but is developed (*πλάτυνεται*) into Son and Spirit" (Orat., IV, c. Ar., xxv). Theodoret says he spoke of one hypostasis and a threefold *πρόσωπον*, whereas St. Basil says he willingly admitted three

epōwra in one hypostasis. This is, so far as words go, exactly the famous formula of Tertullian, "tres personæ, una substantia" (three persons, one substance), but Sabellius seems to have meant "three modes or characters of one person". The Father is the Monad of whom the Son is a kind of manifestation; for the Father is in Himself silent, inactive (*συνῶν, ἀνεκπύρρος*), and speaks, creates, works, as Son (Athan., I. c., 11). Here again we have a parallel to the teaching of the Apologists about the Word as Reason and the Word spoken, the latter alone being called Son. It would seem that the difference between Sabellius and his opponents lay mainly in his insisting on the unity of hypostasis after the emission of the Word as Son. It does not seem clear that he regarded the Son as beginning at the Incarnation; according to the passage of St. Athanasius just referred to, he may have agreed with the Apologists to date Sonship from the creative action of God. But we have few texts to go upon, and it is quite uncertain whether Sabellius left any writings. Monarchianism is frequently combated by Origen. Dionysius of Alexandria fought Sabellianism with some imprudence. In the fourth century the Arians and Semiarians professed to be much afraid of it, and indeed the alliance of Pope Julius and Arhanasius with Marcellus gave some colour to accusations against the Nicene formulas as opening the way to Sabellianism. The Fathers of the fourth century (as, for instance, St. Gregory of Nyssa, "Contra Sabellium", ed. Mai) seem to contemplate a more developed form than that known to Hippolytus ("Contra Noetum" and "Philosophumena") and through him, to Epiphanius: the consummation of creation is to consist in the return of the *Δέσμος* from the humanity of Christ to the Father, so that the original unity of the Divine Nature is after all held to have been temporally compromised, and only in the end will it be restored, that God may be all in all.

Our chief original authorities for early Monarchianism of the Modalist type are Tertullian, "Adversus Praxean", and Hippolytus, "Contra Noetum" (fragment) and "Philosophumena". The "Contra Noetum" and the lost "Syntagma" were used by Epiphanius, Hær. 57 (Noetians), but the sources of Epiphanius's Hær. 62 (Sabellians) are less certain. The references by Origen, Novatian, and later Fathers are somewhat indefinite.

The best Catholic exposition of Monarchianism is by HAGEMANN, *Die römische Kirche* (Freiburg im Br., 1864); the best Protestant account, HARNACK in *Realencyclopädie* s. v. *Monarchianismus* (1903); DÖRNER, *Entwicklungsgeschichte der Lehre von der Person Christi* (2nd ed., Berlin, 1853); tr., *Doctrine of the Person of Christ* (5 vols., Edinburgh, 1861-63); BORNEMANN, *Die Taufe Christi in der dogmatischen Beurteilung der vier ersten Jahrh.* (Leipzig, 1896); DÖLLINGER, *Hippolytus und Kallistus* (Ratisbon, 1853); tr., *Hippolytus and Callistus* (Edinburgh, 1876); SALMON in *Dict. of Christ. Biogr.* s. v. *Sabellianism and Sabellius*; FECHTTRUP in *Kirchenlex.* s. v. *SABELLIUS*; DUCHESNE, *Histoire ancienne de l'Eglise*, I (Paris, 1906); tr., *Early History of the Christian Church* (London, 1909); TIXEYRON, *Histoire des dogmes*, I (Paris, 1905); and the *Histories of Dogma* by SCHWANE, HARNACK, etc.

JOHN CHAPMAN.

Monarchia Sicula, a right exercised from the beginning of the sixteenth century by the secular rulers of Sicily, according to which they had final jurisdiction in purely religious matters, independent of the Holy See. This right they claimed on the ground of a papal privilege. The oldest document advanced in support of their claim is a Bull of 5 July, 1098, addressed by Urban II to Count Roger I of Sicily (Jaffé, "Regista Rom. Pont.", I, 2nd ed., n. 5706; latest edition of the text in "Quellen und Forschungen aus Italien. Archiven und Bibliotheken", VII, 1904, pp. 214-9). The pope agreed not to appoint a papal legate for Sicily against the count's will, and declared his intention of getting executed by the count the ecclesiastical acts, usually performed by a legate (*quinimmo quæ per legatum acturi sumus, per vestram industriam legati vice exhiberi volumus*). Paschal II in a Bull of 1 October, 1117, addressed to Count Roger II of

Sicily (Jaffé, loc. cit., 6562), confirmed this privilege and defined it more clearly. He bestowed upon Roger II the same power, "in the sense that if a papal legate be sent thither, that is a representative of the pope, you in your zeal shall secure the execution of what the legate is to perform" (*ea videlicet ratione, ut si quando illuc ex latere nostro legatus dirigitur, quem profecto vicarium intelligimus, quæ ab eo gerenda sunt, per tuam industriam effectui mancipentur*). Urban II had thus granted Apostolic legatine power to the secular rulers; according to the Bull of Paschal II this meant that, when a papal legate was sent to Sicily to exercise jurisdiction in certain ecclesiastical matters as the pope's representative, he must communicate the nature of his commission to the secular ruler, who would then execute in person the pope's order in place of the legate (*legati vice*). In both instances it was a question not of a jurisdiction of the princes of Sicily independent of the Holy See, but only of the privilege of the secular rulers to execute the precepts of the supreme Church authorities; in other words, the sovereign of Sicily was privileged, but also bound, to carry out papal regulations in his land.

As a result of the feudal relationship between the princes of Sicily and the pope, ecclesiastical matters here took on a more pronouncedly political character than elsewhere, and the Church in Sicily was reduced to the greatest dependence upon the secular power. However, up to the beginning of the sixteenth century, the privilege bestowed by Urban II was never invoked or even mentioned. When Ferdinand II of Aragon became King of Sicily, his secretary, Luca Barberi of Noto in Sicily, undertook to collect the official documents by which the rights of the kings of Sicily, both in ecclesiastical and in secular matters, were clearly determined. To this collection (*Capibrevio*) was joined a collection of documents under the title "Liber Monarchiæ", meant to prove that the secular rulers of Sicily had always exercised the spiritual power. In this "Liber Monarchiæ" the privilege conferred by Urban II in regard to the legatine power was first published. The kings urged it to give a legal basis to the authority they had long exercised over the local Church. They also used it to extend their pretensions that, by virtue of an old papal privilege, they possessed ecclesiastical authority in spiritual matters to be exercised independently of the pope. Despite doubts expressed concerning the genuineness of the Urban document, Ferdinand declared on 22 January, 1515: "As for the Kingdom of Sicily, where we exercise the supervision of spiritual as well as of secular affairs, we have made sure that we do so legitimately". In consequence of such exorbitant demands, disputes arose between the popes and the rulers of the island. Clement VII negotiated with Charles V concerning the Monarchia Sicula, but without success. In 1578 Philip II tried vainly to obtain a formal confirmation of the right from Pius V. In 1597 the king appointed a special permanent judge (*Judex Monarchiæ Siculæ*), who was to give final decisions in the highest ecclesiastical causes, an appeal from his judgment to the pope's being forbidden. The *Judex Monarchiæ Siculæ* claimed the general right to visit the convents, supreme jurisdiction over the bishops and the clergy, and the exercise of a number of ecclesiastical rights belonging to the bishops, so that papal jurisdiction was almost wholly excluded.

When Baronius, in an excursus on the year 1097 in the eleventh volume of his "Annales ecclesiastici" (Rome, 1605), produced solid reasons against the genuineness of Urban II's Bull and especially against the legality of the Monarchia Sicula, a violent feud arose, and the Court of Madrid prohibited the eleventh volume from all countries of the Spanish Empire. Baronius omitted the excursus in the second edition of the "Annales" (Antwerp, 1608), but pub-

lished instead a special "Tractatus de Monarchia Sicula". During the War of the Spanish Succession another serious conflict arose between the Papal Curia and the Spanish court in regard to this alleged legatine power. The occasion of the dispute was a question of ecclesiastical immunity, and the differences continued after Count Victor Amadeus had been made King of Sicily by the Peace of Utrecht and had been crowned at Palermo (1713). On 20 February, 1715, Clement XI declared the Monarchia Sicula null and void, and revoked the privileges attached to it. This edict was not recognized by the monarchs of Sicily, and, when a few years later the island came under the rule of Charles VI, Benedict XIII entered into negotiations with him with the result that the Decree of Clement XI was withdrawn, and the Monarchia Sicula restored, but in an altered form. The king, through the concession of the pope could now appoint the *Judex Monarchiæ Siculæ*, who was at the same time to be the delegate of the Holy See and empowered to decide in the last instance upon religious matters. On the basis of this concession the kings of Sicily demanded more and more far reaching rights in ecclesiastical affairs, so that fresh struggles with the Holy See constantly arose. The situation grew ever more unbearable. Pius IX tried in vain by amicable adjustments to enforce the essential rights of the Holy See in Sicily. Garibaldi, as "Dictator" of Sicily, claimed the rights of the papal legate, and, during the service in the cathedral at Palermo, caused legatine honours to be shown him. In the Bull "Suprema" of 28 January, 1864, which was not published with the prescriptions for its execution until 10 October, 1867, Pius IX revoked the Monarchia Sicula finally and forever. The government of Victor Emanuel protested, and the *Judex Monarchiæ Siculæ*, Rinaldi, refused to submit, for which he was excommunicated in 1868. Article 15 of the Italian law of guarantees (13 May, 1871) explicitly revoked the Monarchia Sicula, and the question was thus finally disposed of.

Monasteries, DOUBLE, religious houses comprising communities of both men and women, dwelling in contiguous establishments, united under the rule of one superior, and using one church in common for their liturgical offices. The reason for such an arrangement was that the spiritual needs of the nuns might be attended to by the priests of the male community, who were associated with them more closely than would have been possible in the case of entirely separate and independent monasteries. The system came into existence almost contemporaneously with monasticism itself, and like it had its origin in the East. Communities of women gathered around religious founders in Egypt and elsewhere, and from the life of St. Pachomius we learn many details as to the nuns under his rule and their relation to the male communities founded by him. Double monasteries, of which those of St. Basil and his sister, Macrina, may be cited as examples, were apparently numerous throughout the East during the early centuries of monasticism. It cannot be stated with any certainty when the system found its way into the West, but it seems probable that its introduction into Gaul may be roughly ascribed to the influence of Cassian, who did so much towards reconciling Eastern monasticism with Western ideas. St. Caesarius of Arles, St. Aurelian, his successor, and St. Radegundis, of Poitiers, founded double monasteries in the sixth century, and later on the system was propagated widely by St.

Columbanus and his followers. Remiremont, Jouarre, Brie, Chelles, Andelys, and Soissons were other well-known examples of the seventh and eighth centuries. From Gaul the idea spread to Belgium and Germany and also to Spain, where it is said to have been introduced by St. Fructuosus in the middle of the seventh century. According to Yepes there were in Spain altogether over two hundred double monasteries.

Ireland presents only one known example—Kildare—but probably there were others besides, of which all traces have since been lost. In England most of the early foundations were double; this has been wrongly attributed by some writers to the fact that many of the Anglo-Saxon nuns were educated in Gaul, where the system was then in vogue, but it seems more correct to ascribe it to the religious influence of the missionaries from Iona, since the first double monastery in England was that of St. Hilda at Whitby, established under the guidance of St. Aidan, and there is no evidence to show that either St. Aidan or St. Hilda was acquainted with the double organization in use elsewhere. Whitby was founded in the seventh century, and in a short time England became covered with similar dual establishments, of which Coldingham, Ely, Shéppey, Minster, Wimborne, and Barking are prominent examples. In Italy, the only other country besides those already mentioned where double monasteries are known to have existed, they were not numerous, but St. Gregory speaks of them as being found in Sardinia (Ep. xi), and St. Bede mentions one at Rome (Hist. Eccl., IV, i). The Danish invasions of the ninth and tenth centuries destroyed the double monasteries of England, and, when they were restored, it was for one sex only, instead of for a dual community. The system seems to have died out also in other countries at about the same time, and it was not revived until the end of the eleventh century when Robert of Arbrissel inaugurated his reform at Fontevrault and gave the idea a fresh lease of life. It is not surprising to find that such a system was sometimes abused, and hence it was always an object of solicitude and strict legislation at the hands of ecclesiastical authority. Many synodal and conciliar decrees recognized its dangers, and ordered the strictest surveillance of all communications passing between monks and nuns. Too close proximity of buildings was frequently forbidden, and every precaution was taken to prevent any occasion of scandal. Very probably it was this scant favour shown by the Church towards it that caused the gradual decline of the system about the tenth century.

In many double monasteries the supreme rule was in the hands of the abbess, and monks as well as nuns were subject to her authority. This was especially the case in England, e. g. in St. Hilda's at Whitby and St. Etheldreda's at Ely, though elsewhere, but more rarely, it was the abbot who ruled both men and women, and sometimes, more rarely still, each community had its own superior independent of the other. The justification for the anomalous position of a woman acting as the superior of a community of men is usually held to originate from Christ's words from the Cross, "Woman, behold thy son; Son, behold thy mother"; and it is still further urged that maternity is a form of authority derived from nature, whilst that which is paternal is merely legal. But, whatever may be its origin, the supreme rule of an abbess over both men and women was deliberately revived, and sanctioned by the Church, in two out of the three mediæval orders that consisted of double monasteries. At Fontevrault (founded 1099) and with the Bridgettines (1346), the abbess was the superior of monks as well as of nuns, though with the Gilbertines (1146) it was the prior who ruled over both. In the earlier double monasteries both monks and nuns observed the same rule *mutatis mutandis*; this example was fol-

lowed by Fontevrault and the Bridgettines, the rule of the former being Benedictine, while the latter observed the Rule of St. Bridget. But with the Gilbertines, whilst the rule of the nuns was substantially Benedictine, the monks adopted that of the Augustinian Canons. (See BRIGITTINES; FONTEVRAULT; GILBERTINES.) Little is known as to the buildings of the earlier double monasteries except that the church usually stood between the two conventual establishments, so as to be accessible from both. From excavations made on the site of Watton Priory, a Gilbertine house in Yorkshire, it appears that the separation of nuns from canons was effected by means of a substantial wall, several feet high, which traversed the church lengthways, and it is probable that some similar arrangement was adopted in other double monasteries. No such communities exist at the present day in the Western Church.

G. CYPRIAN ALSTON.

Monasteries, SUPPRESSION OF.—Under this title will be treated only the suppressions of religious houses (whether monastic in the strict sense or houses of the mendicant orders) since the Reformation. The somewhat more general subject of state encroachments on Church property will be found treated under such titles as LAICIZATION; COMMENDATORY ABBOT; INVESTITURES; CONFLICT OF. The economic motives of state opposition to the tenure of lands by religious corporations (dating from the thirteenth century) are explained under MORTMAIN. The countries dealt with in the present article are: I. Germany, the Iberian Peninsula, and Italy; II. England. (For French suppressions, see FRANCE, especially sub-title, *The Third Republic and the Church in France*.)

I. GERMANY, SPAIN AND PORTUGAL, ITALY.—A. *Germany (including all Austrian Dominions).*—The confiscation of religious property following upon the Treaty of Westphalia (1648) had been for the benefit of Protestant princes only. More than a hundred monasteries and innumerable pious foundations disappeared at this time. Towards the middle of the eighteenth century a new movement tending to the destruction of monastic institutions swept over those portions of the German Empire which had remained attached to the Catholic Faith. "Josephinism", as this political and religious movement was afterwards called, taking its name from its foster-father, the Emperor Joseph II, made the Church subservient to the State. The supernatural character of the religious life was ignored; abbeyes and convents could be permitted to exist only on giving proof of their material utility. A plan was formed at this period for the general secularization of monastic and other ecclesiastical property for the profit of the Catholic Governments in Germany. This was part of a general plan for a redistribution of territory. Frederick II (the Great) of Prussia had taken the initiative and had won over England and France to his idea. The opposition of Maria Theresa, of the Prince Bishop of Mainz, and of Pope Benedict XIV caused the project to fail. The Holy See kept the diplomacy of Prussia in check for some years. To counteract the action of Rome on public sentiment, the partisans of secularization encouraged in Germany the spread of those philosophical errors—Materialism and Rationalism—which were then gaining ground in France (see ENCYCLOPEDISTS). With this view they succeeded in withdrawing the universities from Roman influence.

Meanwhile the princes approached the task directly.

The Elector Maximilian (Joseph) III (1745-77) began in Bavaria a work of destruction which was carried on by his successors down to the Elector Maximilian Joseph IV, Napoleon's ally, who became King Maximilian I of Bavaria in 1805 (d. 1825). Measures were taken first against the mendicant orders; the secular power began to meddle in the government of the monasteries, a commission being appointed by the civil authorities for that purpose. In the meantime (1773) the suppression of the Jesuits was decreed. About the year 1782 the Elector Charles Theodore (1778-99) obtained the assent of Pius VI to a project for the extinction of several religious foundations. The Elector Maximilian Joseph IV (King Maximilian I) of Bavaria completed the work of destruction, influenced by the policy of his ally, Napoleon I, and assisted by the Count de Montgelas, his chief minister. A rescript of 9 September, 1800, deprived the religious orders in Bavaria of all property rights and prohibited them to receive novices. The convents of the mendicant orders (Franciscans, Dominicans, Augustinians, Carmelites) and the religious houses of women were the first to fall. Then came the turn of the Canons Regular and the Benedictines. The cathedral monasteries were not spared. Among the abbeyes that disappeared in 1803 may be mentioned: St. Blasien of the Black Forest (the community, however, being admitted, in 1809, to the monastery of St. Paul), St. Emmeran of Ratisbon, Andechs, St. Ulrich of Augsburg, Michelsberg, Benedictbeuern, Ertal, Kempten, Metten, Oberaltaich, Ottobeurn, Scheyern, Tegernsee, Wessobrunn.

The monasteries in other parts of North Germany met with the common fate of all church property. On the left bank of the Rhine they were suppressed when that territory was annexed to France by the Peace of Lunéville, 9 February, 1801. Their property was disposed of by the Diet of Ratisbon (3 March, 1801—February, 1803), the deplorable business having been negotiated in Paris with Bonaparte and Talleyrand. Besides her twenty-five ecclesiastical principalities and her eighteen universities, Catholic Germany lost all her abbeyes and her religious houses for men: their property was given to Bavaria, Prussia, and Austria. As to the religious houses for women, the princes were to consult with the bishops before proceeding to expel their inmates. The future reception of novices was forbidden. In the Netherlands, the Principality of Liège, and the portions of Switzerland annexed by France, the religious houses disappeared completely.

In the territories immediately subject to the House of Hapsburg, the secularization of monastic houses had begun more than thirty years before this. In pursuance of the policy with which his name has been especially associated, the Emperor Joseph II (d. 1790) forbade the teaching of theology in monasteries, even to the young religious, and also the reception of novices. Intercourse with the Holy See was placed under imperial control. It was forbidden to receive foreign religious. The civil authorities interfered in the regular discipline of communities. Commendatory abbots were appointed. Monasteries were deprived of the parishes belonging to them. Superiors had to account to the emperor's representatives for the disposition of their incomes. Theological works printed outside the Empire could not be used.—Such were the principal lines of action of this administration, of which Kaunitz was the minister. All this, however, was but the prelude to a decree of suppression which was issued on 17 March, 1783.

This decree applied to all monasteries, whether of women or of men, judged useless by the standards of Josephinism; their revenues were taken to increase the salaries of the secular priests or for pious establishments useful to religion and humanity. The dioceses of the Low Countries (then subject to the House of

Hapsburg) lost one hundred and sixty-eight convents, abbeys, or priories. In all, 738 religious houses were suppressed in the Empire during the reign of Joseph II.

In anticipation of this disaster, Pius VI had conferred on the bishops extensive privileges. They had power to dispense expelled religious, both men and women, from wearing their habit, and, in case of necessity, to dispense them from the simple vows. They were to secure for them a pension—but, as this was generally insufficient, many were reduced to poverty. The Government transformed the monasteries into hospitals, colleges, or barracks. The victims of the persecution remained faithful to their religious obligations. Their ordinaries took great care of them, Cardinal de Frankenberg, Archbishop of Mechlin, affording a particularly bright example in this respect. The Abbey of Melk (q. v.) was spared; some of the suppressed houses were even affiliated to it; but on the death of Abbot Urban I (1783), the emperor placed over the monks a religious of the Pious Schools as commendatory abbot. The monasteries of Styria were soon closed, though some houses—e. g., Kremsmünster, Lambach, Admont—escaped the devastation. All those in Carinthia and the Tyrol were sacrificed. The religious in Bohemia had not yet recovered from the ravages caused by the wars of Frederick II and Maria Theresa, when they had to encounter this fresh tempest. Breunau, Emmaus of Prague, and Raigern, with a few monasteries of Cistercians and Premonstratensians, escaped complete ruin. The emperor showed no consideration towards the venerable Abbey of St. Martin of Pannonia and its dependencies. In Hungary the Benedictines were entirely wiped out.

The death of Joseph II put an end to this violence, without, however, stopping the spread of those opinions which had incited it. His brother, Leopold II (d. 1792) allowed things to remain as he found them, but Francis II (Francis I of Austria, son of Leopold II) undertook to repair some of the ruin, permitting religious to pronounce solemn vows at the age of twenty-one. The Hungarian Abbey of St. Martin of Pannonia was the first to profit by this benevolence, but its monks had to open the gymnasia in it and its dependencies. The monasteries of the Tyrol and Salzburg had escaped the ruin. These countries were attached to Austria by the Congress of Vienna (Sept., 1814—June, 1815). The monks were allowed to re-enter. The celebrated Abbey of Reichenau alone did not arise from its ruins. The princely Abbey of St. Gall, too, had been dissolved during the Wars of the Revolution and the Empire, and there was a proposal, at the Congress of Vienna, to re-establish it, but without giving it back its lands: the abbot would not accept the conditions thus imposed, and the matter went no further. The Swiss monasteries were exposed to pillage and ruin during the wars of the Revolution. The government of the Helvetic Republic was hostile to them, they recovered a little liberty after the Act of Mediation, in 1803. But the situation changed after 1832. The Federal Constitution, revised at that time, suppressed the guarantees granted to convents and religious foundations. During the long period of persecution and confiscation in Switzerland, from 1838 to 1848 (for which see LUCERNE), the monks of Mariastein sought refuge in Germany, and then in France and Austria; those of Mury were sheltered at Gries (Tyrol), others, like Disentis, fell into utter ruin. The Swiss Benedictines then went to the United States, where they founded the Swiss-American congregation.

B. *The Iberian Peninsula.*—The constitution of 1812 given to the Kingdom of Spain by the Government which Napoleon imposed on it suppressed all religious congregations and confiscated their property, in accordance with the conqueror's general policy. They were re-established in 1814 by King Ferdinand, whom the War of Independence had restored to the

Throne. Their existence was again threatened by the Revolution of 1820, when the Cortes decreed the suppression of the religious orders, leaving only a few houses to shelter the aged and infirm. It must be said that, in this case, the effect of the generally anti-religious principles actuating the revolutionists was reinforced by the impoverishment of the nation by the Napoleonic wars, by the revolt of its American colonies, and by changed economic conditions. Ferdinand III, who was restored to the throne by the French Army, hastened to annul the decrees of the Cortes (1823). The monasteries and their property were given back to the religious, who were enabled once more to live in community. But in October, 1835, a decree of the Government, inspired by Juan de Mendizábal, minister of finance, again suppressed all the monasteries in Spain and its possessions. The Cortes, which had not been consulted, approved of this measure next year, and promulgated a law abolishing vows of religion. All the movable and immovable property was confiscated and the income assigned to the sinking fund. Objects of art and books were, in general, reserved for the museums and public libraries, though many of them were left untouched, and many others dispersed. Large quantities of furniture and other objects were sold, the lands and rights of each house alienated, while speculators realized large fortunes. Certain monasteries were transformed into barracks or devoted to public purposes. Others were sold or abandoned to pillage.

In 1859 the Government gave to the bishops those religious houses which had not already been disposed of. Numerous conventual churches were turned over for parish use. The religious were promised a pension not to exceed one franc a day, but it was never paid. No mercy was shown even to the aged and the infirm, who were not allowed to wait for death in their cells. Almost all hoped for an approaching political change that would restore them their religious liberty, as had happened twice before, but the event proved otherwise. The destruction was irrevocable, some religious sought a refuge in Italy and in France. The greater number either petitioned the bishops to incorporate them in their dioceses or went to live with their families. The people of the Northern provinces, who are very devoted to Catholicism, did not associate themselves directly with the measures taken against the religious; so much cannot be said for those of the South and of the large towns, where the expulsion of religious sometimes took the appearance of a popular insurrection: convents were pillaged and burned, religious were massacred. Monasteries of women were treated less inhumanly: here the authorities contented themselves with confiscating property and suppressing privileges; but the nuns continued to live in community. With time the passion and hatred of the persecutors diminished somewhat. The monks of the Abbey of Montserrat in Catalonia were able to come together again. The religious orders which supplied the clergy for the Spanish colonies, such as the Dominicans, Augustinians, and Franciscans, were authorized to retain some houses.

The monasteries in Portugal met the same fate as those in Spain, and at about the same time (1833). Only the Franciscans charged with religious duties in the Portuguese colonies were spared.

C. *Italy.*—During the eighteenth century, while Josephinism was rampant in Catholic Germany, Leopold, afterwards the Emperor Leopold II, tried to emulate in some degree the emperor's anti-monastic policy. But the general persecution of religious orders in Italy did not begin until the wars of the Revolution and the Empire had effected a complete transformation in that country. France inspired with her anti-religious tendencies the new governments established by Napoleon, Church property was confiscated; monasteries and convents were suppressed,

though congregations devoted to the care of the sick and to the instruction of poor children were tolerated here and there as, for instance, in the Kingdom of Italy, founded in 1805. The repressive measures could not be enforced in all localities with equal severity. Napoleon extended them to the city of Rome in 1810. The authorities then closed the religious houses of both sexes. At Naples the authorities proceeded to suppress all the orders and confiscate their property (1806-13). When the Congress of Vienna restored these states to their exiled rulers, the latter hastened to make the Church free once more. In Tuscany the duke made a grant to the monasteries, in exchange for the lands that they had lost. In the Pontifical States things reverted to the ancient order: 1824 houses for men and 612 for women were re-established. In Naples the religious had diminished by at least one-half.

The period of peace, however, was not destined to endure: the establishment of Italian unity was fatal to the religious orders. The persecution was resumed in the constitutional Kingdom of Sardinia, which was about to become the agent and the type of united Italy. Cavour imposed this anti-religious policy on King Victor Emmanuel. He proposed first to secularize the monastic property: the money thus obtained was to serve as a church fund to equalize the payment of the diocesan clergy. The king finally gave his sanction to a law which suppressed, in his own states alone, 334 convents and monasteries, containing 4280 religious men and 1200 nuns. This ruin and depredation proceeded uniformly with the cause of Italian unity, since the Piedmontese constitution and legislation were imposed on the whole peninsula. The religious orders and benefices not charged with cures of souls were declared useless, and suppressed; the buildings and lands were confiscated and sold (1866). The Government paid allowances to the surviving religious. In some abbey—as at Monte Cassino—the members of the community were allowed to remain as care-takers. The Papal States were subjected to the same policy after 1870. The Italian authorities contented themselves with depriving the religious of their legal existence and all they possessed, without raising any obstacles to a possible reconstruction of regular communities. A certain number of monasteries have thus been able to exist and carry on their work, owing solely to the guarantee of individual liberty; their existence is precarious, and an arbitrary measure of the Government might at any time suppress them. After the general dissolution, some Italian religious—for instance, the Olivetans and the Canons Regular of St. John Lateran—crossed the Alps and established houses of their respective orders in France. J. M. BESSE.

SUPPRESSION OF MONASTERIES IN ENGLAND UNDER HENRY VIII.—From any point of view the destruction of the English monasteries by Henry VIII must be regarded as one of the great events of the sixteenth century. They were looked upon, in England, at the time of Henry's breach with Rome, as one of the great bulwarks of the papal system. The monks had been called "the great standing army of Rome". One of the first practical results of the assumption of the highest spiritual powers by the king was the supervision by royal decree of the ordinary episcopal visitations, and the appointment of a layman—Thomas Cromwell—as the king's vicar-general in spirituals, with special authority to visit the monastic houses, and to bring them into line with the new order of things. This was in 1534; and, some time prior to the December of that year, arrangements were already being made for a systematic visitation. A document, dated 21 January, 1535, allows Cromwell to conduct the visit through "commissaries"—rather than personally—as the minister is said to be at that time too busy with "the affairs of the whole kingdom". It is now practically admitted that, even prior to the issue

of these commissions of visitation, the project of suppressing some, if indeed not all, of the monastic establishments in the country, had been not only broached, but had become part of Henry's practical politics. It is well to remember this, as it throws an interesting and somewhat unexpected light upon the first dissolutions: the monasteries were doomed prior to these visitations, and not in consequence of them, as we have been asked to believe according to the traditional story. Parliament was to meet early in the following year, 1536, and, with the twofold object of replenishing an exhausted exchequer and of anticipating opposition on the part of the religious to the proposed ecclesiastical changes, according to the royal design, the Commons were to be asked to grant Henry the possessions of at least the smaller monasteries. It must have been felt, however, by the astute Cromwell, who is credited with the first conception of the design, that to succeed, a project such as this must be sustained by strong yet simple reasons calculated to appeal to the popular mind. Some decent pretext had to be found for presenting the proposed measure of suppression and confiscation to the nation, and it can hardly now be doubted that the device of blackening the characters of the monks and nuns was deliberately resorted to.

The visitation opened apparently in the summer of 1535, although the visitatorial powers of the bishops were not suspended until the eighteenth of the following September. Preachers were moreover commissioned to go over the country in the early autumn, in order, by their invectives, to educate public opinion against the monks. These pulpit orators were of three sorts, (1) "railers", who declaimed against the religious as "hypocrites, sorcerers, and idle drones, etc."; (2) "preachers", who said the monks "made the land unprofitable"; and (3) those who told the people that, "if the abbey went down, the king would never want any taxes again". This last was a favourite argument of Cranmer, in his sermons at St. Paul's Cross. The men employed by Cromwell—the agents entrusted with the task of getting up the required evidence—were chiefly four, Layton, Leigh, Aprice, and London. They were well fitted for their work; and the charges brought against the good name of some at least of the monasteries, by these chosen emissaries of Cromwell are, it must be confessed, sufficiently dreadful, although even their reports certainly do not bear out the modern notion of wholesale corruption.

The visitation seems to have been conducted systematically, and to have passed through three clearly defined stages. During the summer the houses in the west of England were subjected to examination; and this portion of the work came to an end in September, when Layton and Leigh arrived at Oxford and Cambridge respectively. In October and November the visitors changed the field of their labours to the eastern and southeastern districts; and in December we find Layton advancing through the midland counties to Lichfield, where he met Leigh, who had finished his work in the religious houses of Huntingdon and Lincolnshire. Thence they proceeded together to the north, and the city of York was reached on 11 January, 1536. But with all their haste, to which they were urged by Cromwell, they had not proceeded very far in the work of their northern inspection before the meeting of Parliament.

From time to time, whilst on their work of inspection, the visitors, and principally London and Leigh, sent brief written reports to their employers. Practically all the accusations made against the good name of the monks and nuns are contained in the letters sent in this way by the visitors, and in the document, or documents, known as the "Comperata Monastica", which were drawn up at the time by the same visitors and forwarded to their chief, Cromwell. No other evidence as to the state of the monasteries at this time is forthcoming, and the inquirer into the truth of

these accusations is driven back ultimately upon the worth of these visitors' words. It is easy, of course, to dismiss inconvenient witnesses as being unworthy of credit, but in this case a mere study of these letters and documents is quite sufficient to cast considerable doubt upon their testimony, whilst an examination into the subsequent careers of these royal inquisitors will more than justify the rejection of their testimony as wholly unworthy of belief. (Gasquet, "Henry VIII and the English Monasteries", I, xi.)

It is of course impossible to enter into the details of the visitation. We must, therefore, pass to the second step in the dissolution. Parliament met on 4 February, 1536, and the chief business it was called upon to transact was the consideration and passing of the act suppressing the smaller religious houses. It may be well to state exactly what is known about this matter. We know for certain that the king's proposal to suppress the smaller religious houses gave rise to a long debate in the Lower House, and that Parliament passed the measure with great reluctance. It is more than remarkable, moreover, that in the preamble of the Act itself Parliament is careful to throw the entire responsibility for the measure upon the king, and to declare, if words mean anything at all, that they took the truth of the charges against the good name of the religious, solely upon the king's "declaration" that he knew the charges to be true. It must be remembered, too, that one simple fact proves that the actual accusations, or "Comperta"—whether in the form of the visitors' notes, or of the mythical "Black-book"—could never have been placed before Parliament for its consideration in detail, still less for its critical examination and judgment. We have the "Comperta" documents—the findings of the visitors, whatever they may be worth, whilst on their rounds, among the State papers—and it may be easily seen that no distinction whatever is made in them between the greater and lesser houses. All are, to use a common expression, "tarred with the same brush"; all, that is, are equally smirched by the filthy suggestions of Layton and Leigh, of London and Aprice. "The idea that the smaller monasteries rather than the larger were particular abodes of vice", writes Dr. Gairdner, the editor of the State papers of this period, "is not borne out by the 'Comperta'". Yet the preamble of the very Act, which suppressed the smaller monasteries because of their vicious living, declares positively that "in the great and solemn Monasteries of the realm" religion was well observed and God well served. Can it be imagined for a moment that this assertion could have found its way into the Act of Parliament, had the reports, or "Comperta", of the visitors been laid upon the table of the House of Commons for the inspection of the members? We are consequently compelled by this fact to accept as history the account of the matter given in the preamble of the first Act of dissolution: namely that the measure was passed on the strength of the king's "declaration" that the charges against the smaller houses were true, and on that alone.

In its final shape the first measure of suppression merely enacted that all religious houses not possessed of an income of more than £200 a year should be given to the Crown. The heads of such houses were to receive pensions, and the religious, despite the alleged depravity of some, were to be admitted to the larger and more observant monasteries, or to be licensed to act as secular priests. The measure of turpitude fixed by the Act was thus a pecuniary one. All monastic establishments which fell below the £200 a year standard of "good living" were to be given to the king to be dealt with at his "pleasure, to the honour of God and the wealth of the realm".

This money limit at once rendered it necessary, as a first step in the direction of dissolution, to ascertain which houses came within the operation of the Act.

As early as April, 1536 (less than a month from the passing of the measure), we find mixed commissions of officials and country gentlemen appointed in consequence to make surveys of the religious houses, and instructions issued for their guidance. The returns made by these commissioners are of the highest importance in determining the moral state of the religious houses at the time of their dissolution. It is now beyond dispute that the accusations of Cromwell's visitors were made prior to the passing of the Act of Suppression of 1536, and therefore prior to, not after (as most writers have erroneously supposed), the constitution of these mixed commissions of gentry and officials. The main purpose for which the commissioners were nominated was of course to find out what houses possessed an income of less than £200 a year; and to take over such in the king's name, as now by the late Act legally belonging to His Majesty. The gentry and officials were however instructed to find out and report upon "the conversation of the lives" of the religious; or in other words they were specially directed to examine into the moral state of the houses visited. Unfortunately, comparatively few of the returns of these mixed commissions are now known to exist; although some have been discovered, which were unknown to Dr. Gairdner when he made his "Calendar" of the documents of 1536. Fortunately, however, the extant reports deal expressly with some of the very houses against which Layton and Leigh had made their pestilential suggestions. Now that the suppression was resolved upon and made legal, it did not matter to Henry or Cromwell that the inmates should be described as "evil livers"; and so the new commissioners returned the religious of these same houses as being really "of good and virtuous conversation", and this, not in the case of one house or district only, but, as Gairdner says, "the characters given of the inmates are almost uniformly good".

To prepare for the reception of the expected spoils, what was known as the Augmentation Office was established, and Sir Thomas Pope was made its first treasurer, 24 April, 1536. On this same day instructions were issued for the guidance of the mixed commissions in the work of dissolving the monasteries. According to these directions, the commissioners, having interviewed the superior and shown him the "Act of Dissolution", were to make all the officials of the house swear to answer truthfully any questions put to them. They were then to examine into the moral and financial state of the establishment, and to report upon it, as well as upon the number of the religious and "the conversation of their lives". After that, an inventory of all the goods, chattels, and plate was to be taken, and an "indenture" or counterpart of the same was to be left with the superior, dating from 1 March, 1536, because from that date all had passed into the possession of the king. Thenceforward the superior was to be held responsible for the safe custody of the king's property. At the same time the commissioners were to issue their commands to the heads of the houses not to receive any more rents in the name of the convent, nor to spend any money, except for necessary expenses, until the king's pleasure should be known. They were, however, to be strictly enjoined to continue their care over the lands, and "to sow and cultivate" as before, until such time as some king's farmer should be appointed and relieve them of this duty. As for the monks, the officer was told "to send those that will remain in religion to other houses with letters to the governors, and those that wish to go to the world to my lord of Canterbury and the lord chancellor for" their letters to receive some benefices or livings when such could be found for them.

One curious fact about the dissolution of the smaller monasteries deserves special notice. No sooner had the king obtained possession of these houses under the money value of £200 a year, than he commenced to

refound some "in perpetuity" under a new charter. In this way no fewer than fifty-two religious houses in various parts of England gained a temporary respite from extinction. The cost, however, was considerable, not alone to the religious, but to their friends. The property was again confiscated and the religious were finally swept away, before they had been able to repay the sums borrowed in order to purchase this very slender favour at the hands of the royal legal possessor. In hard cash the treasurer of the Court of Augmentation acknowledges to have received, as merely "part payment of the various sums of money, due to the king for fines or compositions for the toleration and continuance" of only thirty-three of these refounded monasteries, some £5948 6s. 8d. or hardly less, probably, than £60,000 of present-day money. Sir Thomas Pope, the treasurer of the Court of Augmentation, ingenuously adds that he has not counted the arrears due to the office under this head, "since all and each of the said monasteries, before the close of the account, have come into the King's hands by surrender, or by the authority of Parliament have been added to the augmentation of the royal revenues". "For this reason, therefore," he adds, "the King has remitted all sums of money still due to him, as the residue of their fines for his royal toleration." The sums paid for the fresh foundations "in perpetuity", which in reality as the event showed meant only the respite of a couple of years or so, varied considerably. As a rule they represented about three times the annual revenue of the house; but sometimes, as in the case of St. Mary's, Winchester, which was fined £333 6s. 8d. for leave to continue, it was re-established with the loss of some of its richest possessions.

It is somewhat difficult to estimate correctly the number of religious houses which passed into the king's possession in virtue of the Act of Parliament of 1536. Stowe's estimate is generally deemed sufficiently near the mark, and he says: "the number of the houses then suppressed was 376". In respect to the value of the property, Stowe's estimate would also appear to be substantially correct when he gives £30,000, or some £300,000 of present-day money, as the yearly income derived from the confiscated lands. There can be no doubt, however, that subsequently the promises of large annual receipts from the old religious estates proved illusory, and that, in spite of the rack-renting of the Crown farmers, the monastic acres furnished far less money for the royal purse than they had previously done under the thrifty management and personal supervision of their former owners.

As to the value of the spoils which came from the wrecked and dismantled houses, where the waste was everywhere so great, it is naturally difficult to appraise the value of the money, plate, and jewels which were sent in kind into the king's treasury, and the proceeds from the sales of the lead, bells, stock, furniture, and even the conventual buildings. It is, however, reasonably certain that Lord Herbert, following Stowe, has placed the amount actually received at too high a figure. Not, of course, that these goods were not worth vastly more than the round £100,000, at which he estimates them; but nothing like that sum was actually received or acknowledged by Sir Thomas Pope, as treasurer of the Court of Augmentation. Corruption, without a doubt, existed everywhere, from the lowest attendant of the visiting commissioner to the highest court official. But allowing for the numberless ways in which the monastic possessions could be plundered in the process of transference to their new possessor, it may be not much beyond the mark to put these "Robin Hood's pennyworths", as Stowe calls them, at about £1,000,000 of present-day money.

Something must necessarily be said of the actual process which was followed by the Crown agents in dissolving these lesser monasteries. It was much the same in every case, and it was a somewhat long pro-

cess, since the work was not all done in a day. The rolls of accounts, sent into the Augmentation Office by the commissioners, show that it was frequently a matter of six to ten weeks before any house was finally dismantled and its inmates had all been turned out of doors. The chief commissioners paid two official visits to the scene of operations during the progress of the work. On the first they assembled the superior and his subjects in the Chapter House, announced to the community and its dependents their impending doom; called for and defaced the convent seal, the symbol of corporate existence, without which no business could be transacted; desecrated the church; took possession of the best plate and vestments "unto the King's use"; measured the lead upon the roof and calculated its value when melted; counted the bells; and appraised the goods and chattels of the community. Then they passed on to the scene of their next operations, leaving behind them certain subordinate officers and workmen to carry out the designed destruction by stripping the roofs and pulling down the gutters and rain pipes; melting the lead into pigs and foddors, throwing down the bells, breaking them with sledge-hammers and packing the metal into barrels ready for the visit of the speculator and his bid for the spoils. This was followed by the work of collecting the furniture and selling it, together with the window frames, shutters, and doors by public auction or private tender. When all this had been done, the commissioners returned to audit the accounts and to satisfy themselves generally that the work of devastation had been accomplished to the king's contentment—that the nest had been destroyed and the birds scattered—that what had been a monument of architectural beauty in the past was now a "bare roofless choir, where late the sweet birds sang".

No sooner had the process of destruction begun simultaneously all over the country than the people began at last to realize that the benefits likely to accrue to them out of the plunder were most illusory. When this was understood, it was first proposed to present a petition to the king from the Lords and Commons, pointing out the evident damage which must be done to the country at large if the measure were carried out fully; and asking that the process of suppression should be at once stopped, and that the lesser houses, which had not yet been dissolved under the authority of the Act of 1536, should be allowed to stand. Nothing, of course, came of this attempt. Henry's appetite was but whetted by what had come to him, and he only hungered for more of the spoils of the Church and the poor. The action of the Parliament in 1536 in permitting the first measure to become law made it in reality much more difficult for Henry to draw back; and in more senses than one it paved the way for the general dissolution. Here and there in the country active resistance to the work of destruction was organized, and in the case of Lincolnshire, Yorkshire, and the North generally, the popular rising of the "Pilgrimage of Grace" was caused in the main, or at least in great measure, by the desire of the people at large to save the religious houses from ruthless destruction. The failure of the insurrection of the "Pilgrimage of Grace" was celebrated by the execution of twelve abbots and, to use Henry's own words, by a wholesale "tying-up" of monks. By a new and ingenious process, appropriately called "Dissolution by Attainder", an abbey was considered by the royal advisers to fall into the king's hands by the supposed or constructive treason of its superior. In this way several of the larger abbeys, with all their revenues and possessions, came into Henry's hands as a consequence of the "Pilgrimage of Grace".

The Parliament of 1536, it will be remembered, had granted Henry the possession only of the houses the annual value of which was less than £200. What happened in the three years that followed the passing

of the Act was briefly this: the king was ill satisfied with the actual results of what he had thought would prove a veritable gold mine. Personally, perhaps, he had not gained as much as he had hoped for from the dissolutions which had taken place. The property of the monks somehow seemed cursed by its origin; it passed from his control by a thousand-and-one channels, and he was soon thirsting for a greater prize, which, as the event showed, he was equally unable to guard for his own uses. By his instructions, visitors were once more set in motion against the larger abbeys, in which, according to the Act of 1536, religion was "right well kept and observed". Not having received any mandate from Parliament to authorize the extension of their proceedings, the royal agents, eager to win a place in his favour, were busy up and down the country, cajoling, coercing, commanding, and threatening the members of the religious houses in order to force them to give up their monasteries unto the King's Majesty. As Dr. Gairdner puts it: "by various arts and means the heads of these establishments were induced to surrender, and occasionally when an abbot was found, as in the case of Woburn, to have committed treason in the sense of the recent statutes, the house (by a stretch of the tyrannical laws) was forfeited to the king by his attainder. But attainders were certainly the exception, surrenders being the general rule".

The autumn of 1537 saw the beginning of the fall of the friaries in England. For some reason, possibly because of their poverty, they had not been brought under the Act of 1536. For a year after the "Pilgrimage of Grace" few dissolutions of houses, other than those which came to the king by the attainder of their superiors, are recorded. With the feast of St. Michael, 1537, however, besides the convents of friars the work of securing, by some means or other, the surrender of the greater houses went on rapidly. The instructions given to the royal agents are clear. They were, by all methods known to them, to get the religious "willingly to consent and agree" to their own extinction. It was only when they found "any of the said heads and convents, so appointed to be dissolved, so wilful and obstinate that they would in no wise" agree to sign and seal their own death-warrant, that the commissioners were authorized by Henry's instructions to "take possession of the house" and property by force. And, whilst thus engaged, the royal agents were ordered to declare that the king had no design whatsoever upon the monastic property or system as such, or any desire to secure the total suppression of the religious houses. They were instructed at all costs to put a stop to such rumours, which were naturally rife all over the country at this time. This they did; and the unscrupulous Dr. Layton declared that he had told the people everywhere that "in this they utterly slandered the King their natural lord". He bade them not to believe such reports; and he "commanded the abbots and priors to set in the stocks" such as related such untrue things. It was, however, as may be imagined, hard enough to suppress the rumour whilst the actual thing was going on. In 1538 and 1539 some 150 monasteries of men appear to have signed away their corporate existence and their property, and by a formal deed handed over all rights to the king.

When the work had progressed sufficiently the new Parliament, which met in April, 1539, after observing that divers abbots and others had yielded up their houses to the king, "without constraint, coercion, or compulsion", confirmed these surrenders and vested all monastic property thus obtained in the Crown. Finally, in the autumn of that year, Henry's triumph over the monastic orders was completed by the horrible deaths for constructive treason of the three great Abbots of Glastonbury, Colchester, and Reading. And so, as one writer has said, "before the win-

ter of 1540 had set in, the last of the abbeys had been added to the ruins with which the land was strewn from one end to the other".

It is difficult, of course, to estimate the exact number of religious and religious houses suppressed at this time in England. Putting all sources of information together, it seems that the monks and regular canons expelled from the greater monasteries were about 3200 in number; the friars, 1800; and the nuns, 1560. If to these should be added the number of those affected by the first Act of Parliament, it is probably not far from the truth to say that the number of religious men and women expelled from their homes by the suppression were, in round numbers, about 8000. Besides these, of course, there were probably more than ten times that number of people turned adrift who were their dependents, or otherwise obtained a living in their service.

If it is difficult to determine, with any certainty, the number of the religious in monastic England at the time of the dissolution of the monasteries, it is still more so to give any accurate estimate of the property involved. Speed calculated the annual value of the entire property, which passed into Henry's hands at some £171,312 4s. 3½d. Other valuations have placed it at a higher figure, so that a modern calculation of the annual value at £200,000, or some £2,000,000 of present-day money, is probably not excessive. Hence, as a rough calculation, it may be taken that at the fall of the monasteries an income of about two million pounds sterling a year, of the present money value, was taken from the Church and the poor and transferred to the royal purse.

It may, however, be at once stated that Henry evidently never derived anything like such a sum from the transaction. The capital value was so diminished by gratuitous grants, sales of lands at nominal values, and in numerous other ways, that in fact, for the eleven years from 1536 to 1547, the Augmentation Office accounts show that the king only drew an average yearly income of £37,000, or £370,000 of present-day money, from property which, in the hands of the monks, had probably produced five times the amount. As far as can be gathered from the accounts still extant, the total receipts of the king from the monastic confiscations from April, 1536, to Michaelmas, 1547, was about thirteen million and a half of present-day money, to which must be added about a million sterling, the melting value of the monastic plate. Of this sum, leaving out of calculation the plate and jewels, not quite three millions were spent by the king personally; £600,000 was spent upon the royal palaces, and nearly half a million on the household of the Prince of Wales. More than five millions sterling are accounted for under the head of war expenses, and nearly £700,000 were spent on coast defence. Pensions to religious persons account for £330,000; and one curious item of £6000 is entered as spent "to secure the surrender of the Abbey of Abingdon."

Monastery, CANONICAL ERECTION OF A.—A religious house (monastery or convent) is a fixed resi-

dence of religious persons. It supposes, therefore, continuous habitation of a community strictly so called, governed by a superior and following the rule prescribed by the respective order. Such a religious house is to be distinguished from a grange or farm, from a villa or place of recreation, and from a hospice or place for the reception of travelling religious. The conditions for the legitimate erection of a monastery are: (1) the permission of the Holy See. This is certain for countries subject to the Decree "Romanos Pontifices" (i. e. the United States, England, etc.); it is also required for Italy. Outside of Italy and missionary countries generally, the question is much disputed by canonists; (2) the assent of the ordinary. This condition was approved by the Council of Chalcedon in 451, and was in force as late as the twelfth century. In the thirteenth, the privileges of the mendicant orders caused frequent derogations from the law, but the ancient discipline was restored by the Council of Trent (Sess. XXV, de Reg., cap. iii). This permission cannot be given by the vicar-general nor by the vicar-capitular. Before the bishop gives his assent, he should make himself acquainted with the opinions of those to whom such a monastery might prove a detriment, as the superiors of other religious orders already established there, or the people of the place. The parish priest cannot object, unless it is intended to confer parochial rights on the new religious house; (3) there must be a proper provision for the sustenance of twelve religious, otherwise they must live under the jurisdiction of the ordinary. This last condition does not, however, apply to countries where the "Romanos Pontifices" is in force. For the transfer of a monastery from one site to another in the same locality, no permission of the Holy See is required, as this is translocation, not erection. There was an ancient law that a new monastery could not be erected within a certain distance from an older one, but it has gone into desuetude. As regards convents of religious women, the assent of the ordinary is required, but not that of the Holy See. The same holds for the erection of houses of pious congregations and institutes.

WILLIAM H. W. FANNING.

Monasticism.—Monasticism or monachism, literally the act of "dwelling alone" (Greek, *monos, monázein, monachos*), has come to denote the mode of life pertaining to persons living in seclusion from the world, under religious vows and subject to a fixed rule, as monks, friars, nuns, or in general as religious. The basic idea of monasticism in all its varieties is seclusion or withdrawal from the world or society. The object of this is to achieve a life whose ideal is different from and largely at variance with that pursued by the majority of mankind; and the method adopted, no matter what its precise details may be, is always self-abnegation or organized asceticism. Taken in this broad sense monachism may be found in every religious system which has attained to a high degree of ethical development, such as the Brahmin, Buddhist, Jewish, Christian, and Moslem religions, and even in the system of those modern communistic societies, often anti-theological in theory, which are a special feature of recent social development especially in America. Hence it is claimed that a form of life which flourishes in environments so diverse must be the expression of a principle inherent in human nature and rooted therein no less deeply than the principle of domesticity, though obviously limited to a far smaller portion of mankind. This article and its two ensuing sections, **EASTERN MONASTICISM** and **WESTERN MONASTICISM**, deal with the monastic order strictly so called as distinct from the "religious orders" such as the friars, canons regular, clerks regular, and the more recent congregations. For information as to these

see **RELIGIOUS ORDERS**, and the article on the particular order or congregation required.

I. ITS GROWTH AND METHOD.—*Origin.*—Any discussion of pre-Christian asceticism is outside the scope of this article, but readers who wish to study this portion of the subject may be referred to Part I, of Dr. Zockler's "Askese und Mönchtum" (Frankfurt, 1897), which deals with the prevalence of the ascetic idea among races of the most diverse character. So too, any question of Jewish asceticism as exemplified in the Essenes or Therapeutæ of Philo's "De Vita Contemplativa" is excluded, but for this reference may be given to Mr. F. C. Conybeare's volume "Philo about the Contemplative Life" (Oxford, 1895), by which the authenticity of the work has been reinstated after the attacks of Dr. Lucius and other scholars. It has already been pointed out that the monastic ideal is an ascetic one, but it would be wrong to say that the earliest Christian asceticism was monastic. Any such thing was rendered impossible by the circumstances in which the early Christians were placed, for in the first century or so of the Church's existence the idea of living apart from the congregation of the faithful, or of forming within it associations to practise special renunciations in common was out of question. While admitting this however it is equally certain that monasticism, when it came, was little more than a precipitation of ideas previously in solution among Christians. For asceticism is the struggle against worldly principles, even with such as are merely worldly without being sinful. The world desires and honours wealth, so the ascetic loves and honours poverty. If he must have something in the nature of property then he and his fellows shall hold it in common, just because the world respects and safeguards private ownership. In like manner he practises fasting and virginity that thereby he may repudiate the licence of the world.

Hereafter the various items of this renunciation will be dealt with in detail, they are mentioned at this stage merely to show how the monastic ideal was foreshadowed in the asceticism of the Gospel and its first followers. Such passages as I John, ii, 15-17: "Love not the world, nor the things that are in the world. If any man love the world, the charity of the Father is not in him. For all that is in the world is the concupiscence of the flesh, and the concupiscence of the eyes, and the pride of life, which is not of the Father but is of the world. And the world passeth away and the concupiscence thereof. But he that doeth the will of God abideth for ever"—passages which might be multiplied, and can bear but one meaning if taken literally. And this is precisely what the early ascetics did. We read of some who, driven by the spirit of God, dedicated their energies to the spread of the Gospel and, giving up all their possessions passed from city to city in voluntary poverty as apostles and evangelists. Of others we hear that they renounced property and marriage so as to devote their lives to the poor and needy of their particular church. If these were not strictly speaking monks and nuns, at least the monks and nuns were such as these; and, when the monastic life took definite shape in the fourth century, these forerunners were naturally looked up to as the first exponents of monachism. For the truth is that the Christian ideal is frankly an ascetic one and monachism is simply the endeavour to effect a material realization of that ideal, or organization in accordance with it, when taken literally as regards its "Counsels" as well as its "Precepts" (see **ASCETICISM**; **COUNSELS**, **EVANGELICAL**).

Besides a desire of observing the evangelical counsels, and a horror of the vice and disorder that prevailed in a pagan age, two contributory causes in particular are often indicated as leading to a renunciation of the world among the early Christians. The first of these was the expectation of an immediate Second

Advent of Christ (cf. I Cor., vii, 29-31; I Pet., IV, 7, etc.). That this belief was widespread is admitted on all hands, and obviously it would afford a strong motive for renunciation since a man who expects this present order of things to end at any moment, will lose keen interest in many matters commonly held to be important. This belief however had ceased to be of any great influence by the fourth century, so that it cannot be regarded as a determining factor in the origin of monasticism which then took visible shape. A second cause more operative in leading men to renounce the world was the vividness of their belief in evil spirits. The first Christians saw the kingdom of Satan actually realized in the political and social life of heathendom around them. In their eyes the gods whose temples shone in every city were simply devils, and to participate in their rites was to join in devil worship. When Christianity first came in touch with the Gentiles the Council of Jerusalem by its decree about meat offered to idols (Acts, xv, 20) made clear the line to be followed. Consequently certain professions were practically closed to believers since a soldier, schoolmaster, or state official of any kind might be called upon at a moment's notice to participate in some act of the state religion. But the difficulty existed for private individuals also. There were gods who presided over every moment of a man's life, gods of house and garden, of food and drink, of health and sickness. To honour these was idolatry, to ignore them would attract inquiry and possibly persecution. And so when, to men placed in this dilemma, St. John wrote, "Keep yourselves from idols" (I John, v, 21) he said in effect "Keep yourselves from public life, from society, from politics, from intercourse of any kind with the heathen", in short "renounce the world".

By certain writers the communistic element seen in the Church of Jerusalem during the first years of its existence (Acts, iv, 32) has sometimes been pointed to as indicating a monastic element in its constitution, but no such conclusion is justified. Probably the community of goods was simply a natural continuation of the practice, begun by Jesus and the Apostles, where one of the band kept the common purse and acted as steward. There is no indication that such a custom was ever instituted elsewhere and even at Jerusalem it seems to have collapsed at an early period. It must be recognized also that influences such as the above were merely contributory and of comparatively small importance. The main cause which begot monachism was simply the desire to fulfil Christ's law literally, to imitate Him in all simplicity, following in His footsteps whose "kingdom is not of this world". So we find monachism at first instinctive, informal, unorganized, sporadic; the expression of the same force working differently in different places, persons, and circumstances; developing with the natural growth of a plant according to the environment in which it finds itself and the character of the individual listener who heard in his soul the call of "Follow Me".

(2) *Means to the End.*—It must be clearly understood that, in the case of the monk, asceticism is not an end in itself. For him, as for all men, the end of life is to love God. Monastic asceticism then means the removal of obstacles to loving God, and what these obstacles are is clear from the nature of love itself. Love is the union of wills. If the creature is to love God, he can do it in one way only; by sinking his own will in God's, by doing the will of God in all things: "if ye love Me keep my commandments". No one understands better than the monk those words of the beloved disciple, "Greater love hath no man than this that a man lay down his life", for in his case life has come to mean renunciation. Broadly speaking this renunciation has three great branches corresponding to the three evangelical counsels of poverty, chastity, and obedience.

(a) *Poverty.*—There are few subjects, if any, upon which more sayings of Jesus have been preserved than upon the superiority of poverty over wealth in His kingdom (cf. Matt., v, 3; xiii, 22; xix, 21 sq.; Mark, x, 23 sq.; Luke, vi, 20; xviii, 24 sq., etc.), and the fact of their preservation would indicate that such words were frequently quoted and presumably frequently acted upon. The argument based upon such passages as Matt., xix, 21 sq., may be put briefly thus. If a man wish to attain eternal life it is better for him to renounce his possessions than to retain them. Jesus said, "How hardly shall they that have riches enter into the kingdom of God", the reason being no doubt that it is difficult to prevent the affections from becoming attached to riches, and that such attachment makes admission into Christ's kingdom impossible. As St. Augustine points out, the disciples evidently understood Jesus to include all who covet riches in the number of "the rich", otherwise, considering the small number of the wealthy compared with the vast multitude of the poor, they would not have asked, "Who then shall be saved"? "You cannot serve God and Mammon" is an obvious truth to a man who knows by experience the difficulty of a whole-hearted service of God; for the spiritual and material good are in immediate antithesis, and where one is the other cannot be. Man cannot sate his nature with the temporal and yet retain an appetite for the eternal; and so, if he would live the life of the spirit, he must flee the lust of the earth and keep his heart detached from what is of its very nature unspiritual. The extent to which this voluntary poverty is practised has varied greatly in the monachism of different ages and lands. In Egypt the first teachers of monks taught that the renunciation should be made as absolute as possible. Abbot Agathon used to say, "Own nothing which it would grieve you to give to another". St. Macarius once, on returning to his cell, found a robber carrying off his scanty furniture. He thereupon pretended to be a stranger, harnessed the robber's horse for him and helped him to get his spoil away. Another monk had so stripped himself of all things that he possessed nothing save a copy of the Gospels. After a while he sold this also and gave the price away saying, "I have sold the very book that bade me sell all I had".

As the monastic institute became more organized legislation appeared in the various codes to regulate this point among others. That the principle remained the same however is clear from the strong way in which St. Benedict speaks of the matter while making special allowance for the needs of the infirm, etc. (Reg. Ben., xxxiii). "Above everything the vice of private ownership is to be cut off by the roots from the monastery. Let no one presume either to give or to receive anything without leave of the abbot, nor to keep anything as his own, neither book, nor writing tablets, nor pen, nor anything whatsoever, since it is unlawful for them to have their bodies or wills in their own power". The principle here laid down, viz., that the monk's renunciation of private property is absolute, remains as much in force to-day as in the dawn of monasticism. No matter to what extent any individual monk may be allowed the use of clothing, books, or even money, the ultimate proprietorship in such things can never be permitted to him. (See POVERTY; MENDICANT FRIARS; VOW.)

(b) *Chastity.*—If the things to be given up be tested by the criterion of difficulty, the renunciation of material possessions is clearly the first and easiest step for man to take, as these things are external to his nature. Next in difficulty will come the things that are united to man's nature by a kind of necessary affinity. Hence in the ascending order chastity is the second of the evangelical counsels, and as such it is based upon the words of Jesus, "If any man come to me and hate not his father and mother and wife and children and brethren and sisters yea and his own soul also, he

cannot be my disciple" (Luke, xiv, 26). It is obvious that of all the ties which bind the human heart to this world the possession of wife and children is the strongest. Moreover the renunciation of the monk includes not only these but in accordance with the strictest teaching of Jesus all sexual relations or emotion arising therefrom. The monastic idea of chastity is a life like that of the angels. Hence the phrases, "angelicus ordo", "angelica conversatio", which have been adopted from Origen to describe the life of the monk, no doubt in reference to Mark, xii, 25. It is primarily as a means to this end that fasting takes so important a place in the monastic life. Among the early Egyptian and Syrian monks in particular fasting was carried to such lengths that some modern writers have been led to regard it almost as an end in itself, instead of being merely a means and a subordinate one at that. This error of course is confined to writers about monasticism, it has never been countenanced by any monastic teacher. (See CELIBACY OF THE CLERGY; CHASTITY; CONTINENCE; FAST; Vow.)

(c) Obedience.—"The first step in humility is obedience without delay. This befits those who count nothing dearer to them than Christ on account of the holy service which they have undertaken . . . without doubt such as these follow that thought of the Lord when He said, I came not to do my own will but the will of Him that sent me" (Reg. Ben., v). Of all the steps in the process of renunciation, the denial of a man's own will is clearly the most difficult. At the same time it is the most essential of all as Jesus said (Matt., xvi, 24), "If any man will come after me, let him deny himself and take up his cross and follow me". The most difficult because self-interest, self-protection, self-regard of all kinds are absolutely a part of man's nature, so that to master such instincts requires a supernatural strength. The most essential also because by this means the monk achieves that perfect liberty which is only to be found where is the Spirit of the Lord. It was Seneca who wrote, "parere deo libertas est", and the pagan philosopher's dictum is confirmed and testified to on every page of the Gospel. In Egypt at the dawn of monasticism the custom was for a young monk to put himself under the guidance of a senior whom he obeyed in all things. Although the bond between them was wholly voluntary the system seems to have worked perfectly and the commands of the senior were obeyed without hesitation. "Obedience is the mother of all the virtues": "obedience is that which openeth heaven and raiseth man from the earth": "obedience is the food of all the saints, by her they are nourished, through her they come to perfection": such sayings illustrate sufficiently the view held on this point by the fathers of the desert. As the monastic life came to be organized by rule, the insistence on obedience remained the same, but its practice was legislated for. Thus St. Benedict at the very outset, in the Prologue to his Rule, reminds the monk of the prime purpose of his life, viz., "that thou mayest return by the labour of obedience to Him from whom thou hadst departed by the sloth of disobedience". Later he devotes the whole of his fifth chapter to this subject and again, in detailing the vows his monks must take, while poverty and chastity are presumed as implicitly included, obedience is one of the three things explicitly promised.

Indeed the saint even legislates for the circumstance of a monk being ordered to do something impossible. "Let him seasonably and with patience lay before his superior the reasons of his incapacity to obey, without showing pride, resistance or contradiction. If, however, after this the superior still persist in his command, let the younger know that it is expedient for him, and let him obey for the love of God trusting in His assistance" (Reg. Ben., lxviii). Moreover "what is commanded is to be done not fearfully, tardily, nor

coldly, nor with murmuring, nor with an answer showing unwillingness, for the obedience which is given to superiors is given to God, since He Himself hath said, He that heareth you, heareth Me" (Reg. Ben., v). It is not hard to see why so much emphasis is laid on this point. The object of monasticism is to love God in the highest degree possible in this life. In true obedience the will of the servant is one with that of his master, and the union of wills is love. Wherefore, that the obedience of the monk's will to that of God may be as simple and direct as possible, St. Benedict writes (ch. ii) "the abbot is considered to hold in the monastery the place of Christ Himself, since he is called by His name" (see OBEDIENCE; Vow). St. Thomas, in chapter xi of his *Opusculum* "On the Perfection of the Spiritual Life", points out that the three means of perfection, poverty, chastity, and obedience, belong peculiarly to the religious state. For religion means the worship of God alone, which consists in offering sacrifice, and of sacrifices the holocaust is the most perfect. Consequently, when a man dedicates to God all that he has, all that he takes pleasure in, and all that he is, he offers a holocaust; and this he does pre-eminently by the three religious vows.

(3) *The Different Kinds of Monks*.—It must be clearly understood that the monastic order properly so-called differs from the friars, clerks regular, and other later developments of the religious life in one fundamental point. The latter have essentially some special work or aim, such as preaching, teaching, liberating captives, etc., which occupies a large place in their activities and to which many of the observances of the monastic life have to give way. This is not so in the case of the monk. He lives a special kind of life for the sake of the life and its consequences to himself. In a later section we shall see that monks have actually undertaken external labours of the most varied character, but in every case this work is extrinsic to the essence of the monastic state. Christian monasticism has varied greatly in its external forms, but, broadly speaking, it has two main species (a) the eremitical or solitary, (b) the cenobitical or family types. St. Anthony (q. v.) may be called the founder of the first and St. Pachomius (q. v.) of the second.

(a) *The Eremitical Type of Monasticism*.—This way of life took its rise among the monks who settled around St. Anthony's mountain at Pispir and whom he organized and guided. In consequence it prevailed chiefly in northern Egypt from Lycopolis (Asyut) to the Mediterranean, but most of our information about it deals with Nitria and Scete. Cassian (q. v.) and Palladius (q. v.) give us full details of its working and from them we learn that the strictest hermits lived out of earshot of each other and only met together for Divine worship on Saturdays and Sundays, while others would meet daily and recite their psalms and hymns together in little companies of three or four. There was no Rule of Life among them but, as Palladius says, "they have different practices, each as he is able and as he wishes". The elders exercised an authority, but chiefly of a personal kind, their position and influence being in proportion to their reputation for greater wisdom. The monks would visit each other often and discourse, several together, on Holy Scripture and on the spiritual life. General conferences in which a large number took part were not uncommon. Gradually the purely eremitical life tended to die out (Cassian, "Conf.", xix) but a semi-eremitical form continued to be common for a long period, and has never ceased entirely either in East or West where the Carthusians and Camaldulenses still practise it. It is needless here to trace its developments in detail as all its varieties are dealt with in special articles (see ANCHORITES; ANTHONY, ST.; ANTHONY, ORDERS OF ST.; CAMALDOLESE; CARthusIANS; HERMITS; LAURA; MONASTICISM, EASTERN; STYLITES OR PILLAR SAINTS; PAUL THE HERMIT, ST.).

(b) *The Cenobitical Type of Monasticism.*—This type began in Egypt at a somewhat later date than the eremitical form. It was about the year 318 that St. Pachomius, still a young man, founded his first monastery at Tabennisi near Denderah. The institute spread with surprising rapidity, and by the date of St. Pachomius's death (c. 345) it counted eight monasteries and several hundred monks. Most remarkable of all is the fact that it immediately took shape as a fully organized congregation or order, with a superior general, a system of visitations and general chapters, and all the machinery of a centralized government such as does not again appear in the monastic world until the rise of the Cistercians and Mendicant Orders some eight or nine centuries later. As regards internal organization the Pachomian monasteries had nothing of the family ideal. The numbers were too great for this and everything was done on a military or barrack system. In each monastery there were numerous separate houses, each with its own *prepositus*, cellarer, and other officials, the monks being grouped in these according to the particular trade they followed. Thus the fullers were gathered in one house, the carpenters in another, and so on; an arrangement the more desirable because in the Pachomian monasteries regular organized work was an integral part of the system, a feature in which it differed from the Antonian way of life. In point of austerity however the Antonian monks far surpassed the Pachomian, and so we find Bgoul and Schenutë endeavouring, in their great monastery at Athribis, to combine the cenobitical life of Tabennisi with the austerities of Nitria.

In the Pachomian monasteries it was left very much to the individual taste of each monk to fix the order of life for himself. Thus the hours for meals and the extent of his fasting were settled by him alone, he might eat with the others in common or have bread and salt provided in his own cell every day or every second day. The conception of the cenobitical life was modified considerably by St. Basil. In his monasteries a true community life was followed. It was no longer possible for each one to choose his own dinner hour. On the contrary, meals were in common, work was in common, prayer was in common seven times a day. In the matter of asceticism too all the monks were under the control of the superior whose sanction was required for all the austerities they might undertake. It was from these sources that western monachism took its rise; further information on them will be found in the articles *BASIL THE GREAT, SAINT; BASIL, RULE OF SAINT; BENEDICT OF NURSIA, SAINT; PACHOMIUS, SAINT; PALLADIUS, SAINT.*

(4) *Monastic Occupations.*—It has already been pointed out that the monk can adopt any kind of work so long as it is compatible with a life of prayer and renunciation. In the way of occupations therefore prayer must always take the first place.

(a) *Monastic Prayer.*—From the very outset it has been regarded as the monk's first duty to keep up the official prayer of the Church. To what extent the Divine office was stereotyped in St. Anthony's day need not be discussed here, but Palladius and Cassian both make it clear that the monks were in no way behind the rest of the world as regards their liturgical customs. The practice of celebrating the office apart, or in twos and threes, has been referred to above as common in the Antonian system, while the Pachomian monks performed many of the services in their separate houses, the whole community only assembling in the church for the more solemn offices, while the Antonian monks only met together on Saturdays and Sundays. Among the monks of Syria the night office was much longer than in Egypt (Cassian, "Instit.", II, ii; III, i, iv, viii) and new offices at different hours of the day were instituted. In prayer as in other matters St. Basil's legislation became the norm

among Eastern monks, while in the west no changes of importance have taken place since St. Benedict's rule gradually eliminated all local customs. For the development of the Divine office into its present form see the articles, *BREVIARY; HOURS, CANONICAL; and also the various "hours", e. g. MATINS; LAUDS, etc.; LITURGY, etc.* In the east this solemn liturgical prayer remains to-day almost the sole active work of the monks, and, though in the west many other forms of activity have flourished, the *Opus Dei* or Divine Office has always been and still is regarded as the pre-eminent duty and occupation of the monk to which all other works, no matter how excellent in themselves, must give way, according to St. Benedict's principle (Reg. Ben., xliii) "*Nihil operi Dei præponatur*" (Let nothing take precedence of the work of God). Alongside the official liturgy, private prayer, especially mental prayer, has always held an important place; see *PRAYER; CONTEMPLATIVE LIFE.*

(b) *Monastic Labours.*—The first monks did comparatively little in the way of external labour. We hear of them weaving mats, making baskets and doing other work of a simple character which, while serving for their support, would not distract them from the continual contemplation of God. Under St. Pachomius manual labour was organized as an essential part of the monastic life; and, since it is a principle of the monks as distinguished from the mendicants, that the body shall be self-supporting, external work of one sort or another has been an inevitable part of the life ever since.

(i) *Agriculture*, of course, naturally ranked first among the various forms of external labour. The sites chosen by the monks for their retreat were usually in wild and inaccessible places, which were left to them precisely because they were uncultivated, and no one else cared to undertake the task of clearing them. The rugged valley of Subiaco, or the fens and marshes of Glastonbury may be cited as examples, but nearly all the most ancient monasteries are to be found in places then considered uninhabitable by all except the monks. Gradually forests were cleared and marshes drained, rivers were bridged and roads made; until, almost imperceptibly, the desert place became a farm or a garden. In the later Middle Ages, when the Black Monks were giving less time to agriculture, the Cistercians re-established the old order of things; and even to-day such monasteries as La Trappe de Staoueli in N. Africa, or New Nursia in W. Australia do identically the same work as was done by the monks a thousand years ago. "We owe the agricultural restoration of a great part of Europe to the monks" (Hallam, "Middle Ages", III, 436); "The Benedictine monks were the agriculturists of Europe" (Guizot, "Histoire de la Civilisation", II, 75); such testimony, which could be multiplied from writers of every creed, is enough for the purpose here (see *CISTERCIANS*).

(ii) *Copying of MSS.*—Even more important than their services to agriculture has been the work of the monastic orders in the preservation of ancient literature. In this respect too the results achieved went far beyond what was actually aimed at. The monks copied the Scriptures for their own use in the Church services and, when their cloisters developed into schools, as the march of events made it inevitable they should, they copied also such monuments of classical literature as were preserved. At first no doubt such work was solely utilitarian, even in St. Benedict's rule the instructions as to reading and study make it clear that these filled a very subordinate place in the disposition of the monastic life. Cassiodorus was the first to make the transcription of MSS. and the multiplication of books an organized and important branch of monastic labour, but his insistence in this direction influenced western monachism enormously and is in fact his chief claim to recognition as a legislator for

monks. It is not too much to say that we to-day are indebted to the labours of the monastic copyists for the preservation, not only of the Sacred Writings, but of practically all that survives to us of the secular literature of antiquity (see MANUSCRIPT; CLOISTER; SCRIPTORIUM).

(iii) Education.—At first no one became a monk before he was an adult, but very soon the custom began of receiving the young. Even infants in arms were dedicated to the monastic state by their parents (see Reg. Ben., lix) and in providing for the education of these child-monks the cloister inevitably developed into a schoolroom (see OBLATI). Nor was it long before the schools thus established began to include children not intended for the monastic state. Some writers have maintained that this step was not taken until the time of Charlemagne, but there is sufficient indication that such pupils existed at an earlier date, though the proportion of external scholars certainly increased largely at this time. The system of education followed was that known as the "Trivium" and "Quadrivium" (see ARTS, THE SEVEN LIBERAL), which was merely a development of that used during classical times.

The greater number of the larger monasteries in western Europe had a claustral school and not a few, of which St. Gall in Switzerland may be cited as an example, acquired a reputation which it is no exaggeration to call European. With the rise of the universities and the spread of the mendicant orders the monastic control of education came to an end, but the schools attached to the monasteries continued, and still continue to-day, to do no insignificant amount of educational work (see ARTS, THE SEVEN LIBERAL; CLOISTER; EDUCATION; SCHOOLS).

(iv) Architecture, painting, sculpture and metal work.—Of the first hermits many lived in caves, tombs, and deserted ruins, but from the outset the monk has been forced to be a builder. We have seen that the Pachomian system required buildings of elaborate plan and large accommodation, and the organized development of monastic life did not tend to simplify the buildings which enshrined it. Consequently skill in architecture was called for and so monastic architects were produced to meet the need in the same almost unconscious manner as were the monastic schoolmasters. During the medieval period the arts of painting, illuminating, sculpture, and goldsmiths' work were practised in the monasteries all over Europe and the output must have been simply enormous.

We have in the museums, churches, and elsewhere such countless examples of monastic skill in these arts that it is really difficult to realize that all this wealth of beautiful things forms only a small fraction of the total of artistic creation turned out century after century by these skilful and untiring craftsmen. Yet it is certainly true that what has perished by destruction, loss and decay would outweigh many times over the entire mass of medieval art work now in existence, and of this the larger portion was produced in the workshop of the cloister (see ARCHITECTURE; ECCLESIASTICAL ART; PAINTING; ILLUMINATION; RELIQUARY; SHRINE; SCULPTURE).

(v) Historical and patristic work.—As years passed by the great monastic corporations accumulated archives of the highest value for the history of the countries wherein they were situated. It was the custom too in many of the larger abbeys for an official chronicler to record the events of contemporary history. In more recent times the seed thus planted bore fruit in the many great works of erudition which have won for the monks such high praise from scholars of all classes. The Maurist Congregation of Benedictines (q. v.) which flourished in France during the seventeenth and eighteenth centuries was the supreme example of this type of monastic industry, but

similar works on a less extensive scale have been undertaken in every country of western Europe by monks of all orders and congregations, and at the present time (1910) this output of solid scholarly work shows no signs whatever of diminution either in quality or quantity.

(vi) Missionary work.—Perhaps the mission field would seem a sphere little suited for monastic energies, but no idea could be more false. Mankind is proverbially imitative and so, to establish a Christianity where paganism once ruled, it is necessary to present not simply a code of morals, not the mere laws and regulations, nor even the theology of the Church, but an actual pattern of Christian society. Such a "working model" is found pre-eminently in the monastery, and so it is the monastic order which has proved itself the apostle of the nations in western Europe.

To mention a few instances of this—Saints Columba in Scotland, Augustine in England, Boniface in Germany, Ansgar in Scandinavia, Swithbert and Willibrord in the Netherlands, Rupert and Emmeran in what is now Austria, Adalbert in Bohemia, Gall and Columban in Switzerland, were monks who, by the example of a Christian society which they and their companions displayed, led the nations among whom they lived from paganism to Christianity and civilization. Nor did the monastic apostles stop at this point but, by remaining as a community and training their converts in the arts of peace, they established a society based on Gospel principles and firm with the stability of the Christian faith, in a way that no individual missionary, even the most devoted and saintly, has ever succeeded in doing.

It must be clearly understood however, that monasticism has never become stereotyped in practice, and that it would be quite false to hold up any single example as a supreme and perfect model. Monasticism is a living thing and consequently it must be informed with a principle of self motion and adaptability to its environment. Only one thing must always remain the same and that is the motive power which brought it into existence and has maintained it throughout the centuries, viz., the love of God and the desire to serve Him as perfectly as this life permits, leaving all things to follow after Christ.

G. ROGER HUDDLESTON.

II. EASTERN MONASTICISM BEFORE CHALCEDON (A. D. 451).—Egypt was the Motherland of Christian monasticism. It sprang into existence there at the beginning of the fourth century and in a very few years spread over the whole Christian world. The rapidity of the movement was only equalled by the durability of its results. Within the lifetime of St. Anthony the religious state had become what it has been ever since, one of the characteristic features of the Catholic Church, with its ideals, and what may be termed the groundwork of its organization, determined. But this was not all. The simple teaching of the first Egyptian monks and hermits fixed once and forever the broad outlines of the science of the spiritual life, or, in other words, of ascetic theology. The study, therefore, of early monasticism possesses a great deal more than a merely antiquarian interest. It is concerned with a movement the force of which is in no way spent and which has had a very large share in creating the conditions which obtain at the present day.

The first chapter in the history of monasticism is the life of St. Anthony which has already been described (see ANTHONY, SAINT). The inauguration of the monastic movement may be dated either about 285, when St. Anthony, no longer content with the life of the ordinary ascetic, went into the wilderness, or about 305, when he organized a kind of monastic life for his disciples. *Ascetic* is the term usually employed by writers on monasticism for those who in pre-monastic days forsook the world so far as they were able. Of the three Evangelical counsels, chastity alone can be practised independently of external circumstances. Naturally, therefore (beginning with the sub-Apostolic age), we hear first of men and women leading the virgin life (cf. I Clem., xxxviii; Ignat., "ad Polycarp.", c. v; Hermas, "Sim.", IX, 30).

The Apologists pointed triumphantly to such (Justin, "Apol.", I, xv; Athenagoras, "Legat.", xxxiii; Minucius Felix, "Octav.", xxxi). Voluntary poverty, in the complete renunciation of all worldly possessions, would be difficult till there were monasteries, for persons with wealth to renounce would not, generally speaking, have been brought up so as to be capable of earning their own livelihood. Still we have the examples of Origen, St. Cyprian, and Pamphilus to

show that the thing was done. A full practice of the last Evangelical counsel (obedience) could only be realized after the monastic ideal had taken root and passed beyond the purely eremitical stage. The ante-Nicene ascetic would be a man who led a single life, practised long and frequent fasts, abstained from flesh and wine, and supported himself, if he were able, by some small handicraft, keeping of what he earned only so much as was absolutely necessary for his own sustenance, and giving the rest to the poor. If he were an educated man, he might be employed by the Church in some such capacity as that of catechist. Very often he would don the kind of dress which marked its wearer off as a philosopher of an austere school.

In Egypt, at the time when St. Anthony first embraced the ascetic life, there were numbers of ascetics living in huts in the neighbourhood of the towns and villages. When St. Anthony died (356 or 357), two types of monasticism flourished in Egypt. There were villages or colonies of hermits—the eremitical type; and monasteries in which a community life was led—the cenobitic type. A brief survey of the opening chapters of Palladius's "Lausiac History" will serve as a description of the former type.

Palladius was a monk from Palestine who, in 388, went to Egypt to drink in the spirit of monasticism at the fountainhead. On landing at Alexandria he put himself in the hands of a priest named Isidore, who in early life had been a hermit at Nitria and now apparently presided over a hospice at Alexandria without in any way abating the austerity of his life. By the advice of Isidore, Palladius placed himself under the direction of a hermit named Dorotheus who lived six miles outside Alexandria, with whom he was to pass three years learning to subdue his passions and then to return to Isidore to receive higher spiritual knowledge. This Dorotheus spent the whole day collecting stones to build cells for other hermits, and the whole night weaving ropes out of palm leaves. He never lay down to sleep, though slumber sometimes overtook him while working or eating. Palladius, who seems to have lived in his cell, ascertained from other solitaries that this had been his custom from his youth upwards. Palladius's health broke down before he completed his time with Dorotheus, but he spent three years in Alexandria and its neighbourhood visiting the hermitages and becoming acquainted with about 2000 monks. From Alexandria he went to Nitria, where there was a monastic village containing about 5000 solitaries. There was no kind of monastic rule. Some of the solitaries lived alone, sometimes two or more lived together. They assembled at the church on Saturdays and Sundays. The church was served by eight priests of whom the oldest always celebrated, preached, and judged, the others only assisting. All worked at weaving flax. There were bakeries where bread was made, not only for the village itself, but for the solitaries who lived in the desert beyond. There were doctors. Wine also was sold.

Strangers were entertained in a guest-house. If able to read, they were lent a book. They might stay as long as they liked, but after a week they were set to some kind of work. If at the ninth hour a man stood and listened to the sound of psalmody issuing from the different cells, he would imagine, says Palladius, that he was caught up into paradise. But, though there was no monastic rule at Nitria, there was municipal law, the outward symbol of which was three whips suspended from three palm trees, one for monks who might be guilty of some fault, one for thieves who might be caught prowling about, and the third for strangers who misbehaved. Further into the desert was a place called Cells, or Cellia, whither the more perfect withdrew. This is described by the

author of the "*Historia monachorum in Ægypto*". Here the solitaries lived in cells so far apart that they were out of sight and out of hearing of one another. Like those of Nitria, they met only on Saturdays and Sundays at church, whither some of them had to travel a distance of three or four miles. Often their death was only discovered by their absence from church.

In strong contrast with the individualism of the eremitical life was the rigid discipline which prevailed in the cenobitical monasteries founded by St. Pachomius. When, in 313, Constantine was at war with Maxentius, Pachomius, still a heathen, was forcibly enlisted together with a number of other young men, and placed on board a ship to be carried down the Nile to Alexandria. At some town at which the ship touched, the recruits were overwhelmed with the kindness of the Christians. Pachomius at once resolved to be a Christian and carried out his resolution as soon as he was dismissed from military service. He began as an ascetic in a small village, taking up his abode in a deserted temple of Serapis and cultivating a garden on the produce of which he lived and gave alms. The fact that Pachomius made an old temple of Serapis his abode was enough for an ingenious theory that he was originally a pagan monk. This view is now quite exploded.

Pachomius next embraced the eremitical life and prevailed upon an old hermit named Palemon to take him as his disciple and share his cell with him. It may be noted that this kind of discipleship, which, as we have already seen, was attempted by Palladius, was a recognized thing among the Egyptian hermits. Afterwards he left Palemon and founded his first monastery at Tabennisi near Denderah. Before he died, in 346, he had under him eight or nine large monasteries of men, and two of women. From a secular point of view, a Pachomian monastery was an industrial community in which almost every kind of trade was practised. This, of course, involved much buying and selling, so the monks had ships of their own on the Nile, which conveyed their agricultural produce and manufactured goods to the market and brought back what the monasteries required. From the spiritual point of view, the Pachomian monk was a religious living under a rule more severe, even when allowance has been made for differences of climate and race, than that of the Trappists.

A Pachomian monastery was a collection of buildings surrounded by a wall. The monks were distributed in houses, each house containing about forty monks. Three or four houses constituted a tribe. There would be from thirty to forty houses in a monastery. There was an abbot over each monastery, and provosts with subordinate officials over each house. The monks were divided into houses according to the work they were employed in: thus there would be a house for carpenters, a house for agriculturists, and so forth. But other principles of division seem to have been employed, e. g., we hear of a house for the Greeks. On Saturdays and Sundays all the monks assembled in the church for Mass; on other days the Office and other spiritual exercises were celebrated in the houses.

"The fundamental idea of St. Pachomius's Rule", writes Abbot Butler, "was to establish a moderate level of observance (moderate in comparison with the life led by the hermits) which might be obligatory on all; and then to leave it open to each—and to indeed encourage each—to go beyond the fixed minimum, according as he was prompted by his strength, his courage, and his zeal" ("*Lausiac History*", I, p. 236). This is strikingly illustrated in the rules concerning food. According to St. Jerome, in the preface to his translation of the "*Rule of Pachomius*", the tables were laid twice a day except on Wednesdays and Fridays, which, outside the seasons of Easter and

Pentecost, were fast days. Some only took very little at the second meal; some at one or other of the meals confined themselves to a single food; others took just a morsel of bread. Some abstained altogether from the community meal; for these bread, water, and salt were placed in their cell.

Pachomius appointed his successor a monk named Petronius, who died within a few months, having likewise named his successor, Horsiesi. In Horsiesi's time the order was threatened with a schism. The abbot of one of the houses, instead of forwarding the produce of the work of his monks to the head house of the order, where it would be sold and the price distributed to the different houses according to their need, wished to have the disposal of it for the sole benefit of his own monastery. Horsiesi, finding himself unable to cope with the situation, appointed Theodore, a favourite disciple of Pachomius, his coadjutor.

When Theodore died, in the year 368, Horsiesi was able to resume the government of the order. This threatened schism brings prominently before us a feature connected with Pachomius's foundation which is never again met with in the East, and in the West only many centuries later. "Like Clteaux in a later age", writes Abbot Butler, "it almost at once assumed the shape of a fully-organized congregation or order, with a superior general and a system of visitation and general chapters—in short, all the machinery of a centralized government, such as does not appear again in the monastic world until the Cistercian and the Mendicant Orders arose in the twelfth and thirteenth centuries" (op. cit., I, 235).

A word must be said about Schenoudi, or Schnoudi, or Senuti. Shortly after the middle of the fourth century, two monks, Pgol and Pschais, changed their eremitical monasteries into cenobitical ones. Of the latter we know scarcely anything. Schenoudi, when a boy of about nine years old, came under the care of his uncle Pgol. Both Pgol and Schenoudi were reformers—the Pachomian Rule was not strict enough for them.

Schenoudi succeeded his uncle Pgol as head of the White Monastery of Athribis and, till his death (about 453), was not only the greatest monastic leader, but one of the most important men, in Egypt. He waged war against heretics; he took a prominent part in the rooting out of paganism; he championed the cause of the poor against the rich. He once went in person to Constantinople to complain of the tyranny of government officials. On one occasion 20,000 men, women, and children took refuge in the White Monastery during an invasion of the savage Blemmyes of Ethiopia, and Schenoudi maintained all the fugitives for three months, providing them with food and medical aid. On another occasion he ransomed a hundred captives and sent them home with food, clothing, and money for their journey (Leipoldt, "*Schenute von Atripe*", 172, 173). Schenoudi's importance for the history of monasticism is small, for his influence, great as it was in his own country, did not make itself felt elsewhere. There were two barriers: Upper Egypt was a difficult and dangerous country for travellers, and such as did penetrate there would not be likely to visit a monastery where hardly anything but Coptic was spoken. According to Abbot Butler, "Schenoudi is never named by any Greek or Latin writer" (op. cit., II, 204). He has been rediscovered in our own time in Coptic MSS. A description of the ruins of the White Monastery will be found in Curzon's "*Monasteries of the Levant*", ch. xi. There are photographs of the outer wall and the ruins of the church in Milne's "*Hist. of Egypt under Roman Rule*".

In part II of Butler's "*Lausiac History*" is a map of Monastic Egypt. A glance at this map and

the notes accompanying it brings forcibly before the mind an important fact in monastic history. With the exception of a single Pachomian monastery at Canopus, near Alexandria, the cenobitic monasteries are in the South, and confined to a relatively small area. The eremitical monasteries, on the contrary, are everywhere, and especially in the North. These latter were thus far more accessible to pilgrims visiting Egypt and so became the patterns or models for the rest of the Christian world. It was the eremitical, not the cenobitical, type of monasticism which went forth from Egypt.

Monasticism at a very early date spread along the route of the Exodus and the desert of the Forty Years' Wandering. The solitaries had a special predilection for Scriptural sites. At every place hallowed by tradition, which Sylvia visited (A. D. 385), she found monks. The attraction of Mt. Sinai for the solitaries was irresistible, in spite of the danger of captivity or death at the hands of the Saracens. In 373 a number of solitaries inhabited this mountain, living on dates and other fruit, such bread as they had being reserved for the Sacred Mysteries. All the week they lived apart in their cells; they gathered together in the church on Saturday evening and, after spending the night in prayer, received communion on Sunday morning. Forty of them were massacred in 373, and on the same day another group of solitaries at Raitha (supposed to be Elim) were killed by a second band of barbarians. These events were described by eye-witnesses (Tillemont, "H. E." VII, 573-80). The same kind of life was being led at Mt. Sinai, and a similar experience was undergone some twenty years later when St. Nilus was there.

St. Hilarion, who for a time had been a disciple of St. Anthony, propagated monasticism of the eremitical type first in the neighbourhood of his native city Gaza and then in Cyprus. His friend St. Epiphanius, after practising the monastic life in Egypt, founded a monastery near Eleutheropolis in Palestine somewhere about 330 or perhaps a little later.

In Jerusalem and its neighbourhood there were numerous monasteries at a very early date. To name only a few, there was the monastery on the Mount of Olives, from which Palladius went forth on his tour of the Egyptian monasteries; there were two monasteries for women in Jerusalem, built by the older and younger Melania respectively. At Bethlehem St. Paula founded three monasteries for women and one for men about A. D. 387. There was, besides, in Bethlehem the monastery where Cassian some years before began his religious life. The lauras, which were very numerous, formed a conspicuous feature in Palestinian monasticism. The first seems to have been founded before 334 by St. Chariton at Pharan, a few miles from Jerusalem; later on, two more were founded by the same saint at Jericho and at Suca.

St. Euthymius (473) founded another celebrated one in the Valley of Cedron. Near Jericho was the laura ruled over by St. Gerasimus (475). Some details concerning the rule of this laura have fortunately been preserved in a very ancient Life of St. Euthymius. It consisted of a cenobium where the cenobitic life was practised by novices and others less proficient. There were also seventy cells for solitaries. Five days in the week these latter lived and worked alone in their cells. On Saturday they brought their work to the cenobium, where, after receiving Holy Communion on Sundays, they partook of some cooked food and a little wine. The rest of the week their fare was bread, dates, and water. When some of them asked to be allowed to heat some water, that they might cook some food, and to have a lamp to read by, they were told that if they wished to live thus they

had better take up their abode in the cenobium (*Acta SS.*, March, I, 386-87).

Antioch, when St. John Chrysostom was a young man, was full of ascetics and the neighbouring mountains were peopled with hermits. So great was the impulse driving men to the solitary life that at one time there was an outcry, amounting almost to a persecution, among Christians as well as pagans against those who embraced it. This was the occasion of St. Chrysostom's treatise against the opponents of monasticism: in the first book he dwelt upon the guilt incurred by them; the second and third were addressed respectively to a pagan and a Christian father who were opposing the wish of their sons to embrace the monastic state. The pathetic scene between the saint and his mother, which he describes in the beginning of the "*De sacerdotio*", must be typical of what took place in many Christian homes. He himself so far yielded to his mother's entreaties that he contented himself with the ascetic life at home till her death. Palestine and Antioch must suffice as examples of the rapid spread of monasticism outside of Egypt. There is abundant evidence of the same phenomenon in all the countries between the Mediterranean and Mesopotamia; and Mesopotamia, according to St. Jerome, whose testimony is amply borne out by other writers, rivalled Egypt itself in the number and holiness of its monks (*Comm. in Isaiam*, V, xix).

We now come to a name second only in importance to St. Anthony's for the history of eastern monasticism. St. Basil the Great before embracing the monastic state made a careful study of monasticism in Egypt, Palestine, Coele Syria, and Mesopotamia. The result was a decided preference for the cenobitical life. He founded several monasteries in Pontus, over one of which he himself for a time presided, and very soon monasteries, modelled after his, spread over the East. His monks assembled together for "psalmody" and "genuflexions" seven times a day, in accordance with the Psalmist's "*Septies in die laudem dixi tibi*" (*Ps. cxviii*, 164): at midnight ("*Media nocte surgebam*"—*Ibid.*, 62), at evening, morning, and midday (*Ps. lv*, 18), at the third hour, the hour of Pentecost, and at the ninth, the sacred hour of the Passion. To complete the tale of seven, the midday prayer was divided into two parts separated by the community meal (*Sermo "Asceticus"*, Benedictine edition, II, 321). St. Basil's monastic ideal is set forth in a collection of his writings known as the "*Asceticon*", or "*Ascetica*", the most important of which are the "*Regulæ fusius tractatæ*", a series of answers to questions, fifty-five in number, and the "*Regulæ brevis tractatæ*", in which three hundred and thirteen questions are briefly replied to. It must not be supposed that the "*Regulæ*" form a rule, though it would be possible to go a good way towards constituting one out of them. They are answers to questions which would naturally arise among persons already in possession of a framework of customs or traditions. Sometimes they treat of practical questions, but as often as not they deal with matters concerning the spiritual life. What is on the whole a good description of them will be found in Smith and Cheetham, "*Dict. of Christ. Antiquities*", II, 1233 sqq.

It would not be easy to exaggerate St. Basil's influence upon eastern monasticism: he furnished the type which ultimately prevailed. But two points of the utmost importance, as marking the difference between Eastern and Western monasteries, must be kept in mind. (1) He did not draw up a rule, but gave, what is far more an elastic thing, a model or pattern. (2) He was not the founder of a religious order. No Eastern, except St. Pachomius, ever was. An order, as we understand the term, is a purely Western product. "It is not enough", says a writer who cer-

tainly does not underrate St. Basil's influence, "to affirm that the Basilian Order is a myth. One must go further and give up calling the Byzantine monks Basilians. Those most concerned have never taken to themselves this title, and no Eastern writer that I know of has ever bestowed it upon them" (Pargoire in "Dict. d'Archéologie chrétienne", s. v. "Basilé"). In a word, every monastery is an order of its own. With St. Basil Eastern monasticism reached its final stage—communities of monks leading the contemplative life and devoting themselves wholly to prayer and work. The cenobitical life steadily became the normal form of the religious calling, and the eremitical one the exceptional form, requiring a long previous training.

We must now speak of the grounds upon which St. Basil based his decision—a decision so momentous for the future history of monasticism—in favour of the cenobitical life. Life with others is more expedient because, in the first place, even for the supply of their bodily needs, men depend upon one another. Further, there is the law of charity. The solitary has only himself to regard; yet "charity seeks not itself".

Again, the solitary will not equally discover his faults, there being no one to correct him with meekness and mercy. There are precepts of charity which can only be fulfilled in the cenobitical life. The gifts of the Holy Spirit are not all given to all men, but one is given to one man and another to another. We cannot be partakers in the gifts not bestowed on ourselves if we live by ourselves. The great danger to the solitary is self-complacency; he is not put to the test, so that he is unable to learn his faults or his progress. How can he learn humility when there is no one to prefer before himself? Or patience when there is no one to yield to? Whose feet shall he wash? To whom shall he be as a servant? (Reg. fus. tract., Q. vii.) This condemnation of the eremitical life is interesting because of what might almost be called its tameness. One would expect at least a lurid picture of the dangers which the solitary ran, delusions, melancholy culminating in despair, terrible moral and spiritual falls, the abandonment of the religious calling for the life of vice, and so forth. But instead of such things we have little more than what amounts to disadvantages and the risk of somewhat flat and commonplace kinds of failure, against which the common life afforded the best protection. Clearly St. Basil found very little that was tragic during the two years he was investigating monasticism in Egypt, Mesopotamia, and elsewhere.

It might be supposed that so uncompromising a verdict against the eremitical life would stir up a fierce conflict. As a matter of fact, it did nothing of the kind. Palestine, towards the end of the fourth century, began to supersede Egypt as the centre of monasticism, and in Palestine the laura and the cenobium were in perfect harmony. That of St. Gerasimus, with its cenobium already referred to, may be taken as a typical example. St. Basil's authority was equal to St. Anthony's among the leaders of Palestinian monasticism; yet they took it as a matter of course that life in the laura was the most perfect, though under ordinary circumstances it should not be entered upon before an apprenticeship had been served in a cenobium. The paradox is not so great as it may at first sight appear. The dweller in the laura was under an archimandrite or abbot and so was not exposed to the dangers of the purely eremitical state. (A number of passages from the Lives of St. Euthymius, St. Theodosius, and others bearing upon the above subject have been brought together by Holl, "Enthusiasmus und Bussgewalt beim Griechischen Mönchthum", Leipzig, pp. 172 sqq.)

At the Council of Chalcedon, monasticism had so become a recognized part of the life of the Church

that it was especially legislated for. Monasteries were not to be erected without the leave of the bishop; monks were to receive due honour, but were not to mix themselves up with the affairs of Church or State. They were to be subject to the bishop, etc. (can. iv). Clerics and monks were not to serve in war or embrace a secular life (can. vii). Monasteries were not to be secularized (can. xxiv).

Solitary spots, according to St. Basil, should be chosen as sites for monasteries. Nevertheless, they soon found their way into cities. According to Marin ("Les Moines de Constantinople", Paris, 1897, 330-898), at least fifteen monasteries were founded at Constantinople in the time of Constantine the Great; but Besse (Les Moines d'Orient, 18) affirms that the three most ancient ones only dated back to the time of Theodosius (375-95). In 518 there were at least fifty-four monasteries in Constantinople. Their names and those of their rulers are given in a petition addressed by the monks of Constantinople to Pope Hormisdas in 518 (Martin, *ibid.*, 18).

For Egyptian monasticism, not only are the original sources far superior to those for early Monasticism elsewhere, but the subject has been more thoroughly investigated. The most important work that has appeared in recent times is BUTLER, *The Lausiac History of Palladius in Cambridge Texts and Studies*, VI, (first part, 1898; second part, 1904). Other important works are LADEUZE, *Etude sur le cénobitisme Pachomien pendant le IV^e siècle et la première moitié du V^e* (Louvain and Paris, 1898); SCHIEWIETZ, *Das morgenländische Mönchthum*, I (Mainz, 1904); LEIPOLDT, *Schenute von Atripe* (Leipzig, 1903) in *Texte und Untersuch.* (new series), XI (Leipzig, 1903). Ladeuze gives an exhaustive study of the documents upon which our knowledge of Pachomius and Schenoudi are based. Schiewietz treats of (1) Christian asceticism in the first three centuries and (2) Egyptian monasticism in the fourth; he omits Schenoudi altogether. A very important point of difference between Ladeuze and Schiewietz on the one hand, and Butler on the other, is the unfavourable estimate formed by the first two and the favourable one by the last of Palladius's account of the Pachomian monasticism. Classifications and appreciations of the original sources will be found in BUTLER, *op. cit.*, pt. I, 196 sqq.; pt. II, p. xii. The most valuable, now that the text has been restored by Butler, is the *Lausiac History of Palladius* (see above). What used to pass for Palladius was a text very much interpolated with the *Historia monachorum in Egypto*, an account of information gathered by seven monks of Palestine who visited Egypt in 394-95, written by one of them. The Greek text was printed for the first time by PREUSCHEN, *Palladius und Rufinus* (Giessen, 1897). Till 1897 it was only known in the Latin version of Rufinus, which was supposed to be the original. As the experiences narrated do not square with the facts of Rufinus's Life, this supposition reduced it to the level of an historical romance. Butler has proved, or nearly proved, that the Greek is the original and thus restored the work to its proper place as a genuine record. He has done the same for the *Lausiac Hist.* by recovering the uninterpolated text. *The Institutes and Conferences of Cassian* are also records based upon personal knowledge (see art. CASSIAN, JOHN). For Pachomian monasticism the chief authorities are the Greek Life of Pachomius; PACHOMIUS, *Asceticism*, known also as the *Paralipomena*; the *Epistola Ammonis* on Theodore (all to be found in ACTA SS., May, I); and St. Jerome's translation of the Rule. A number of Coptic and Arabic MSS. concerning Egyptian monasticism have been published of late years chiefly by AMÉLINEAU, for which we must refer the reader to the bibliography at the end of LADEUZE, *op. cit.*, and to LEIPOLDT, *op. cit.* An English translation of Syriac versions of the *Lausiac History*, the *Asceticism*, and the *Hist. Monach.* (there attributed to St. Jerome) will be found in vol. I of BUDGE, *Paradise of the Fathers* (London, 1907). For Palladius, references to the corresponding Greek text of Butler will be found on pp. xxxiii, xxxiv.

For non-Egyptian Eastern monasticism, the chief sources are the Lives, when authentic, of individual monks and hermits; ST. THEODORET, *De vitâ patrum*; certain writings of ST. BASIL, ST. JEROME, ST. JOHN CHRYSOSTOM, ST. EPIPHANIUS, ST. EPHREM SYRUS, ST. HILUS, etc.; the historians SOCRATES and SOZOMEN. Among older books dealing with the subject TILLEMONT'S *Mémoires* is perhaps the most indispensable. MARIN, *Vies des Pères des déserts d'Orient* (9 vols., Paris, 1824), gives copious quotations from the original sources. The only important modern work upon Eastern Monasticism as a whole seems to be BESSE, *Les moines d'Orient antérieurs au concile Chalcedoine* (451) (Louvain, 4001).

FRANCIS JOSEPH BACCHUS.

III. EASTERN MONASTICISM.—(1) *Origin*.—The first home of Christian monasticism is the Egyptian desert. Hither during persecution men fled the world and the danger of apostasy, to serve God in solitude. St. Anthony (270-356) is counted the father of all monks. His fame attracted many others, so that under Diocletian and Constantine there were large colonies of monks in

Egypt, the first λαύραι. St. Athanasius's (d. 373) friendly relations to the Egyptian monks and the refuge he found among them during his second (356-362) and third (362-363) exiles are well known incidents of his life. The monks lived each in his own hut, providing for their simple needs with their own hands, united by a bond of willing submission to the direction of some older and more experienced hermit, coming together on Saturday and Sunday for common prayer, otherwise spending their time in private contemplation and works of penance. Celibacy was from the beginning an essential note of monasticism. A wife and family were part of the "world" they had left.

Poverty and obedience were to some extent relative, though the ideal of both was developing. The monk of the desert was not necessarily a priest; he formed a different class from the clergy who stayed in the world and assisted the bishops. For a long time this difference between monks and clergy remained; the monk fled all intercourse with other people to save his soul away from temptation. Later some monks were ordained priests in order to administer sacraments to their brethren. But even now in the East the priest-monk (ιερομόναχος) is a special person distinct from the usual monk (μόναχος), who is a layman.

St. Anthony's scarcely less famous disciple Pachomius (d. 345) is believed to have begun the organization of the hermits in groups, "folds" (μυρίαραι) with stricter subjection to a leader (ἀρχιμανδρίτης); but the organization was vague. Monasticism was still a manner of life rather than affiliation to an organized body; any one who left wife and family and the "world" to seek peace away from men was a monk. Two codified "Rules" are attributed to Pachomius; of these the longer is translated into Latin by St. Jerome, a second and shorter one is in Palladius, "Hist. Lausiaca" XXXVIII. Sozomenos gives a compendium of the "Rule of Pachomius" (H. E., III, xiv). Neither of these rules is authentic, but they may well contain maxims and principles that go back to his time, mixed with later ones. They are already considerably advanced towards a regulated monastic life. They order uniformity in dress, obedience to a superior, prayers and meals at fixed times in common; they regulate both ascetic practices and handwork.

About the same time as St. Anthony in Egypt, Hilarion flourished at Gaza in Palestine (see St. Jerome, "Life of St. Hilarion" in P. L., XXIII, 29-54). He stands at the head of West Syrian monasticism. In the middle of the fourth century Aphraates speaks of monks in East Syria (Wright, "The Homilies of Aphraates", London, 1869, I, Hom. 6 and 18). At the same time we hear of them in Armenia, Pontus, and Cappadocia. Epiphanius, for instance, who in 367 became Bishop of Salamis in Cyprus, had been for thirty years a monk in Palestine. At the time of St. Basil (330-379), therefore, there were already monks all over the East. As soon as he was baptized (357) he determined to be a monk himself; he spent two years travelling "to Alexandria, through Egypt, in Palestine, Syria, and Mesopotamia" (Ep. 223), studying the life of the monks. Then in 358 he formed the community at Annesos in Pontus that was to be in some sort a new point of departure for Eastern monasticism. He describes the life at Annesos in a letter to St. Gregory Nazianzen (Ep. 2). Its principles are codified in various ascetic works by him, of which the chief are the two "Rules", the longer ("Οροι κατὰ πλάτος, P. G., XXXI, 905-1052) and the shorter ("Οροι κατ' ἐπιτομήν, ib., 1051-1306). (See BASIL, RULE OF SAINT.)

(2) *To the great Schism.*—Gradually nearly all Eastern monasteries accepted the Rules of St. Basil. Their inner organization evolved a hierarchy of officials among whom the various offices were distrib-

uted; the prayers, meals, work, punishments were portioned out according to the ascetic works of St. Basil, and so the whole monastery arrived at a working order.

That order obtains still. In its inner life Eastern monasticism has been extraordinarily stationary. There is practically no development to describe. Its history from the fourth century down to our own time is only a chronicle of the founding and endowment of new monasteries, of the part taken by monks in the great religious controversies and in one or two controversies of their own, of the emperors, empresses, patriarchs, and other great persons who, freely or under compulsion, ended their career in the world by retiring to a monastery. Two ideas that constantly recur in Eastern theology are that the monastic state is that of Christian perfection and also a state of penance. Eusebius (d. c. 340) in his "Demonstratio evangelica" distinguishes the two kinds of life of a Christian, the less perfect life in the world and the perfect life of monks.

The idea recurs continually. Monks lead the "angelic life", their dress is the "angelic habit"; like the angels they neither marry nor give in marriage, and like them the chief object of their existence is to sing the praises of God (in the Divine office). Not incompatible with this is the other idea, found in St. Basil and many others, that their state is one of penance (μετάνοια). Symeon of Thessalonica (d. 1429) counts the monks simply as "penitents" (μετανοούντες). The most perfect life on earth, namely, is that of a man who obeys the command to "do penance, for the Kingdom of Heaven is nigh".

The organization and life of a Byzantine monastery before the schism is known to us by the decrees affecting it made by various councils, laws in the "Corpus iuris" (in the "Codex" and the "Novellæ"), the lives of eminent monks, of which the "Synaxarion" has preserved not a few, and especially by the ascetic writings of monks, letters, sermons, and so on, in which they give advice to their colleagues. Of such monastic writers St. John Damascene (d. c. 754), George Hamartolos (ninth century), and especially St. Theodore of Studion (d. 826) are perhaps the most valuable for this purpose. At the head of each independent monastery (λαύρα is the common name in Greek) was the superior. At first (e.g., by Justinian: "Nov.", V, vii; CXXIII, v and xxxiv) he is called indifferently ἀββας, ἀρχιμανδρίτης, ἡγούμενος. Later the common name is ἡγούμενος only. The archimandrite has become a person of superior rank and takes precedence of a hegumenos. Goar thinks that archimandrite meant the superior of a patriarchal monastery, that is, one immediately subject to the patriarch and independent of the jurisdiction of the ordinary. The title then would correspond to that of the Western "Abbas nullius".

Marin (Les Moines de Constantinople, pp. 87-90), admitting this, demonstrates from examples that there was an intermediate period (from about the sixth to the ninth centuries) during which the title archimandrite was given as a purely personal honour to certain hegumenoi without involving any exemption for the monastery. A further precedence belonged to a "great archimandrite". The election and rights of the hegumenos are described by St. Basil in his two Rules, by Justinian (Novel., CXXIII, xxxiv), and Theodore of Studion (Testamentum, in P. G., XCIX, 1817-1818). He was elected by the monks by a majority of votes; in cases of dispute the patriarch or ordinary decided; sometimes lots were cast. He was to be chosen for his merit, not according to the time he had already spent in the monastery, and should be sufficiently learned to know the canons. The patriarch or bishop must confirm the election and institute the hegumenos. But the emperor received him in audience and gave him a pastoral staff (the

βάβδος). The ceremony of induction is given in the "Euchologion" (Goar's edition, Venice, 1730, 395-396). He then remained abbot for life, except in the event of his being deposed, after trial, for some canonical offence.

The hegumenos had absolute authority over all his monks, could receive novices and inflict punishments; but he was bound always by the rule of St. Basil and the canons, and he had to consult a committee of the more experienced monks in all cases of difficulty. This committee was the *συναξίς* that in many ways limited the autocracy of the superior (St. Basil's Rule, P. G., XXXI, 1037). The hegumenos in the Byzantine time, after Justinian, was generally, but not quite always, a priest. He received the confessions of his monks [there are instances of those who were not priests usurping this office (Marin, op. cit., 96)] and could ordain them to minor Orders, including the subdiaconate. Under the abbot there was a hierarchy of other officials, more or less numerous according to the size of the laura. The *δευτερεύων* took his place in case of his absence or sickness, the *οικονόμος* had charge of

all the property, the *κελλάριος* looked after the food, the *ἐπιτημονάρχος* saw to the regular performance of services in the church, the *καροράρχης* guided the singers during the Divine office. These officials, who usually formed the *synaxis*, acted as a restraint on the authority of the hegumenos. Numerous lesser offices, as those of infirmarian, guest-master, porter, cook, and so on, were divided among the community. The monks were divided into three orders, novices, those

BLESSED TRINITY (HAGIA TRIADA) MONASTERY, METEORA, THESSALY

who bear the lesser habit and those who have the great habit. Children (the Council in Trullo of 692 admits profession as valid after the age of ten years), married men (if their wives are willing), even slaves who are badly treated by their masters or in danger of losing their faith, could be received as novices. Justinian ordered novices to wear lay clothes (Novel., V, ii), but soon the custom was introduced that after a probation of about six months (while they were postulants) they should have their hair cut (tonsure) and receive a tunic (*χιτών*) and the tall cap called *καλμαβχιον*. The service for this first clothing is in the "Euchologion" (Goar, pp. 378-380).

After three years' noviceship the monk received the lesser habit or *mandyas* (*τὸ μικρὸν σχῆμα, μανδύας*). He is again tonsured in the form of a cross, receives a new tunic, belt, cap, sandals, and the monastic cloak (*μανδύας*). For the rite, see Goar, pp. 382-389. The *mandyas* is the "angelic habit" that makes him a true monk; it is at this service that he makes his vows. An older form of the "sacrament of monastic perfection" (*μυστήριον μοναχικῆς τελειώσεως*), that is, of the profession and reception of a monk, is given by Dionysius Areopagita (c. 500), "de Eccles. Hierarch.", VI, ii (P. G., III, 533). The monk is "ordained" by a priest (*ιερεύς*; he always calls bishops *ιερόδρα*), presumably the abbot. Standing he recites the "monastic invocation" (*τὴν μοναστικὴν ἐπικλήσιν*), evidently a prayer for the grace he needs. The priest then asks him if he renounces everything, explains to him the duties of his state, signs him with the cross, tonsures

him and clothes him in the habit, finally celebrates the holy Liturgy, and gives him Communion. From the time of his profession the monk remains inseparably attached to the monastery. Besides the vows of poverty, chastity, and obedience he makes a vow of perseverance in the religious exercises of the particular *laura* he has chosen. Normally he can no more change to another than go back to the world. He should moreover never go out at all. In theory all monks are "enclosed" (St. Basil, P. G., XXXI, 635-636); but this rule has never been taken very literally. Monks travelled about, with the consent of their superiors and with the excuse that they were engaged in business of the *laura* or of the Church in general.

But there still remained a further step. After having proved their perseverance for some years monks were accustomed to ask, as a reward for their advancement in the ascetic life, for the "great habit" (*τὸ μέγα καὶ ἀγγελικὸν σχῆμα*). This was simply a larger and more dignified cloak, suitable for the veterans of the monastery. Gradually its reception became a regular ceremony and the wearers of the great habit began

to form a superior class, the aristocracy of the *laura*. St. Theodore of Studion objected strongly to this distinction: "As there is only one baptism", he says, "so is there only one habit" (P. G., XCIX, 1819). It is true that there is no real place for such a higher rank in the monastic system. At the reception of the first habit the monk makes his solemn vows for life and becomes a full monk in every sense. However, in spite of opposition, the custom grew. The imposition of the great habit re-

peats very much the ceremony of the lesser one and forms a kind of renewal of vows (Goar, 403-414); it is from the older monks who have gone through this rite and are honourably distinguished by their long cloaks that the dignitaries of the *laura* are chosen. Another gradual development was the formation of a class of priest-monks. At first no monks received any ordination; then one or two were made priests to administer sacraments to the others, then later it became common to ordain a monk priest. But it has never become the rule that all choir-monks should be ordained, as it became in the West. On entering monasteries people changed their name. The monk was to abstain from flesh-meat always; his food was fruit and vegetables and on feast-days fish, eggs, milk, and cheese. Wine was allowed. The chief meal, the only full meal in the day, was served at the sixth hour (midday); on the frequent fast-days, including every Wednesday and Friday and the four fasting-times, it was put off till the ninth hour. Later in the evening, after the *προδεδειγνον* (compline), the remains of the meal were again spread in the refectory and any who wished, chiefly the younger members, might partake of a light supper (cf. Marin, op. cit., p. 121).

The monk's main occupation was the daily chanting of the long Byzantine office in church. This took up a great part of the day and the night. There were moreover the *διδασκαλικά* offices, which on the eves of great feasts lasted all night. The rest of the time was spent in manual work, digging, carpentry, weaving,

and so on, portioned out to each by the abbot, of which the profit belonged to the monastery (St. Basil, P. G., XXXI, 1016, 1017, 1132, etc.; Marin, op. cit., 132-135). Men who already know an innocent and profitable craft may continue to exercise it as monks. Some practised medicine for the good of the community. Nor were the study of theology and the arts of calligraphy and painting neglected. Monasteries had libraries, and monks wrote theological works and hymns. In St. Theodore's time the Studion monastery was famous for its library and the beautiful handwriting of its monks (Theodore, "Orat.", XI, 16; in P. G., XCLX). There was a scale of punishments ranging from special fasts and prayers or the *ἀνελόγια*—that is, privation of the abbot's blessing—to the *ἀφορισμός* or solitary confinement and excommunication from all common prayers and the sacraments. The punishment for fornication was excommunication for fifteen years (cf. the "Epitimia" ascribed to St. Basil in M. P., XXXI, 1305-1314). A monk who had proved his constancy for many years in the community could receive permission from the hegumenos to practise the severer life of a hermit. He then went to occupy a solitary cell near the laura (St. Basil's Rule, P. G., XXXI, 1133). But he was still counted a member of the monastery and could return to it if he found solitude too hard. At the court of the Patriarch of Constantinople was an official, the Exarch of the monks, whose duty it was to supervise the monasteries. Most other bishops had a similar assistant among their clergy.

Celibacy became an ideal for the clergy in the East gradually, as it did in the West. In the fourth century we still find St. Gregory Nazianzen's father, who was Bishop of Nazianzos, living with his wife, without scandal. But very soon after that the present Eastern rule obtained. It is less strict than in the West. No one may marry after he has been ordained priest (Paphnutius at the first Council of Nicaea maintains this; see the discussion in Hefele-Leclercq, "Histoire des Conciles", Paris, 1907, I, pp. 620-624; the first Canon of the Synod of Neocaesarea in 314 or 325, ib., p. 327, and Can. Apost., xxvi. The Synod of Elvira about 300 had decreed absolute celibacy for all clerks in the West, Can. xxxiii, ib., pp. 238-239; priests already married may keep their wives (the same law applied to deacons and subdeacons: Can. vi of the Synod in Trullo, 692; see "Echos d'Orient", 1900-1901, pp. 65-71), but bishops must be celibate. As nearly all secular priests were married this meant that, as a general rule, bishops were chosen from the monasteries, and so these became, as they still are, the road through which advancement may be attained. Besides the communities in monasteries there were many extraordinary developments of monasticism. There were always hermits who practised various extreme forms of asceticism, such as binding tight ropes round their bodies, very severe fasting, and so on. A singular form of asceticism was that of the Stylites (*στυλῖται*), who lived on columns. St. Symeon Stylites (q. v.) began this practice in 420.

From the time of Constantine the building and endowment of monasteries became a form of good work adopted by very many rich people. Constantine and Helen set the example and almost every emperor afterwards (except Julian) followed it (Marin, "Les moines de Constantinople", chap. i). So monasteries grew up all over the empire. Constantinople especially was covered with them (see the list, ib., 23-25). One of the chief of these was Studion (*Στοιδίου*) in the south-western angle of the city, founded by a Roman, Studius, in 462 or 463. It was occupied by so-called "sleepless" (*ἀκοιμητοί*) monks who, divided into companies, kept an unceasing round of prayer and psalm-singing day and night in their church. But they were not a separate order; there was no distinction between various religious orders. St. Theodore, the great de-

fender of images in the second Iconoclast persecution, became Hegumenos of Studion in 799 (till his death in 826). His letters, sermons and constitutions for the Studite monks gave renewed ideals and influenced all Byzantine monasticism. During this period a great number of decrees of synods, ordinances of patriarchs, emperors, and abbots, further defined and expanded the rule of St. Basil. Many Eastern synods draw up among their canons laws for monks, often merely enforcing the old rule (e. g. the Synod of Gangres in the middle of the fourth century, Can., xix, etc.). St. John Chrysostom (cf. Montalembert, "Histoire des Moines d'Occident", Paris, 1880, I, 124), the Patriarch John the Faster (d. 595: Pitra, "Spicilegium Solesmense", Paris, 1852, IV, 416-444), the Patriarch Nicephoros (d. 829: ib., 381, 415), and so on, down to Photius (Hergenröther, "Photius", Ratisbon, 1867, II, 222-223), added to these rules, which, collected and commented in the various constitutions and *typika* of the monasteries, remain the guide of a Byzantine monk. Most of all, St. Theodore's "Constitutions of Studion" (P. G., XCIX, 1703-1720) and his list of punishments for monks (ib., 1734-1758) represent a classical and much copied example of such a collection of rules and principles from approved sources. St. Basil's mother and sister had formed a community of women at Annesos near the settlement of the men. From that time convents of nuns spread throughout the Byzantine Church, organized according to the same rule and following the same life as that of the monks with whatever modifications were necessary for their sex. The convents were subject to the jurisdiction of the bishop or patriarch. Their spiritual needs were provided for by a priest, generally a priest-monk, who was their "ghostly father" (*πνευματικὸς πατήρ*). The abbess was called *ἡγουμένησα*.

Lastly, during this period the monks play a very important part in theological controversies. The Patriarch of Alexandria, for instance, in his disputes with Constantinople and Antioch could always count on the fanatical loyalty of the great crowd of monks who swarmed up from the desert in his defence. Often we hear of monks fighting, leading tumults, boldly attacking the soldiers. In all the Monophysite troubles the monks of Egypt, Syria, Palestine, and the capital were able to throw the great weight of their united influence on the one side or the other. During the Acacian schism (482-519), while the whole Byzantine Church broke communion with Rome, only the "sleepless" monks of Studion remained Catholic. On the whole, the monks were generally on the Catholic side. During the Iconoclast persecution they were so determined against the overthrow of the holy pictures that the Iconoclast emperors made the abolition of monasticism part of their programme and persecuted people for being monks just as much as for worshipping images (see ICONOCLASM). Especially the great Studion monastery at Constantinople had a tradition of unswerving orthodoxy and loyalty to Rome. They alone kept communion with the Holy See in the Acacian schism, they were the leaders of the Image-worshippers in Iconoclast times, and their great abbot St. Theodore (d. 826) was one of the last defenders of union and the pope's rights before the great schism.

(3) *From the schism to modern times.*—The schism made little difference to the inner life of the Byzantine monasteries. Like the lower clergy and the people they quietly followed their bishops, who followed the patriarchs, who followed the Œcumenical patriarch into schism. After that their life went on as before, except that, having lost the advantage of intercourse with the West, they gradually drifted into the same stagnation as the rest of the Orthodox Church. They lost their tradition of scholarship, they had never done any work in parishes, and so they gradually arrived at the ideal that the "angelic life" meant, besides their immensely long prayers, contemplation

and fasting, doing nothing at all. In the eighteenth century, when an attempt was made to found monastic schools, they fiercely resented such a desecration of their ideal. During the early Middle Ages the Orthodox remained immeasurably behind the Catholic monks, who were converting western Europe and making their monasteries the homes of scholarship. The chief event of this period is the foundation of the Athos monasteries, destined to become the centre of Orthodox monasticism. When St. Athanasius of Athos founded the great Laura there, there were already cells of hermits on the holy mountain. Nevertheless he is rightly looked upon as the founder of the communities that made Athos so great a centre of Orthodoxy (see *ATHOS, MOUNT*; also Kyriakos, *Ἐκκλησιαστική Ιστορία*, Athens, 1898, III, 74-78; "Echos d'Orient", II, 321-31).

In the tenth and eleventh centuries the famous monasteries called the Meteora (*Μετέωρα*) in Thessaly were built on their inaccessible peaks to escape the ravages of the Slavs. The Turkish conquest made little difference to the monks. Moslems respect religious. Their Prophet had spoken well of monks (Koran, Sura V, 85) and had given a charter of protection to the monks of Sinai; but they shared fully the degradation of the Orthodox Church under Moslem rule. The Turkish conquest sealed their isolation from the rest of Christendom; the monasteries became the refuge of peasants too lazy to work, and the monk earned the scorn with which he is regarded by educated people in the East. Eugenios Bulgaris (d. 1800), one of the chief restorers of classical scholarship among the Greeks, made a futile attempt to found a school at Athos. The monks drove him out with contumely as an atheist and a blasphemer, and pulled his school down. Its ruins still stand as a warning that study forms no part of the "angelic" life.

(4) *Monasticism in the present Orthodox Church.*—The sixteen independent Churches that make up the Orthodox communion are full of monasteries. There are fewer convents. One great monastery, that of Mount Sinai, follows what professes to be the old rule of St. Anthony. All the others have St. Basil's rule with the additions, expansions, and modifications made by later emperors, patriarchs, and synods. There is no distinction of religious orders as in the West, though many lauras have customs of their own. All monks are "Basilians" if one must give them a special name. A monk is *μόναχος*, a priest-monk *ιερομόναχος*. A monastery is *μόνη* or *λαύρα*. The novice (*ἀρχιδίος*) wears a tunic called *βάσος* with a belt and the *kakimauchion* of all the clergy, he is often called *βασοφόρος*. After two years (the period is sometimes shortened) he makes his (solemn) vows and receives the small habit (*μαρδύρας*). Technically he is now a *μικρόσχημος*, though the word is not often used. After an undefined time of perseverance he receives the great habit (*κουκούλιον*) and becomes *μεγαλόσχημος*. The popular Greek name for monk is "good old man" (*καλόγερος*). The election, the rights and duties of the hegumenos and other dignitaries remain as they were before the schism. The title "archimandrite" appears to be given now to abbots of the more important monasteries and also sometimes as a personal title of distinction to others. It involves only precedence of rank.

Most monasteries depend on the local metropolitan. In the Orthodox states (Russia, Greece, etc.) the Holy Synod has a good deal to say in their management, confirms the election of the abbot, controls, and not unfrequently confiscates their property. But certain great monasteries are exempt from local jurisdiction and immediately subject to the patriarch or Holy Synod. These are called *σταντοπήγια*. One Orthodox monastery (Mount Sinai) of which the abbot is also "Archbishop of Sinai", is an autocephalous Church, obeying only Christ and the Seven Councils.

The *Γενικοί κανονισμοί* of the Œcumenical patriarchate contain a chapter about monasteries (pp. 67 sq.). They are divided into three classes, those with more than twenty, more than ten or more than five monks. Only those of the first class (more than twenty monks) are bound to sing all the Divine office and celebrate the holy Liturgy every day. Monasteries with less than five monks are to be suppressed or incorporated in larger ones. Monastic property accumulated in the East as in the West. Many quarrels between the Church and State have arisen from usurped control or even wholesale confiscation of this property by the various Orthodox governments. The first Greek Parliament in 1833 (at Nauplion) suppressed all monasteries in the new kingdom that had less than six monks. In 1864 Cusa confiscated all monastic property in Rumania, of which much belonged to the monasteries of Mount Sinai, Jerusalem, and Athos. In 1875 Russia confiscated three-fifths of the property in Bessarabia belonging to the monastery of the Holy Sepulchre. Of the rest it paid itself one-fifth for its trouble and applied two-fifths to what it described euphemistically as pious purposes in Russia. Many monasteries have farms called *μετόχια* in distant lands. Generally a few monks are sent to administer the *metochion* of which all the revenue belongs to the mother-house. The most famous monasteries in the southern part of the Orthodox Church are Mount Sinai, the Holy Sepulchre at Jerusalem, the Meteora in Thessaly, Sveti Naum on the Lake of Ochrida and, most of all, Athos. The national quarrels in the Orthodox Church have full development at Athos. Till lately the Greeks succeeded in crushing all foreign elements. They drove the Georgians from Iviron, the Bulgars from Philotheos, Xenophon, and St. Paul's. Now they are rapidly losing ground and influence; the Slavs are building large *Sketai*, and Russia here as everywhere is the great danger to the Greek element. The Russians have only one laura (Panteleimon or Russiko) but with its huge *Sketai* it contains more monks than all the Greek lauras together. All the Athos monasteries are *stauropugia*; only the Patriarch of Constantinople has any jurisdiction. For ordinations the hegumenoi invite the neighbouring Metropolitan of Heraclea. The monasteries have also the dignity of "Imperial" lauras, as having been under the protection of former emperors.

(5) *Monasticism in Russia.*—The writer is indebted to Mr. C. Faminsky of the Russian Embassy Church at London for the following account and the Russian bibliography. There have been monks in Russia since Christianity was first preached there in the tenth century. Their great period was the fourteenth century; their decline began in the sixteenth. Peter the Great (1661-1725) at one time meant to suppress the monasteries altogether. In 1723 he forbade new novices to be received. Under Catherine II (1761-1796) a more prosperous era began; since Alexander I (1801-1825) monasteries flourish again all over the empire. The latest census (1896) counts 495 monasteries and 249 convents of nuns. These are divided into 4 lauras (in Russia the name means a certain precedence and special privileges); 7 *stauropugia* (subject directly to the Holy Synod and exempt from the ordinary's jurisdiction), 64 monasteries attached to bishops' palaces. The rest are divided into three classes. There are 73 of the first class (which have at least 33 monks or, if convents, 52 nuns), 100 of the second (17 monks or nuns) and 191 of the third (12 monks or 17 nuns). There are further 350 monasteries not classified. Catherine II introduced the practice of drawing up official lists of the monasteries. She found 1072 monasteries in her empire of which she abolished 496 and classified the rest. In Russia, as at Athos, monasteries are either cenobitic (*obshchitel'nyie*) or idiorhythmic (*neobshchitel'nyie*); but these latter are not in favour with the Holy Synod

which restores the cœnobic rule wherever possible. Some monasteries are supported by government (*shlatnyie*), others have to support themselves. The three classes mentioned above concern the amounts received by the supported monasteries. The stauropegia are: Solovetsky, at Archangel, Simonoff, Donukoyi, Novospassky, and Saikonnospassky at Moscow, Voskresensky or New Jerusalem, Spaso-Yakovlesky. The census of 1896 counts 42,940 monks and 7464 nuns in the empire. The most famous Russian monasteries are Kieff (Kievsky Laura) founded in 1062 by a St. Anthony, the largest of all; the Troitzky Laura near Moscow, founded by St. Sergius in 1335 and now the home of the first "Ecclesiastical Academy" (Seminary) in the empire; the Metropolitan of Moscow is its hegumenos. The Pochaievsky Laura, founded in the thirteenth century and famous for its miraculous *eikon* of the Blessed Virgin; Solovetsky, founded in 1429; Surieff (in the government of Novgorod) founded in 1030; Tikhvinsky (in Novgorod); Volokolamsky (in the Moscow government) founded by St. Joseph of Volokolamsk in 1479, which has an important library and has often been used as a state prison, and Kyrylla-Bilezersky (in Novgorod) founded by St. Cyril in 1397.

(6) *Monasticism in the lesser Eastern Churches.*—Little need be said of these Churches. All had fully developed monasticism according to St. Basil's idea before they went into schism, and all have monks and nuns under much the same conditions as the Orthodox, though, naturally, in each case there has been some special development of their own. The Nestorians once had many monasteries. Joseph Simon Assemani in the eighteenth century counts 31 ("Bibl. Orientalis", III, Rome, 1725, xiv, §2). Since the fourteenth century the discipline has become so relaxed that monks can easily get dispensed from their vows and marry (Badger, "The Nestorians and their Rituals", London, 1852, II, p. 179). They now have neither monasteries nor convents; but there are monks and nuns who live in their own houses or wander about. The Copts have many monasteries arranged almost exactly like those of the Orthodox (Silbernagl, "Verfassung u. gegenwärtiger Bestand sämtl. Kirchen des Orients", Ratisbon, 1904, 291-293). The Abyssinian monasteries are very flourishing (ib. 299-302). There are in Abyssinia also people called *deberats*, regular canons who say the office in common and obey a superior called *nebrat*, but may marry. The Nebrat of Aksum is one of the most powerful members of the Abyssinian Church and the leader of the national party against the foreign (Coptic) metropolitan. The Syrian Jacobites once had a great number of monasteries. Down to the sixth century there were still Stylites among them. They now have only nine monasteries in the present reduced state of their Church, most of them also residences of bishops. The Jacobite monk fasts very strictly. To eat meat is a crime punished as equal to adultery (Silbernagl, op. cit., 313-315). The Armenian Church, as being considerably the largest and most flourishing of these lesser Eastern Churches, has the largest number of monks and the most flourishing monastic state. Armenian monks follow St. Basil's rule, but are much stricter in the matter of fasting. The novitiate lasts eight years. It is a curious contrast to this strictness that the abbot is often not a monk at all, but a married secular priest who hands on his office to his son by hereditary right. Most Armenian bishops live in monasteries. Etchmiadzin, the residence of the Katholikos, is theoretically the centre of the Armenian Church. The Armenians have the huge monastery of St. James, the centre of their quarter of Jerusalem, where their Patriarch of Jerusalem lives, and the convent of Deir asseituni on Mount Sion with a hundred nuns. Armenian monks do not as a rule become bishops; the bishops are taken from the

unmarried Vartabeds, that is, the higher class of secular priests (doctors). In all the other Eastern Churches bishops are monks. All use their monasteries as places of punishment for refractory clergy.

(7) *Uniate Monks.*—The only difference union with Rome makes to Eastern monks is that there is in the Uniate Churches a certain tendency to emulate the Latin religious orders. As this generally means a disposition to do something more than recite the Divine office, it may be counted an unmixed advantage. Uniate monks, like all the uniate clergy, are admittedly better educated than the schismatics; some of them at least attend Western schools or seminaries of Latin religious in the East. It is a Latinizing tendency that makes them often use special names for their order and even evolve into something like separate religious orders. Thus most Uniate Byzantine monks call themselves "Basilians", as the Latins use "Benedictine" or "Franciscan". Among the Melchites the two great congregations of Salvatorians and Shuwerites (see MELCHITES) are practically different orders. The Uniate Armenians have the famous Mechitarist Congregation, really a special religious order founded by Mechitar (1676-1749). The Mechitarists have the monastery of San Lazaro at Venice, and a branch separated from the others in 1774 have a house at Vienna. By their schools, missions, and literary activity they have always done great things in educating and converting their countrymen. The Catholic Chaldees have three monasteries, Rabban Hormusd, Alkosh, and Mar Yurgis in Mesopotamia. The Maronite Church from the beginning has been specially a monastic Church. It was first formed by the schism of the monks of St. John Maro, in the Lebanon, from the Patriarch of Antioch. Since their union with Rome they have formed separate orders. Till 1757 there were two such orders, those of St. Isaia and of St. Antony. The St. Antony monks then split again into two congregations, the Aleppians (monks of Aleppo) and Baladites (*baladiye*, country monks). Clement XIV sanctioned this separation in 1770. All follow the rule of St. Antony. For the rest the Uniate monks of each Church have the same rule and customs as the corresponding schismatics. Certain details have been revised and abuses eliminated by the Roman authorities. There are Uniate monasteries wherever there are Uniate Christians. Uniate bishops are by no means always monks as there are many of unmarried secular priests. One may note especially the Uniate Byzantine monks in southern Italy and in the great monastery of Grottaferrata outside Rome.

ADRIAN FORTESCUE.

IV. WESTERN MONASTICISM.—(1) *Pre-Benedictine Period.*—The introduction of monasticism into the West may be dated from about A. D. 340 when St.

Athanasius visited Rome accompanied by the two Egyptian monks Ammon and Isidore, disciples of St. Anthony. The publication of the "*Vita Antonii*" some years later and its translation into Latin spread the knowledge of Egyptian monachism widely and many were found in Italy to imitate the example thus set forth. The first Italian monks aimed at reproducing exactly what was done in Egypt and not a few—such as St. Jerome, Rufinus, Paula, Eustochium and the two Melanias—actually went to live in Egypt or Palestine as being better suited to monastic life than Italy. As however the records of early Italian monasticism are very scanty, it will be more convenient to give first a short account of early monastic life in Gaul, our knowledge of which is much more complete.

(a) Gaul.—The first exponent of monasticism in Gaul seems to have been St. Martin, who founded a monastery at Ligugé near Poitiers, c. 360 (see *LIGUGÉ; MARTIN OF TOURS, ST.*). Soon after he was consecrated Bishop of Tours; he then formed a monastery outside that city, which he made his customary residence. Although only some two miles from the city the spot was so retired that Martin found there the solitude of a hermit. His cell was a hut of wood, and round it his disciples, who soon numbered eighty, dwelt in caves and huts. The type of life was simply the Antonian monachism of Egypt (see above, *EASTERN MONASTICISM*) and so rapidly did it spread that, at St. Martin's funeral two thousand monks were present. Even more famous was the monastery of Lérins (q. v.) which gave to the Church of Gaul some of its most famous bishops and saints. In it too the famous Abbot John Cassian (q. v.) settled after living for seven years among the monks of Egypt, and from it he founded the great Abbey of St. Victor at Marseilles. Cassian was undoubtedly the most celebrated teacher that the monks of Gaul ever had, and his influence was all on the side of the primitive Egyptian ideals. Consequently we find that the eremitical life was regarded as being the summit or goal of monastic ambition and the means of perfection recommended were, as in Egypt, extreme personal austerities with prolonged fasts and vigils, and the whole atmosphere of ascetical endeavour so dear to the heart of the Antonian monk (see *CASSIAN, JOHN; FRANCE; CÆSARIUS OF ARLES, ST.; LÉRINS, etc.*).

(b) Celtic Monasticism (Ireland, Wales, Scotland).—Authorities are still divided as to the origin of Celtic monasticism, but the view most commonly accepted is that of Mr. Willis Bund which holds it to have been a purely indigenous growth and rejects the idea of any direct connexion with Gallic or Egyptian monasticism. It seems clear that the first Celtic monasteries were merely settlements where the Christians lived together—priests and laity, men, women, and children alike—as a kind of religious clan. At a later period actual monasteries both of monks and nuns were formed, and later still the eremitical life came into vogue. It seems highly probable that the ideas and literature of Egyptian or Gallic monachism may have influenced these later developments, even if the Celtic monasticism were purely independent in origin, for the external manifestations are identical in all three forms. Indeed the desire for austerities of an extreme character has always remained a special feature of Irish asceticism down to our own time. Want of space forbids any detailed account of Celtic monasticism in this place but the following articles may be referred to: (for Ireland) *ARMAGH, BANGOR, CLONARD, CLONLERT, CLONMACNOISE, LISMORE, BOBBIO, LUXEUIL, SAINTS PATRICK, CARTEAGE, COLUMBANUS, COMGALL*; (for Wales) *LLANCAFYVAN, BANGOR, SAINTS ASAPE, DAVID, DUBRIC, GILDAS, KENTIGERN*; (for Scotland) *IONA, SCHOOL OF, LINDISFARNE, ABBEY OF, SAINTS NINIAN, COLUMBA, AIDAN*. Undoubtedly, however, the chief glory of Celtic monasticism is its

missionary work, the results of which are to be found over all northwestern Europe. The observance, at first so distinctive, gradually lost its special character and fell into line with that of other countries; but, by that time, Celtic monasticism had passed its zenith and its influence had declined.

(c) Italy.—Like the other countries of western Europe, Italy long retained a purely Eastern character in its monastic observance. The climate and other causes however combined to render its practice far harder than in the lands of its origin. In consequence the standard of observance declined, and it is clear from the Prologue to St. Benedict's Rule that by his day the lives of many monks left much to be desired. Moreover there was as yet no fixed code of laws to regulate the life either of the monastery or of the individual monk. Each house had its own customs and practices, its own collection of rules dependent largely on the choice of the abbot of the moment. There were certainly in the West translations of various Eastern codes, e. g. the Rules of Pachomius and Basil and another attributed to Macarius. There were also St. Augustine's famous letter (Ep., ccci) on the management of convents of nuns, and also the writings of Cassian, but the only actual Rules of Western origin were the two by St. Cæsarius for monks and nuns respectively, and that by St. Columbanus, none of which could be called a working code for the management of a monastery. In a word monachism was still waiting for the man who should adapt it to Western needs and circumstances and give to it a special form distinct from that of the East. This man was found in the person of St. Benedict (480–543).

(2) *The Spread of St. Benedict's Rule.*—Full details of St. Benedict's legislation, which had such immense effect on the monasticism of Western Europe, will be found in the articles *BENEDICT OF NURSIA, ST.*, and *BENEDICT, RULE OF ST.* It is sufficient here to point out that St. Benedict legislated for the details of the monastic life in a way that had never been done before either in East or West. It is clear that he had acquainted himself thoroughly with the lives of the Egyptian fathers of the desert, with the writings of St. Basil, Cassian, and Rufinus; and in the main lines he has no intention of departing from the precedents set by these great authorities. Still the standard of asceticism aimed at by him, as was inevitable in the West, is less severe than that of Egypt or Syria. Thus he gives his monks good and ample food. He permits them to drink wine. He secures a sufficient period of unbroken sleep. His idea was evidently to set up a standard that could and should be attained by all the monks of a monastery, leaving it to individual inspiration to essay greater austerities if the need of these were felt by any one. On the other hand, probably as a safeguard against the relaxations mentioned above, he requires a greater degree of seclusion than St. Basil had done. So far as possible all connexion with the world outside the monastery is to be avoided. If any monk be compelled by duty to go beyond the monastery enclosure he is forbidden on his return to speak of what he has seen or heard. So too no monk may receive gifts or letters from his friends or relatives without permission of the abbot. It is true that guests from without are to be received and entertained, but only certain monks specially chosen for the purpose may hold intercourse with them.

Perhaps, however, the chief point in which St. Benedict modified the pre-existing practice is his insistence upon the *stabilitas loci*. By this special Vow of Stability he unites the monk for life to the particular monastery in which his vows are made. This was really a new development and one of the highest importance. In the first place by this the last vestige of personal freedom was taken away from the monk. Secondly it secured in each monastery that continuity of theory and practice which is so essential for the

family which St. Benedict desired above everything. The abbot was to be a father and the monk a child. Nor was he to be more capable of choosing a new father or a new home than any other child was. After all St. Benedict was a Roman, and the scion of a Roman patrician family, and he was simply bringing into the monastic life that absolute dependence of all the members of a family upon the father which is so typical of Roman law and usage. Only at the selection of a new abbot can the monks choose for themselves. Once elected the abbot's power becomes absolute; there is nothing to control him except the Rule and his own conscience which is responsible for the salvation of every soul entrusted to his care.

The Rule of St. Benedict was written at Monte Cassino in the ten or fifteen years preceding the saint's death in 543, but very little is known of the way in which it began to spread to other monasteries. St. Gregory (*Dial.*, II, xcii) speaks of a foundation made from Monte Cassino at Terracina, but nothing is known of this house. Again the traditions of Benedictine foundations in Gaul and Sicily by St. Maurus and St. Placid are now generally discredited. Still the Rule must have become known very soon, for by the death of Simplicius, the third Abbot of Monte Cassino, in line from St. Benedict, it is referred to as being generally observed throughout Italy (Mabillon, "Annal. Bened.", VII, ii). In the year 580 Monte Cassino was destroyed by the Lombards and the monks fled to Rome, taking with them the autograph copy of the Rule. They were installed by Pelagius II in a monastery near the Lateran Basilica. It is almost certain that St. Gregory the Great who succeeded Pelagius II introduced the Benedictine Rule and observance into the monastery of St. Andrew which he founded on the Cælian Hill at Rome, and also into the six monasteries he founded in Sicily. Thanks to St. Gregory the Rule was carried to England by St. Augustine and his fellow monks; and also to the Frankish and Lombard monasteries which the pope's influence did much to revive. Indirectly too, by devoting the second book of his "Dialogues" to the story of St. Benedict's life and work, Gregory gave a strong impetus to the spread of the Rule. Thus the first stage in the advance of St. Benedict's code across Western Europe is closely bound up with the name of the first monk-pope.

In the seventh century the process continued steadily. Sometimes the Benedictine code existed side by side with an older observance. This was the case at Bobbio where the monks lived either under the rule of St. Benedict or of St. Columbanus, who had founded the monastery in 609. In Gaul at the same period a union of two or more rules was often to be found, as at Luxeuil, Solignac, and elsewhere. In this there was nothing surprising, indeed the last chapter of St. Benedict's rule seems almost to contemplate such an arrangement. In England, thanks to St. Wilfrid of York, St. Benedict Biscop and others, the Benedictine mode of life began to be regarded as the only true type of monachism. Its influence however was still slight in Ireland where the Celtic monasticism gave way more slowly. In the eighth century the advance of Benedictinism went on with even greater rapidity owing principally to the efforts of St. Boniface. That saint is known as the Apostle of Germany although the Irish missionaries had preceded him there. His energies however were divided between the two tasks of converting the remaining heathen tribes and bringing the Christianity of the Irish converts into line with the Roman use and obedience. In both these undertakings he achieved great success and his triumph meant the destruction of the earlier Columban form of monasticism. Fulda, the great monastery of St. Boniface's institution, was modelled directly on Monte Cassino in which Sturm the abbot had resided for some time so that he might become perfectly ac-

quainted with the workings of the Rule at the fountain head, and in its turn Fulda became the model for all German monasteries. Thus by the reign of Charlemagne the Benedictine form of monasticism had become the normal type throughout the West with the sole exception of some few Spanish and Irish cloisters. So completely was this the case that even the memory of earlier things had passed away and it could be gravely doubted whether monks of any kind at all had existed before St. Benedict and whether there could be any other monks but Benedictines.

At the time of Charlemagne's death in 814 the most famous monk in western Europe was St. Benedict of Aniane, the friend and counsellor of Louis the new emperor. For him Louis built a monastery near his imperial palace at Aix, and there Benedict gathered thirty monks, chosen from among his own personal friends and in full sympathy with his ideas. This monastery was intended to be a model for all the religious houses of the empire, and the famous Assembly of 817 passed a series of resolutions which touched upon the whole range of the monastic life. The object of these resolutions was to secure, even in the minutest details, an absolute uniformity in all the monasteries of the empire, so that it might seem as if "all had been taught by one single master in one single spot". As might have been expected the scheme failed to do this, or even anything approaching thereto, but the resolutions of the Assembly are of high interest as the first example of what are nowadays called "Constitutions", i. e. a code, supplementary to the Holy Rule, which shall regulate the lesser details of everyday life and practice. The growth of the Benedictine monasticism and its development during the period known as the "Benedictine centuries" will be found treated of in the article *BENEDICTINES*, but it may be stated broadly that, while it had of course its periods of vigour and decline, no serious modification of St. Benedict's system was attempted until the rise of Cluny in the early part of the tenth century.

(3) *The Rise of Cluny.*—The essential novelty in the Cluniac system was its centralization. Hitherto every monastery had been a separate family, independent of all the rest. The ideal of Cluny, however, was to set up one great central monastery with dependent houses, numbered even by the hundred, scattered over many lands and forming a vast hierarchy or monastic feudal system under the Abbot of Cluny. The superior of every house was nominated by the Abbot of Cluny, every monk was professed in his name and with his sanction. It was in fact more like an army subject to a general than St. Benedict's scheme of a family with a father to guide it, and for two centuries it dominated the Church in Western Europe with a power second only to that of the papacy itself. (See *CLUNY*; *BERNO, ST.*; *ODO, ST.*; *HUGH THE GREAT.*) Anything indeed more unlike the primitive monasticism with its caves and individualism than this elaborate system with the pomp and circumstance which soon attended it could hardly be imagined, and the instinct which prompted men to become monks soon began to tell against a type of monasticism so dangerously liable to relapse into mere formalism. It must be understood however that the observance of Cluny was still strict and the reaction against it was not based on any need for a reform in morals or discipline. The abbots of Cluny during the first two centuries of its existence, with the sole exception of Pontius (1109) who was soon deposed, were men of great sanctity and commanding ability. In practice however the system had resulted in crushing all initiative out of the superiors of the subordinate monasteries and so, when a renewal of vigour was needed there was no one capable of the effort required and the life was crushed out of the body by its own weight. That this defect was the real cause why the system failed is cer-

tain. Nothing is more remarkable in the history of Benedictine monasticism than its power of revival by the springing up of renewed life from within. Again and again, when reform has been needed, the impetus has been found to come from within the body instead of from outside it. But in the case of Cluny such a thing had been rendered practically impossible, and on its decline no recovery took place.

(4) *Reaction against Cluny.*—The reaction against Cluny and the system of centralization took various forms. Early in the eleventh century (1012) came the foundation of the Camaldolese by St. Romuald. This was a hark back to the ancient Egyptian ideal of a number of hermits living in a "laura" or collection of detached cells which were situated some considerable distance apart (see CAMALDOLESE). A few years later (1039) St. John Gualbert founded the Order of Vallombrosa which is chiefly important for the institution of "lay brothers", as distinct from the choir monks, a novelty which assumes high importance in later monastic history (see LAY-BROTHER; VALLOMBROSA). In 1074 came the Order of Grammont which however did not move to the place from which its name is derived until 1124 (see GRAMMONT; STEPHEN OF MURET, St.). Far more important than these was the establishment in 1084 of the Carthusians by St. Bruno, at the Grand Chartreuse near Grenoble, which boasts that it alone of the great orders has never required to be reformed (see CARTUSIANS; CHARTREUSE, LE GRAND; BRUNO, St.). In all these four institutes the tendency was towards a more eremitical and secluded form of life than that followed by the Benedictines, but this was not the case in the greatest of all the foundations of the period, viz. the Cistercians.

The Cistercians derived their name from Cîteaux near Dijon where the Order was founded about 1098 by St. Robert of Molesme. The new development differed from that of Cluny in this that, while Cluny established one scattered family of vast size, Cîteaux preserved the idea that each monastery was an individual family but united all these families into one "Order" in the modern sense of an organized congregation. The Abbot and House of Cîteaux was to be pre-eminent for ever over all the monasteries of the order. The abbots of all other monasteries were to assemble at Cîteaux in general chapter every year. The purpose of this was to secure in every monastery a complete uniformity in the details of observance, and this uniformity was to be made even more certain by a yearly visitation of each house. The Abbot of Cîteaux possessed the further right of visiting any and every monastery at will, and though he was not to interfere with the temporalities of any house against the wishes of the abbot and brethren, in all matters of discipline his power was absolute. This elaborate system was set forth in the famous document known as the "Carta Caritatis" and in it for the first time the expression "Our Order" is used in the modern sense. Previously the word, as used in the phrase "the monastic order" had denoted the mode of life common to every monastery. In the "Carta Caritatis" it is used to exclude all monastic observance not exactly on the lines of the "new monastery", i. e., Cîteaux, and subject to it. The monasteries of the Cistercians spread over Europe with surprising rapidity and from the colour of their habit the monks were called the "White Monks", the older Benedictines and Cluniacs being known as the "Black Monks" (see CISTERCIANS; CÎTEAUX; ROBERT OF MOLESME, St.; BERNARD OF CLAIRVAUX, St.).

The impetus given by these new foundations helped to revitalise the Benedictine monasteries of the older type, but at the same time a new influence was at work upon western monasticism. Hitherto the monastic ideal had been essentially contemplative. Certainly the monks had undertaken active work

of many kinds but always as a kind of accident, or to meet some immediate necessity, not as a primary object of their institute nor as an end in itself. Now however religious foundations of an active type began to be instituted, which were dedicated to some particular active work or works as a primary end of their foundation. Of this class were the Military Orders, e. g., the Templars, Hospitallers, and Teutonic Knights; numerous Institutes of canons, e. g., Augustinians, Premonstratensians, and Gilbertines; the many Orders of friars, e. g. Carmelites, Trinitarians, Servites, Dominicans, and Franciscans or Friars Minor. Of these and the multitudinous modern foundations of an active character, as distinct from a contemplative or monastic one, this article does not profess to treat; they will be found fully dealt with in the general article RELIGIOUS ORDERS and also individually in separate articles under the names of the various orders and congregations. It must be recognized however that these active institutions attracted a vast number of vocations and to that extent tended to check the increase and development of the monastic order strictly so called, even while their fervour and success spurred the older institutes to a renewal of zeal in their special observances.

The Fourth Council of Lateran in 1215 passed certain special canons to regulate monastic observance and prevent any falling away from the standard set up. These directions tended to adapt the best features of the Cistercian system, e. g. the general chapters, to the use of the Black monks, and they were a great step in the path which later proved so successful. At the time however they were practically ignored by the monasteries on the Continent, and only in England was any serious effort made to put them into practice. The consequence was that the English monasteries of Black monks soon formed themselves into one national congregation, the observance throughout the country became largely uniform, and a far higher standard of life obtained than was common in continental monasteries at the same period. The system of periodical general chapters ordered by the Lateran Council was maintained. So too was the subjection of all monasteries to the diocesan bishops as a normal state of affairs; indeed only five abbeys in all England were exempt from episcopal jurisdiction. There were of course individual failures here and there, but it is clear that, from the date of the Council of Lateran up to the time of their destruction, the English Benedictine houses maintained on the whole a good standard of discipline and preserved the affectionate respect of the great majority of the laity in every rank of life.

(5) *Period of Monastic Decline.*—On the Continent the period succeeding the Fourth Lateran Council was one of steady decline. The history of the time tells of civil disturbance, intellectual upheaval, and a continual increase of luxury among ecclesiastics as well as laymen. The wealth of the monasteries was tempting and the great ones both in Church and State seized upon them. Kings, nobles, cardinals, and prelates obtained nominations to abbeys "in commendam" and more often than not absorbed the revenues of houses which they left to go to ruin. Vocations grew scarce and not unfrequently the communities were reduced to a mere handful of monks living on a trifling allowance doled out to them none too willingly by the layman or ecclesiastic who claimed to be their commendatory abbot. Efforts to check these evils were not wanting especially in Italy. The Sylvestrines, founded by St. Sylvester de Gozzolini about the middle of the thirteenth century, were organized on a system of perpetual superiors under one head, the Prior of Monte Fano, who ruled the whole congregation as general assisted by a chapter consisting of representatives from each house (see SYLVESTRINES).

The Celestines, founded about forty years later by St. Peter Morone (Celestine V), were organized on much the same plan but the superiors were not perpetual and the head of the whole body was an Abbot elected by the General Chapter for three years and ineligible for re-election for nine years after his previous term of office (see CELESTINES; CELESTINE V, St.). The Olivetans, founded about 1313 by Bernardo Tolomei of Siena, mark the last stage of development. In their case the monks were not professed for any particular monastery, but, like friars, for the congregation in general. The officials of the various houses were chosen by a small committee appointed for this purpose by the general chapter. The abbot-general was visitor of all monasteries and "superior of superiors", but his power was held for a very short period only. This system had the very great advantage that it rendered the existence of commendatory superiors practically impossible, but it secured this at the cost of sacrificing all family life in the individual monastery which is the central idea of St. Benedict's legislation. Further, by taking the right of election away from the monastic communities, it concentrated all real power in the hands of a small committee, a course obviously open to many possible dangers (see OLIVETANS).

(6) *Monastic Revival*.—In the great wave of reform and revival which characterized the later fifteenth and sixteenth centuries the older institutions of Benedictines once more gave proof of their vitality and a spontaneous renewal of vigour was shown throughout Europe. This revival followed two main lines. In the Latin countries the movement pursued the path marked out by the Olivetans. Thus in Italy all the monasteries of Black monks were gradually united together under the name of the Congregation of St. Justina of Padua, afterwards called the Cassinese Congregation (see under BENEDICTINES). Similar methods were adopted in the formation of the Congregations of St. Maur and St. Vannes in France, in the two Congregations of Spanish Benedictines, and in the revival of the English Congregation. In Germany the revival took a different path; and, while keeping closer to the traditions of the past, united the existing monasteries very much in the manner ordered by the Fourth Council of Lateran in 1215. The Union of Bursfeld is perhaps the best example of this method. An example of reform in the seventeenth century was the work of Abbé de Rancé in instituting the Cistercian reform at La Trappe. In this his object was to get as close as possible to the primitive form of Benedictine life. No one can question his sincerity or the singleness of his intentions, but de Rancé was not an antiquary and had not been trained as a monk but as a courtier. The result was that he interpreted St. Benedict's rule with the most absolute literalness, and thus succeeded in producing a cast-iron mode of life far more rigid and exacting than there is any reason to believe St. Benedict himself either desired to or did beget. The upheaval of the French Revolution and the wars which followed it seemed likely to give a death blow to Western monachism and in fact did destroy monasteries by the hundred. But nothing perhaps is more noteworthy, in all the wonderful revival of Catholicism which the last hundred years have seen, than the resuscitation of monastic life in all its forms, not only in Europe, but also in America, Africa, Australia, and other distant lands whose very existence was unknown to the founders of Western monachism. Details of this revival will be found in the articles on the various orders and congregations referred to above.

No mention has been made in this article of the question of women under Monasticism. Broadly speaking the history of contemplative nuns, as distinct from nuns of the more recent active orders, has been identical with that of the monks. In almost every in-

stance the modifications, reforms, etc., made by the various monastic legislators have been adopted by convents of women as well as by the monks. In cases where any special treatment has been thought necessary, e. g. the Carthusian Nuns, a separate section of the article on the order or congregation in question has been dedicated to the subject. These sections should be referred to in all cases for detailed information. (For practical details of the monastic life and the actual working of a monastery see the articles MONASTICISM; MONASTERY; ABBEY; ABBOT; ABBESS; OBEDIENTIARIES; BENEDICT, RULE OF St.; BENEDICT OF NURSIA, St.; NUN.)

G. ROGER HUDLESTON.

Moncada, FRANCISCO DE, Count of Osona, Spanish historian, son of the Governor of Sardinia and Catalonia, b. at Valencia, 29 December, 1586; d. near Goch, Germany, 1635. He entered the army at a very early age, and in 1624, was appointed by King Philip IV ambassador to the imperial court at Vienna, where he soon succeeded in acquiring the esteem of Ferdinand II and his ministers. In 1629 he was recalled from Vienna and sent to Brussels in place of Cardinal de la Cueva, ambassador to the Infanta Isabella. His chief duty there consisted in keeping the king posted in regard to the conditions in the Netherlands, in supervising the royal officials, and in watching over the disbursements of Spanish funds. He soon discovered the chief fault of the preceding administration and endeavoured to concede to the Belgians a much larger share in the administration of their country's affairs, for he realized that only by such a show of confidence could they be kept loyal to the empire. He also proposed, though without success, to transfer the general management of Belgian affairs from Madrid to Brussels. In 1630 he was appointed commander-in-chief of the navy, in 1632 of the entire army, and in 1634, after the death of the Infanta, governor of Belgium, until relieved by the arrival of Prince Cardinal Ferdinand. His crowning and final achievement as military commander was the liberation of Breda, the citizens of which ordered memorial coins struck in his honour. The following year he accompanied the cardinal on an expedition into the Duchy of Cleves, where he died after a short illness at the siege of Goch. He had an amiable character, knew how to guide men according to his own desires, and combined great shrewdness and firmness with wise moderation. He wrote a valuable history of the expedition of the Catalonians and Aragonians against the Turks and Greeks (Barcelona, 1623; Madrid, 1777, 1805, 1883; Paris, 1841, in "Tesoro de los historiadores espanoles"). We furthermore possess from his pen the "Vida de Anicio Manlio Torquato Severino Boecio", which was printed (Frankfort, 1642) seven years after his death.

Biog. Nat., I (Brussels, 1866), 578-590.

PATRICIUS SCHLAGER.

Mondino (a diminutive for RAIMONDO; MUNDINUS) DEI LUCCI, anatomist, b. probably at Bologna, about 1275; d. there, about 1327. Mondino performed a series of public dissections at the University of Bologna in the early part of the fourteenth century. He is sometimes said to have performed only two or three dissections, but his own writings refute this. He is often proclaimed the first to have performed dissections in modern times, but Haeser says that many anatomists dissected before his time, and that we have even a manual of dissection written before this, by one Ricardus. Mondino systematized dissection, and wrote a manual called "Anathomia", which was used in nearly all medical schools for three centuries after his time. Its popularity can be judged from the editions issued after the invention of printing. There is one at Pavia (1478), Bologna (1482), and Padua (1484); there are Venice editions of 1494, 1498, 1500, and 1507; Leipzig (1505), Strasburg (1509), and Marburg and

Lyons shortly afterwards. His book was considered such an authority that an old teacher declared that medical students for centuries worshipped him as a god. If something found in a dissection were not described in Mondino's "Anathomia", constantly open before them while dissecting, it was considered an anomaly. The work of course has been superseded by progress in the science of anatomy, but it is easy to understand from it how much practical anatomy for surgical purposes the medieval physicians were taught.

HAEUSER in *Biographisches Lexicon der hervorragenden Aerzte*; *Bibliographie médicale* (Paris, 1826); for the question of dissection before and by Mondino, see PILCHER, *The Mondino Myth in Medical Library and Historical Journal* (Brooklyn, Dec., 1906); WALSH, *The Popes and Science* (New York, 1908).

JAMES J. WALSH.

Mondoñedo (Lat. *MONDUMETUM*, or *MINDON*), **DIOCESE OF** (*MINDONTIENSIS*, also *BRITONIENSIS*, *DUMIENSIS*, and *VILLABRIENSIS*), comprises the civil Provinces of Lugo and Corunna, and is bounded on the north by the Bay of Biscay, on the east by the Asturias, on the south by the Diocese of Lugo, and on the west by the Archdiocese of Compostela (or Santiago de Galicia), of which it has been a suffragan since 1114. Some authorities have sought to fix the date of the foundation of this diocese (under its primitive name of Britonia) earlier than the second half of the sixth century, but the later date seems the more probable when we consider that, at the Second Council of Braga (572), Mailoc, Bishop of Britonia, was ranked lowest because of the more recent origin of his see. It seems to have been founded by the Suevian king, Theodomir, converted to Catholicism by St. Martin of Dumio (see **MARTIN OF BRAGA**, SAINT) and to have included in its jurisdiction the Churches of the Britones (a territory coinciding with that of Mondoñedo) and some of those of the Asturias. In the beginning it was a suffragan of Lugo, until the Goths placed Lugo under the jurisdiction of Braga. After Mailoc no mention is found of the bishops of Britonia for a long time, doubtless because the great distance from Toledo made it impossible for them to assist at the councils. In 633 Metopius, Bishop of Britonia, assisted at the Fourth Council of Toledo, presided over by St. Isidore. Sonna, his successor, was one of the bishops who signed at the Seventh Council of Toledo (646) and sent a representative to the Eighth Council of Toledo (16 December, 653). When Britonia was invaded and destroyed by the Saracens, the bishop and priests took refuge in Asturias. In 899, during the reign of Alfonso III, Theodesimus, Bishop of Britonia assisted with other prelates at the consecration of the church of Santiago. It may also be noted that, in the repartition of the parishes, the church of San Pedro de Nova was assigned as the residence of the bishops of Britonia and Orense, when they should come to assist at the councils of Oviedo. By that time, however, the See of Britonia had been translated to the town of Mondumetum and the church of St. Martin of Dumio, or Mondoñedo. The diocese has since been most generally known by this name, although the episcopal residence has again changed. After the time of St. Martin it was transferred to Villamayor de Brea, from which it derived the name of Villabriensis, and afterwards to Ribadeo, but it was nevertheless known as Mindoniense, as a document of the year 1199 bears witness. At first, its patron was St. Martin of Tours, but St. Martin of Dumio was afterwards chosen patron.

The church of St. Martin of Mondoñedo, one of the best of the ancient churches of this region, had been the cathedral church since 866. The present parochial house is a part of the old episcopal palace, connected with the church by a gallery from what seems to have been one of the episcopal chambers. In 1112 the queen, Doña Urraca, transferred the episcopal residence to Brea, a valley about seven and a half miles from St. Martin of Mondoñedo, in the midst of

which is Villamayor de Brea, where the cathedral church of Santa María Vallibriense was built. The Blessed Virgin, under her title of the Assumption, was the patroness of this church. Alfonso VII gave a charter to the town, and the bishop resided there until Ferdinand II of León transferred the episcopal residence to Ribadeo. In 1233 Don Martín, successor to Don Pelayo, transferred it to its present location, Mondoñedo, now a town of 10,590 inhabitants. To appease the discontent occasioned in Ribadeo by this change, Bishop Nuño II and his chapter established a collegiate church in Ribadeo with a canon and four prebendaries (*racioneros*).

Many of the bishops of Mondoñedo were noted for their sanctity and learning. First among these is St. Rosendus, who, in consideration of his eminent virtue, was created a bishop when he was very young, and governed the diocese from 928 to 942. He founded the monastery of Celanova, to which he afterwards retired to live the life of a monk. Of another abbot of Celanova, Gonzalvo, a legend has been preserved which attributes to his prayers the repulse of the Northmen who were devastating the coasts of Galicia. His sepulchre is in the church of St. Martin of Mondoñedo, and on the spot on the shore where he prayed a chapel has been erected to which people come in great numbers, especially at Pentecost. Don Martín, bishop from 1219 to 1248, built the present cathedral of Mondoñedo, except for the present façade and four chapels, which form an additional nave behind the principal one. Towards the end of his life he resigned his see and withdrew to St. Martin of Mondoñedo to prepare for death. Don Pedro Enriquez de Castro (1426-45) is credited with having built the ancient cloister, where the coat of arms of his family was emblazoned. Don Fadrique de Guzmán (1462-92) made notable repairs in the cathedral; Don Alfonso Suárez de la Fuente del Salce (1493-96) was named inquisitor general by Pope Alexander VI; Don Pedro Pacheco, son of the Conde de Montalban (1533-37) was created a cardinal; Fray Antonio de Guevara, a classical writer, preacher and chronicler for Charles V shed lustre on the See of Mondoñedo. Don Diego de Soto (1546-49) completely renovated the cathedral.

In the church at Villamayor de Brea, which was formerly the cathedral of the diocese, there are some notable frescoes, entirely covering the walls of the interior. Those on the Gospel side represent, in three large panels, the slaughter of the Innocents; those on the Epistle side, four scenes from the life of St. Peter. Other paintings, the work of the Asturian painter, Terán, decorate the domes of the transept and the main chapel. The present cathedral of Mondoñedo, built in the thirteenth century (see above), is one of the best examples of ogival art in Galicia. The Romanesque portal is, as in many of the churches of that period, the most ancient portion. In the seventeenth century a façade in the Baroque style was added. The church is in the form of a Latin cross, with three naves; it has fine altars, choir stalls in the Flemish style, mural paintings of the fifteenth century, interesting for the history of art, and two organs in the over-decorated style of the eighteenth century, while the sacristy is richly decorated with pictures of the Flemish school. The Capilla de los Remedios, built in 1738, by Bishop Sarmiento de Sotomayor also deserves mention. The monastery of San Salvador de Lorenzana, formerly belonging to the Benedictines, and so called from its proximity to the river Lorenzana, is one of the most notable in Galicia. It was founded on 17 June, 969, during the episcopate of Theodomir, by the saintly Conde Osorio Gutiérrez, and was richly endowed. The remains of the founder, who became a member of the community, are interred in the monastery. A very beautiful monument constructed of rare marbles, such as are not to be found

In any other part of Spain, has been erected over his grave. His memory is venerated, and the faithful visit his tomb. The convent of the Alcantarines (Franciscans of the reform of St. Peter of Alcántara), founded in 1731, is now used as barracks. The court-house (1584) and the seminary are among the principal buildings of Mondofedo.

The present seminary building, in the Huertas del Torrellón, was built by Bishop José Francisco de Losada in 1770-75. Mondofedo, which until 1836, was the capital of the province, numbers among her distinguished sons the teacher Pacheco Febrero, author of "Galería de Escribanos", José Cayetano Suaces, Bishop of Palencia; Lucas Miranda, author of the "Teatro de Prelados de la Iglesia de Mondofedo", and the sculptor Castro, designer of the inspiring figure of Saint Francis in the cathedral. Bishop Manuel Navarrete wrote a long history of Mondofedo and its bishops. The present (1910) Bishop of Mondofedo, Don Juan José Solés y Fernández, b. at Oviedo, 1848, was consecrated on 26 May, 1907.

RAMÓN RUIZ AMADO.

Mondovi, DIOCESE OF (MONTISREGALIS), in Piedmont, province of Cuneo, northern Italy. The city is built upon three hills, at a height of about 1600 feet above sea-level, and dates from the year 1000; but the suburb of Breo, the name of which recalls the Bredolensis colony mentioned in a Roman inscription found in that neighbourhood, had a castle in the time of Charlemagne. The town, called Monsvici, also Monteregale, was under the bishops of Asti until 1198, when it established itself as a commune, but was compelled to struggle against the bishops of Asti, the marquesses of Saluzzo and of Monferrato, and the counts of Savoy, in turn recognizing and shaking off the suzerainty of one or another of those lords. The commune maintained a war against the marquesses of Civa (1240-50), and finally, Bressano di Vico, a powerful lord in Mondovi, attempted to make himself master of the city, which submitted to Charles of Anjou (1260), and from that time, with some interruptions, remained under the protection of the kings of Naples, until 1366. In 1396, having again changed lords several times, it came under the dominion of the Savoyard lords of Achaia, and in 1418, under that of the dukes of Savoy, in whose possession it remained. In 1476 and in 1533, the inhabitants of Mondovi attempted to give their allegiance either to the Marquess of Monferrato or to the Duke of Mantua, and the French contested for its possession with the imperialists (1536-43), and with the house of Savoy (1543-59). The city was at war with the Duke of Savoy for the salt monopoly (1678-99). Napoleon defeated the Piedmontese near Mondovi (1796), thereby assuring his way through the valley of the Po, and in 1799 it was pillaged by the French.

It was the birthplace of the pious Cardinal Bona, of the celebrated physicist Beccaria, and of Marquess Ormea, a statesman of the eighteenth century. Its cathedral contains paintings by Giulio Romano, Cambiasso, and others. The residence of the bishop is one of the noblest episcopal palaces in Italy. In the church of la Missione there are frescoes by the Jesuit Pozzi. Outside the city is the sanctuary of the Madonna del Pilone, dating from the fourteenth century, but finished later (1730-49). The palace of the counts of San Quintino contained the first printing-office in Piedmont, and was the seat of a university (1560-1719) founded by Duke Emmanuel Philibert, the first institution of its kind in Piedmont. The city, at first part of the Diocese of Asti, became the seat of a bishop, suffragan of the Archbishop of Milan, but, since 1515, Turin has been its metropolitan. In 1817,

the territory of Cuneo was detached from the See of Mondovi and made a diocese. The first bishop of Mondovi was Damiano Zavaglia, a zealous and peace-loving prelate; among his successors were Percivallo di Palma (1429), Amadeo Romagnano (1497), who reconstructed the cathedral (1550); Michele Ghislieri, O.P. (1550), later Pope Pius V; Cardinal Vincenzo Lauro (1566), founder of the seminary, during whose incumbency the cathedral and other churches were torn down to make room for the citadel; Giovanni Battista Isnardi (1697), who restored the episcopal palace and the church of St. Dalmazio; Carlo Felice Sanmartino (1741), founder of the new seminary, and Giovanni Tommaso Ghilardi, O.P. (1842), a very pious and charitable man. The city contains 145 parishes, with 170,000 faithful, 6 religious houses of women, 10 educational establishments for boys and 15 for girls; it has three Catholic newspapers.

CAPPELLI, *Le Chiese d'Italia* (Venice, 1887), XIV; GRASSI, *Memorie storiche della chiesa vescovile di Monteregale* (Turin, 1785); DELLA ROCCA, *Le Storie dell' antica città di Monteregale ossia Mondovi* (2 vols., Turin, 1894-99).

U. BENIGNI.

Mone, FRANZ, historian and archæologist, b. at Mingsheim near Bruchsal, Baden, 12 May, 1796; d. at Karlsruhe, 12 March, 1871. He attended the gymnasium at Bruchsal and in 1814 entered Heidelberg, where in 1817 he was appointed tutor (*Privatdozent*) in history, in 1818 secretary of the university library, in 1819 extraordinary, and in 1822 ordinary, professor, and in 1825 head of the university library. From 1827 to 1831 he was professor at Louvain. On his return to Baden he edited for a period the "Karlsruher Zeitung"; he became in 1835 archivist and director of the General National Archives at Karlsruhe, and retired in 1868. By his great diligence and tireless energy he acquired extensive knowledge. His works on early history ("Urgeschichte des badischen Landes", 2 vols., 1845; "Untersuchungen über die gallische Sprache", 1851; "Celtische Forschungen", 1857) suffer from his tendency to trace everything possible to a Celtic origin. More important are his works on literary history, which include: "Einleitung in das Nibelungenlied" (1818); "Geschichte des Heidentums im nördlichen Europa" (2 vols., 1822-3); "Otnit" (1821); "Quellen und Forschungen zur Geschichte der deutschen Literatur und Sprache" (1830); "Untersuchungen zur Geschichte der deutschen Heldensage" (1836); "Uebersicht der niederländischen Volkalliteratur älterer Zeit" (1838). In the "Anzeiger für Kunde des deutschen Mittelalters" (1835-9), he calls attention to a great mass of unknown materials. Of great value for the history of the drama are his editions of "Alte deutsche Schauspiele" (1841) and "Schauspiele des Mittelalters" (2 vols., 1846). His works, "Lateinische und griechische Messen" (1850) and "Lateinische Hymnen" (3 vols., 1853-5), advanced the knowledge of liturgy and ecclesiastical poetry, and offer important liturgical documents not published elsewhere. For the history of his native country the following are useful: "Badisches Archiv" (2 vols., 1826-7); "Quellen-sammlung der badischen Landesgeschichte" (4 vols., 1848-67); the second volume of the "Episcopatus Constantiensis" of Neugart (1862), and, most particularly, the extraordinarily rich and varied "Zeitschrift für die Geschichte des Oberrheins" (21 vols., 1850-68), which was founded by Mone, and in which most of the articles during these early years were from his pen. It has been continued since then by the General Archives and by the Historical Commission of Baden. His industry and zeal in collecting were very praiseworthy, although he was sometimes deficient in accuracy and critical judgment; in his works the economic-historical interest is always in the foreground. He was an earnest and pious Catholic, and took part in the Baden ecclesiastical-political strife during the forties, publishing the two aggressive anonymous pam-

phlets, "Die katholischen Zustände in Baden" (1841-3).

VON WRECH, *Badische Biographien*, II (Heidelberg, 1875), 88-9; INRM in *Allg. deutsche Biogr.*, XXII (Leipzig, 1885), 165-6. Portions of Moneta's correspondence were edited by VON WRECH in *Zeitschr. für die Gesch. des Oberrheins*, LV (1901), 422 sqq., 650 sqq.; LVII (1903), 458 sqq.

KLEMENS LÖFFLER.

Moneta (MONETUS), theologian, b. at Cremona, Italy, date unknown; d. at Bologna, 1240. He was one of the first disciples of St. Dominic. Previous to his entrance into the order in 1220, he was professor of philosophy in the university of Bologna, where his rare erudition and depth of thought as well as his clearness of exposition won for him a wide reputation. The eloquence of Bl. Reginald, the superior of the local community, attracted to the order so many renowned doctors and students that Moneta began to fear for his own prestige, to insure which, he carefully avoided the preacher and exhorted his pupils, by word and example, to do likewise. But yielding to his pupils' wishes one day he accompanied them to a sermon and was so deeply moved by it that he resolved to become a religious. He was later noted for his sanctity no less than for his eloquent and learned controversies with the heretics. His intense devotion to study caused him to lose his sight in the latter days of his life. He is the author of "Summa contra Catharos et Waldenses", a widely read work during his time. It was first edited in 1743 by a religious of his order, Thomas Aug. Ricchini, who supplied the work with copious notes. In a biographical sketch of the author with which he prefaced the work, we are informed that Moneta wrote also a commentary on Aristotle's logic and a "Summa casuum conscientie". QUÉTIF-ÉCHARD, *SS. Ord. Præd.*, I, 122; *Mon. Ord. Præd. Hist.*, I, 169; DENYER, *Archiv. für Lit. u. Kirchengesch.*, II, 232; ST. GILLES, *Life of Bl. Reginald*, Eng. tr. (New York, 1877), 56-9.

JOSEPH SCHRODER.

Mongolia.—The name used to designate an immense uneven plateau, part of the Chinese Empire, extending, roughly speaking, from the Tarbagatai to the great K'ingan chains.

GEOGRAPHY.—Mongolia is bounded on the north by the Siberian provinces of Tomak, Irkutsk, Yeniseisk, and Transbaikalia, as defined by the Russo-Chinese treaties of 1689 and 1727; on the east, by Manchuria, the frontier crossing the Nonni River; on the south, the frontier, after following the Shara Muran, which separates it from the Chinese provinces of Chi-li, Shan-si, Shen-si, and, crossing the bend of the Hwang-ho (Ordos Country), Kan-su, includes Ala-shan, following part of the Great Wall; on the southwest and west it is bounded by the New Dominion (Sin Kiang) and the Siberian province of Semipalatinsk to Mount Kaldar (Altai). The population of Mongolia is estimated variously at 2,600,000 (Statesman's Year Book, 1910), 2,580,000, or nearly 2 to the square mile, and 5,000,000. Its area of 1,367,953 square miles may be divided into three regions: the central region, known as the Mongolian Sha-mo, in contradistinction to the Great Sha-mo, or Desert of Gobi; the north-western region, a plateau connected with the Great Altai, including Kobdo and Urga, and bounded on the S. E. by the Ektagh Altai (or Mongolian, or Southern, Altai); the southwestern region of the great K'ingan, a long chain of mountains, stretching from the Shara Muren to the Argún River, separating the plateau of Gobi from the Manchurian plains.

The climate is extremely dry, and the temperature varies abruptly with the season of the year and even the hour of the day. An idea of the severity of a Mongolian winter may be gathered from the following description of conditions in the month of October: "The cold by this time was almost Arctic. All our provisions were frozen through and through; potatoes were like lumps of iron; meat had to be broken rather than cut; and some eggs which we had brought with

us were frozen so hard that, in spite of a preliminary thawing, the yolks were still solid lumps of ice when the whites were perfectly fried. Tea left in the bottom of a cup in the tent was frozen solid in a very few minutes. The ink froze on one's pen as one wrote, and one had to blow on it after writing every two or three words, while each page had to be thawed over the lamp before it could be blotted. In the morning we woke with our moustaches fringed with lumps of ice and a coating of ice along the edge of the bed-clothes where the breath had fallen" (Kidston, "China", no. 3, 1904, 21).

The Kerulon, or Khérelon, River, though "an in considerable river, is the longest of the vast arid East Mongol upland, and the permanence of the pastures along its banks has always attracted a large share of the nomad population; many of the Tsatsen princes keep their headquarters on or close to the Kerulon" (Campbell, 24). This river rises on the southern slopes of the Kentai Mountains, near Mount Burkhan Kalduna and enters the Dalai Nor, five or six miles southwest of the Altan Emül (Golden Saddle), a pair of brown hills, famous in Mongol legend, between which the river flows. The Dalai, or Kulun Nor, is a lake in the Manchurian region, 16 miles from north-east to south-west, and about 10 miles from east to west, near the Transbaikalian frontier of Russia; it was visited in 1689 by Father Gerbillon. This lake receives on the north the waters of the Dalai Gol, which, united to the Khailar River, form the Argún River, and this in turn joins the Shilka. The Argún and Shilka being united take the name of Amúr, or He-lung-kiang, the great river which runs into the Okhotsk Sea. The Úrsun Gol carries the overflow of the Buyr, or Bur, Nor to the Kulun Nor; the Khalka Gol, which rises in Lake Galba, on the western slope of the great K'ingan range, flows into the Buyr Nor; near it, on its south bank, stands the Ikhe Boshan Sume (Monastery of the Large Buddha). The Selenga River which runs into Lake Baikal, rises in the Ulan Taiga and Khan Taiga Mountains; its main tributaries are on the left, the Eke Gol flowing from the Kosso Gol in the middle of which is the Buddhist sacred island of Dalai Kui; on the right the Orkhon, which springs from the Khangai chain, receiving on the left the waters of the Tamir and on the right those of the Tola.

THE PEOPLE.—Organization.—With regard to the word *Mongol*, Mr. E. H. Parker (Asiatic Quart. Rev., July, 1910) writes: "It is usually believed that Jenghiz Khan gave the name Mung-Ku (the present Chinese name for 'Mongol') to his people, and the word is said to mean 'silver', just as the Liao (Kitan) dynasty is said to mean 'iron', and the Kin (Niuchen) dynasty to mean 'gold' . . . In the same way, I suspect the various forms, Mungu or Mungut, which have an unbroken descent from A. D. 600 to A. D. 1200 (before Jenghiz rose to power), must refer to some ancient stream or typographical peculiarity in the Onon region, near where Jenghiz arose." In the History of the Ming Dynasty (Ming Shi) the Mongols are styled Ta-ta (Tatars) and also Meng-gu. The Mongol tribes are divided into Nui Mung-ku (Inner Mongols) and Wai Mung-ku (Outer Mongols). The Nui Mung-ku, including forty-nine banners (*ho shun*), arose out of the organization formed by the descendants of Jenghiz Khan, which has continued to the present time. Under the Yuan dynasty they were organized in six divisions (*Djirughan Tuman*, or "Six Ten Thousands"), forming two wings, the right occupying the western portion of the Mongolian territory, the left the eastern portion. The Inner Mongols are now divided into six *meng* (Chinese), or *chogoldán* (Mongol), including twenty-four *pu* (Chinese), or *aimak* (Mongol), as follows: I. Cherim Meng, or League, comprising the following *pu*, or tribes: (1) Khorch'in, 6 banners; (2) Djalaid, 1 banner; (3) Turbet, 1 banner; (4) Ghorlos, 2 banners. II. Cho-

sol'tu League: (5) Kharach'in, 3 banners; (6) T'umed, 2 banners. III. Chao Uda League: (7) Ao-Khan, 1 banner; (8) Naiman, 1 banner; (9) Barin, 2 banners; (10) Djarud, 2 banners; (11) Aru Khorch'in, 2 banners; (12) Ongniod, 1 banner; (13) Keshikhteng, 1 banner; (14) Khalka of the Left, 1 banner. IV. Silinghol League: (15) Uchumuch'in, 2 banners; (16) Khaochid, 2 banners; (17) Sunid, 2 banners; (18) Abaga, 2 banners; (19) Abaganur, 2 banners. V. Ulan Ch'ap League: (20) Sze Tze Pu Lo, or Durban Keuked, 1 banner; (21) Mou Mangan, 1 banner; (22) Urad, 3 banners; (23) Khalka of the Right, 1 banner; VI. Ikh Chao League: (24) Ordos, 7 banners. W. F. Mayers who gives these particulars (Chinese Government) adds that with the tribes of the Ordos there are amalgamated certain fragments of the T'umed tribe, occupying the region adjacent to Kwei Hwa Ch'eng, to the north-east of the Great Bend of the Yellow River.

Inner Mongolia is broadly speaking "what is to the south of the Great Desert"; it extends over the plateau beyond the K'ingan Mountains into the upper valleys of the Manchurian rivers, the Liao and the Sungari; it includes part of Outer Chi-li. With the exception of the Ch'ahar and the T'umed, placed under the government of Manchu generals, each Mongolian banner is ruled by an hereditary chieftain or noble (Dzassak or Jassak). These nobles are classed in six ranks, from *ts'in wang*, "prince of the first order", to *taichi*, or *daidji*, "noble". They are controlled by the *Li fan Yuan*. Campbell writes (op. cit. supra): "The descent and honours of every noble are registered in the Li Fan Yuan, at Peking, and the bearers of hereditary titles indicate their successors, who must be confirmed in the succession by decrees of the Chinese Emperor. On succeeding to a title, a Jassak is summoned to Peking for audience. All the nobility of the Inner Mongol tribes pay visits to the Chinese Court at New Year by roster, a cycle of three years completing the roster; and those who do not go to Court are required to attend at the local Jassak's residence on New Year's Day in full Court dress, and perform the proper obeisances in the direction of Peking. A *jassak* presents a sheep and a bottle of milk spirit to the emperor on these occasions, and a *taichi* gives a 'scalded sheep.' Such as visit Peking are banqueted and receive presents of silk, and they attend in the suite of the Chinese Emperor when he goes forth to offer the seasonable sacrifices."

The Wai Mung-ku, or Outer Mongols, comprise the Khalkhas and the Kalmuks, or Western Mongols. The country stretches "along the Siberian frontier from near Lake Kulun to the Altai, and includes the four Aimak, or Khantees, of the Khalkas, and the west Mongol territories under the jurisdiction of the Chinese Military Government at Uliasut'ai, Kobdo, Tarbagatai, and Uriankhai. In the term Outer Mongolia may also be included the Mongols of Kokonor and Tsaidam, who are under the control of an Imperial agent stationed at Si-ning Fu" (Campbell, op. cit.). The Khalkhas constitute four great *pu*: (1) the T'ushét'u Khanate, 20 banners; (2) Tssetsen Khanate, 23 banners; (3) Dzassakt'u Khanate, 18 banners; (4) Sain-noin Tribe, 22 banners. Urga (Ta-kuren) is the administrative centre of the East Khalkha Khanates, within the territory of the T'ushét'u Khan. Its name represents the Russian pronunciation of the Mongol word *orgo* (residence). According to C. W. Campbell, the full native name is Bodgo Lamain Khure (The God-lama's Encampment); shorter names are Da Khure, or Ikhe Khure (Great Encampment), Bogdo Khure, and simply Khure; the Chinese call the place K'u-lun, or K'u-lien, or Ta K'u-lien. Urga includes three towns lying to the north of the Tola River: Urga proper, the Mongol quarters; the Russian consulate and settlement, a mile and a half to the east; and farther east

Mai-mai chên, the Chinese Urga, the commercial town. There is a population of 25,000, half of whom are lamas. There is a Chinese commissioner, styled *K'u-lun pan shi ta ch'en* (incumbent in 1910, Yen Chi), and an assistant commissioner, styled *pan pan ta ch'en* (incumbent in 1910, Pêng-ch'u-k'o-ch'ê-lin). Urga is also the residence of the *cheptsundampa hut'ukht'u*, or patriarch of the Khalkha tribes, ranking, in the Lamaist Church, next to the Dalai and the Panshen erdeni lamas; this title was conferred in the middle of the seventeenth century by the Dalai lama on a son of the T'ushet'u khan, known in Mongol history as Undur Gegen. When the British troops entered Lhasa, the Dalai lama fled to Urga, where he arrived on the 27 Nov., 1904. Uliasut'ai, in the territory of the Sain Noin Khalkas, is the seat of a *tsiang kiun*, or military governor (in 1910 K'un siu), and of two *ts'an tsan ta ch'en*, or military assistant governors (in 1910 Ch'ê-têng-so-no-mu and K'uei Huan. Kobdo, on the Bayantu, has, subject to Uliasut'ai, a military assistant governor (in 1910, P'u Jun), and a commissioner, or *pan shi ta ch'en* (in 1910 Si Hêng). At Si-ning there is a *pan shi ta ch'en* (in 1910, Ch'ing Shu).

The Kalmuks, or Western Mongols, next in importance to the Khalkhas, include six tribes: (1) Oelôt (Eleuths), Kalmuks; (2) Turbet; (3) Turgut; (4) Khoshoit; (5) Khoit; (6) Ch'oros. To these should be added the Ts'ing Hai Mung-ku, Mongols of Kokonor, including 29 banners, all Kalmuk, 21 banners being Khoshoit; the Alashan Mung-ku, Mongols of Alashan, of Kalmuk descent, with Ning hia as their chief centre; the Yeo Muh, nomadic tribes, including the Ch'ahar, near the Great Wall, the Bargu tribe, controlled by Je-hol and Kalgan, the Urianghai, Mingad, and Djach'in under the Governor of Uliasut'ai. The Buriat are subject to Russia, and the Dam Mongols live in Tsaidam between Kokonor and Tibet.

As a result of the recent Russo-Japanese agreement, the Chinese Imperial Grand Council studied the means of preserving the integrity of Mongolian territory; it was resolved that two divisions of modern troops should be sent to this country, that education should be established according to Chinese methods, and that a railway should be built across Mongolia with its terminus at Peking.

Religion.—The religion of the Mongols is Buddhism under the Lamaist form, introduced from Tibet at the end of the Ming Dynasty. The lamas like the *cheptsundampa hut'ukht'u* at Urga, have their head clean shaven. Large monasteries exist at Je-hol and Dolon-nor (Lama-miao), and at Wu T'ai shan, in the Shan-si Province. The Lamaist organization in and near Peking is named Chu King Lama; the metropolitan, Chang-chia Hut'ukht'u lives at Dolon-nor—or rather at Yung Ho Kung—and controls the Mongols of Ch'ahar. Lamaism has certainly altered the character of the warlike followers of Jenghiz, who are now a peaceful population of herdsmen. "The Lamas", writes Kidston (op. cit., p. 19), "exercise enormous influence; every tent has its altar, every high ridge on the plain has its sacred cairn, the repetition of prayers and the telling of beads is universal and incessant, and almost every collection of 'yurts' has its prayer flags, fluttering conveniently easy petitions with every breeze that blows. Belief in the transmigration of the soul and in the utter unimportance of the mere body is so strong that the bodies of laymen are not buried at all, but simply thrown out on the plain, where the dogs make short work of them. The taking of life is regarded with horror, though sheer necessity makes an exception and provides quibbling excuses for the slaughter of sheep. On the whole journey we only saw one fire-arm, and that was evidently intended for show rather than for use. It was carried by one of the escort provided for us by Prince Ha-la-han, and, from inquiries, I believe that it represented the entire armament of the Principality."

Customs, Language, etc.—The typical Mongol is short and stumpy; the head is shaven, with the exception of a tuft of hair, a souvenir of the Manchu conquest. Family ties are very loose; marriage being a civil contract the binding force of which is the mere will of the parties. Stock-breeding is the occupation of practically all Mongols. They are remarkable herdsmen, and their ponies which are excellent, are branded. They have herds of camels, and yaks are to be seen in the mountainous parts of northern Mongolia. Mr. George J. Kidston (China, No. 3, 1904) observes: "Both in features and in character they are less foreign to the European than the Chinese. They have often almost ruddy complexions; they laugh more heartily, have none of the endless formalities and (to us) crooked ways of thought that distinguish the Chinese, and they have even certain customs that strike one as being distinctly Western. The women, for instance, when they meet, embrace one another and kiss on both cheeks, while the men shake both hands. . . . Perhaps the first thing that strikes a stranger about the Mongols, after their exceeding filthiness, is their love of talking. . . . Hospitality is a universal virtue, and one may enter any 'yurt' on the plain and be sure of a welcome. . . . They are excitable, but courage is not their strong point, and disputes die out in lengthy warfare of words." They are also lazy and voracious. They live on mutton, milk, and brick tea; they have neither flour, vegetables, nor eggs. "They have one very excellent preparation which the Chinese call 'milk-skin'; it is made by boiling milk until the cream settles in a thick skin on the top, and it much resembles Devonshire cream. The only native strong drink is made from fermented mare's milk. We were told that it is intoxicating if partaken of in large quantities. The Mongols, however, have a decided weakness for Chinese wine and spirits, and the Chinese always speak of them as a drunken race" (op. cit., 19). The Mongol tent (*gher*, or *yurt*) is made of a trellis of wooden staves fastened neatly together with strings of hide, the whole being covered with felt, the best of which comes from Russian Turkestan.

The Mongol language belongs to the Ural-Altaic family, the Kalmuk dialect, though containing a number of Turkish words, being the purer. The Uighur is the basis of the modern Mongol and Manchu characters; it is of Syriac origin, introduced into Eastern Turkestan by the early Nestorian missionaries. There is a dialect poem in Uighur, the "Kudatku bibk", dating from A. D. 1069, which was published in 1870 by Arminius Vambery, and in 1891 by W. Radloff.

HISTORY.—When Jenghiz Khan died on 18 August, 1227, his dominions were divided among his four sons. Juji, the eldest son, died before his father, and was replaced by his own son Batu, who had for his share the plains of Kipchak, the lower course of the Syr-Daria, the Aral and Caspian Seas, the valleys of the Don and the Volga, and northward beyond the Ural River; Chagatai had the Kingdom of Mávárán-Nahr, or Transoxiana, and also what is now Chinese Turkestan, Ferghána, Badakhshan, etc., and his capital was Almalik; Okkodai, the third son, had the Mongol country with the capital, Karákorum; lastly, Tu-li had the territory between the Karákorum mountains and the sources of the Onon River. Karákorum (*kara*, black; *kuren*, a camp), was called by the Chinese Ho-lin and was chosen for his capital by Jenghiz Khan in 1206. Its full name, Hia-la Ho-lin, was taken from a river to the west. In the spring of 1235, Okkodai had a wall built round Ho-lin. After the death of Kúblái, Ho-lin was altered to Ho-Ning, and in 1320 the name of the province was changed into Lingpe ("mountainous North", i. e., the Ying-shan chain, separating China Proper from Mongolia). Recent researches have fully confirmed the belief that the Erdeni Tso, or Erdeni Chao, monastery, founded in 1586, occupies the site of Karákorum, near the bank

of the Orkhon, between this river and the Kokchin (old) Orkhon. In 1256, Mangku Khan decided to transfer the seat of government to Kaiping fu, or Shang-tu, near the present Dolon nor, north of Peking. In 1260, Kúblái transferred his capital to Ta-fu (Peking), and it was called Khan-baligh. The second Supreme Khan was Okkodai (1229-41), replaced by his son Kuyuk (third Great Khan) (1246-48), Turakina being regent (1241-46); Ogulgaimish was regent (1248-51). The title was then transferred to the Tu-li branch of Jenghiz family, and the fourth great Khan was Mangku, who was killed at the siege of Ho-chou in Sze-ch'uan (1251-57).

Kúblái, brother of Mangku, who succeeded him in 1260, was the fifth great Khan and the first real Emperor of China of the Yuan Dynasty (1280). His ancestors have the following dynastic titles or *miao hao*: T'ai Tsu (Jenghiz), T'ai Tsung (Okkodai), Ting Tsung (Kuyuk), Hien Tsung (Mangku). Kúblái himself has the *miao hao* of She Tsu and the two reign-titles (*nien hao*) of Chung T'ung (1260) and Che Yuan (1264). The list of his successors according to their *miao hao*, with *nien hao* in parentheses, is as follows: Ch'eng Tsung, 1295 (Yuan Ch'eng, 1295; Ta Teh, 1297); Wu Tsung, 1308 (Che Ta, 1308); Jen Tsung, 1312 (Hwang K'ing, 1312; Yen Yew, 1314); Ying Tsung, 1321 (Che Che, 1321); Tai Ting Ti, 1324; (Tai Ting, 1324; Che Ho, 1328); Ming Tsung, 1329 (T'ien Li, 1329); Wen Ti, 1330 (T'ien Li, 1330; Che Shun, 1330); Shun Ti, 1333 (Yuan Tung, 1333; Che Yuan, 1335; Che Ch'eng, 1341). The misconduct and weakness of the emperors led a Chinese priest, Chu Yuan-chang, to raise the standard of rebellion and expel the Mongols, in 1368. This priest ascended the throne under the title of Hung Wu, and established his dynasty, the Ming, at Nan-king. Of the Court of Kúblái Khan the Venetian traveller Marco Polo has left us a glorious account. China was then divided into twelve *sheng*, or provinces: Cheng Tung, Liao Yang, Chung Shu, Shen-si, Ling Pe (Karákorum), Kan Su, Sze-ch'uan, Ho-nan Kiang-Pe, Kiang-che, Kiang-si, Hu-Kwang and Yun-Nan.

The younger brother of Kúblái, Hulaku, captured Bagdad, on 5 Feb., 1258; and the Khalif Mostásim Billah, the last of the Abbasid sovereigns, surrendered to the Mongol chief on 10 February. Hulaku was thus the founder of the dynasty of Ilkhans of Iran, which included the following princes: Hulaku, until 1265; Abaka (1265-81); Nikudar Ahmed (1281-84); Arghún (1284-91); Gaikhatu (1291-95); Baldu (1295); Ghazan Mahmud (1295-1304); Ghiyas ed-din Oljaitu Khudabandeh Mohammed (1304-16); Abusaid Bahadur (1316-35); Moiz ed-dunia we'd-din Arpa (1335-36); Musa (1336); Mohammed (1336-38); Togha Timur (1338-39); Iss ed-din Djehan-Timur (1339); Satibeg (1339); Suleiman (1339-44); Adil Anushirwan (1344-53). After the death of Abusaid all these princes were but nominal sovereigns, overruled by five small dynasties: (1) Ilkhanian-Jelalid, at Bagdad (1336-1432); (2) Beni Kurt, in Khorasan and Herat (1248-1383); (3) Modhafferian, in Irak, Fars, and Kerman (1335-92); (4) Serbedarian, in Khorasan (1335-81); (5) Jubanian, in Azerbaidjan (1337-55). They were all destroyed by Timur or his successors. Among the first Ilkhans, Arghún and Oljaitu had relations with the kings of France: two letters are preserved in the French Archives, one from Arghún Khan (1289), brought by Buscarel, and the other from his son Oljaitu (May, 1305) to Philip the Fair. These letters are both in the Mongol language, and, according to Abel Rémusat and other authorities, in the Uighur character, the parent of the present Mongol writing; facsimiles of them are given in Prince Roland Bonaparte's "Recueil des documents de l'époque mongole". Under this dynasty, in 1318, Pope John XXII had created an archbishopric at Sulthanyeh, of which Franco of Perugia, William

Adam (1 June, 1323), John of Cora (1329), and others were the incumbents, down to Thomas de Abaraner (19 Dec., 1425).

Chagatai died in 1241, and was replaced by his grandson Kara Hulaku. About 1321, under Kabak, the realm of Chagatai was divided into two parts; Mávárâ-un-Nahr, or Transoxiana, and Moghulistan, or Jatah. About fifteen khans ruled Transoxiana, while confusion and discord were prevalent, until the great Timur conquered the land and restored order in 1370 (A. H. 771). The first ruler of Moghulistan (1321) was Isán Bugha Khán; after the death of Sultan Ahmed Khan (1504) a state of anarchy prevailed in the country until Sultan Mansur, the eldest son of Ahmed, established his authority at Aksu, Turfan, etc., and created the Khanate of Uighuristán, while the Kirghiz in the steppes, having elected khans, formed the Confederation of Kazák-Uzbegs, and Sultan Said Khan, third son of Ahmed, established a khanate in Kaashgar and the western provinces (see TURKESTAN).

From Juji, the eldest son of Jenghiz Khan, descended the following dynasties of khans: (1) Kipchak, 1224-1502; (2) Astrakhan, 1466-1554; (3) Great Bulgaria, 1224-1438; (4) Kazan, 1438-1552; (5) Kasimof, 1450-1681; (6) Crimea, 1420-1783; (7) Nogais, 1224-1301; (8) Kazák-Uzbegs, 1427-1830; (9) Turan and Tiumen, 1225-1659; (10) Tiumen and Sibir, 1301-1588; (11) Kharezen, 1515-1805; (12) Mávárâ-un-Nahr, 1500-1796.

CATHOLIC MISSIONS.—In 1838, the Vicariate Apostolic of Liao-tung was detached from the Diocese of Peking. It included both Manchuria and Mongolia. Emmanuel-Jean-François-Verrolles, of the Paris Missions Etrangères, was the first vicar Apostolic. Five years later (28 August, 1840) the new vicariate was divided into three vicariates Apostolic: (1) Liao-tung and Manchuria; (2) Mongolia; (3) Kan su. Mongolia had been a dependence of the Diocese of Peking from 1690 to 1838, and after 1783 had been administered by the Lazarists; the Paris Missions Etrangères kept it only two years, and when it was made a separate vicariate Apostolic (28 August, 1840) at the head of it was placed Joseph Martial Mouly, titular Bishop of Fussola, who, on his transfer to Peking (1857), was replaced by Florent Daguin, titular Bishop of Troas, who died 9 May, 1859. François Tagliabue was then appointed pro-vicar and superior of the mission. On 7 Sept., 1864, the Lazarists surrendered Mongolia to the Belgian missionaries, and Theophilus Verbiest (b. at Antwerp in 1823) was the first superior and Provicar Apostolic; he died 23 Feb., 1868, and was succeeded as pro-vicar by Edward Smorenbourg. Jacques Bax (b. 1824) was appointed vicar Apostolic 22 Oct., 1874, was consecrated titular Bishop of Adran, 6 Jan., 1875, and died 4 Jan., 1895, at Si-wan-tze. On 21 Dec., 1883, Leo XIII divided Mongolia into three vicariates Apostolic, Eastern, Central, and Western and Southern Mongolia, all in the hands of the Belgian Missionaries (Congr. Imm. Cordis B. M. V. de Scheutveld). The first Vicar Apostolic of Eastern Mongolia was Conrad Abels, b. at Weest, Limburg, Holland, 31 Jan., 1856, consecrated titular Bishop of Lagania, 31 Oct., 1897; residence at Sung shu tsuei tze (Notre Dame des Pins). He was succeeded by Theodore Hermann Rutjes, titular Bishop of Eleuteropolis, who died 4 August, 1896. There are in Eastern Mongolia 39 European and 12 native priests; 19,864 Christians; 18 churches. (2) Central Mongolia, after the partition, in 1883, remained under Mgr Bax, who was succeeded as vicar Apostolic by Jerome Van Aertselaer (b. 1 Nov., 1845), consecrated titular Bishop of Zarai, 24 July, 1898, with residence at Siwan tze. There are 46 European and 23 native priests; 25,775 Christians; 37 churches. (3) Western-Southern Mongolia.—To the vicariate created in 1883 were added by decree of 12 Oct., 1886, the Prefecture of Ning hia from the Kan-su vicariate and the Sub-

prefecture K'u-luan. The residence is at Eul she sze k'ing ti. Vicar Apostolic Alphonsus Bermyn (b. 2 Aug., 1853) was consecrated 15 April, 1901, titular Bishop of Stratonicea. He replaced Alphonse de Vos, titular Bishop of Abdera, d. 21 July, 1888, and Ferdinand Hamer, who was transferred from Kan-su, 30 August, 1888, and martyred August, 1900. There are 45 European and 1 native priests; 13,896 Christians; 30 churches. This vicariate is the Ordos country.

BERNE. JULG has translated Mongolian legends and tales into German, especially, *Die Märchen des Siddhi Kār* (1866-68) and I. J. SCHMIDT has translated the great work of SAMANG SETSEN under the title, *Geschichte der Ost Mongolen und ihres Fürstenhauses* (St. Petersburg, 1829). The latter author has also published *Grammatik der Mongolischen Sprache* (St. Petersburg, 1831) and *Mongolisch-deutsch-russisches Wörterbuch* (St. Petersburg, 1835). J. E. KOVALEVSKI, *Dictionnaire mongol-russe-français* (3 vols, quarto, Kasan, 1844-49). Other Mongolian scholars worthy of mention are: VON DER GABELLSTEIN, BOBROVNIKOV, GOLDSTUNSKY, POEDNIKIEV. See also CAMPBELL, *Journey in Mongolia in China* (1904), no. 1; KIDSTON, *Journey in Mongolia in China* (1904), no. 3—both parliamentary papers; CORDIER, *Bibliotheca Sinica*, chapter *Mongolia*.

HENRI CORDIER.

Monica, SAINT, widow; born of Christian parents at Tagaste, N. Africa, in 333; died at Ostia, near Rome, in 387. We are told but little of her childhood. She was married early in life to Patritius who held an official position in Tagaste. He was a pagan, though like so many at that period, his religion was no more than a name; his temper was violent and he appears to have been of dissolute habits. Consequently Monica's married life was far from being a happy one, more especially as Patritius's mother seems to have been of a like disposition with himself. There was of course a gulf between husband and wife; her almsdeeds and her habits of prayer annoyed him, but it is said that he always held her in a sort of reverence. Monica was not the only matron of Tagaste whose married life was unhappy, but, by her sweetness and patience, she was able to exercise a veritable apostolate amongst the wives and mothers of her native town; they knew that she suffered as they did, and her words and example had a proportionate effect.

Three children were born of this marriage, Augustine the eldest, Navigius the second, and a daughter, Perpetua. Monica had been unable to secure baptism for her children, and her grief was great when Augustine fell ill; in her distress she besought Patritius to allow him to be baptized; he agreed, but on the boy's recovery withdrew his consent. All Monica's anxiety now centred in Augustine; he was wayward and, as he himself tells us, lazy. He was sent to Madaura to school and Monica seems to have literally wrestled with God for the soul of her son. A great consolation was vouchsafed her—in compensation perhaps for all she was to experience through Augustine—Patritius became a Christian. Meanwhile, Augustine had been sent to Carthage, to prosecute his studies, and here he fell into grievous sin. Patritius died very shortly after his reception into the Church and Monica resolved not to marry again. At Carthage Augustine had become a Manichean and when on his return home he ventilated certain heretical propositions she drove him away from her table, but a strange vision which she had urged her to recall him. It was at this time that she went to see a certain holy bishop, whose name is not given, but who consoled her with the now famous words, "the child of those tears shall never perish". There is no more pathetic story in the annals of the Saints than that of Monica pursuing her wayward son to Rome, whither he had gone by stealth; when she arrived he had already gone to Milan, but she followed him. Here she found St. Ambrose and through him she ultimately had the joy of seeing Augustine yield, after seventeen years of resistance. Mother and son spent six months of true peace at Cassiacum, after which time Augustine was baptized in the church of St. John the Baptist at Milan. Africa claimed them however, and they set

out on their journey, stopping at Civit  Vecchia and at Ostia. Here death overtook Monica and the finest pages in his "Confessions" were penned as the result of the emotion Augustine then experienced.

St. Monica was buried at Ostia, and at first seems to have been almost forgotten, though her body was removed during the sixth century to a hidden crypt in the church of St. Aureus. About the thirteenth century, however, the cult of St. Monica began to spread and a feast in her honour was kept on 4 May. In 1430 Martin V ordered the relics to be brought to Rome. Many miracles occurred on the way, and the cultus of St. Monica was definitely established. Later, the Archbishop of Rouen, Cardinal d'Estouteville, built a church at Rome in honour of St. Augustine and deposited the relics of St. Monica in a chapel to the left of the high altar. The Office of St. Monica however does not seem to have found a place in the Roman Breviary before the sixteenth century. In 1850 there was established at Notre Dame de Sion at Paris an Association of Christian mothers under the patronage of St. Monica; its object was mutual prayer for sons and husbands who had gone astray. This Association was in 1856 raised to the rank of an archconfraternity and spread rapidly over all the Catholic world, branches being established in Dublin, London, Liverpool, Sidney, and Buenos Ayres. Eugenius IV had established a similar Confraternity long before.

ST. AUGUSTINE, *Confessions*, IX, reprinted in *SUIUS. GUALTERRUS*, Canon Regular of Ostia, who was especially charged with the work of removing the relics from Ostia by Martin V, wrote a life of the saint with an account of the translation. He appended to the life a letter which used to be attributed to St. Augustine but which is undoubtedly spurious; it purports to be written to his sister Perpetua and describes their mother's death. The BOLLANDISTS decide for the contemporary character of the letter whilst denying it to St. Augustine. *BARONIUS, Ann. Eccl.*, ad an. 389; BOUGAUB, *Histoire de S. Monique*.

HUGH T. POPE.

Monism (from the Greek *monos*, "one" "alone", "unique") is a philosophical term which, in its various meanings, is opposed to Dualism or Pluralism. Wherever pluralistic philosophy distinguishes a multiplicity of things, Monism denies that the manifoldness is real, and holds that the apparently many are phases, or phenomena, of a one. Wherever dualistic philosophy distinguishes between body and soul, matter and spirit, object and subject, matter and force, the system which denies such a distinction, reduces one term of the antithesis to the other, or merges both in a higher unity, is called Monism.

I. IN METAPHYSICS.—The ancient Hindu philosophers stated as a fundamental truth that the world of our sense-experience is all illusion (*maya*), that change, plurality, and causation are not real, that there is but one reality, God. This is metaphysical Monism of the idealistic-spiritual type, tending towards mysticism. Among the early Greek philosophers, the Eleatics, starting, like the Hindus, with the conviction that sense-knowledge is untrustworthy, and reason alone reliable, reached the conclusion that change, plurality, and origination do not really exist, that Being is one, immutable, and eternal. They did not explicitly identify the one reality with God, and were not, so far as we know, inclined to mysticism. Their Monism, therefore, may be said to be of the purely idealistic type. These two forms of metaphysical Monism recur frequently in the history of philosophy; for instance, the idealistic-spiritual type in neo-Platonism and in Spinoza's metaphysics, and the purely idealistic type in the rational absolutism of Hegel. Besides idealistic Monism there is Monism of the materialistic type, which proclaims that there is but one reality, namely, matter, whether matter be an agglomerate of atoms, a primitive, world-forming substance (see IONIAN SCHOOL OF PHILOSOPHY), or the so-called cosmic nebula out of which the world evolved. There is another form of metaphysical Monism, represented in these days by Haeckel and his followers, which,

though materialistic in its scope and tendency, professes to transcend the point of view of materialistic Monism and unite both matter and mind in a higher something. The weak point of all metaphysical Monism is its inability to explain how, if there is but one reality, and everything else is only apparent, there can be any real changes in the world, or real relations among things. This difficulty is met in dualistic systems of philosophy by the doctrine of matter and form, or potency and actuality, which are the ultimate realities in the metaphysical order. Pluralism rejects the solution offered by scholastic dualism and strives, with but little success, to oppose to Monism its own theory of synechism or panpsychism (see PRAGMATISM). The chief objection to materialistic Monism is that it stops short of the point where the real problem of metaphysics begins.

II. IN THEOLOGY.—The term *Monism* is not much used in theology because of the confusion to which its use would lead. Polytheism, the doctrine that there are many Gods, has for its opposite Monotheism, the doctrine that there is but one God. If the term *Monism* is employed in place of *Monotheism*, it may, of course, mean Theism, which is a monotheistic doctrine, or it may mean Pantheism, which is opposed to theism. In this sense of the term, as a synonym for Pantheism, Monism maintains that there is no real distinction between God and the universe. Either God is indwelling in the universe as a part of it, not distinct from it (pantheistic Immanentism), or the universe does not exist at all as a reality (Acosmism), but only as a manifestation or phenomenon of God. These views are vigorously combated by Theism, not only on considerations of logic and philosophy, but also on considerations of human life and conduct. For the ethical implications of pantheism are as detrimental to it as its shortcomings from the point of view of consistency and reasonableness. Theism does not deny that God is indwelling in the universe; but it does deny that He is comprised in the universe. Theism does not deny that the universe is a manifestation of God; but it does deny that the universe has no reality of its own. Theism is, therefore, dualistic: it holds that God is a reality distinct from the universe and independent of it, and that the universe is a reality distinct from God, though not independent of Him. From another point of view, theism is monistic; it maintains that there is but One Supreme Reality and that all other reality is derived from Him. *Monism* is not then an adequate equivalent of the term *Theism*.

III. IN PSYCHOLOGY.—The central problem of rational psychology is the question of the relation between soul and body. Scholastic dualism, following Aristotle, maintains that man is one substance, composed of body and soul, which are respectively matter and form. The soul is the principle of life, energy, and perfection; the body is the principle of decay, potentiality, and imperfection. These two are not complete substances: their union is not accidental, as Plato thought, but substantial. They are, of course, really distinct, and even separable; yet they act on each other and react. The soul, even in its highest functions, needs the co-operation, at least extrinsic, of the body, and the body in all its vital functions is energized by the soul as the radical principle of those functions. They are not so much two in one as two forming one compound. In popular imagination this dualism may be exaggerated; in the mind of the extreme ascetic it sometimes is exaggerated to the point of placing a too sharp contrast between "the flesh" and "the spirit", "the beast" and "the angel", in us.

Psychological Monism tends to obliterate all distinction between body and soul. This it does in one of three ways. (A) Monism of the materialistic type reduces the soul to matter or material conditions, and thus, in

effect, denies that there is any distinction between soul and body. The Stoics described the soul as a part of the material world-substance; the Epicureans held that it is a compound of material atoms; modern Materialism knows no substantial soul except the nervous system; Cabanis, for instance, proclaims his materialism in the well-known crude formula: "The brain digests impressions, and organically secretes thought." Psychological materialism, as metaphysical materialism, closes its eyes to those phenomena of the soul which it cannot explain, or even denies that such phenomena exist. (B) Monism of the idealistic type takes an entirely opposite course. It reduces the body to mind or mental conditions. Some of the neo-Platonists held that all matter is non-existent, that our body is, therefore, an error on the part of our minds, and that the soul alone is the personality.

John Scotus Eriugena, influenced by the neo-Platonists, held the body to be a resultant from incorporeal qualities which the soul, by thinking them and synthesizing them, creates into a body for itself. In modern times, Berkeley included the human body in his general denial of the reality of matter, and maintained that there are no substances except the soul and God. The grounds for this belief are epistemological. Psychological Monism runs counter to common sense and experience. Historically, it is a reaction against materialism. To refute materialism it is not necessary to deny that the body is a reality. The unreflecting dualism of common sense and the scientific dualism which the Scholastics built on the facts of experience steer a safe and consistent course between the hasty generalization of the Materialist, who sees nothing but body, and the bold paradox of the Idealist, who recognizes no reality except mind.

(C) A third kind of psychological Monism goes by the name of psychophysical parallelism. It maintains two principles, the one negative and the other affirmative. First, it denies categorically that there is, or can be, any direct causal influence of the soul on the body or of the body on the soul: our thoughts cannot produce the movements of our muscles, neither can the action of light on the retina produce in us the "thought" of a colour. Secondly, it affirms in some shape or form that both the body and the soul are phases of something else, that this something evolves its activities along two parallel lines, the physical and the psychical, so that the thought, for instance, of moving my hand is synchronous with the motion of my hand, without one in any way influencing the other. This is the doctrine of Occasionalists who, like Malebranche, (q. v.), maintain that the union of the soul and body "consists in a mutual and natural correspondence of the thoughts of the soul with the processes of the brain, and of the emotions of the soul with the movements of the animal spirits" (Rech. de la Vérité, II, v). It is the doctrine of Spinoza, whose metaphysical Monism compelled him to hold that body and soul are merely aspects of the one substance, God, under the attributes extension and thought, but that they unfold their modes of activity in a manner preordained to correspondence (Eth., II, ii, schol.). Leibniz meets the difficulty in his own characteristic way by teaching that all monads are partly material and partly immaterial, and that among all monads and their activities there exists a pre-established harmony (see LEIBNIZ; MONAD). In the so-called *Identitätsphilosophie* of some German Transcendentalists, such as Schelling, reality is mind in so far as it is active, and matter in so far as it is passive; mind and matter are, therefore, two harmonious, but independent, series of phases of reality. Fechner's view is similar: he holds that the reality pervading the whole universe is at once physical and psychical, that the physical is the "exterior" and the psychical the "interior", or "inner", side of reality, and that

the body and soul in man are but one instance of a parallelism which prevails everywhere in nature. Paulsen ("Introd. to Phil.", tr. Thilly, 87 sqq.) holds that "two propositions are contained in the theory of parallelism: (1) Physical processes are never effects of psychical processes; (2) Psychical processes are never effects of physical processes." He adopts Fechner's panpsychism, maintaining that "everything corporeal points to something else, an inner, intelligible element, a being for itself, which is akin to what we experience within ourselves". Both the corporeal and the "inner" are parts of the universal system, which is the body of God, and, though they do not interact, they act in such a way that harmony results.

Herbert Spencer uses the word *parallelism* in a slightly different sense: the separate impressions of the senses and the stream of inner conscious states must be adjusted by the activity of the mind, if the two series are to be of any use to the developing or evolving animal or man; that is, there must be a parallelism between a certain physical evolution and the correlative psychical evolution" (Principles of Psych., n. 179), while both mind and matter are mere "symbols of some form of Power absolutely and forever unknown to us" (op. cit., n. 63). This idea finds favour among the evolutionists generally, and has one distinct advantage: it obviates the necessity of explaining many phenomena of mind which could not be accounted for by the principles of materialistic evolution. Thus, under the name "double-aspect theory" it is adopted by Clifford, Bain, Lewes, and Huxley. Among empirical psychologists parallelism has been found satisfactory as a "working hypothesis". Experience, it is maintained, tells us nothing of a substantial soul that acts on the body and is acted upon. It does tell us, however, that psychical states are apparently conditioned by bodily states, and that states of body apparently influence states of mind. For the purposes of science, conclude the empiricists, it is enough to maintain as an empirical formula that the two streams of activity are, so to speak, parallel, though never confluent. There is no need to ground the formula on any universal metaphysical theory, such as the pan-psychism of Fechner and Paulsen. It is enough that, as Wundt points out, the facts of experience establish a correspondence between physical and psychical, while the dissimilarity of the physical and the psychical precludes the possibility of one being the cause of the other. To all these parallelistic explanations of the relations between soul and body the Scholastic dualists take exception. First, the scholastics call attention to the verdict of experience. Up to a certain point, the facts of experience are capable of a parallelistic, as well as of a dualistic, explanation. But when we come to consider the unity of consciousness, which is a fact of experience, we find that the theory of parallelism breaks down, and the only explanation that holds is that of dualists, who maintain the substantiality of the soul. Secondly, if the parallelistic theory be true, what, ask the Scholastic dualists, becomes of the freedom of the will and moral responsibility? If our mental and bodily states are not to be referred to an immediate personal subject, but are considered phases or aspects of a universal substance, a cosmic soul, mind-stuff, or unknown "form of Power", it is not easy to see in what sense the will can be free, and man be held responsible for his mental or bodily acts.

In a minor sense the word *monism* is sometimes used in psychology to designate the doctrine that there is no real distinction between the soul and its faculties. Psychological dualism holds that soul and body are distinct, though incomplete, substances. But how about the soul itself? Plato's doctrine that it has three parts has had very little following in philosophy. Aristotle distinguished between the substance of the soul and its powers (*dynamis*), or faculties,

and bequeathed to the Schoolmen the problem whether these faculties are really, or only notionally, distinct from the soul itself. Those who favour the real distinction are sometimes called pluralists in psychology, and their opponents, who say that the distinction is nominal or, at most, notional, are sometimes called psychological Monists. The question is decided by inferences from the facts of consciousness. Those who hold real distinction of function argue that this is sufficient ground for a real distinction of faculties.

IV. IN EPISTEMOLOGY, as in psychology, Monism is used in various senses to signify, in a general way, the antithesis of dualism. The Dualist in epistemology agrees with the ordinary observer, who distinguishes both in theory and in practice between "things" and "thoughts". Common sense, or unreflecting consciousness, takes things generally to be what they seem. It acts on the conviction that the internal world of our thoughts corresponds with the external world of reality. The philosophical dualist questions the extent and accuracy of that correspondence; he learns from psychology that many instances of so-called immediate perception have in them a large share of interpretation, and are, in so far, referable to the activity of the mind. Nevertheless, he sees no reason to quarrel with the general verdict of common sense that there is a world of reality outside us, as well as a world of representation within us, and that the latter corresponds in a measure to the former. He distinguishes, therefore, between subject and object, between self and not-self, and holds that the external world exists. The Monist in one way or another eliminates the objective from the field of reality, obliterates the distinction between self and not-self, and denies that the external world is real. Sometimes he takes the ground of idealism, maintaining that thoughts are things, that the only reality is perception, or rather, that a thing is real only in the sense that it is perceived, *esse est percipi*. He scornfully rejects the view of naïve realism, refers with contempt to the copy-theory (the view that our thoughts represent things) and is rather proud of the fact that he is in conflict with common sense. Sometimes he is a solipsist, holding that self alone exists, that the existence of not-self is an illusion, and that the belief in the existence of other minds than our own is a vulgar error. Sometimes, finally, he is an acosmist: he denies that the external world exists except in so far as it is thought to exist: or he affirms that we create our own external world out of our own thoughts.

However, the classical form of epistemological Monism at the present time is known as Absolutism. Its fundamental tenet is metaphysical monism of the purely idealistic type. It holds that both subject and object are merely phases of an abstract, unlimited, impersonal consciousness called the Absolute; that neither things nor thoughts have any reality apart from the Absolute. It teaches that the universe is a rational and systematic whole, consisting of an intellectual "ground" and multifarious "appearances" of that ground, one appearance being what the Realist calls things, and another what the Realist calls thoughts. This is the doctrine of the Hegelians, from Hegel himself down to his latest representatives, Bradley and McTaggart. All these forms of epistemological Monism—namely, idealism, solipsism, acosmism, and absolutism—have, of course, metaphysical bearings, and sometimes rest on metaphysical foundations. Nevertheless, historically speaking, they are traceable to a psychological assumption which is, and always will be, the dividing line between Dualism and Monism in epistemology. The Dualists, in their analysis of the act of knowing, call attention to the fact that in every process of perception the object is immediately given. It seems like emphasizing the obvious to say so, yet it is precisely on this

point that the whole question turns. What I perceive is not a sensation of whiteness but a white object. What I taste is not the sensation of sweetness but a sweet substance. No matter how much the activity of the mind may elaborate, synthesize, or reconstruct the data of sense-perception, the objective reference cannot be the result of any such subjective activity; for it is given originally in consciousness. On the contrary, the Monist starts with the idealistic assumption that what we perceive is the sensation. Whatever objective reference the sensation has in our consciousness is conferred on it by the activity of the mind. The objective is, therefore, reducible to the subjective; things are thoughts; we make our world. In the dualist's analysis there is immediate, presentative contact in consciousness between the subject and the object. In the Monist's account of the matter there is a chasm between subject and object which must be bridged over somehow. The problem of Dualism or Monism in epistemology depends, therefore, for solution on the question whether perception is presentative or representative; and the dualist, who holds the presentative theory, seems to have on his side the verdict of introspective psychology as well as the approval of common sense.

In recent Pragmatist contributions to epistemology there is presented a different view of epistemological Monism from that given in the preceding paragraphs, and a solution is offered which differs entirely from that of traditional dualism. In William James's works, for instance, Monism is described as that species of Absolutism which "thinks that the all-form or collective-unit form is the only form that is rational", while opposed to it is Pluralism, that is, the doctrine that "the each-form is an eternal form of reality no less than it is the form of temporal appearance" (*A Pluralistic Universe*, 324 sqq.). The multitude of "each-forms" constitute, not a chaos, but a cosmos, because they are "inextricably interfused" into a system. The unity, however, which exists among the "each-forms" of reality is not an integral unity nor an articulate or organic, much less a logical, unity. It is a unity "of the strung-along type, the type of continuity, contiguity, or concatenation" (op. cit., 325). Into this unfinished universe, into this stream of successive experiences, the subject steps at a certain moment. By a process which belongs, not to logic, but to life, which exceeds logic, he connects up these experiences into a concatenated series. In other words, he strings the single beads on a string, not of thought, but of the practical needs and purposes of life. Thus the subject makes his own world, and, really, we are not any better off than if we accepted the verdict of the intellectualistic Idealist. We have merely put the practical reason in place of the theoretical: so far as the value of knowledge is concerned the antithesis between Monism and Pluralism is more apparent than real, and the latter is as far from the saneness of realistic Dualism as the former. It is true that the Pluralist admits, in a sense, the existence of the external world; but so also does the Absolutist. The trouble is that neither admits it in a sense which would save the distinction between subject and object. For the Pluralist as well as the Monist is entangled in the web of subjective Idealism as soon as he favours the doctrine that perception is representative, not presentative.

V. IN COSMOLOGY, the central question is the origin of the universe. The early Ionian philosophers assigned, as the cause or principle (*ἀρχή* is the Aristotelian word) of the universe, a substance which is at once the material out of which the universe is made and the force by which it was made. As Aristotle says, they failed to distinguish between the material cause and the efficient cause. They were, therefore, dynamists and hylozoists. That is, they held matter to be of its nature active, and en-

dowed with life. Without the aid of any extrinsic force, they said, the original substance, by a process of thickening and thinning, or by quenching and kindling, or in some other immanent way, gave rise to the universe as we now see it. This primitive cosmothetic Monism gradually gave way to a dualistic conception of the origin of the world. Tentatively at first, and then more decisively, the later Ionians introduced the notion of a primitive force, distinct from matter, which fashioned the universe out of the primordial substance. Anaxagoras it was, who, by clearly defining this force and describing it as mind (*νοῦς*), earned the encomium of being the "first of the ancient philosophers who spoke sense". Dualism, thus introduced, withstood the onslaughts of materialistic Atomism and Epicureanism, pantheistic Stoicism and emanationistic neo-Platonism. It was developed by Socrates, Plato, and Aristotle, who brought to their description of the world-forming process a higher notion of cosmothetic mind than the pre-Socratic philosophers possessed. It was left for the Christian philosophers of Alexandria and their successors, the Scholastics of medieval times, to elaborate the doctrine of creation *ex nihilo*, and thus bring out more clearly the rôle played by the Divine Power and Will in the formation of the universe. The order, harmony, and purposiveness evident everywhere in nature are cited by the creationists as evidence to show that mind must have presided at the origination of things. Furthermore, the question of dynamism or mechanism hinges on the problem of the nature of matter. This phase of the question has been developed especially in post-Cartesian philosophy, some maintaining that matter is essentially inert and must, therefore, have acquired force and activity from without, while others as stoutly maintain that matter is by nature active and, consequently, may have developed its own force from within. Evolution of the thoroughgoing type takes the latter view. It holds that in the primitive cosmic matter was contained "the power and potency" of all life and movement, in such a way that no external agent was required in order to bring it to actual existence. Here, as in the question of Theism, Christian philosophy is frankly dualistic, although it acknowledges that, since actuality antecedes potency by nature and, as a matter of fact, the world originated in time, while God is eternal, there was, before creation, but One Reality.

VI. In ETHICS, the word *Monism* is very little used. In some German works it is employed to designate the doctrine that the moral law is autonomous. Christian ethics is essentially heteronomic: it teaches that all law, even natural law, emanates from God. Kantian ethics and Evolutionistic ethics hold that the moral law is either self-imposed or emanates from the moral sense which is a product of the struggle for existence. In both the Kantian and the Evolutionistic systems there is only one source of the power of moral discrimination and approval. For this reason the word *Monism* is here used in its generic sense. In English philosophical literature, however, the word has no such signification. In accounting for the origin of evil, a problem which, though it belongs to metaphysics, has important bearings on ethical questions, some philosophers have adopted a Dualistic doctrine and explained that good and evil originate from two distinct principles, the one supremely good, the other completely and absolutely evil. This was the doctrine of the ancient Persians, from whom it was borrowed by Manes, the founder of the Manichean sect. Opposed to this is the Monistic view, that God is indeed the cause of all that is good in the universe, and that evil is not to be assigned to any supreme cause distinct from God. Whatever explanation be given of the existence of evil in the world, it is maintained that a supreme principle of evil is utterly impossible and even inconceivable.

VII. CONTEMPORARY MONISTIC MOVEMENTS AND SCHOOLS.—In current philosophical literature, whenever no special qualification is added, Monism generally means the modified materialistic monism of Haeckel. Modern materialistic Monism in Germany begins with Feuerbach, a disciple of Hegel. Feuerbach was followed by Vogt and Moleschott. To these succeeded Haeckel, who combines Darwinian evolution with a materialistic interpretation of Spinoza and Bruno. Haeckel's works, both in the original and in English translations, have had a wide circulation, their popularity being due rather to the superficial manner in which Haeckel disposes of the most serious questions of metaphysics than to any intrinsic excellence of content or method. Haeckel is honorary president of the *Monistenbund* (Society of Monists), founded at Jena in 1906, for the purpose of propagating the doctrines of Monism. The society is openly anti-Christian, and makes active warfare against the Catholic Church. Its publications, "*Der Monist*" (a continuation of the "*Freie Glocken*"—first number, 1906), "*Blätter des deutschen Monistenbunds*" (first number, July, 1906), and various pamphlets (*Flugblätter des Monistenbunds*), are intended to be a campaign against Christian education and the union of Church and State.

The group of writers in America who, under the editorship of Dr. Paul Carus, have been identified with the "*Monist*" (Chicago, monthly, first number, Jan., 1891) are not, apparently, actuated by the same animosity against Christianity. Nevertheless, they hold Haeckel's fundamental tenet that Monism as a system of philosophy transcends Christianity as a form of belief, and is the only rational synthesis of science and religion. "Religious progress no less than scientific progress", writes Carus, "is a process of growth as well as a cleansing from mythology. . . . Religion is the basis of ethics. . . . The ideal of religion is the same as that of science, it is a liberation of the mythological elements and its aim is to rest upon a concise but exhaustive statement of facts" (*Monism, Its Scope and Import*, 8, 9). This "concise but exhaustive statement of facts" is positive Monism, the doctrine, namely, that the whole of reality constitutes one inseparable and indivisible entirety. Monism is not the doctrine that one substance alone, whether it be mind or matter, exists: such a theory, says Dr. Carus, is best designated as Henism. True Monism "bears in mind that our words are abstracts representing parts or features of the One and All, and not separate existences" (*op. cit.*, 7). This Monism is Positivistic, because its aim is "the systematisation of knowledge, that is, of a description of facts" (*ibid.*). "Radical free thought" is the motto of this school of Monism; at the same time, it disclaims all sympathy with destructive Atheism, Agnosticism, Materialism, and Negativism in general. Nevertheless, the untrained student of philosophy will be likely to be more profoundly influenced by the Monistic criticism of Christianity than by the constructive effort to put something in place of the errors referred to.

All Monism may be described as resulting from the tendency of the human mind to discover unitary concepts under which to subsume the manifold of experience. So long as we are content to take and preserve the world of our experience as we find it, with all its manifoldness, variety, and fragmentation, we are in the condition of primitive man, and little better than brute animals. As soon as we begin to reflect on the data of the senses, we are led by an instinct of our rational nature to reduce manifold effects to the unity of a causal concept. This we first do in the scientific plane. Afterwards, carrying the process to a higher plane, we try to unify these under philosophical categories, such as substance and accident, matter and force, body and mind, subject and object.

The history of philosophy, however, shows with unmistakable clearness that there is a limit to this unifying process in philosophy. If Hegel were right, and the formula, "The rational alone is real", were true, then we should expect to be able to compass all reality with the mental powers which we possess. But, Christian philosophy holds, the real extends beyond the domain of the (finite) rational. Reality eludes our attempt to compress it within the categories which we frame for it. Consequently, Dualism is often the final answer in philosophy; and Monism, which is not content with the partial synthesis of Dualism, but aims at an ideal completeness, often results in failure. Dualism leaves room for faith, and hands over to faith many of the problems which philosophy cannot solve. Monism leaves no room for faith. The only mysticism that is compatible with it is rationalistic, and very different from that "vision" in which, for the Christian mystic, all the limitations, imperfections, and other shortcomings of our feeble efforts are removed by the light of faith.

WILLIAM TURNER.

Monita Secreta, a code of instructions alleged to be addressed by Acquaviva, the fifth general of the Society, to its various superiors, and laying down the methods to be adopted for the increase of its power and influence. According to them, every means is to be employed of acquiring wealth for the order, by enticing promising young men to enter it and endow it with their estates; rich widows are to be cajoled and dissuaded from remarriage; every means is to be used for the advancement of Jesuits to bishoprics or other ecclesiastical dignities, and to discredit the members of other orders, while the world is to be persuaded that the Society is animated by the purest and least interested motives: the reputation of those who quit it is to be assailed and traduced in every way.

That the "Monita" are in reality what they pretend, cannot possibly be maintained. They are known to be the work of one Jerome Zahorowski, a Pole, who, having been a member of the Society, had been discharged in 1611. They first appeared at Cracow in 1612 in MS., purporting to be a translation from the Spanish, and were printed in the same city in 1614. Various stories were told, however, as to the mode in which these secret instructions were originally discovered; the credit being most commonly assigned to Duke Christian of Brunswick who, having been born in 1599, was a mere boy when they first saw the light. The place where they were found was variously set down as Paderborn, Prague, Liège, Antwerp, Glatz, and on board a captured East Indiaman. Attempts were likewise made at various times, as late even as 1783, to excite interest in the work as the result of a new discovery; to say nothing of an undated edition, in the early nineteenth century, which professes to issue from the Propaganda Press, and to be authenticated by the testimonies of various Jesuit authorities. These, however, are manifestly nothing but impudent

and malignant fabrications, the general, "Felix Aconiti", being utterly unknown in the *Annals* of the Society, and the censor who approves the publication bearing the ominous name "Pasquinelli", while the titles which, it is alleged, should ensure the esteem of men in general for the Society, include all the crimes and abominations of every kind—immoralities, conspiracies, murders, and regicides—which their bitterest enemies have ever attributed to the Society.

In looking for more authentic evidence as to the true character of the "Monita", it is unnecessary to cite any to whose testimony a suspicion of partiality might attach—from Bishop Lipski of Cracow (1616), through the long list of Jesuit writers who have from the first denounced the fabrication, and who are quoted by Father Bernard Duhr in his "Jesuiten Fabeln". Witnesses beyond any such exception are for example, the famous Fra Paolo Sarpi, the historian of the Council of Trent, the Jansenist Henri de Saint-Ignace, as well as Arnould and the "Nouvelles Ecclésiastiques", to whom may be added Pascal himself, whose negative testimony is sufficient to show what he thought on the subject.

To these witnesses may be added such pronounced anti-Jesuits as von Lang, Döllinger, Friedrich (the author of *Janus*), Huber, and Reusch, as well as the Protestant historian Gieseler. In the British House of Commons, during the debates on Catholic Emancipation, the fraudulent character of the "Monita" was fully acknowledged by more than one speaker, while the authorities of the British Museum, and likewise the French bibliographer M. Barbier, agree in describing the work as "apocryphal".

The only defence seriously attempted on the other side is that offered by the late Dr. Littledale in his notorious article "Jesuits" in the "Encyclopædia Britannica". He acknowledges, indeed, that the work is in reality "both caricature and libel", but pleads nevertheless that it is substantially true, since its author, "a shrewd and keen observer", having noticed how Jesuits actually worked, deduced from his observations the rules by which they were guided. As to this remarkable example of "jesuitical" argumentation, it is sufficient to inquire upon what solid foundation Dr. Littledale's basal assumption rests. Where is the evidence that the principles of the "Monita" animate Jesuit practice? The official rules and constitutions of the order plainly contradict in every respect these supposed instructions, for they expressly prohibit the acceptance of ecclesiastical dignities by its subjects, unless compelled by papal authority, and from the days of the founder, St. Ignatius himself, it is known that every obstacle has been thrown by the Society in the way of such promotion. Moreover, in many cases, genuine private instructions from the general to subordinate superiors have fallen into hostile hands, but while in many cases they are found to give instructions directly contrary to those we have heard, it is not even alleged that in any instance they corroborate them.

JOHN GERARD.

Monk.—A monk may be conveniently defined as a member of a community of men, leading a more or less contemplative life apart from the world, under the vows of poverty, chastity, and obedience, according to a rule characteristic of the particular order to which he belongs. The word monk is not itself a term commonly used in the official language of the Church. It is a popular rather than a scientific designation, but it is at the same time very ancient, so much so that its origin cannot be precisely determined. So far as regards the English form of the word, that undoubtedly

the fifth and sixth centuries. Peculiar to the Latin Church is the monogram IH Ξ XP Ξ , which occurs in the sixth century Greek-Latin Codex Claramontanus, as an abbreviation of both Our Lord's Greek names. The Greeks also employed the letters IH as an abbreviation for the name of Jesus, with a peculiar symbolic meaning. According to the Epistle of pseudo-Barnabas the circumcision by Abraham of 318 men of his household had a mystic signification. The Greek letters I E T, used as numerals, amount to 318, and at the same time the first two of these letters are abbreviations of the Name of Jesus, while the third represents the cross (Pseudo-Barnabas, c. ix). The meaning was adopted by the Greek Church, and from them it was borrowed by the Latins. The familiar monogram I H S was first popularized by St. Bernardine of Siena in the early fifteenth century and later, with the addition of a cross over the central letter, by the Society of Jesus. (See I.H.S.)

Theol.*, s. vv. *Monogramm Christi* (Leipzig, 1903); KRAUS in *Real-encyklopädie der christlichen Alterthümer* s. v. (Freiburg, 1886).

MAURICE M. HASSETT.

Monomotapa.—Whatever be the etymological meaning of the word *Monomotapa*, the origin of which is much disputed, it is certain, at any rate, that the Portuguese of the sixteenth century employed it to denote the paramount chief of the Makaranga, a powerful South African tribe dwelling between the Zambesi and Limpopo rivers and extending westward from the Indian Ocean probably as far as the twenty-fifth parallel of east longitude. "Some interest," says Mr. Theal, "is attached to this word Monomotapa, inasmuch as it was placed on maps of the day as if it were the name of a territory, not the title of a ruler, and soon it was applied to the entire region from the Zambesi to the mouth of the Fish River. Geographers, who knew nothing of the country, wrote the word upon their charts, and one copied another until the belief became general that a people far advanced in civilization, and governed by a mighty emperor, occupied the whole of southeastern Africa. . . . Such an empire never existed. The foundation upon which imagination constructed it is nothing more than a Bantu tribe." The empire of the Monomotapa was called Mokaranga. In the fifteenth century, it was united and powerful, but, when the Portuguese arrived in 1505, it was in a state of disruption, as the reigning Monomotapa, Makomba by name, had delegated his authority over the more distant parts of his dominions to members of his family who soon asserted their independence. The Makaranga still live scattered in different parts of Rhodesia over a territory which was once their own. In the matter of civilization they never had much to lose, but their warlike qualities have disappeared, so that the word *Makaranga* is used by their neighbours as a term of reproach and a synonym for coward. The word *Monomotapa* is no longer known among them. They are, at any rate, more intelligent and docile than their neighbours, while their features and many of their customs point to an infusion of Semitic blood. The theory has lately obtained in some quarters, that they built the Great Zimbabwe and other ruins scattered over their country. It is far more probable, however, that these, as well as the numerous rock-mines found in the gold area of Rhodesia and Portuguese East Africa, were the work of some Semitic people who occupied the country as gold seekers long before the arrival of the Bantu. The Makaranga were evangelized in 1561 by the Ven. Father Gonçalo da Silveira, S.J., who baptized the Monomotapa and many of his people. But within three months of his arrival the converted chief, instigated by some Mohammedan refugees from Mozambique, turned against the missionary and had him strangled on 16 March, 1561.

JAMES KENDALL.

Monophysites and Monophysitism.—The history of this sect and of its ramifications has been summarized under EUTYCHIANISM (the nickname somewhat unfairly given by Catholic controversialists). The theology of Monophysitism has also been described under the same heading. Two points are discussed in the following article: first, the literary activity of the Monophysites both in Greek and Syriac; secondly, the question whether they can be exculpated from material heresy in their Christology.

LITERARY HISTORY.—From many points of view the Monophysites are the most important of early heretics, and no heresy or related group of heresies until the sixteenth century has produced so vast and important a literature. A large portion of it is lost; some remains in manuscript, and of late years important publications have brought much of this material to the light of day. Nearly all the Greek literature has perished in its original form, but much of it survives in early Syriac translations, and the Syriac literature itself is extant in yet greater amount. The scientific, philosophical, and grammatical writings of Monophysites must for the most part be passed over here. Ecclesiastical history and biography, as well as dogmatic and polemical writings will be described for the fifth and sixth centuries, together with a few of the chief works of the centuries immediately following.

Dioscurus (q. v.) has left us but a few fragments. The most important is in the "Hist. Misc.", III, i, from a letter written in exile at Gangra, in which the banished patriarch declares the reality and completeness of our Lord's Human Body, intending evidently to deny that he had approved the refusal of Eutyches to admit Christ's consubstantiality with us.

Timothy Ælurus (d. 477) who had been ordained priest by St. Cyril himself, and preserved a profound attachment to that saint, published an edition of some of his works. He accompanied Dioscurus to the Robber Council of Ephesus in 449, as he says himself "together with my brother the blessed priest Anatolius" (the secretary of Dioscurus, promoted by him to the See of Constantinople). It is not necessary to infer that Timothy and Anatolius were brothers. When the death in exile of Dioscurus (September, 454) was known, Timothy assumed the leadership of those who did not acknowledge the orthodox Patriarch Proterius, and demanded a new bishop. He had with him four or five deprived bishops. The riots which followed were renewed at the death of the Emperor Marcian, and Proterius was murdered. Even before this, Timothy had been consecrated patriarch by two bishops. Eusebius of Pelusium and the famous Peter the Iberian, Bishop of Maluma, the latter not even an Egyptian. At Constantinople Anatolius was scarcely his enemy; the minister Aspar was probably his friend; but the Emperor Leo certainly desired to acquiesce in the demands for Timothy's deposition addressed to him by the orthodox bishops of Egypt and by Pope St. Leo, and he punished the murderers of Proterius at once. Meanwhile Ælurus was expelling from their sees all bishops who accepted the Council of Chalcedon. It was not, however, till Anatolius was dead (3 July, 458) and had been succeeded by St. Gennadius, that the Emperor put into effect the opinions he had elicited from all the bishops of the East in the "Encyclia", by exiling Ælurus first to Gangra in Paphlagonia, and then in 460 to the Cheronesus. During the reign of Basiliscus he was restored, at the end of 475, and Zeno spared his old age from molestation.

Under EUTYCHIANISM something has been said of his theology, and more will be found below. Of his works a fragment on the Two Natures, is in Migne (P. G., LXXXVI, 273). The unpublished Syriac collection of his works (in British Mus., MS. Addit. 12156, sixth cent.) contains (a) a treatise against the "Dyophysites" (Catholics) which consists mainly of a collection of extracts from the Fathers against the Two Natures, the last of the citations being from letters of Dioscurus. This is, however, but a summary of a larger work, which has recently been published entire in an Armenian translation under the title of "Refutation of the Council of Chalcedon". We learn from Justinian that the original was written in exile. (b) Extracts from a letter written to the city of Constantinople against the Eutychianizers Isaias of Hermopolis and Theophilus, followed by another *florilegium* from "the Fathers" (almost entirely from Apollinarian forgeries). This letter is preserved entire by Zacharias (in Hist. Misc., IV, xii, where it is followed by the second letter), and also in the "Chronicle" of Michael the Syrian. (c) A second letter against the same. (d) Extracts from two letters to all Egypt, the Thebaid, and Pentapolis on the treatment of Catholic bishops, priests, and monks who should join the Monophysites. (e) A refutation of the Synod of Chalcedon and of the Tome of Leo, written between 454 and 460, in two parts, according to the title, and concluding with extracts from the "Acts" of the Robber Synod and four documents connected with it. (f) A short prayer which Blessed Timothy used to make over those who returned from the communion of the Dyophysites. (g) Exposition of the faith of Timothy, sent to the Emperor Leo by Count Rusticus, and an abridged narration of what subsequently happened to him. A similar supplication of Alurus to Leo, sent by the silentary Diomedes, is mentioned by Anastasius Sin. The contents of this MS. are largely cited by Lebon. A translation into Latin of patristic testimonies collected by Alurus was made by Gennadius Massil, and is to be identified with the Armenian collection. A Coptic list of Timothy's works mentions one on the Cantic of Canticles. The "Plerophoria" (33, 36) speak of his book of "Narrations", from which Crum (p. 71) deduces an ecclesiastical history by Timothy in twelve books. Lebon does not accept the attribution to Timothy of the Coptic fragments by which Crum established the existence of such a work, but he finds (p. 110) another reference to a historical work by the patriarch in MS. Addit. 14602 (Chabot, "Documenta", 225 sqq.).

Peter Mongus (q. v.) of Alexandria was not a writer. His letters in Coptic are not genuine; though a complete Armenian text of them has been published, which is said to be more probably authentic. *Peter Fullo* (q. v.) of Alexandria similarly left no writings. Letters addressed to him exist, but are certainly spurious. *Timothy IV*, Patriarch of Alexandria (517-535), composed "Antirrhethica" in many books. This polemical work was lost; but a homily of his remains and a few fragments. *Theodosius*, Patriarch of Alexandria (10-11 February, 535, and again July, 535-537 or 538) has left us a few fragments and two letters. The Severians of Alexandria were called *Theodosians* after him, to distinguish them from the *Gaianites* who followed his incorruptibilist rival *Gaianus*. The latter left no writings.

Severus: The most famous and the most fertile of all the Monophysite writers was Severus, who was Patriarch of Antioch (512-518), and died in 538. We have his early life written by his friend Zacharias Scholasticus; a complete biography was composed soon after his death by John, the superior of the monastery where Severus had first embraced the monastic life. He was born at Sozopolis in Pisidia, his father being a senator of the city, and descended from the Bishop of Sozopolis

who had attended the Council of Ephesus in 431. After his father's death he was sent to study rhetoric at Alexandria, being yet a catechumen, as it was the custom in Pisidia to delay baptism until a beard should appear. Zacharias, who was his fellow-student, testifies to his brilliant talents and the great progress he made in the study of rhetoric. He was enthusiastic over the ancient orators, and also over Libanius. Zacharias induced him to read the correspondence of Libanius with St. Basil, and the works of the latter and of St. Gregory of Nazianzus, and he was conquered by the power of Christian oratory. Severus went to study law at Berytus about the autumn of 486, and he was followed thither by Zacharias a year later. Severus was later accused of having been in youth a worshipper of idols and a dealer in magical arts (so the *libellus* of the Palestinian monks at the council of 536), and Zacharias is at pains to refute this calumny indirectly, though at great length, by relating interesting stories of the discovery of a hoard of idols at Menuthis in Egypt and of the routing of necromancers and enchanters at Berytus; in both these exploits the friends of Severus took a leading part, and Zacharias asks triumphantly whether they would have consorted with Severus had he not agreed with them in the hatred of paganism and sorcery. Zacharias continued to influence him, by his own account, and induced him to devote the free time which the students had at their disposal on Saturday afternoons and Sundays to the study of the Fathers. Other students joined the pious company of which an ascetic student named Evagrius became leader, and every evening they prayed together in the church of the Resurrection. Severus was persuaded to be baptized. Zacharias refused to be his godfather, for he declared that he did not communicate with the bishops of Phœnicia, so Evagrius stood sponsor, and Severus was baptized in the church of the martyr, Leontius, at Tripolis.

After his baptism Severus renounced the use of baths and betook himself to fasting and vigils. Two of his companions departed to become monks under Peter the Iberian. When the news of the death of that famous monk (488) arrived, Zacharias and several others entered his monastery of Beith-Aphthonia, at the native place of Zacharias, the port of Gaza (known also as Maïuma), where Peter had been bishop. Zacharias did not persevere, but returned to the practice of the law. Severus intended to practise in his own country, but he first visited the shrine of St. Leontius of Tripolis, the head of St. John Baptist at Emesa, and then the holy places of Jerusalem, with the result that he joined Evagrius who was already a monk at Maïuma. The great austerities there did not suffice for Severus, and he preferred the life of a solitary in the desert of Eleutheropolis. Having reduced himself to great weakness he was obliged to pass some time in the monastery founded by Romanus, after which he returned to the laura of the port of Gaza, in which was the convent of Peter the Iberian. Here he spent what his charities had left of his patrimony in building a monastery for the ascetics who wished to live under his direction. His quiet was rudely disturbed by Nephalius, a former leader of the Acephali, who was said to have once had 30,000 monks ready to march on Alexandria when, at the end of 482, Peter Mongus accepted the Henoticon and became patriarch. Later on Nephalius joined the more moderate Monophysites, and finally the Catholics, accepting the Council of Chalcedon. About 507-8 he came to Maïuma, preached against Severus, and obtained the expulsion of the monks from their convents. Severus betook himself to Constantinople with 200 monks, and remained there three years, influencing the Emperor Anastasius as far as he could in the support of the Henoticon, against the Catholics on the one hand and the irreconcilable Acephali on the other. He was spoken of as successor to the Patriarch Mace-

donius who died in August 511. The new patriarch, Timotheus, entered into the views of Severus, who returned to his cloister. In the following year he was consecrated Patriarch of Antioch, 6 November, 512, in succession to Flavian, who was banished by the emperor to Arabia for the half-heartedness of his concessions to Monophysitism. Elias of Jerusalem refused to recognize Severus as patriarch, and many other bishops were equally hostile. However, at Constantinople and Alexandria he was supported, and Elias was deposed. Severus exercised a most active episcopacy, living still like a monk, having destroyed the baths in his palace, and having dismissed the cooks. He was deposed in September, 518, on the accession of Justin, as a preparation for reunion with the West. He fled to Alexandria.

In the reign of Justinian the patronage accorded to the Monophysites by Theodora raised their hopes. Severus went to Constantinople where he fraternized with the ascetical Patriarch Anthimus, who had already exchanged friendly letters with him and with Theodosius of Alexandria. The latter was deposed for heresy by Pope Agapetus on his arrival in Constantinople in 536. His successor Mennas held a great council of sixty-nine bishops in the same year after the pope's departure in the presence of the papal legates, solemnly heard the case of Anthimus and reiterated his deposition. Mennas knew Justinian's mind, and was determined to be orthodox: "We, as you know", said he to the council, "follow and obey the Apostolic See, and those with whom it communicates we have in our communion, and those whom it condemns, we condemn." The Easterns were consequently emboldened to present petitions against Severus and Peter of Apamea. It is from these documents that we have our main knowledge of Severus from the point of view of his orthodox opponents. One petition is from seven bishops of Syria Secunda, two others are from ninety-seven monasteries of Palestine and Syria Secunda to the emperor and to the council. Former petitions of 518 were recited. The charges are somewhat vague (for the facts are supposed known) of murders, imprisonments, and chains, as well as of heresy. Mennas pronounced the condemnation of these heretics for contemning the succession from the Apostles in the Apostolic See, for setting at naught the patriarchal see of the royal city and its council, the Apostolic succession from our Lord in the holy places (Jerusalem), and the sentence of the whole Diocese of Orients. Severus retired to Egypt once more and to his eremitical life. He died, 8 February, 538, refusing to take a bath even to save his life, though he was persuaded to allow himself to be bathed with his clothes on. Wonders are said to have followed his death, and miracles to have been worked by his relics. He has always been venerated by the Jacobite Church as one of its principal doctors.

His literary output was enormous. A long catalogue of works is given by Assemani. Only a few fragments survive in the original Greek, but a great quantity exists in Syriac translations, some of which has been printed. The early works against Nephalius are lost. A dialogue, "Philaethes", against the supporters of the Council of Chalcedon was composed during the first stay of Severus at Constantinople, 509-11. It was a reply to an orthodox collection of 250 extracts from the works of St. Cyril. An answer seems to have been written by John the Grammarian of Caesarea, and Severus retorted with an "Apology for Philaethes" (remains of the attack and retort in Cod. Vat. Syr. 140 and Cod. Venet. Marc. 165). A work "Contra Joannem Grammaticum" which had a great success, and seems to have long been regarded by the Monophysites as a triumph, was probably written in exile after 519. Severus was not an original theologian. He had studied the Cappadocians and he depended much on the Apollinarian forgeries; but in the main he fol-

lows St. Cyril in every point without conscious variation.

A controversy with Sergius the Grammarian, who went too far in his zeal for the "One Nature", and whom Severus consequently styles a Eutychian, is preserved in MS. Addit. 17154. This polemic enabled Severus to define more precisely the Monophysite position, and to guard himself against the exaggerations which were liable to result from the habit of restricting theology to attacks on Chalcedon. In his Egyptian exile Severus was occupied with his controversy with Julian of Halicarnassus. We also hear of works on the two natures "Against Felicissimus", and "Against the Codicils of Alexander". Like all Monophysites his theology is limited to the controversial questions. Beyond these he has no outlook. Of the numerous sermons of Severus, those which he preached at Antioch are quoted as "Homilies cathedrales". They have come down to us in two Syriac translations; one was probably made by Paul, Bishop of Callinicus, at the beginning of the sixth century, the other by Jacob Baradai, was completed in 701. Those which have been printed are of astonishing eloquence. A diatribe against the Hippodrome may be especially noticed, for it is very modern in its denunciation of the cruelty to the horses which was involved in the chariot races. A fine exhortation to frequent communion is in the same sermon. The letters of Severus were collected in twenty-three books, and numbered no less than 3759. The sixth book is extant. It contains theological letters besides many proofs of the varied activities of the patriarch in his episcopal functions. He also composed hymns for the people of Antioch, since he perceived that they were fond of singing. His correspondence with Anthimus of Constantinople is found in "Hist. Misc.", IX, xxi-xxii.

Julian, Bishop of Halicarnassus, joined with Severus in the intrigue by which Macedonius was deposed from the Patriarchate of Constantinople in 511. He was exiled on the accession of Justin in 518, and retired to the monastery of Enaton, nine miles from Alexandria. He was already of advanced age. Here he wrote a work "Against the Diphysites" in which he spoke incorrectly according to Severus, who nevertheless did not reply. But Julian himself commenced a correspondence with him (it is preserved in the Syriac translation made in 528 by Paul of Callinicus, and also partially in the "Hist. Misc.", IX, x-xiv) in which he begged his opinion on the question of the incorruptibility of the Body of Christ. Severus replied, enclosing an opinion which is lost, and in answer to a second letter from Julian wrote a long epistle which Julian considered to be wanting in respect, especially as he had been obliged to wait for it a year and a month. Parties were formed. The Julianists upheld the incorruptibility of the Body of Christ, meaning that Christ was not naturally subject to the ordinary wants of hunger, thirst, weariness, etc., nor to pain, but that He assumed them of His free will for our sakes. They admitted that He is "consubstantial with us", against Eutyches, yet they were accused by the Severians of Eutychianism, Manicheism, and Docetism, and were nicknamed Phantasiasts, Aphthartodocetæ, or Incorrupticola. They retorted by calling the Severians Phthartolotræ (Corrupticolas), or Ktiolotræ, for Severus taught that our Lord's Body was "corruptible" by its own nature; that was scarcely consistent, as it can only be of itself "corruptible" when considered apart from the union, and the Monophysites refused to consider the Human Nature of Christ apart from the union. Justinian, who in his old age turned more than ever to the desire of conciliating the Monophysites (in spite of his failure to please them by condemning the "three chapters"), was probably led to favour Julian because he was the opponent of Severus, who was universally regarded as the great foe of orthodoxy. The emperor issued an edict in 565 making the "incor-

ruptibility" an obligatory doctrine, in spite of the fact that Julian had been anathematized by a council at Constantinople in 536, at which date he had probably been dead for some years.

A commentary by Julian on the Book of Job, in a Latin version, was printed in an old Paris edition of Origen (ed. GENEBRARDUS, 1574). A MS. of the original Greek is mentioned by Mai. It is largely quoted in the catena on Job of NICETAS of HERACLEA. The great work of Julian against SEVERUS seems to be lost. Ten anathematisms remain. Of his commentaries, one on Matthew is cited by MOSES BARKEPHA (P. G., CXI, 551). It is to be hoped that some of Julian's works will be recovered in Syriac or Coptic translations. An anti-Julianist catena in the British Museum (MS. Addit. 12155) makes mention of Julian's writings. We hear of a treatise by him, "Against the Eutychianists and Manichæans", which shows that Julian, like his great opponent SEVERUS, had to be on his guard against extravagant Monophysites. Part of the treatise which *Peter of Callinicus*, Patriarch of Antioch (578-591), wrote against the Damianists is extant in Syriac MSS. (see ASSEMANI's and WRIGHT's catalogues).

The writers of the Tritheist sect (see TRITHEISTS) next demand our attention. The chief among them, *John Philoponus*, of Cæsarea, was Patriarch of the Tritheists at Alexandria at the beginning of the sixth century, and was the principal writer of his party. He was a grammarian, a philosopher, and an astronomer as well as a theologian. His principal theological work, *Διατριβὴς ἡ περὶ ἐνόςους*, in ten books, is lost. It dealt with the Christological and Trinitarian controversies of his age, and fragments of it are found in LEONTIUS (De sectis, Oct. 5), in St. John DAMASCENE (De hæres. I, 101-107, ed. Le Quien) and in NICEPH. CALL., XVIII (see MANSI, XI, 301). A complete Syriac translation is in Brit. Mus. and Vat. MSS. Another lost theological work, *περὶ ἀναστάσεως*, described the writer's theory of a creation of new bodies at the general resurrection; it is mentioned by Photius (cod. 21-23), by TIMOTHEUS PRESBYTER and NICEPHORUS. As a philosopher Philoponus was an Aristotelian, and a disciple of the Aristotelian commentator AMMONIUS, son of HERMEAS. His own commentaries on Aristotle were printed by Aldus at Venice (on "De generatione et interitu", 1527; "Analytica posteriora", 1534; "Analytica priora", 1536; "De nat. auscult.", I-IV, and "De anima", 1535; "Meteorologica", I, 1551; "Metaphysica", 1583). He also wrote much against the *Ἐπιχειρήματα* of PROCLUS, the last great Neoplatonist: eighteen books on the eternity of the world (Venice, 1635), composed in 529, and *περὶ κοσμοπόλεως* (printed by CORDERIUS, Vienna, 1630, and in Gallandi, XII; new ed. by REICHERT, 1897), on the Hexameron, in which he follows St. Basil and other Fathers, and shows a vast knowledge of all the literature and science accessible in his day. The latter work is dedicated to a certain SERGIUS, who may perhaps be identified with SERGIUS the Grammarian, the Eutychianizing correspondent of SEVERUS. The work was possibly written as early as 517 (for 617 in the editions is evidently a clerical error). A "Computatio de Pascha", printed after this work, argues that the Last Supper was on the 13th of Nisan, and was not a real passover. A lost theological work entitled *τμήματα* is summarized by MICHAEL the Syrian (Chronicle, II, 69). A book against the Council of Chalcedon is mentioned by Photius (cod. 55). A work "Contra Andrean" is preserved in a Syriac MS. Another work "Against the Acephali" exists in MS., and may be the work Philoponus is known to have written in controversy with SEVERUS. In grammar his master was ROMANUS, and his extant writings on the subject are based upon the *καθολικὴ* of HERODIAN (*τοικὰ παραγγέλματα*, ed. DINDORF, 1825; *περὶ τῶν διαφόρων τοικημάτων*, ed. EGENOLFF, 1890).

This sixth century Monophysite is to be distin-

guished from an earlier grammarian, also called Philoponus, who flourished under Augustus and Tiberius. Of his life little is known. On account of his Tritheistic opinions he was summoned to Constantinople by Justinian, but he excused himself on account of his age and infirmity. He addressed to the emperor a treatise "De divisione, differentia, et numero", which seems to be the same as a treatise spoken of as "De differentia quæ manere creditur in Christo post unionem"; but it is lost. He addressed an essay on Tritheism to ATHANASIUS MONACHUS, and was condemned on this account at Alexandria. At a disputation held by the emperor's order before the Patriarch of Constantinople JOHN SCHOLASTICUS, CONON, and EUGENIUS represented the Tritheists; JOHN condemned PHILOPONUS, and the emperor issued an edict against the sect (PHOTIUS, cod. 24). In 568 Philoponus was still alive, for he published a pamphlet against JOHN, which PHOTIUS describes with great severity (cod. 75). The style of Philoponus, he says, is always clear, but without dignity, and his argumentation is puerile. (For the theological views of the sect, see TRITHEISTS.)

CONON, Bishop of Tarsus, though a Tritheist and, with EUGENIUS, a supporter of JOHN PHILOPONUS before the emperor, disagreed with that writer about the equality of the three Persons of the Holy Trinity (see TRITHEISTS), and together with EUGENIUS and THEMISTIUS wrote a book, *κατὰ Ιωάννου*, against his views on the Resurrection. EUGENIUS is called a Cilician bishop by JOHN of EPHEBUS, but BAR HEBRÆUS makes him Bishop of Seleucia in Isauria (see TRITHEISTS). THEMISTIUS, surnamed CALONYMUS, was a deacon of Alexandria, who separated from his patriarch, TIMOTHY IV (517-535), and founded the sect of AGNOSTÆ. He wrote against SEVERUS a book called "Apology for the late Theophobius", to which a Severian monk named THEODORE replied; the answer of THEMISTIUS was again refuted by THEODORE in three books (PHOTIUS, cod. 108). Other works of THEMISTIUS are referred to by St. MAXIMUS CONFESSOR, and some fragments are cited in MANSI, X, 981 and 1117. *Stephen Gobarus* the Tritheist is known only by the elaborate analysis of his book given by PHOTIUS (cod. 232); it was a "Sic et Non" like that of ABELARD, giving authorities for a proposition and then for the contrary opinion. At the end were some remarks on curious views of a number of Fathers. It was evidently, as PHOTIUS remarks, a performance of more labour than usefulness.

HISTORY.—We now turn to the historians. *Zacharias of Gaza*, brother of PROCOPIUS of GAZA, the rhetorician, *Zacharias Scholasticus*, *Zacharias the Rhetorician*, *Zacharias of Mitylene*, are all apparently the same person (so KUGENER's latest view, KRÜGER, and BROOKS). Of his early life we have a vivid picture in his memoirs of SEVERUS, with whom he studied at Alexandria and at Berytus. His home was at the port of Gaza, near the monastery of the bishop, PETER the Iberian. To the latter he was greatly devoted, and believed that PETER had prophesied his unfitness for the monastic life. He in fact did not become a monk, when his friends EVAGRIUS, SEVERUS, and others did so, but practised law at Constantinople, and reached eminence in his profession. Of his writings, a dialogue "that the world did not exist from eternity" was probably composed in youth while he lived at Berytus. His "Ecclesiastical History" is extant only in a Syriac epitome which forms four books (III-VI) of the "Historia Miscellanea". It begins with a short account from a Monophysite point of view of the Council of Chalcedon, and continues the history, mainly of Palestine and Alexandria, until the death of ZENO (491). From the same history is derived a curious statistical description of Rome in "Hist. Misc.", X, xvi. The very interesting life of SEVERUS carries the author's recollections up to the accession of his hero to the See of Antioch in 512. It was written subsequently to the history, as the *cubicularius* EUPRAXIUS, to whom that

work was dedicated, was already dead. His recollections of Peter the Iberian and of Theodore, Bishop of Antioch, are lost, but his biography of Isaias, an Egyptian ascetic, is preserved in Syriac. A disputation against the Manichaeans, published by Cardinal Pitra in Greek, was probably written after the edict of Justinian against the Manichaeans in 527. He seems to have been still a layman. Up to the time he wrote the life of Severus he was a follower of the Henoticon; this was the easy course under Zeno and Anastasius. It would seem that he found it paid to revert to orthodoxy under Justin and Justinian, for he was present as Bishop of Mitylene at the Council of Mennas at Constantinople in 536, where he was one of the three metropolitans who were sent to summon Anthimus to appear. His name does not appear in the incomplete printed list of subscriptions to that patriarch's deposition, but Labbe testifies that it is found in some MSS. (Mansi, VIII, 975); it is absent from the condemnation of Severus in a later session. Zacharias was dead before the oecumenical council of 553.

An important historical work in anecdotal form is the "Plerophoria" of John of Matama, composed about 515; it contains stories of Monophysite worthies up to date, especially of Peter the Iberian, whose life was also written by Zacharias, but is now lost. A later life of Peter has been printed, which contains curious information about the Iberian princes from whom the Monophysite bishop descended. The life of the ascetic Isaias by Zacharias accompanies it.

The interesting "Historia Miscellanea", often referred to as *Pseudo-Zacharias*, was composed in Syriac in twelve books by an unknown author who seems to have lived at Amida. Though the work was completed in 569, he seems to have used part of the history of John of Ephesus, which was finished only in 571. Certain parts were written earlier (or are borrowed from older writers), VII, xv before 523; X, xii in 545; XII, vii in 555; XII, iv in 561. The first book contains a quantity of legendary matter from Greek sources which are still extant; a few words are added on the Syriac doctors Isaac and Dodo. Book II has the story of the Seven Sleepers. History begins in II, ii, with an account of Eutyches, and the letter of Proclus to the Armenians follows. The next four books are an epitome of the lost work of Zacharias Rhetor. The seventh book continues the story from the accession of Anastasius (491), and together with general ecclesiastical history it combines some interesting details of wars with the Persians in Mesopotamia. A curious chapter gives the Prologue of Moro, or Mara, Bishop of Amida (a Syriac writer whose works appear to be lost), to his edition of the four Gospels in Greek, to which the writer appends as a curiosity the *pericope* of the woman taken in adultery (John, viii) which Moro had inserted in the 89th canon; "it is not found in other MSS." Book VIII, iii, gives the letter of Simeon of Beit-Arsham on the martyrs of Yemen, perhaps an apocryphal document. Book XI is lost, with most of X and XII. Some of X has been restored by Brooks from the "Chronicle" of Michael the Syrian (died 1199). It is necessary to mention the "Chronicle of Edessa" from 495 to 506, which is embedded in the "Chronicle" attributed to Joshua the Stylite (who seems to have been a Catholic); this latter is included in the second book of the "Chronicle" attributed to the Patriarch of Antioch, Dionysius of Tell-Mahre, a compilation which has a fourth book (from the end of the sixth century to 775) which is an original work by the compiler, who was in reality a monk of Zonkenin (north of Amida), possibly Joshua the Stylite himself.

Some small chronicles of the sixth, seventh, eighth, and ninth centuries have been published as "Chronica minora" in the "Corpus Script. Or." Of later histories, those of Bar Hebraeus (died 1286) must be noted. His "Chronicon Syriacum" is an abridgment of Mi-

chael with a continuation; the "Chronicon ecclesiasticum" contains the ecclesiastical history first of Western Syria and then of Eastern Syria, with lives of the patriarchs of Antioch, of the Jacobite missionary bishops (called *maphrians*) and of the Nestorian patriarchs. The "Chronicle" of Elias of Nisibis to 1008 is important because it mentions its sources, but it is very defective in the early period through the loss of some pages of the MS. Basil the Cilician and John of Aegea are counted as Monophysite writers by Ehrhard (in Krumbacher, p. 53), but Photius clearly makes them out Nestorians (cod. 41, 55, 107), and it is by a slip that he conjectures Basil to be the author of a work against Nestorius.

Syriac Writers.—Of the Syriac Monophysite writers none is more important than Philoxenus, otherwise *Xenaias*, who was Bishop of Mabug (Hierapolis) from 485. For his life and the version of Scripture which was made by his order, see PHILOXENUS. His dogmatic writings alone concern us here. His letter to the Emperor Zeno, published by Vaschalde (1902) is of 485, the date of his episcopal consecration and of his acceptance of the Henoticon. His treatises on the Incarnation date perhaps before 500; to the same period belong two short works, "A Confession of Faith" and "Against every Nestorian". He wrote also on the Trinity. A letter to Marco, lector of Anasbarus, is attributed to 515-518. After he had been exiled by Justin to Philippolis in Thrace in 518, he attacked the orthodox patriarch, Paul of Antioch, in a letter to the monks of Teleda, and wrote another letter of which fragments are found in MS. Addit. 14533, in which he argues that it is sometimes wise to admit baptisms and ordinations by heretics for the sake of peace; the question of sacramental validity does not occur to him. Fragments of his commentaries on the Gospel are found in MSS. Thirteen homilies on religious life have been published by Budge. They scarcely touch upon dogma. Of his three liturgies two are given by Renaudot. Out of the great mass of his works in MS. at Rome, Paris, Oxford, Cambridge, London, only a fraction has been published. He was an eager controversialist, a scholar, and an accomplished writer. His Syriac style is much admired. His sect had no more energetic leader until Jacob Baradaeus himself. He was president of the synod which elevated Severus to the See of Antioch, and he had been the chief agent in the extrusion of Flavian. He was an energetic foe of Catholicism, and his works stand next in importance to those of Severus as witnesses to the tenets of their party. He was exiled by Justin in 519 to Philippolis and then to Gangra, where he died of suffocation by smoke in the room in which he was confined.

James of Sarugh, 451-521 (q. v.), became *periodeutes*, or visitor, of Haura in that district about 505, and bishop of its capital, Batnan, in 519. Nearly all his numerous writings are metrical. We are told that seventy amanuenses were employed to copy his 760 metrical homilies, which are in Wright's opinion more readable than those of Ephraem or Isaac of Antioch. A good many have been published at various times. In the Vatican are 233 in MSS., in London 140, in Paris, 100. They are much cited in the Syriac Liturgy, and a liturgy and a baptismal rite are ascribed to him. Numerous letters of his are extant in Brit. Mus., MSS. Addit. 14587 and 17163. Though his feast is kept by Maronites and even by some Nestorians, there is no doubt that he accepted the Henoticon, and was afterwards in relation with the leading Monophysites, rejecting the Council of Chalcedon to the end of his life. Stephen bar Soudaili was an Edeessene Monophysite who fell into Pantheism and Origenism. He was attacked by Philoxenus and James of Sarugh, and retired to Jerusalem. The confession of faith of John of Tella (483-538; bishop, 519-521) is extant, and so is his commentary on the Trisagion, and his canons for the clergy and replies to the questions of

the priest Sergius—all in MSS. in the British Museum. The great *James Baradaeus*, the eponymous hero of the Jacobites, who supplied bishops and clergy for the Monophysites when they were definitively divided from the Eastern Catholics in 543, wrote but little: a liturgy, a few letters, a sermon, and a confession of faith are extant (see *BARADAËUS*). Of Syriac translators it is not necessary to speak, nor is there need to treat of the Monophysite scientist Sergius of Reschaina, the writer on philosophy, Ahoudemmeh, and many others.

John of Ephesus, called also *John of Asia*, was a Syrian of Amida, where he became a deacon in 529. On account of the persecution of his sect he departed, and was made administrator of the temporal affairs of the Monophysites in Constantinople by Justinian, who sent him in the following year as a missionary bishop to the pagans of Asia Minor. He relates of himself that he converted 60,000, and had 96 churches built. He returned to the capital in 546, to destroy idol worship there also. But on the death of Justinian he suffered a continual persecution, which he describes in his "History", as an excuse for its confusion and repetitions. What remains of that work is of great value as a contemporary record. The style is florid and full of Greek expressions. The lives of blessed Easterns were put together by John about 565-566, and have been published by Land. They include great men like Severus, Baradaeus, Theodosius, etc. (For an account of these works and for bibliography see *JOHN OF EPHESUS*.)

George, bishop of the Arabians (b. about 640; d. 724) was one of the chief writers of the Assyrian Jacobites. He was a personal follower of James of Edessa, whose poem on the Hexameron he completed after the death of James in 708. In this work he teaches the Apocatastasis, or restoration of all things, including the destruction of hell, which so many Greek Fathers learned from Origen. George was born in the Tchouma in the Diocese of Antioch, and was ordained bishop of the wandering Arabs in November, 686; his see was at Akoula. He was a man of considerable learning. His translation, with introduction and commentary, of part of the "Organon" of Aristotle ("Categories", "De Interpretatione" and "Prior Analytics") is extant (Brit. Mus., MS. Addit. 14659), as is the collection he made of *scholia* on St. Gregory of Nazianzus, and an explanation of the three Sacraments (Baptism, Holy Communion, and consecration of chrism,—following Pseudo-Dionysius). His letters of 714 till 718 are extant in the same MS. as this last work (Brit. Mus., MS. Addit. 12154). They deal with many things; astronomical, exegetical, liturgical questions, explanations of Greek proverbs and fables, dogma and polemics, and contain historical matter about Aphraates and Gregory the Illuminator. His poems included one in dodecasyllables on the unpromising subject of the calculation of movable feasts and the correction of the solar and lunar cycles, another on the monastic life, and two on the consecration of the holy chrism. His works are important for our knowledge of Syriac Church and literature. His reading was vast, including the chief Greek Fathers, with whom he classes Severus and Pseudo-Dionysius the Areopagite; he knows the Pseudo-Clementines and Josephus, and of Syriac writers he knows Bardesanes, Aphraates, and St. Ephraem. His correspondence is addressed to literary monks of his sect. The canons attributed to George in the "Nomocanon" of Bar Hebraeus are apparently extracts from his writings reduced to the form of canons.

James of Edessa (q. v.), about 633-708, was the chief Syriac writer of his time, and the last that need be mentioned here. His works are sufficiently described in a separate article. The Syriac literature of the Monophysites, however, continued throughout the middle ages. Their Coptic, Arabic, and Arme-

nian literature is large, but cannot be treated in an article like the present one.

ORTHODOXY.—Were the Monophysites really heretics or were they only schismatics? This question was answered in the affirmative by Assemani, more recently by the Oriental scholar Nau, and last of all by Lebon, who has devoted an important work, full of evidence from unpublished sources, to the establishment of this thesis. It is urged that the Monophysites taught that there is but one Nature of Christ, *μία φύσις*, because they identify the words *φύσις* and *ὑπόστασις*. But in just the same way the Nestorians have lately been justified. A simple scheme will make the matter plain:

Nestorians: One person, two hypostases, two natures.

Catholics: One person, one hypostasis, two natures.

Monophysites: One person, one hypostasis, one nature.

It is urged by Bethune-Baker that Nestorius and his friends took the word hypostasis in the sense of nature, and by Lebon that the Monophysites took nature in the sense of hypostasis, so that both parties really intended the Catholic doctrine. There is a *prima facie* argument against both these pleas. Granting that for centuries controversialists full of *odium theologicum* might misunderstand one another and fight about words while agreeing as to the underlying doctrine, yet it remains that the words person, hypostasis, nature, (*πρόσωπον*, *ὑπόστασις*, *φύσις*) had received in the second half of the fourth century a perfectly definite meaning, as to which the whole Church was at one. All agreed that in the Holy Trinity there is one Nature (*οὐσία* or *φύσις*) having three Hypostases or Persons. If in Christology the Nestorians used *ὑπόστασις* and the Monophysites *φύσις* in a new sense, not only does it follow that their use of words was singularly inconsistent and inexcusable, but (what is far more important) that they can have had no difficulty in seeing what was the true meaning of Catholic councils, popes, and theologians, who consistently used the words in one and the same sense with regard both to the Trinity and the Incarnation. There would be every excuse for Catholics if they misunderstood such a strange "derangement of epithets" on the part of the schismatics, but the schismatics must have easily grasped the Catholic position. As a fact the Antiochene party had no difficulty in coming to terms with St. Leo; they understood him well enough, and declared that they had always meant what he meant. How far this was a fact must be discussed under NESTORIANISM. But the Monophysites always withstood the Catholic doctrine, declaring it to be Nestorian, or half Nestorian, and that it divided Christ into two.

Lebon urges that Severus himself more than once explains that there is a difference in the use of words in "theology" (doctrine of the Trinity) and in "the economy" (Incarnation): "Admittedly hypostasis and *οὐσία* or *φύσις* are not the same in theology; however, in the economy they are the same" (P. G., LXXXVI, 1921), and he alleges the example of Gregory of Nazianzus to show that in a new mystery the terms must take new significations. But surely these very passages make it evident that Severus distinguished between *φύσις* and *ὑπόστασις*. Putting aside the Trinity and the Incarnation, every *φύσις* is a *ὑπόστασις*, and every *ὑπόστασις* is a *φύσις*,—in this statement all Catholics and Monophysites agree. But this means that the denotation of the words is the same, not that there is no difference of connotation. *Φύσις* is an abstraction, and cannot exist except as a concrete, that is to say, as a *ὑπόστασις*. But "admittedly" in the Trinity the denotation as well as the connotation of the words is diverse, it is still true that each of the three Hypostases is identified with the Divine Nature (that is, each Person is God); but

if each Hypostasis is therefore still a *phōsis* (the one *phōsis*) yet the *phōsis* is not one but three Hypostases. The words retain their old sense (connotation) yet have received a new sense in a new relation. It is obvious that this is the phenomenon to which Severus referred. Catholics would add that in the Incarnation conversely two natures are one hypostasis. Thus the meanings of *phōsis* (abstract=ὁσία) and *hypostasis* (subsistent *phōsis*, *phōsis* ὑπεστάσα or ἐνυπόστατος) in the Holy Trinity were a common possession; and all agreed further that in the created universe there cannot exist a nature which does not subsist, there is no such thing as a *phōsis* ἀνυπόστατος. (α) But Catholics hold the Human Nature of Christ considered in itself to be ἀνυπόστατος, to have no human *hypostasis*, but that the second Person of the Holy Trinity is its *hypostasis*. As the infinity of the Divine Nature is capable of a threefold subsistence, so the infinity of the Hypostasis of the Word is able to be the Hypostasis of the Human Nature assumed as well as of the Divine. The union in Christ is not a union of two natures directly with one another, but a union of the two in one hypostasis; thus they are distinct yet inseparable, and each acts in communion with the other. (β) The Nestorians argued thus: There are, according to the Fathers, two natures in Christ; but since every nature is a hypostasis, the Human Nature in Christ is a hypostasis. In order to make one Christ, they tried (in vain) to explain how two hypostases could be united in one person (πρόσωπον). They did not mean to divide Christ, but their prosopic union leaked at every seam; it was difficult to express it or argue about it without falling into heresy. The Antiochenes were glad to drop such inadequate formulæ, for it was certain that "person" in the Holy Trinity was only another name for "hypostasis". The Cyrillians were shocked, and could not be induced to believe (though St. Cyril himself did) that the Nestorianizers did not really mean two Christs, two Sons. (γ) Conversely, starting from the same proposition that every *phōsis* is a *hypostasis*, the Monophysites argued that as Christ is one Person, one Hypostasis, so He is one Nature, and they preferred "is one nature" to the equivalent "has one nature". They alleged high authority for their formula, not only St. Cyril, but behind him St. Athanasius, Pope St. Julius, and St. Gregory the Wonderworker. These authorities, however, were but Apollinarian forgeries; the favourite formula of St. Cyril, the *μία φύσις σεσαρκωμένη*, had been borrowed unwittingly from an Apollinarian source, and had been meant by its original inventor in a heretical sense. Nay, the "one nature" went back to the Arians, and had been used by Eudoxius himself to express the incompleteness of the Human Nature of Christ.

Yet the Monophysites were far from being Apollinarians, still less were they Arians; they were careful from the beginning to explain that Christ is perfect Man, and that He assumed a complete Human Nature like ours. Dioscurus is emphatic on this point in his letter to Secundinus (Hist. Misc., III, i) and with need, since he had acquitted Eutyches who had denied our Lord's "consubstantiality with us". Ælurus is just as clear in the letters by which he refuted and excommunicated Isaias of Hermopolis and Theophilus as "Eutychians" (Hist. Misc., IV, xii), and Severus had an acute controversy with Sergius the Grammarian on this very point. They all declared with one voice that Christ is *μία φύσις*, but *ἐκ δύο φύσεων*, that His Divine Nature is combined with a complete Human Nature in one hypostasis, and hence the two have become together the One Nature of that one hypostasis, howbeit without mixture or confusion or diminution. Ælurus insists that after union the properties of each nature remain unchanged; but they spoke of "the divine and human things", *divina et humana*, not natures; each nature re-

mains in its natural state with its own characteristics (*ἐν ἑαυτοῖς τῇ κατὰ φύσιν*) yet not as a unity but as a part, a quality (*ποιότης φύσιν*), not as a *phōsis*. All the qualities of the two natures are combined into one *hypostasis* *σύνθετος* and form the one nature of that one hypostasis. So far there is no heresy in intention, but only a wrong definition:—that one hypostasis can have only one nature.

But however harmless the formula "one nature" might look at first sight, it led in fact immediately to serious and disastrous consequences. The Divine Nature of the Word is not merely specifically but numerically one with the Divine Nature of the Son and the Holy Ghost. This is the meaning of the word *homousios* applied to the Three Persons, and if Harnack were right in supposing that at the Council of Constantinople in 381 the word was taken to imply only three Persons of one species, then that Council accepted three Gods, and not three distinct but inseparable Persons in one God. Now if the Divine and Human Natures are united in the Word into one Nature, it is impossible to avoid one of two conclusions, either that the whole Divine Nature became man and suffered and died, or else that each of the three Persons had a Divine Nature of His own. In fact the Monophysites split upon this question. Ælurus and Severus seem to have avoided the difficulty, but it was not long before those who refused the latter alternative were taunted with the necessity of embracing the former, and were nicknamed Theopaschites, as making God to suffer. Vehemently Severus and his school declared that they made the Divinity to suffer not as God, but only as man; but this was insufficient as a reply. Their formula was not "The Word made flesh", "the Son of God made man", but "one Nature of the Word made flesh";—the Nature became flesh, that is the whole Divine Nature. They did not reply: "We mean hypostasis when we say nature, we do not mean the Divine Nature (which the Word has in common with the Father and the Holy Ghost) but His Divine Person, which in the present case we call His *phōsis*", for the *phōsis* τοῦ Θεοῦ Λόγου, before the word *σεσαρκωμένη* has been added, is in the sphere of "theology" not of "the economy", and its signification could not be doubted.

Just as there were many "Eutychians" among the Monophysites who denied that Christ is consubstantial with us, so there were found many to embrace boldly the paradox that the Divine Nature has become incarnate. Peter Fullo added to the praise of the Trinity the words "who was crucified for us", and refused to allow the natural inference to be explained away. Stephen Niobes and the Niobites expressly denied all distinction between the Human and the Divine Natures after the union. The Actistetes declared that the Human Nature became "uncreated" by the union. If the greatest theologians of the sect, Severus and Philoxenus, avoided these excesses, it was by a refusal to be logically Monophysite.

It was not only the orthodox who were scandalized by these extreme views. An influential and very learned section of the schism rebelled, and chose the second of the two alternatives,—that of making the Divine Nature itself threefold, in order to ensure that the Human Nature in Christ was made one with the Nature of the Son alone and not with the whole Divine Nature. John Philoponus, the Aristotelian commentator, therefore taught that there are in the Trinity three partial substances (*μερικαὶ ὁσείας*) and one common substance (*μία κοινή*), thus falling into Polytheism, with three, or rather four, gods. This Tritheistic party was treated with leniency. It split into sections. Though they were excommunicated at Alexandria, the Patriarch Damian held a view not far different. He so distinguished between the Divine *ὁσία* and the three Hypostases which partake (*μετέχουσιν*) in it, that he conceded the *ὁσία* to be existent of Itself (*ἐνυπόστατος*),

and his followers were nicknamed Tetradiates. Thus Peter Fullo, the Actistetes, and the Niobites on the one hand, and the Tritheists and Damianists on the other, developed the Monophysite formulæ in the only two possible directions. It is obvious that formulæ which involved such alternatives were heretical in fact as well as in origin. Severus tried to be orthodox, but at the expense of consistency. His "corruptibilist" view is true enough, if the Human Nature is considered in the abstract apart from the union (see EUTYCHIANISM), but to consider it thus as an entity was certainly an admission of the Two Natures. All change and suffering in Christ must be (as the Julianists and Justinian rightly saw) strictly voluntary, in so far as the union gives to the Sacred Humanity a right and claim to beatification and (in a sense) to deification. But Severus was willing to divide the Natures not merely "before" the union (that is, logically previous to it) but even after the union "theoretically", and he went so far in his controversy with the orthodox John the Grammarian as to concede *deus phoresis et theupla*. This was indeed an immense concession, but considering how much more orthodox were the intentions of Severus than his words, it is scarcely astonishing, for St. Cyril had conceded much more.

But though Severus went so far as this, it is shown elsewhere (see EUTYCHIANISM, MAXIMUS CONFESSOR, and especially MONOTHELITISM) that he did not avoid the error of giving one activity to our Lord, one will, and one knowledge. It is true enough that he had no intention of admitting any incompleteness in the Humanity of Christ, and that he and all the Monophysites started merely from the proposition that all activity, all will, and intelligence proceed from the person, as ultimate principle, and on this ground alone they asserted the unity of each in Christ. But it was on this ground that Monothelitism was condemned. It was not supposed by the best Catholic theologians who attacked that doctrine that the Monophysites denied Christ to have exercised human activities, human acts of the will, human acts of cognition; the error was clearly recognized as lying in the failure to distinguish between the human or the mixed (theandric) activity of Christ as Man, and the purely Divine activity, will, knowledge, which the Son has in common with the Father and the Holy Spirit, and which are in fact the Divine Nature. In speaking of one activity, one will, one knowledge in Christ, Severus was reducing Monophysitism to pure heresy just as much as did the Niobites or the Tritheists whom he certainly held in horror; for he refused to distinguish between the human faculties of Christ—activity, will, intellect—and the Divine Nature itself. This is not Apollinarianism, but is so like it that the distinction is theoretical rather than real. It is the direct consequence of the use of Apollinarian formulæ. St. Cyril did not go so far; and in this Monothelit error we may see the essence of the heresy of the Monophysites; for all fell into this snare, except the Tritheists, since it was the logical result of their mistaken point of view.

For general literature see EUTYCHIANISM. In P. G. there are more fragments than complete writings. Important collections are ASSEMANI, *Bibliotheca Orientalis* (Rome, 1719-28); CHABOT and others, *Corp. Script. Christ. Orient.*, *Script. Syri*; GRAFFIN and NAU, *Patrologia Orient.* (1905—, in progress); also de LAGARDE, *Analecta Syriaca* (Leipzig, 1858); LAND, *Anecdota Syriaca* (Leyden, 1870). For the very numerous Monophysite writings contained in Syriac MSS. see especially the following catalogues: ASSEMANI, *Bibl. Mediceo Laurentiana et Palatina MS. Orient. catal.* (Florence, 1742); IDEM, *Bibl. Apost. Vatic. catal.*, part I, vol. II-III (Rome, 1758-9); WRIGHT, *Catal. of the Syriac MS. in the Brit. Mus. acquired since 1838* (London, 1870-2); WRIGHT and COOK, *Catal. of Syriac MSS. of the Univ. of Cambridge* (Cambridge, 1901); SACHAU, *Handchrift-Verzeichnisse der K. Bibl. zu Berlin*, XXIII, *Syriaca MSS.* (Berlin, 1899), etc. On the literature in general see ASSEMANI, op. cit., II, *Dissertatio de Monophysitismo*; GIESSELER, *Commentatio qua Monophysitarum veterum errores ex eorum scriptis recens edici illustrantur* (Göttingen, 1835-8); WRIGHT, *Syriac Literature* (Encyclop. Brit., 9th ed., 1887; published separately as *A Short History of Syr. Lit.*, London, 1894); DUVAL, *La littérature Syriacque* (3rd ed., Paris, 1907); many excellent articles by KRÜGER in *Realencyclopädie*.

On TIMOTHY ELURUS see CRUM, *Eusebius and Coptic Church Hist.* in *Proc. of Soc. of Bibl. Arch.* (London, 1902); TER-MIKHEITSIAN AND TER-MINASSIAN, *Tim. Elurus' des Patriarches von Alexandrien, Widerlegung der auf der Synode zu Chalcedon festgesetzten Lehre*, ARMENIAN text (Leipzig, 1906); LEBON, *La Christologie de Tim. Elurus in Revue d'hist. eccl.* (Oct., 1908); IDEM, *La Monophysisme sévérien* (Louvain, 1909), 92-111.

For French tr. of the letters of PETER FULLO see RÉVILLIOUT in *Revue des Questions Hist.*, XXII (1877), 83, and (in Coptic and French) AMÉLINHAT, *Mon. pour servir à l'hist. de l'Égypte chrét.* (Paris, 1888); the Armenian text in ISMAELIAN, *The book of Letters, Armenian only* (Tiflis, 1901); the letters to Peter Mongus are in MANNI, VII, 1109 sqq.; in favour of their genuineness see PAGI's notes to BARONIUS, ad ann. 486, No. 15; against, VALENTIN, *Observ. eccl.*, 4 (in his edition of EVAGRIUS, Paris, 1673; P. G., LXXXVII), and TILLEMONT, XVI. Greek fragments from the homilies of TIMOTHY IV in *Cosmas Indicopleustes* (P. G., LXXXVIII), an entire homily in MAI, *Script. vet. nov. coll.*, V (1831), and P. G., LXXXVI. Fragments of THEODOREUS in *Cosmas* (ibid.), and of letters to Severus in P. G., LXXXVI; see also MANNI, X, 1117 and 1121. A letter from Theodosius to Severus and one to Anthimus in *Hist. Mss.*, IX, 24, 26.

On SEVERUS see ASSEMANI; KRÜGER in *Realencykl.* s. v.; VENABLES in *Dict. Christ. Biog.*; SPANUTH, *Zacharias Rhetor, Das Leben des Severus* (Syr. text, Göttingen, 1893); lives by ZACHARIAS and JOHN OF BEITH-APHTHOMIA, followed by a collection of documents concerning Severus, edited by KUGENER in *Patrol. Orient.*, II; *The Conflict of Severus*, by ATHANASIUS, Ethiopic text with English transl., ed. by GOODE, together with Coptic fragments of the same work, edited by CRUM, in *Patrol. Orient.*, III; DUVAL, *Homélies cathédrales de Sévère*, 52-7, Syriac and French, in *Patrol. Orient.*, II; BROOKS, *Sixth book of select letters of Severus in the Syriac version of Athanasius of Nisibis* (Text and Transl. Soc., London, 1904); EUSTATHIUS, *Σεβήριος ὁ Μονοφύσιτος* (Leipzig, 1894); PEISKER, *Severus von Antiochien, ein Kritischer Quellenbeitrag zur Geschichte des Monophysitismus* (Halle, 1903); and especially LEBON, *Le Monophysisme sévérien*, largely founded on the study of unpublished Syriac MSS. in the Brit. Mus. (Louvain, 1909).

On JULIAN see FABRICIUS, CAVE, GIESELER, DORNER, HARNACK; also DAVIDS in *Dict. Christ. Biog.* (1882); KRÜGER in *Realencycl.* (1901); LIETTMANN, *Catenen* (Freiburg, 1897); IDEM, *Aus Julian von Hal. in Rheinisch. Mus.*, LV (1900), 321. On JOHN PHILOPONUS see CAVE, FABRICIUS, ASSEMANI, DORNER, etc.; SCHARFENBERG, *Dissert. da Joanne Philop.* (Leipzig, 1768); DAVIDS in *Dict. Christ. Biog.*; NAUCK in *Allgemeine Encycl.*; STÖCKEL in *Kirchenlex.*, s. v. *Johannes Philoponus*; GASS and MEYER in *Realencycl.*; RITTER, *Gesch. der Philos.*, VI; KRUMHACKER, *Gesch. der byz. Litt.* (2nd ed., 1897), 53 and 581, etc.; LUDWIG, *De Joanne Philopono grammatico* (Königsberg, 1888-9). On ZACHARIAS see KUGENER, *La compilation historique de Ps.-Zach. le rhéteur in Revue de l'Orient Chrét.*, V (1900), 201; IDEM, *Observations sur la vie de l'ascète Isote et sur les vies de Pierre l'ib. et de Théodore d'Antioch par Zach. le Schol. in Byzant. Zeitschr.*, IX (1900), 464; in these articles KUGENER distinguishes the Rhetor from the Scholastic, whom he identifies with the bishop; but he has changed his mind as to KRÜGER, *Zach. Schol.*, in *Realencycl.* (1908). See also below under *Historia Miscellanea*.

The *Plerophoria* of JOHN of MATAMA are preserved in an abridgement in the *Chronicle* of MICHAEL SYR. A French translation by NAU, *Les Plerophories de Jean, évêque de Matouma in Revue de l'Orient chrét.* (1898-9, and separately, Paris, 1899). The life of PETER THE IBERIAN, RAABE, *Petrus der Iberer* (Leipzig, 1895); BROOKS, *Vita virorum apud Monophysitas celeberrimorum in Corp. Script. Orient.*, *Script. Syri*, 3rd series, 25, including the life of IESAIAS, which is also LAND, III (Paris, 1907); a Georgian version of this biography publ. by MARI (St. Petersburg, 1896); KUGENER in *Byzant. Zeitschr.*, IX (Leipzig, 1900), 464; CHABOT, *Pierre l'Ibérien d'après une récente publication in Revue de l'Orient latin*, III (1895), 2.

The *Historia Miscellanea* of PSEUDO-ZACHARIAS was published by LAND, loc. cit., III, in Syriac German tr. by AHERNS and KUGLER, *Die sogenannten Kirchengeschichte von Zach. Rh.* (Leipzig, 1899); HAMILTON and BROOKS, *The Syriac chronicle known as that of Zach. of Mitylene* (London, 1899, English only); see KUGENER, op. cit. For MICHAEL THE SYRIAN, CHABOT, *Chronique de Michel le Syrien* (Paris, 1901-2, in progress). There is an abridged Latin translation of the *Chronicle* of JOSEPH in ASSEMANI, loc. cit., I, 262-283; Syriac and French by MARTIN, *Chronique de Joseph le St. in Abhandlungen für die Kunde des Morgenlandes*, VI (Leipzig, 1876), 1; in Syriac and English by WRIGHT, *The Chronicle of J. the St.* (Cambridge, 1882); Syriac and Latin (*Chronicle of Edessa only*) in *Corpus Script. JOHN CHAPMAN.

Monopoli, DIOCESE OF (MONOPOLITANA), in the Province of Bari, in Apulia, southern Italy. The city has a small but good harbour on the Adriatic. It succeeded the ancient Egnatia, the ruins of which are not far from the modern town. In the eighth and ninth centuries, Monopoli was often ravaged by the Saracens. After the advent of the Norman counts, it became (1042) the seat of Hugues. During the war between France and Spain for the possession of the Kingdom of Naples Monopoli was taken twice by the Venetians (1495 and 1528), and on the second occasion was sacked. In 1552 Charles V surrounded the town with walls and towers that still exist. The episcopal see was created in 1062, and its first prelate was Deodatus. The cathedral was erected by the second bishop, Romualdus, in 1073. In 1118 Polignano, a small town situated on a high promontory along the Adriatic, was united to this diocese. The diocese is immediately subject to the Holy See; it has eight parishes, 65,000 inhabitants, and three educational institutes for girls.

CAFFELLETTI, *Le Chiese d'Italia*, XXI (Venice, 1887).

U. BENIGNI.

Monopoly, MORAL ASPECTS OF.—According to its etymology, monopoly (*μονοπωλία*) signifies exclusive sale, or exclusive privilege of selling. Present usage, however, extends the term to any degree of unified control over a commodity sufficient to enable the person or corporation in control to limit supply and fix price. The proportion of the supply of an article that must be controlled in order to attain these ends, depends upon many factors, and differs considerably in different industries. In the majority of monopolized businesses, it is somewhere between 70 and 90 per cent, although there are cases in which the unified control of a little more than one half the supply of the commodity seems to suffice. In most of the cases in which the monopoly controls less than three-fourths of a business, the independent dealers seem to have the power to overthrow the monopoly but prefer to take advantage of the higher prices and steadier market conditions established by the dominant concern. They are, consequently, passive factors in the monopolized condition of the trade. No matter how great the degree of control which the monopoly enjoys, its power over supply and prices is not absolute. Many economic and prudential considerations will restrain a monopoly from exercising this power to the extent that it might desire—for example, the fear of potential competition, the discovery of a substitute for the monopolized article,

or the possibility that people may get on without either the article or a substitute. But in all cases monopoly implies the ability deliberately to regulate supply and prices beforehand, and to fix both at some other point than that which would have been reached by the natural action of the market under normal competition. However inexpedient a monopoly may be, it is not in itself immoral. Its moral character depends entirely upon its actions and its effects. More specifically, its morality is determined by the prices that it establishes, and the methods that it employs toward actual or potential competitors.

I. **MONOPOLISTIC PRICES.**—According to the older moral theologians, monopoly prices were unjust when they were higher than the prices that would have prevailed under competition (cf. Lugo, "*De Justitia et de Jure*", disp. xxvi, n. 72). While this rule was substantially correct for the Middle Ages, when the competitive, or rather the customary, price was generally fair to both producers and consumers, it is far from acceptable to-day, when the competitive price is often too low to provide a just return to the agents of production. For competitive prices, as well as for monopoly prices, the objective rule of justice is that a thing should be sold at a price sufficiently high to remunerate fairly all who have contributed to the production of the thing; the subjective rule of justice is the social estimate, the price approved by competent and fair-minded men (cf. Tanqueray, "*De Justitia*", 776). If the monopoly price does not exceed these limits, it is not unjustly high, even though it be higher than the price that had obtained or would have obtained under the stress of competition. Since the different classes that help to produce a socially useful commodity have a right to a fair return for their services, and since this return can come only from the price at which the commodity is sold, the latter is unjustly low unless it is sufficient for this purpose. There is no hidden force in competition by which an unjust price can be made just. On the other hand, there is no secret virtue in monopoly to justify a selling price that is more than sufficient to render fair returns to the different agents of production. These propositions are accepted by the overwhelming majority of persons, whether experts or not; the practical, and the only serious difficulty is to determine precisely what is a fair return to each of the different agents.

Putting the matter as briefly and as summarily as possible, we may say that a just remuneration to the agents of production comprises: (1) a living wage for all labourers, and something more than this for those workers who possess exceptional ability or skill, who put forth unusual efforts, who perform disagreeable tasks, or who turn out exceptionally large products; (2) fair profits for the business man, on account of his activities as director of industry; (3) a fair rate of interest on the actual capital invested in the business. Fair recompense for the captain of industry in a monopoly will generally mean the amount that he could obtain in return for the same services in a competitive business. Although competition is not of itself a determinant of fair wages in the case of ordinary labour, inasmuch as it often forces remuneration below the level of decent living, it is generally fair to the director of industry, inasmuch as it enables him not merely to obtain a decent livelihood, but to maintain himself in accordance with that higher standard of living to which he has a reasonable claim. And it yields even more than this to those business men whose ability is exceptional. A fair rate of interest on monopoly capital will be the rate that prevails in competitive businesses that are subject to a like amount of risk. The capitalist or interest receiver as such, does not work, but is free to earn his livelihood by his labour from other sources. Thus, since

interest is not his sole means of livelihood, the just rate of interest is not determined by, nor does it bear any definite relation to, the content of a decent livelihood in the individual case. Consequently, competition may be the proper rule of justice for the interest receiver, as well as for the director of industry, although it is not always a just rule for the ordinary wage-earner.

What are the grounds for the assertion that the investor in a monopoly has no right to more than the competitive or prevailing rate of interest? The answer to this question is bound up with the more fundamental question concerning the basis of the right of any investor to receive any interest at all. But, no matter what answer we give to this latter question, no matter what justification of interest we may adopt, we cannot prove, we can have no ground upon which to erect the beginnings of a proof, that the capitalist has a right, as capitalist, to more than the prevailing or competitive rate of interest. If we assume that interest is justified as the product or fruit of capital, we have no reason to assert that the so-called product has a higher value than men attribute to it in the open market under competitive conditions. If we regard interest as the due reward of the capitalist's sacrifices in saving, we have no ground for maintaining that these are not fully remunerated in the current rate. If we adopt the theory that seems to be most satisfactory and least assailable, namely that interest is chiefly justified on grounds of social utility, inasmuch as the community would probably not have sufficient capital unless men were encouraged to save by the hope of interest, we must likewise conclude that the current competitive rate is sufficiently high, since it brings forth sufficient saving and sufficient capital for society's needs. The argument based upon this theory may be stated summarily as follows: Since interest on capital cannot be shown to be unjust on individual grounds, that is as a payment from the purchaser of the product of capital to the owner of capital (for it must be remembered that the consumer is the real and final provider of interest on capital), it will be justified on social grounds if it is necessary in order to evoke sufficient social capital; and there is an overwhelming probability that it is necessary for this purpose. Since interest is justified only for this purpose and to this extent, the just rate of interest cannot be higher than the rate that attains this end, which in our time is the competitive rate.

The doctrine that capital has no right to more than the competitive rate of interest is accepted by the social estimate everywhere (see Final Report of the U. S. Industrial Commission, p. 409). It is implicitly asserted in the teaching of the theologians that the competitive rate is the just rate in the case of money loaned (cf. Tanquerey, "De Justitia", n. 906). Where the risk and other circumstances are the same, men do not value an investment any higher than a loan; they will put their money into the one or the other indifferently; consequently, it would seem clear that, when the circumstances just referred to are the same, a fair return on invested money need not exceed a fair return on loaned money. To be sure, investors and business men do obtain more than the competitive rate of interest in some years and in some enterprises, even where competition is active and constant; but this advantage is either offset by exceptionally low rates in other years, or it is due to unusual business ability, or it arises from an increase in the value of the land connected with the enterprise. In all these cases the exceptionally high rate is undoubtedly lawful morally, but the excess is due to other factors than the capital pure and simple. Since the prevailing or competitive rate is sufficiently high to satisfy the demands of justice in businesses that are subject to competition, there seems to be no good reason why it is not, gener-

ally speaking, sufficiently high in monopolistic concerns. The owner of a monopoly has no more right to take advantage of the helplessness of the consumer in order to extort an exceptionally high rate of interest on his investment than the money-lender has to exploit the distress of the borrower in order to exact an exorbitant rate of interest on the loan. It would seem that the only exception to this rule would occur when the monopoly, while paying a fair wage to labour and a fair price to those from whom it buys materials, introduces economies of production which enable it to sell its goods at less than the prices charged by its competitors, and yet make unusual profits and interest on its investment. In such a case it seems reasonable that a monopolistic concern (more properly, its active directors, who alone have effected the productive economies) should receive some of the benefits of the cheaper methods of production. On the other hand, there is no good reason why the monopoly should appropriate all the benefits of the improvement. If it does not share them with the consumer by reducing prices below the competitive level, it renders no social service to compensate for the social danger which is inherent in every monopolistic enterprise. As a matter of fact, the great majority of existing monopolies do not pay higher wages nor higher prices for material than competitive concerns, and yet they charge the consumer higher prices than would have prevailed under competition (cf. Final Report of the Industrial Commission, pp. 621, 625, 660).

In the preceding paragraphs reference is had to monopolistic concerns that fix prices without any supervision or restriction by the State. When the public authority exercises adequate control over the charges of public service monopolies, such as gas and street-railway companies, and determines these freely and honestly, it would seem that the monopolistic corporation has a right to collect the full amount of the charges established by the public authorities, even though they should yield unusual profits on the investment, for the presumption is that such charges are fair to both producer and consumer. No such presumption extends to those cases in which the state control over charges is only mildly corrective and partial, instead of fundamental and thorough.

II. MONOPOLISTIC METHODS.—The methods and practices employed by monopolies in dealing with their rivals did not occupy the attention of the older moral theologians who wrote on the subject of monopoly. Nor have recent writers given this phase of the subject the attention that it deserves. As a consequence, authoritative ethical teaching is as yet silent, whereas public opinion regards as immoral most of the practices by which monopolistic concerns harass and eliminate their competitors. Among the most notable of these methods are discriminative underselling, the factor's agreement, and railway favouritism.

Discriminative underselling occurs, when the monopoly sells its goods at unprofitably low prices in the territory in which it wishes to destroy competition, while imposing unreasonably high prices elsewhere. While the independent dealer who is driven out of business by this device has no strict right to the patronage of the customers who are drawn away from him through the low prices established by the monopoly, he has a right not to be deprived of that patronage by unjust methods. According to a general and far-reaching moral principle, a man is unjustly treated when he is prevented by unjust means from obtaining an advantage which he has a right to pursue (cf. Lehmkühl, "Theologia Moralis", I, n. 974; Tanquerey, "De Justitia", n. 588). Among the unjust means enumerated by the moral theologians are: force, fraud, deception, falsehood, intimidation, and extortion. Now when a manufacturer or a merchant is deprived of the patronage of his customers through ruinously low prices, which the monopoly is enabled to

maintain by means of the exorbitantly high prices that it establishes at another place or time, he is deprived of this advantage by unjust means. The unjustly high prices are as truly the means by which the independent dealer is injured, as the lying reports brought to a would-be benefactor are the means by which his intended beneficiary is deprived of a legacy. This is the stock example used by the moral theologians to illustrate the general principle stated above. When, however, a business concern eliminates a competitor by lowering prices universally, and keeping them low even after the latter has gone out of business, no injustice is done, because no unjust means are employed. Even when a monopolistic concern lowers prices everywhere at the same time, and raises them to an unjust level only after its competitors have been driven from the field, the latter would seem to be victims of injustice. For, although the unjust prices do not come into existence until after the injury has been accomplished, they are as certainly the means whereby the injury was done, as though they had been established simultaneously with the ruinously low prices. In both cases the exorbitant prices operate as the moral cause of the act by which the unprofitably low prices are established.

The factor's agreement is exemplified when a merchant engages to handle no goods, or no goods of a certain kind, except those manufactured by a monopoly; should the merchant decline to enter into this agreement, the monopolistic concern will refuse to sell him any goods at all. If the agreement is established, the result is that the rivals of the monopolistic manufacturing concern are deprived of the patronage of the merchant through intimidation. It is a species of secondary boycott, inasmuch as the monopoly refuses to have business intercourse with the merchant, unless the latter refuses to do business with the independent manufacturer. It seems sufficiently clear that boycotts of this kind are unreasonable and unjust whenever, as in this instance, there exists no sufficient reason for the intimidation and the refusal of intercourse (see LABOUR UNIONS, MORAL ASPECTS OF). Indeed, the motive of the monopoly is, as a rule, not merely lacking in reasonableness, but positively unjust; for its ultimate aim is not simply to acquire the patronage that now goes to its rivals, but in addition to raise prices to the consumer after its rivals have been eliminated.

Railway favouritism is the most important of all the methods of monopoly. It has in all probability been as effective in creating and maintaining monopolies as all the other methods combined. It appears under many forms, but its essence is found in the fact that the goods dealt in by a monopoly are carried by the railroad at a rate so much below that charged to independent dealers that the latter must either go out of business or be content with insufficient profits. This practice is undoubtedly immoral: (1) because it is forbidden by the civil law; (2) because the railroad, as a quasi-public agency, is under obligation to treat all its patrons with the same distributive justice that the state itself would be obliged to accord them if it were the owner of the railroads; (3) because the lower charges collected from the monopoly imply unjustly high charges extorted from the independent shippers. As a violation of the civil law, railway favouritism is against legal justice; as unequal treatment of different patrons, it is a violation of both distributive and commutative justice, precisely as the unequal imposition of taxes violates both these forms of justice. If the rate accorded to the monopoly for carrying its goods is sufficiently high to be just, the higher rate imposed upon its rivals exceeds the limits of justice. If the former rate is so low as to be unremunerative to the railroad, the injustice done to the independent dealers is still greater, inasmuch as they are compelled to bear a part of the charges that should be defrayed by

the monopoly. The favours accorded to the latter are not deducted from the normal revenues and profits of the railway company.

As a matter of purely natural justice, a railroad might concede somewhat lower carrying rates to a monopolistic concern because the monopoly ships goods in larger lots. The cost of such transportation is always smaller than when the same volume of goods is carried in separate lots for several different concerns. Nevertheless, even this degree of favouritism is a violation of legal justice, and frequently a violation of charity as regards the smaller shipping concerns. Inasmuch as the practice of railway favouritism to monopolies is seldom confined within these narrow limits, the question raised in this paragraph is not of much practical importance. Again, the railroad might be absolved from the charge of violating natural justice if the lower rates which it extended to the monopoly did not fall below the lowest level (*pretium infimum*) of justice, while the charges exacted from the independent shippers did not exceed the highest level (*pretium summum*) sanctioned by justice. A private enterprise, such as a mercantile concern, could probably be absolved from the stigma of injustice if it indulged in this practice toward its different customers. But, as we have seen above, a railway is not a purely private concern. Since it performs a quasi-public function, it would seem to be bound by the same rules of distributive justice that would govern the State, if the latter were operating the business of transportation. The share of the monopoly in the immorality and injustice connected with railway favouritism consists in the fact that it requests, urges, and sometimes intimidates the railway to indulge in the practice. The monopoly is therefore a co-operator. In the language of the moral theologians, it is a *mandans*, or principal, and likewise a *participans*, or beneficiary (frequently the only beneficiary) of the injustice done to its rivals through overcharges for transportation.

While monopoly is not necessarily unjust, and while any particular monopoly may be free from unjust practices, experience shows that the power to commit injustice which is included in monopoly cannot be unreservedly entrusted to the average human being or group of human beings. Consequently, it is the duty of public authority to prevent the existence of unnecessary monopolies, and to exercise such supervision over necessary monopolies as to render impossible monopolistic injustice, whether against the independent business man through unjust methods, or the consumer through unjust prices. Many of the moral judgments enunciated in this article will perhaps strike the reader as lacking in positiveness, inasmuch as they are modified by such phrases as "it would seem," "it is probable," "it is reasonable". Yet no other course was possible. Concerning most of the specific questions discussed in the foregoing pages, there exists no specific teaching by the Church, or even by the unanimous voice of theologians. There are not even well-defined bodies of theological opinion. All that can be done is to draw conclusions from, and make specific applications of, the more general principles of justice as found in approved Catholic sources.

JOHN A. RYAN.

Monothelism (from the Greek *μόνος* "only," and *θεός* "god") is a word coined in comparatively modern times to designate belief in the one supreme God, the

Creator and Lord of the world, the eternal Spirit, All-powerful, All-wise, and All-good, the Rewarder of good and Punisher of evil, the Source of our happiness and perfection. It is opposed to Polytheism, which is belief in more gods than one, and to Atheism, which is disbelief in any deity whatsoever. In contrast with Deism, it is the recognition of God's presence and activity in every part of creation. In contrast with Pantheism, it is belief in a God of conscious freedom, distinct from the physical world. Both Deism and Pantheism are religious philosophies rather than religions.

On the other hand, Monotheism, like Polytheism, is a term applying primarily to a concrete system of religion. The grounds of reason underlying monotheism have already been set forth in the article GOD. These grounds enable the inquiring mind to recognize the existence of God as a morally certain truth. Its reasonableness acquires still greater force from the positive data associated with the revelation of Christianity. (See REVELATION.)

PRIMITIVE MONOTHEISM.—Was monotheism the religion of our first parents, and hence the primitive form of religion? Many Evolutionists and Rationalist Protestants answer No. Rejecting the very notion of positive, Divine revelation, they hold that the mind of man was in the beginning but little above that of his ape-like ancestors, and hence incapable of grasping so intellectual a conception as that of Monotheism.

They assert that the first religious notions entertained by man in his upward course towards civilization were superstitions of the grossest kind. In a word, primitive man was, in their opinion, a savage, differing but little from existing savages in his intellectual, moral, and religious life. Catholic doctrine teaches that the religion of our first parents was monotheistic and supernatural, being the result of Divine revelation. Not that primitive man without Divine help could not possibly have come to know and worship God. The first man, like his descendants to-day, had by nature the capacity and the aptitude for religion. Being a man in the true sense, with the use of reason, he had the tendency then, as men have now, to recognize in the phenomena of nature the workings of a mind and a will vastly superior to his own. But, as he lacked experience and scientific knowledge, it was not easy for him to unify the diverse phenomena of the visible world. Hence he was not without danger of going astray in his religious interpretation of nature. He was liable to miss the important truth that, as nature is a unity, so the God of nature is one. Revelation was morally necessary for our first parents, as it is for men to-day, to secure the possession of true monotheistic belief and worship.

The conception that Almighty God vouchsafed such a revelation is eminently reasonable to everyone who recognizes that the end of man is to know, love, and serve God. It is repugnant to think that the first generations of men were left to grope in the dark, ignorant alike of the true God and of their religious duties, while at the same time it was God's will that they should know and love Him. The instruction in religion which children receive from their parents and superiors, anticipating their powers of independent reasoning, and guiding them to a right knowledge of God, being impossible for our first parents, was not without a fitting substitute. They were set right from the first in the knowledge of their religious duties by a Divine revelation. It is a Catholic dogma, intimately connected with the dogma of original sin and with that of the Atonement, that our first parents were raised to the state of sanctifying grace and were destined to a supernatural end, namely, the beatific vision of God in heaven. This necessarily implies supernatural faith, which could come only by revelation.

Nor is there anything in sound science or philosophy to invalidate this teaching that Monotheistic belief was imparted by God to primitive man. While it may be true that human life in the beginning was on a comparatively low plane of material culture, it is also true that the first men were endowed with reason, i. e. with the ability to conceive with sufficient distinctness of a being who was the cause of the manifold phenomena presented in nature. On the other hand, a humble degree of culture along the lines of art and industry is quite compatible with right religion and morality, as is evident in the case of tribes converted to Catholicism in recent times; while retaining much of their rude and primitive mode of living, they have reached very clear notions concerning God and shown remarkable fidelity in the observance of His law. As to the bearing of the Evolutionistic hypothesis on this question, see FETISHISM.

It is thus quite in accordance with the accredited results of physical science to maintain that the first man, created by God, was keen of mind as well as sound of body, and that, through Divine instruction, he began life with right notions of God and of his moral and religious duties. This does not necessarily mean that his conception of God was scientifically and philosophically profound. Here it is that scholars are wide of the mark when they argue that Monotheism is a conception that implies a philosophic grasp and training of mind absolutely impossible to primitive man.

The notion of the supreme God needed for religion is not the highly metaphysical conception demanded by right philosophy. If it were, but few could hope for salvation. The God of religion is the unspeakably great Lord on whom man depends, in whom he recognizes the source of his happiness and perfection; He is the righteous Judge, rewarding good and punishing evil; the loving and merciful Father, whose ear is ever open to the prayers of His needy and penitent children. Such a conception of God can be readily grasped by simple, unphilosophic minds—by children, by the unlettered peasant, by the converted savage.

Nor are these notions of a supreme being utterly lacking even where barbarism still reigns. Bishop Le Roy, in his interesting work, "Religion des primitifs" (Paris, 1909), and Mr. A. Lang, in his "Making of Religion" (New York, 1898), have emphasized a point too often overlooked by students of religion, namely, that with all their religious crudities and superstitions, such low-grade savages as the Pygmies of the Northern Congo, the Australians, and the natives of the Andaman Islands entertain very noble conceptions of the Supreme Deity. To say, then, that primitive man, fresh from the hand of God, was incapable of monotheistic belief, even with the aid of Divine revelation, is contrary to well-ascertained fact. From the opening chapters of Genesis we gather that our first parents recognized God to be the author of all things, their Lord and Master, the source of their happiness, rewarding good and punishing evil. The simplicity of their life made the range of their moral obligation easy of recognition. Worship was of the simplest kind.

MOsaic MONOTHEISM.—The ancient Hebrew religion, promulgated by Moses in the name of Jehovah (Jahweh), was an impressive form of Monotheism. That it was Divinely revealed is the unmistakable teaching of Holy Scripture, particularly of Exodus and the following books which treat explicitly of Mosaic legislation. Even non-Catholic Scriptural scholars, who no longer accept the Pentateuch, as it stands, as the literary production of Moses, recognize, in great part, that, in the older sources which, according to them, go to make up the Pentateuch, there are portions that reach back to the time of Moses, showing the existence of Hebrew monotheistic worship in his day.

Now, the transcendent superiority of this Monotheism taught by Moses offers a strong proof of its Divine origin. At a time when the neighbouring nations representing the highest civilization of that time—Egypt, Babylonia, Greece—were giving an impure and idolatrous worship to many deities, we find the insignificant Hebrew people professing a religion in which idolatry, impure rites, and a degrading mythology had no legitimate place, but where, instead, belief in the one true God was associated with a dignified worship and a lofty moral code. Those who reject the claim of Mosaic Monotheism to have been revealed have never yet succeeded in giving a satisfactory explanation of this extraordinary phenomenon. It was, however, pre-eminently the religion of the Hebrew people, destined in the fullness of time to give place to the higher monotheistic religion revealed by Christ, in which all the nations of the earth should find peace and salvation. The Jewish people was thus God's chosen people, not so much by reason of their own merit, as because they were destined to prepare the way for the absolute and universal religion, Christianity. The God of Moses is no mere tribal deity. He is the Creator and Lord of the world. He gives over to His chosen people the land of the Chanaanites. He is a jealous God, forbidding not only worship of strange gods, but the use of images, which might lead to abuses in that age of almost universal idolatry. Love of God is made a duty, but reverential fear is the predominant emotion. The religious sanction of the law is centred chiefly in temporal rewards and punishments. Laws of conduct, though determined by justice rather than by charity and mercy, are still eminently humane.

CHRISTIAN MONOTHEISM.—The sublime Monotheism taught by Jesus Christ has no parallel in the history of religions. God is presented to us as the loving, merciful Father, not of one privileged people, but of all mankind. In this filial relation with God—a relation of confidence, gratitude, love—Christ centres our obligations both to God and to our fellow-men. He lays hold of the individual soul and reveals to it its high destiny of Divine sonship. At the same time, He impresses on us the corresponding duty of treating others as God's children, and hence as our brethren, entitled not simply to justice, but to mercy and charity. To complete this idea of Christian fellowship, Jesus shows Himself to be the eternal Son of God, sent by His heavenly Father to save us from sin, to raise us to the life of grace and to the dignity of children of God through the atoning merits of His life and death. The love of God the Father thus includes the love of His incarnate Son. Personal devotion to Jesus is the motive of right conduct in Christian Monotheism. Co-operating in the sanctification of mankind is the Holy Ghost, the Spirit of truth and life, sent to confirm the faithful in faith, hope, and charity. These three Divine Persons, distinct from one another, equal in all things, Father, Son, and Holy Ghost, are one in essence, a trinity of persons in the one, undivided Godhead (see **TRINITY, THE**). Such is the Monotheism taught by Jesus. The guaranty of the truth of His teaching is to be found in His supreme moral excellence, in the perfection of His ethical teaching, in His miracles, especially His bodily resurrection, and in His wonderful influence on mankind for all time. (Cf. John, xvii, 3; I Cor., viii, 4.) As Christianity in its beginnings was surrounded by the polytheistic beliefs and practices of the pagan world, a clear and authoritative expression of Monotheism was necessary. Hence the symbols of faith, or creeds, open with the words: "I [we] believe in God (*θεός, deus*)" or, more explicitly, "I [we] believe in one God (*εἰς θεόν, unum deum*)". (See **Denziger-Bannwart**, "Enchiridion", 1-40; cf. **APOSTLES' CREED**; **ATHANASIAN CREED**; **NICENE CREED**.) Among the early heresies, some of the most important and most directly op-

posed to Monotheism arose out of the attempt to account for the origin of evil. Good they ascribed to one divine principle, evil to another. (See **GNOSTICISM**; **MANICHEISM**; **MARCIONITES**.) These dualistic errors gave occasion for a vigorous defence of Monotheism by such writers as St. Irenæus, Tertullian, St. Augustine, etc. (see **Bardenheuer-Shahan**, "Patrology", St. Louis, 1908).

The same doctrine naturally held the foremost place in the teaching of the missionaries who converted the races of Northern Europe; in fact, it may be said that the diffusion of Monotheism is one of the great achievements of the Catholic Church. In the various conciliar definitions regarding the Trinity of Persons in God, emphasis is laid on the unity of the Divine nature; see, e. g., Fourth Council of Lateran (1215), in **Denzinger-Bannwart**, "Enchiridion", 428. The medieval Scholastics, taking up the traditional belief, brought to its support a long array of arguments based on reason; see, for instance, St. Thomas, "Contra Gentes", I, xlii; and St. Anselm, "Monol.", iv. During the last three centuries the most conspicuous tendency outside the Catholic Church has been towards such extreme positions as those of Monism (q. v.) and Pantheism (q. v.), in which it is asserted that all things are really one in substance, and that God is identical with the world. The Church, however, has steadfastly maintained, not only that God is essentially distinct from all things else, but also that there is only one God. "If any one deny the one true God, Creator and Lord of all things visible and invisible, let him be anathema" (Conc. Vatican., Sess. III, "De fide", can. i).

MOHAMMEDAN MONOTHEISM.—Of Mohammedan Monotheism little need be said. The Allah of the Koran is practically one with the Jehovah of the Old Testament. Its keynote is *islam*, submissive resignation to the will of God, which is expressed in everything that happens. Allah is, to use the words of the Koran, "The Almighty, the All-knowing, the All-just, the Lord of the worlds, the Author of the heavens and the earth, the Creator of life and death, in whose hand is dominion and irresistible power, the great all-powerful Lord of the glorious throne. God is the Mighty, . . . the Swift in reckoning, who knoweth every ant's weight of good and of ill that each man hath done, and who suffereth not the reward of the faithful to perish. He is the King, the Holy, . . . the Guardian over His servants, the Shelterer of the orphan, the Guide of the erring, the Deliverer from every affliction, the Friend of the bereaved, the Consoler of the afflicted, . . . the generous Lord, the gracious Hearer, the Near-at-hand, the Compassionate, the Merciful, the Forgiving" (cited from "Islam", by Ameer Ali Syed). The influence of the Bible, particularly the Old Testament, on Mohammedan Monotheism is well known and need not be dwelt on here.

MONOTHEISM AND POLYTHEISTIC RELIGIONS.—What has thus far been said leads to the conclusion that Christian Monotheism and its antecedent forms, Mosaic and primitive Monotheism, are independent in their origin of the Polytheistic religions of the world. The various forms of polytheism that now flourish, or that have existed in the past, are the result of man's faulty attempts to interpret nature by the light of unaided reason. Wherever the scientific view of nature has not obtained, the mechanical, secondary causes that account for such striking phenomena as sun, moon, lightning, tempest, have invariably been mistaken for personal, living causes. The thunder has suggested the thunderer; the tempest, a mysterious living being of destructive tendencies; the sun, moon, and stars have been viewed either as living beings, or as inert bodies kept in movement by invisible, intelligent agents. This personalizing of the striking phenomena of nature was common among the highest pagan nations of antiquity. It is the common view

among peoples of inferior culture to-day. It is only since modern science has brought all these phenomena within the reign of physical law that the tendency to view them as manifestations of distinct personalities has been thoroughly dispelled. Now such a person-alizing of nature's forces is compatible with Monotheism so long as these different intelligencies fancied to produce the phenomena are viewed as God's creatures, and hence not worthy of Divine worship. But where the light of revelation has been obscured in whole or in part, the tendency to deify these personalities associated with natural phenomena has asserted itself.

In this way polytheistic nature-worship seems to have arisen. It arose from the mistaken application of a sound principle, which man everywhere seems naturally to possess, namely, that the great operations of nature are due to the agency of mind and will. Professor George Fisher observes: "The polytheistic religions did not err in identifying the manifold activities of nature with voluntary agency. The spontaneous feelings of mankind in this particular are not belied by the principles of philosophy. The error of polytheism lies in the splintering of that will which is immanent in all the operations of nature into a plurality of personal agents, a throng of divinities, each active and dominant within a province of its own" ("Grounds of Christian and Theistic Belief", 1903, p. 29). Polytheistic nature-worship is to be found among practically all peoples who have lacked the guiding star of Divine revelation. Such history of these individual religions as we possess offers little evidence of an upward development towards Monotheism; on the contrary, in almost every instance of known historic development, the tendency has been to degenerate further and further from the monotheistic idea. There is, indeed, scarcely a Polytheistic religion in which one of the many deities recognized is not held in honour as the father and lord of the rest. That this is the result of an upward development, as non-Catholic scholars very generally assert, is speculatively possible. But that it may as well be the outcome of a downward development from a primitive monotheistic belief cannot be denied. The latter view seems to have the weight of positive evidence in its favour. The ancient Chinese religion, as depicted in the oldest records, was remarkably close to pure Monotheism. The gross Polytheistic nature-worship of the Egyptians of later times was decidedly a degeneration from the earlier quasi-Monotheistic belief. In the Vedic religion a strong Monotheistic tendency asserted itself, only to weaken later on and change into Pantheism. The one happy exception is the upward development which the ancient Aryan Polytheism took in the land of the Iranians. Through the wise reform of Zoroaster, the various gods of nature were subordinated to the supreme, omniscient spirit, Ormuzd, and were accorded an inferior worship as his creatures. Ormuzd was honoured as the creator of all that is good, the revealer and guardian of the laws of religious and moral conduct, and the sanctifier of the faithful. The sense of sin was strongly developed, and a standard of morality was set forth that justly excites admiration. Heaven and hell, the final renovation of the world, including the bodily resurrection, were elements in Zoroastrian eschatology. A nobler religion outside the sphere of revealed religion is not to be found. Yet even this religion is rarely classed by scholars among monotheistic religions, owing to the polytheistic colouring of its worship of the subordinate nature-spirits, and also to its retention of the ancient Aryan rite of fire-worship, justified by Zoroastrians of modern times as a form of symbolic worship of Ormuzd.

The so-called survivals in higher religions, such as belief in food-eating ghosts, pain-causing spirits, witchcraft, the use of amulets and fetishes, are often cited as evidence that even such forms of Monotheism

as Judaism and Christianity are but outgrowths of lower religions. The presence of the greater part of these superstitious beliefs and customs in the more ignorant sections of Christian peoples is easily explained as the survival of tenacious customs that flourished among the ancestors of European peoples long before their conversion to Christianity. Again, many of these beliefs and customs are such as might easily arise from faulty interpretations of nature, unavoidable in unscientific grades of culture, even where the monotheistic idea prevailed. Superstitions like these are but the rank weeds and vines growing around the tree of religion.

CHARLES F. AIKEN.

Monotheitism and Monothelites (sometimes written MONOTHELETES, from *μονοθεληται*, but the *η* is more naturally transliterated into late Latin by *i*), a heresy of the seventh century, condemned in the Sixth General Council. It was essentially a modification of Monophysitism, propagated within the Catholic Church in order to conciliate the Monophysites, in hopes of reunion.

THE THEOLOGICAL QUESTION.—The Monophysites were habitually represented by their Catholic opponents as denying all reality to the human nature of Christ after the union. This was perhaps a logical deduction from some of their language, but it was far from being the real teaching of their chief doctors.

Yet at least it is certain that they made the unity of Christ (on which they insisted against real and supposed Nestorianizers) imply only one principle of intention and will, and only one kind of activity or operation (*ἐνέργεια*). Personality seemed to them to be manifested in will and action; and they thought a single personality must involve a single will and a single category of action. The Person of Christ, being divino-human, must therefore involve one divino-human will and one divino-human activity (see EUTYCHIANISM; MONOPHYSITES AND MONOPHYSITISM).

A. The two Wills.—The Catholic doctrine is simple, at all events in its main lines. The faculty of willing is an integral part of human nature: therefore, our Lord had a human will, since He took a perfect human nature. His Divine will on the other hand is numerically one with that of the Father and the Holy Ghost. It is therefore necessary to acknowledge two wills in Christ.

But if the word *will* is taken to mean not the faculty but the decision taken by the will (the will willed, not the will willing), then it is true that the two wills always acted in harmony: there were two wills willing and two acts, but one object, one will willed; in the phrase of St. Maximus, there were δύο θελήματα though μία γνῶμη. The word *will* is also used to mean not a decision of the will, but a mere velleity or wish, *voluntas ut natura* (θελημα) as opposed to *voluntas ut ratio* (βουλησις). These are but two movements of the same faculty; both exist in Christ without any imperfection, and the natural movement of His human will is perfectly subject to its rational or free movement. Lastly, the sensitive appetite is also

sometimes entitled *will*. It is an integral part of human nature, and therefore exists in the perfect human nature of Jesus Christ, but without any of the imperfection induced by original or actual sin: He can have no passions (in that sense of the word which implies a revolt against the reason), no concupiscence, no "will of the flesh". Therefore this "lower will" is to be denied in Christ, in so far as it is called a will, because it resists the rational will (it was in this sense that Honorius was said by John IV to have denied that Christ had a lower will); but it is to be asserted in Him so far as it is called will, because it obeys the rational will, and so is *voluntas per participationem*: in fact in this latter sense the sensual appetite is less improperly called *will* in Christ than in us, for *quo perfectior est volens, eo magis sensualitas in eo de voluntate habet*. But the strict sense of the word *will* (*voluntas, θέλημα*) is always the rational will, the free will. It is therefore correct to say that in Christ there are but two wills: the Divine will, which is the Divine nature, and the human rational will, which always acts in harmony with and in free subjection to the Divine will. The denial of more than one will in Christ by the heretics necessarily involved the incompleteness of His human nature. They confounded the will as faculty with the decision of the faculty. They argued that two wills must mean contrary wills, which shows that they could not conceive of two distinct faculties having the same object. Further, they saw rightly that the Divine will is the ultimate governing principle, τὸ ἡγεμονικόν, but a free human will acting under its leadership seemed to them to be otiose. Yet this omission prevents our Lord's actions from being free, from being human actions, from being meritorious, indeed makes His human nature nothing but an irrational, irresponsible instrument of the Divinity—a machine, of which the Divinity is the motive power. To Severus our Lord's knowledge was similarly of one kind—He had only Divine knowledge and no human cognitive faculty. Such thoroughgoing conclusions were not contemplated by the inventors of Monothelitism, and Sergius merely denied two wills in order to assert that there was no repugnance in Christ's human nature to the promptings of the Divine, and he certainly did not see the consequences of his own disastrous teaching.

B. *The two operations*.—Operation or energy, activity (*ἐνέργεια, operatio*), is parallel to will, in that there is but one activity of God, *ad extra*, common to all the three Persons; whereas there are two operations of Christ, on account of His two natures. The word *ἐνέργεια* is not here employed in the Aristotelean sense (*actus*, as opposed to *potentia, δύναμις*), for this would be practically identical with *esse* (*existentia*), and it is an open question amongst Catholic theologians whether there is one *esse* in Christ or two. Nor does *ἐνέργεια* here mean simply the *action* (as Vasquez, followed by de Lugo and others, wrongly held) but the faculty of action, including the act of the faculty. Petavius has no difficulty in refuting Vasquez, by referring to the writers of the seventh century; but he himself speaks of *duo genera operationum* as equivalent to *duo operationes*, which introduces an unfortunate confusion between *ἐνέργεια* and *πράξεις* or *ἐργήματα*, that is between faculty of action and the multiple actions produced by the faculty. This confusion of terms is frequent in modern theologians, and occurs in the ancients, e. g. St. Sophronius. The actions of God are innumerable in Creation and Providence, but His *ἐνέργεια* is one, for He has one nature of the three Persons. The various actions of the incarnate Son proceed from two distinct and unconfused *ἐνέργειαι*, because He has two natures. All are the actions of one subject (agent or *principium quod*), but are either divine or human according to the nature (*principium quo*) from which they are elicited. The Monophysites were therefore quite right in say-

ing that all the actions, human and divine, of the incarnate Son are to be referred to one agent, who is the God-man; but they were wrong in inferring that consequently His actions, both the human and the Divine, must all be called "theandric" or "divino-human", and must proceed from a single divino-human *ἐνέργεια*. St. Sophronius, and after him St. Maximus and St. John Damascene, showed that the two *ἐνέργειαι* produce three classes of actions, since actions are complex, and some are therefore mingled of the human and the divine. (1) There are Divine actions exercised by God the Son in common with the Father and the Holy Ghost (e. g. the creation of souls or the conservation of the universe) in which His human nature bears no part whatever, and these cannot be called divino-human, for they are purely Divine. It is true that it is correct to say that a child ruled the universe (by the *communicatio idiomatum*), but this is a matter of words, and is an accidental, not a formal predication—He who became a child ruled the universe as God, not as a child, and by an activity that is wholly Divine, not divino-human. (2) There are other Divine actions which the Word Incarnate exercised in and through His human nature, as to raise the dead by a word, to heal the sick by a touch. Here the Divine action is distinguished from the human actions of touching or speaking, though it uses them, but through this close connexion the word *theandric* is not out of place for the whole complex act, while the Divine action as exercised through the human may be called formally theandric, or divino-human. (3) Again, there are purely human actions of Christ, such as walking or eating, but these are due to the free human will, acting in response to a motion of the Divine will. These are elicited from a human *potentia*, but under the direction of the Divine. Therefore they are also called theandric, but in a different sense—they are materially theandric, humano-divine. We have seen therefore that to some of our Lord's actions the word theandric cannot be applied at all; to some it can be applied in one sense, to others in a different sense. The Lateran Council of 649 anathematized the expression *una deivirilis operatio, μία θεωδρικὴ ἐνέργεια*, by which all the actions divine and human are performed. It is unfortunate that the respect felt for the writings of Pseudo-Dionysius Areopagita has prevented theologians from proscribing the expression *deivirilis operatio* altogether. It has been shown above that it is correct to speak of *deiviriles actus* or *actiones* or *ἐνέργηματα*. The *καὶνὴ θεωδρικὴ ἐνέργεια*, of Pseudo-Dionysius was defended by Sophronius and Maximus as referring to the Divine *ἐνέργεια* when producing the mixed (formally theandric) acts; theandric thus becomes a correct epithet of the Divine operation under certain circumstances, and that is all.

Though the Monophysites in general spoke of "one theandric operation", yet a speech of St. Martin at the Lateran Council tells us that a certain Colluthus would not go even so far as this, for he feared lest "theandric" might leave some operation to the human nature; he preferred the word *θεοκοπρέπης, Deo decibilis* (Mansi, X, 982). The denial of two operations, even more than the denial of two wills, makes the human nature of Christ an inanimate instrument of the Divine will. St. Thomas points out that though an instrument participates in the action of the agent who uses it, yet even an inanimate instrument has an activity of its own; much more the rational human nature of Christ has an operation of its own under the higher motion it receives from the divinity. But by means of this higher motion, the two natures act in concert, according to the famous words of St. Leo's Tome: "Agit enim utraque forma cum alterius communiōne quod proprium est; Verbo scilicet operante quod Verbi est, et carne exsequente quod carnis est. Unum horum coruscatur miraculis, aliud succumbit in-

juris" (Ep. 28, 4). These words were quoted by Cyrus, Sergius, Sophronius, Honorius, Maximus, etc., and played a large part in the controversy. This intercommunication of the two operations follows from the Catholic doctrine of the *περίχωρησις, circuminsessio*, of the two unconfused and inseparable natures, as again St. Leo: "Exprimit quidem sub distinctis actionibus veritatem suam utraque natura, sed neutra se ab alterius connexione disjungit" (Serm. liv, 1). St. Sophronius (Mansi, XI, 480 sqq.) and St. Maximus (Ep. 19) expressed this truth at the very outset of the controversy as well as later; and it is insisted upon by St. John Damascene. St. Thomas (III, Q. xix, a. 1) well explains it: "Motum participat operationem moventis, et movens utitur operatione moti, et sic utrumque agit cum communicatione alterius". Krüger and others have doubted whether it could be said that the question of two operations was already decided (as Loofs held), in Justinian's time. But it seems that St. Leo's words, yet earlier, were clear enough. The writings of Severus of Antioch assumed that his Catholic opponents would uphold two operations, and an obscure monk in the sixth century, Eustathius (De duabus naturis, P. G., LXXXVI, 909) accepts the expression. Many of the numerous citations from the Greek and Latin Fathers adduced at the Lateran Council and on other occasions are inconclusive, but some of them are clear enough. Really learned theologians like Sophronius and Maximus were not at a loss, though Cyrus and Honorius were puzzled. The Patriarch Eulogius of Alexandria (580-607) had written against those who taught one will, but his work was unknown to Cyrus and Sergius.

HISTORY.—The origin of the Monothelite controversy is thus related by Sergius in his letter to Pope Honorius. When the Emperor Heraclius in the course of the war which he began about 619, came to Theodosiopolis (Erzeroum) in Armenia (about 622), a Monophysite named Paul, a leader of the Acephali, made a speech before him in favour of his heresy. The emperor refuted him with theological arguments, and incidentally made use of the expression "one operation" of Christ. Later on (about 626) he inquired of Cyrus, Bishop of Phasis and metropolitan of the Laz, whether his words were correct. Cyrus was uncertain, and by the emperor's order wrote to Sergius the Patriarch of Constantinople, whom Heraclius greatly trusted, for advice. Sergius in reply sent him a letter said to have been written by Mennas of Constantinople to Pope Vigilius and approved by the latter, in which several authorities were cited for one operation and one will. This letter was afterwards declared to be a forgery and was admitted to be such at the Sixth General Council. Nothing more occurred, according to Sergius, until in June, 631, Cyrus was promoted by the emperor to the See of Alexandria. The whole of Egypt was then Monophysite, and it was constantly threatened by the Saracens. Heraclius was doubtless very anxious to unite all to the Catholic Church, for the country was greatly weakened by the dissensions of the heretics among themselves, and by their bitterness against the official religion. Former emperors had made efforts for reunion, but in the fifth century the Henoticon of Zeno had been condemned by the popes yet had not satisfied all the heretics, and in the sixth century the condemnation of the three Chapters had nearly caused a schism between East and West without in the least placating the Monophysites. Cyrus was for the moment more successful. Imagining, no doubt, as all Catholics imagined, that Monophysitism involved the assertion that the human nature of Christ was a nonentity after the Union, he was delighted at the acceptance by the Monophysites of a series of nine *Capitula*, in which the Chalcedonian "in two natures" is asserted, the "one composite hypostasis", and *φύσιν καὶ καὶ ὑπόστασιν ἑνὴν*, together with the adverbs *ἀσπλάγχνον, ἀφάρτητον,*

ἀσπλάγχνον. St. Cyril, the great doctor of the Monophysites, is cited; and all is satisfactory until in the seventh proposition our Lord is spoken of as "working His Divine and His human works by one theandric operation, according to the divine Dionysius". This famous expression of the Pseudo-Dionysius the Areopagite is taken by modern critics to show that he wrote under Monophysite influences. But Cyrus believed it to be an orthodox expression, used by Mennas, and approved by Pope Vigilius. He was triumphant therefore at the reunion to the Church of a large number of Theodosian Monophysites, so that, as Sergius phrases it, all the people of Alexandria and nearly all Egypt, the Thebaid, and Libya had become of one voice, and whereas formerly they would not hear even the name of St. Leo and of the Council of Chalcedon, now they acclaimed them with a loud voice in the holy mysteries. But the Monophysites saw more clearly, and Anastasius of Mount Sinai tells us that they boasted "they had not communicated with Chalcedon, but Chalcedon with them, by acknowledging one nature of Christ through one operation".

St. Sophronius, a much venerated monk of Palestine, soon to become Patriarch of Jerusalem, was in Alexandria at this time. He strongly objected to the expression "one operation", and unconvinced by Cyrus's defence of it, he went to Constantinople, and urged on Sergius, upon whose advice the expression had been used, that the seventh capitulum must be withdrawn. Sergius thought this too hard, as it would destroy the union so gloriously effected; but he was so far impressed that he wrote to Cyrus that it would be well for the future to drop both expressions "one operation" and "two operations", and he thought it necessary to refer the whole question to the pope. (So far his own story.) This last proceeding must warn us not to judge Sergius too harshly. It may be invention that he was born of Monophysite parents (so Anastasius of Sinai); at all events he was an opponent of the Monophysites, and he based his defence of "one operation" on the citations of Fathers in the spurious letter of his orthodox predecessor Mennas, which he believed to have had the approval of Pope Vigilius. He was a politician who evidently knew little theology. But he had more to answer for than he admits. Cyrus had not really been doubtful at first. His letter to Sergius with great politeness explains that he had said the emperor was wrong, and had quoted the famous words of St. Leo's Tome to Flavian: "Agit utraque natura cum alterius communione quod proprium est" as plainly defining two distinct but inseparable operations; Sergius was responsible for leading him into error by sending him the letter of Mennas. Further, St. Maximus tells us that Sergius had written to Theodore of Pharan asking his opinion; Theodore agreed. (It is probable that Stephen of Dora was mistaken in making Theodore a Monothelite before Sergius.) He also worked upon the Severian Paul the one-eyed, the same with whom Heraclius had disputed. He had requested George Arsas, a Monophysite follower of Paul the Black of Antioch, to furnish him with authorities for the "one operation", saying in his letter that he was ready to make a union on this basis. The Alexandrian St. John the Almsgiver (609 or 619) had taken this letter from Arsas with his own hand, and was only prevented by the irruption of the Saracens (619) from using it to obtain the deposition of Sergius.

In the letter to Honorius, Sergius unwittingly develops another heresy. He admits that "one operation", though used by a few Fathers, is a strange expression, and might suggest a denial of the unconfused union of two natures. But the "two operations" are also dangerous, by suggesting "two contrary wills, as though when the Word of God wished to fulfil His saving Passion, His humanity resisted and contradicted His will, and thus two contrary wills would be

introduced, which is impious, for it is impossible that in the same subject there should be two wills at once, and contrary to one another as to the same thing". So far he is right; but he continues: "For the saving doctrine of the holy Fathers clearly teaches that the intellectually animated flesh of the Lord never performs its natural movement apart from, and by its own impetus contrariwise to, the direction of the Word of God hypostatically united to it, but only at the time and in the manner and to the extent that the Word of God wishes," just as our body is moved by our rational soul. Here Sergius speaks of the natural will of the flesh, and of the Divine will, but makes no mention of the higher free will, which indeed is wholly subject to the Divine will. He may indeed be understood to include this intellectual will in "the intellectually animated flesh", but his thought is not clear, and his words simply express the heresy of one will. He concludes that it is best simply to confess that "the only begotten Son of God, who is truly both God and Man, works both the Divine and the human works, and from one and the same incarnate Word of God proceed indivisibly and inseparably both the Divine and the human operations as St. Leo teaches: *Agit enim utraque, etc.*" If these words and the quotation from St. Leo mean anything, they mean two operations; but Sergius's error lies precisely in deprecating this expression. It cannot be too carefully borne in mind that theological accuracy is a matter of definition, and definition is a matter of words. The prohibition of the right words is always heresy, even though the author of the prohibition has no heretical intention and is merely shortighted or confused. Honorius replied reproving Sophronius, and praising Sergius for rejecting his "new expression" of "two operations". He approves the recommendations made by Sergius, and has no blame for the capitula of Cyrus. In one point he goes further than either, for he uses the words: "Wherefore we acknowledge one Will of our Lord Jesus Christ." We may easily believe the testimony of Abbot John Symponus, who wrote the letter for Honorius, that he intended only to deny a lower will of the flesh in Christ which contradicted His higher will, and that he was not referring at all to His Divine will; but in connexion with the letter of Sergius such an interpretation is scarcely the more obvious one. It is clear that Honorius was not any more a wilful heretic than was Sergius, but he was equally incorrect in his decision, and his position made the mistake far more disastrous. In another letter to Sergius he says he has informed Cyrus that the new expressions, one and two operations, are to be dropped, their use being most foolish.

In one of the last four months of 638 effect was given to the pope's letter by the issue of an "Exposition" composed by Sergius and authorized by the emperor; it is known as the *Ecthesis* of Heraclius. Sergius died 9 Dec., a few days after having celebrated a council in which the *Ecthesis* was acclaimed as "truly agreeing with the Apostolic teaching", words which seem to be a reference to its being founded on the letter of Honorius. Cyrus received the news of this council with great rejoicings. The *Ecthesis* itself is a complete profession of Faith according to the five General Councils. Its peculiarity consists in adding a prohibition of the expression one and two operations, and an assertion of one will in Christ lest contrary wills should be held. The letter of Honorius had been a grave document, but not a definition of Faith binding on the whole Church. The *Ecthesis* was a definition. But Honorius had no cognizance of it, for he had died on 12 Oct. The envoys who came for the emperor's confirmation of the new Pope Severinus refused to recommend the *Ecthesis* to the latter, but promised to lay it before him for judgment (see MAXIMUS OF CONSTANTINOPLE). Severinus, not consecrated until May, 640, died two months later, but not without

having condemned the *Ecthesis*. John IV, who succeeded him in December, lost no time in holding a synod to condemn it formally. When Heraclius, who had merely intended to give effect to the teaching of Honorius, heard that the document was rejected at Rome, he disowned it in a letter to John IV, and laid the blame on Sergius. He died Feb., 641. The pope wrote to the elder son of Heraclius, saying that the *Ecthesis* would doubtless now be withdrawn, and apologizing for Pope Honorius, who had not meant to teach one human will in Christ. St. Maximus Confessor published a similar defence of Honorius, but neither of these apologists says anything of the original error, the forbidding of the "two operations", which was soon to become once more the principal point of controversy. In fact on this point no defence of Honorius was possible. But Pyrrhus, the new Patriarch of Constantinople, was a supporter of the *Ecthesis* and confirmed it in a great council, which St. Maximus, however, reproves as irregularly convoked. After the death of Constantine and the exile of his brother Heracleonas, Pyrrhus himself was exiled to Africa. Here he was persuaded in a famous controversy with St. Maximus (q. v.) to renounce the appeal to Vigilius and Honorius and to condemn the *Ecthesis*; he went to Rome and made his submission to Pope Theodore, John IV having died (Oct., 642).

Meanwhile protests from the East were not wanting. St. Sophronius, who, after becoming Patriarch of Jerusalem, died just before Sergius, had yet had time to publish at his enthronisation a formal defence of the dogma of two operations and two wills, which was afterwards approved by the sixth council. This remarkable document was the first full exposition of the Catholic doctrine. It was sent to all the patriarchs, and St. Sophronius humbly asked for corrections. His references to St. Leo are interesting, especially his statement: "I accept all his letters and teachings as proceeding from the mouth of Peter the Corypheus, and I kiss them and embrace them with all my soul". Further on he speaks of receiving St. Leo's definitions as those of Peter, and St. Cyril's as those of Mark. He also made a large collection of testimonies of the Fathers in favour of two operations and two wills. He finally sent to Rome Stephen, Bishop of Dora, the first bishop of the patriarchate, who has given us a moving description of the way in which the saint led him to the holy place of Calvary and there charged him, saying: "Thou shalt give an account to the God who was crucified for us in this holy place, in His glorious and awful advent, when He shall come to judge the living and the dead, if thou delay and allow His Faith to be endangered, since, as thou knowest, I am myself let, by reason of the invasion of the Saracens which is come upon us for our sins. Swiftly pass, then, from end to end of the world, until thou come to the Apostolic See, where are the foundations of the holy doctrines. Not once, not twice, but many times, make clearly known to all those holy men there all that has been done; and tire not instantly urging and beseeching, until out of their apostolic wisdom they bring forth judgment unto victory." Urged by almost all the orthodox bishops of the East, Stephen made his first journey to Rome. On the death of St. Sophronius, his patriarchal see was invaded by the Bishop of Joppa, a supporter of the *Ecthesis*. Another heretic sat in the See of Antioch. At Alexandria the union with the Monophysites was shortlived. In 640 the city fell into the hands of the Arabians under Amru, and the unfortunate heretics have remained until today (save for a few months in 646) under the rule of the infidel. Thus the whole of the Patriarchates of Constantinople, Antioch, Jerusalem, and Alexandria were separated from Rome. Yet no doubt, except in Egypt, the great number of the bishops and the whole of their flocks were orthodox and had no wish to accept the *Ecthesis*.

The bishops of Cyprus, independent of any patriarch, held a synod 29 May, 643, against the *Ecthesis*. They wrote to Pope Theodore a letter of entreaty: "Christ, our God, has instituted your Apostolic chair, O holy head, as a God-fixed and immovable foundation. For thou, as truly spake the Divine Word, art Peter, and upon thy foundation the pillars of the Church are fixed, and to thee He committed the keys of the kingdom of Heaven. He ordered thee to bind and loose with authority on earth and in heaven. Thou art set as the destroyer of profane heresies, as Coryphaeus and leader of the orthodox and unsullied Faith. Despise not then, Father, the Faith of our Fathers, tossed by waves and imperilled; disperse the rule of the foolish with the light of thy divine knowledge, O most holy. Destroy the blasphemies and insolence of the new heretics with their novel expressions. For nothing is wanting to your orthodox and pious definition and tradition for the augmentation of the Faith amongst us. For we—O inspired one, you who hold converse with the holy Apostles and sit with them—believe and confess from of old since our very swaddling clothes, teaching according to the holy and God-fearing Pope Leo, and declaring that 'each nature works with the communion of the other what is proper to it', etc. They declare themselves ready to be martyred rather than forsake the doctrine of St. Leo: but their Archbishop Sergius, when the persecution arose, was found on the side of the persecutors, not of the martyrs. It is abundantly clear that St. Maximus and his Constantinopolitan friends, St. Sophronius and the bishops of Palestine, Sergius and his suffragans, had no notion that the Apostolic See had been compromised by the letters of Honorius, but they look to it as the only port of salvation. Similarly in 646 the bishops of Africa and the adjoining islands held councils, in the name of which the primates of Numidia, Byzacene and Mauritania sent a joint letter to Pope Theodore, complaining of the *Ecthesis*: "No one can doubt that there is in the Apostolic See a great and unfailing fountain pouring forth waters for all Christians", and so forth. They enclose letters to the emperor and to the patriarch Paul, to be sent to Constantinople by the pope. They are afraid to write directly, for the former governor, Gregory (who had presided at the disputation of his friend St. Maximus with Pyrrhus) had revolted and made himself emperor, and had just been defeated; this was a blow to orthodoxy, which it brought into discredit at Constantinople. Victor, elected primate of Carthage after the letters were written, added one of his own.

Paul, the patriarch whom the Emperor Constans had substituted for Pyrrhus, had not been acknowledged by Pope Theodore, who demanded of him that Pyrrhus should first be tried by a council before two representatives of the Holy See. Paul's reply is preserved: the views he exposes are those of the *Ecthesis*, and he defends them by referring to Honorius and Sergius. Theodore pronounced a sentence of deposition against him, and Paul retaliated by destroying the Latin altar which belonged to the Roman See in the palace of Placidia at Constantinople, in order that the papal envoys might be unable to offer the Holy Sacrifice; he also persecuted them, together with many orthodox laymen and priests, by imprisonment, exile, or stripes. But Paul, in spite of this violence, had no idea of resisting the definitions of Rome. Until now, Honorius had not been disowned there, but defended. It was said that he had not taught one will; but the prohibition in the *Ecthesis* of two operations was but an enforcement of the course Honorius had approved, and nothing had as yet, it seems, been officially published at Rome on this point. Paul, somewhat naturally, thought it would be sufficient if he dropped the teaching of one will, and prohibited all reference to one will or two wills as well as to one operation or two operations; it could hardly be urged that this was not

in accordance with the teaching of Pope Honorius. It would be a measure of peace, and East and West would be again united. Paul therefore persuaded the emperor to withdraw the *Ecthesis*, and to substitute for that elaborate confession of Faith a mere disciplinary measure forbidding all four expressions under the severest penalties; none of the emperor's orthodox subjects have any longer permission to quarrel over them, but no blame is to attach to any who may have used either alternative in the past. Transgression of this law is to involve deposition for bishops and clerics, excommunication and expulsion for monks, loss of office and dignity for officials, fines for richer laymen, corporal punishment and permanent exile for the poorer. By this cruel law heresy is to be blameless and orthodoxy forbidden. It is known as the Type of Constans. It is not a Monothelite document, for it forbids that heresy just as much as the Catholic Faith. Its date falls between Sept. 648 and Sept. 649. Pope Theodore died 5 May of the latter year, and was succeeded in July by St. Martin I. In October St. Martin held a great council at the Lateran, at which 105 bishops were present. The pope's opening speech gives a history of the heresy, and condemns the *Ecthesis*, Cyrus, Sergius, Pyrrhus, Paul, and the Type. John IV had spoken of Sergius with respect; and Martin does not mention Honorius, for it was obviously impossible to defend him if the Type was to be condemned as heresy. Stephen of Dora, then on his third visit to Rome, presented a long memorial, full of devotion to the Apostolic See. A deputation followed, of 37 Greek abbots residing in or near Rome, who had apparently fled before the Saracens from their various homes in Jerusalem, Africa, Armenia, Cilicia, etc. They demanded the condemnation of Sergius, Pyrrhus, Paul, and Cyrus and the anathematizing of the Type by the Apostolic and head See. The heretical documents read were part of a letter of Theodore of Pharan, the seventh proposition of Cyrus, the letter of Sergius to Cyrus, excerpts from the synods held by Sergius and Pyrrhus (who had now repented of his repentance), and the approval of the *Ecthesis* by Cyrus. The letter of Sergius to Honorius was not read, nor was anything said about the correspondence of the latter with Sergius. St. Martin summed up; then the letter of Paul to Pope Theodore and the Type were read. The council admitted the good intention of the latter document (so as to spare the emperor while condemning Paul), but declared it heretical for forbidding the teaching of two operations and two wills. Numerous excerpts from the Fathers and from Monophysite writers were read, and twenty canons were agreed to, the eighteenth of which condemns Theodore of Pharan, Cyrus, Sergius, Pyrrhus, Paul, the *Ecthesis*, and the Type, under anathema. A letter to the emperor was signed by all. An encyclical letter was sent throughout the Church in the name of St. Martin and the council, addressed to all bishops, priests, deacons, abbots, monks, ascetics, and to the entire sacred fulness of the Catholic Church. This was a final and complete condemnation of the Constantinopolitan policy. Rome had spoken ex cathedra.

Stephen of Dora had been before appointed papal vicar in the East, but he had by error been informed only of his duty to depose heretical bishops, and not that he was authorized to substitute orthodox bishops in their place. The pope now gave this commission to John, Bishop of Philadelphia in Palestine, who was ordered to appoint bishops, priests, and deacons in the patriarchates of Antioch and Jerusalem. Martin also sent letters to these patriarchates, and to Peter, who seems to have been governor, asking him to support his vicar; this Peter was a friend and correspondent of St. Maximus. The pope deposed John, Archbishop of Thessalonica, and declared the appointments of Macarius of Antioch and Peter of Alexandria to be null and void. Constans retaliated by having St.

Martin kidnapped at Rome, and taken a prisoner to Constantinople. The saint refused to accept the *Ecthesis*, and after sufferings, many of which he has himself related in a touching document, he died a martyr in the Crimea in March, 655 (see MARTIN I, POPE). St. Maximus (662), his disciple the monk Anastasius (also 662), and another Anastasius, a papal envoy (666), died of ill-treatment, martyrs to their orthodoxy and devotion to the Apostolic See.

While St. Martin was being insulted and tortured at Constantinople, the patriarch Paul was dying. "Alas, this will increase the severity of my judgment", he exclaimed to the emperor, who paid him a visit; and Constans was induced to spare the pope's life for the moment. At Paul's death Pyrrhus was restored. His successor Peter sent an ambiguous letter to Pope Eugenius, which made no mention of two operations, thus observing the prescription of the Type. The Roman people raised a riot when it was read in Sta. Maria Maggiore, and would not permit the pope to continue his Mass until he promised to reject the letter. Constans sent a letter to the pope by one Gregory, with a gift to St. Peter. It was rumoured at Constantinople that the pope's envoys would accept a declaration of "one and two wills" (two because of the natures, one on account of the union). St. Maximus refused to believe the report. In fact Peter wrote to Pope Vitalian (657-672) professing "one and two wills and operations" and adding mutilated quotations from the Fathers; but the explanation was thought unsatisfactory, presumably because it was only an excuse for upholding the Type. In 663 Constans came to Rome, intending to make it his residence, on account of his unpopularity at Constantinople, for besides putting the pope to death and proscribing the orthodox faith, he had murdered his brother Theodosius. The pope received him with all due honour, and Constans, who had refused to confirm the elections of Martin and Eugenius, ordered the name of Vitalian to be inscribed on the diptychs of Constantinople. No mention seems to have been made of the Type. But Constans did not find Rome agreeable. After spoiling the churches, he retired to Sicily, where he oppressed the people. He was murdered in his bath in 668. Vitalian vigorously opposed rebellion in Sicily, and Constantine Pogonatus, the new emperor, found the island at peace on his arrival. It does not seem that he took any interest in the Type, which was doubtless not enforced, though not abolished, for he was fully occupied with his wars against the Saracens until 678, when he determined to summon a general council to end what he regarded as a quarrel between the Sees of Rome and Constantinople. He wrote in this sense to Pope Donus (676-78), who was already dead. His successor St. Agatho thereupon assembled a synod at Rome and ordered others to be held in the West. A delay of two years was thus caused, and the heretical patriarchs Theodore of Constantinople and Macarius of Antioch assured the emperor that the pope despised the Easterns and their monarch, and they tried, but unsuccessfully, to get the name of Vitalian removed from the diptychs. The emperor asked for three representatives at least to be sent from Rome, with twelve archbishops or bishops from the West and four monks from each of the Greek monasteries in the West, perhaps as interpreters. He also sent Theodore into exile, probably because he was an obstacle to reunion.

The first session of the Sixth (Ecumenical) Council took place at Constantinople (7 Nov., 680), Constantine Pogonatus presiding and having on his left, in the place of honour, the papal legates. Macarius of Antioch was the only prelate who stood up for Monothelitism, and he was in due course condemned as a heretic (see MACARIUS OF ANTIOCH). The letters of St. Agatho and of the Roman Council insisted on the decisions of the Lateran Council, and repeatedly affirmed

the inerrancy of the Apostolic See. These documents were acclaimed by the council, and accepted by George, the new Patriarch of Constantinople and his suffragans. Macarius had appealed to Honorius; and after his condemnation a packet which he had delivered to the emperor was opened, and in it were found the letters of Sergius to Honorius and of Honorius to Sergius. As these were at best similar to the Type, already declared heretical, it was unavoidable that they should be condemned. The fifth council had set the example of condemning dead writers, who had died in Catholic communion, but George suggested that his dead predecessors might be spared, and only their teaching anathematized. The legates might have saved the name of Honorius also had they agreed to this, but they evidently had directions from Rome to make no objection to his condemnation if it seemed necessary. The final dogmatic decree contains the decisions of the five preceding general councils, condemns the *Ecthesis* and the Type, and heretics by name, including Honorius, and "greet with uplifted hands" the letters of Pope Agatho and his council (see HONORIUS I, POPE). The address to the emperor, signed by all the bishops, declares that they have followed Agatho, and he the Apostolic teaching. "With us fought the prince of the Apostles, for to assist us we had his imitator and the successor to his chair. The ancient city of Rome proffered you a divinely written confession and caused the daylight of dogmas to rise by the Western parchment. And the ink shone, and by Agatho, Peter spoke; and you, the autocrat king, voted with the Almighty who reigns with you." A letter to the pope was also signed by all the Fathers. The emperor gave effect to the decree in a lengthy edict, in which he echoes the decisions of the council, adding: "These are the teachings of the voices of the Gospels and the Apostles, these are the doctrines of the holy synods and of the elect and patristic tongues; these have been preserved untainted by Peter, the rock of the faith, the head of the Apostles; in this faith we live and reign." The emperor's letter to the pope is full of such expressions; as for example: "Glory be to God, Who does wondrous things, Who has kept safe the Faith among you unharmed. For how should He not do so in that rock on which He founded His Church, and prophesied that the gates of hell, all the ambushes of heretics, should not prevail against it? From it, as from the vault of heaven, the word of the true confession flashed forth," etc. But St. Agatho, a worker of many miracles, was dead, and did not receive the letter, so that it fell to St. Leo II to confirm the council. Thus was the East united again to the West after an incomplete but deplorable schism.

It would seem that in 687 Justinian II believed that the sixth council was not fully enforced, for he wrote to Pope Conon that he had assembled the papal envoys, the patriarchs, metropolitans, bishops, the senate and civil officials and representatives of his various armies, and made them sign the original acts which had recently been discovered. In 711 the throne was seized by Philipppus Bardanes, who had been the pupil of Abbot Stephen, the disciple "or rather leader" of Macarius of Antioch. He restored to the diptychs Sergius, Honorius, and the other heretics condemned by the council; he burned the acts (but privately, in the palace), he deposed the Patriarch Cyrus, and exiled some persons who refused to subscribe a rejection of the council. He fell, 4 June, 713, and orthodoxy was restored by Anastasius II (713-15). Pope Constantine had refused to recognize Bardanes. The intruded patriarch, John VI, wrote him a long letter of apology, explaining that he had submitted to Bardanes to prevent worse evils, and asserting in many words the headship of Rome over the universal Church. This was the last of Monothelitism.

The chief ancient authorities for our knowledge of the Mono-

thalites are the acts of the Lateran synod and of the sixth council, the works of St. MAXIMUS CONFESSOR and ANASTASIUS SINAITA, and the *Collectanea* of ANASTASIUS BIBLIOTHECARIUS. Of modern works only a few need be specially mentioned: COMBÉRIE, *Auctarium novum*, II (*Historia Monothelitarum et Dissertatio apologetica ad VI synodi*) (Paris, 1648); PETAVIUS, *De Incarnatione*, VIII, IX; HEFELÉ, *Hist. of Councils*, V (Eng. tr.); BARDENHEWER, *Ungedruckte Excerpts aus einer Schrift des Patriarchen Eulogius von Alexandria* (in *Theolog. Quartalschrift*, 1896, no. 78); OWSERIAN, *Die Entstehungsgeschichte des Monothelismus nach ihren Quellen geprüft* (Leipzig, 1897). See also HONORIUS I, POPE, and MAXIMUS OF CONSTANTINOPLE.

JOHN CHAPMAN.

Monreale, ARCHDIOCESE OF, in the province of Palermo, Sicily, on the skirts of Mount Caputo. The city is built in a commanding situation over the port of Palermo. It was a pleasure resort of the Norman kings, to whom it owes its foundation. In 1167 William II built there the church of Santa Maria Nuova, with its adjoining monastery for the Benedictines of Cava dei Tirreni—the most superb monastic building of the Benedictine Order in Europe, famous for its cloister and its graceful Moresque colonnade. At the present time only the lower portion of the convent is in the possession of the monks. The church (now the cathedral) is the noblest in Sicily, though the portico of its façade has been restored in a style not in harmony with the remainder of the building. Its bronze doors, the work of Bonanno of Pisa (1186), are notable, as are also the arabesques of the portals.

The interior has three naves, and the columns of Egyptian marble have foiled and figured capitals, each different from the others. The apse and the lateral walls are covered with beautiful mosaics, representing scenes from the Old and New Testaments. The high altar is covered with worked sheets of silver (seventeenth century), and, in a chapel to its right, are the tombs of William I the Wicked and of William II. The chapel of Saint Benedict contains sculptures by Marabitti (eighteenth century). In 1811 a fire destroyed the roof, which was restored in a way to leave the rafters exposed to view. On the mountain beyond the city is the monastery of San Martino of the Cassinese Benedictines, whose church is rich in works of art; farther on is the castle of San Benedetto, built by the Saracens. In 1174 the abbey of Monreale was declared a "prælatūra nullius"; two years later its abbot was vested with the title and jurisdiction of a bishop, and in 1182 he became the metropolitan of Catania and of Syracuse. At first the archbishops were elected by the monks, but were not always Benedictines; since 1275, however, the election has been reserved to itself by the Holy See. In time Girgenti and Caltagirone also became suffragan to Monreale; but Syracuse, in 1844, and Catania, in 1860, became archiepiscopal sees. The former having become the Metropolitan of Caltagirone, Monreale received the new Diocese of Caltanissetta (1860), which see and Girgenti are now its only suffragans. Among the archbishops of this see have been Cardinal Giovanni Proccamazza (1278); Cardinal Aussio Despuig de Podio (1458); Cardinal Pompeo Colonna (1531); Cardinal Ippolito de' Medici (1532); Alessandro Farnese

(1536); Ludovico de Torres (1584), founder of the seminary; Cardinal Vitaliano Visconti (1670); Cardinal Traian d'Acquaviva d'Aragona (1739). From 1775 to 1802 Monreale and Palermo were united. The archdiocese has 30 parishes with 228,600 inhabitants; 352 secular and 66 regular priests; 26 convents of men and one of women; three educational institutes for male students and three for girls.

U. BENIGNI.

Monroe, JAMES, soldier, convert, b. in Albemarle county, Virginia, U. S. A., 10 Sept., 1799; d. at Orange, New Jersey, 7 Sept., 1870. He was the son of Andrew a brother of President James Monroe, and greatly resembled his illustrious uncle. After the usual course at the U. S. Military Academy at West Point,

he graduated in 1815, and was commissioned a lieutenant of artillery. In the war with the Algerian pirates he was wounded, 17 June, 1815, while directing the guns of the frigate *La Guerrière* in a battle off Cape de Gata, Spain. As an aide to General Scott he served during 1817–22, and did garrison duty as a first lieutenant of the 4th Artillery to 30 Sept., 1832, when he resigned from the army. Settling in New York he entered public life, being elected to the Board of Aldermen, 1833–35, and to Congress, 1839–41. He

was nominated to Congress also in 1846, but the election being contested and a new election ordered he declined to run again. In 1850–52 he was a member of the New York legislature, and then retired from public life on the death of his wife. Previous to the outbreak of the Civil War he visited Richmond and sought by speeches and personal influence to prevent the secession of his native State, Virginia. All through the war he was a staunch upholder of the Union. His brother ANDREW F. MONROE, b. at Charlottesville, Va., 5 March, 1824, after graduating at the U. S. Naval Academy served during the Mexican War, and while on a naval expedition to China, in 1853, also became a convert. He joined the Society of Jesus in 1854 and was ordained priest in 1860. He was for a number of years one of the faculty of St. Francis Xavier's College, New York, where he died 2 Aug., 1872.

CULLUM, *Biog. Register of the Officers and Graduates of the U. S. Military Academy*, I (New York, 1891); HEITMAN, *Hist. Register and Dictionary of the U. S. Army* (Washington, 1903), s. v.; *National Encycl. of Am. Biog.*, s. v.; *The College of St. Francis Xavier* (New York, 1897).

THOMAS F. MEEHAN.

Monsabré, JACQUES-MARIE-LOUIS, celebrated pulpit orator, b. at Blois, France, 10 Dec., 1827; d. at Havre, 21 Feb., 1907. He was ordained as a secular priest 15 June, 1851, but soon felt he had a religious vocation. On the thirty-first of July, 1851, the feast of St. Ignatius, he celebrated his first Mass and thought seriously of entering the Society of Jesus. Four days later, however, the feast of St. Dominic, he decided to become a Dominican and immediately

CATHEDRAL, MONREALE
Church, XII Century—Portico, XVI Century

wrote a letter of application to Père Lacordaire. He had to wait four years for release from the diocese, as the bishop had received authorization from the Holy See to withhold that long his permission for newly ordained priests to enter a religious order. In May, 1855, he received his dimissorials, entered the novitiate at Flavigny, received the habit on the thirty-first of the same month and one year later made his simple profession. A few days later he was sent to the house of studies at Chalais, where he spent a year in solitude and prayer. In the winter he was appointed to preach the Lenten sermons in the church of St. Nizier, at Lyons, where he gave the first indication of that eloquence which was later to illuminate all France. After preaching the Lenten sermons in Lyons, Monsabré was assigned to the convent of St.

JACQUES-MARIE-LOUIS MONSABRÉ

Thomas, in Paris, where he began to give conferences. After interrupting this ministry for several years he took it up again. In the Advent of 1867 he gave conferences in the convent church. He preached then for a number of years in the principal cities of France, Belgium, and even in London, conducting retreats, novenas, and tridiums. His reputation, however, was really first made by the course of Advent

sermons which he preached in the Cathedral of Notre Dame, Paris, in 1869, as successor of the unfortunate Carmelite, Père Hyacinthe Loyson. The success of these conferences brought the invitation to preach the Lenten sermons in Notre Dame in 1870, succeeding Père Félix of the Society of Jesus. During the siege of Paris by the Prussian troops, the conferences at Notre Dame were interrupted. On the capitulation of Metz, Monsabré preached from one of its pulpits. Meanwhile the Archbishop of Paris, Monsignor Darboy, had fallen a victim to the Commune and was succeeded by Monsignor Guibert, who lost no time in inviting Monsabré to occupy the pulpit of his cathedral. From this time on, Père Monsabré preached in the Cathedral of Notre Dame for twenty years and proved himself a worthy successor of Bossuet, Lacordaire and all the other great preachers whom the French Church has produced. He conceived and executed the gigantic plan of expounding the whole system of Catholic dogmatic theology. Not often, perhaps never before, did a preacher succeed in holding so large an audience completely under the sway of his eloquence for so long a time.

The classic and elegant form of Monsabré's discourses attracted the educated class of France. "His intense love of souls and apostolic zeal made his discourses throb with life, and his clear and profoundly theological mind enabled him to shed light even upon the most abstruse tenets of the faith, while his earnest and impassioned appeals to all the noblest impulses of man always met with an enthusiastic response." Monsabré's published works consist of forty-eight volumes, the "L'exposition du Dogme Catholique" being famous for its eloquence and popular exposition of Catholic dogma. In 1890 he preached the Advent sermons in Rome. In 1891 he gave the same course in Toulouse. On the death of Monsignor Freppel,

Bishop of Angers, he was invited to fill the vacancy in the Chamber of Deputies, but declined. In 1871 he was sent to the General Chapter of Ghent to represent his province and in 1898 to that of Avila as Definitor. His apostolic labours closed with the magnificent oration delivered at Reims on the occasion of the fourteenth centenary of the baptism of Clovis, King of the Franks. Since 1903 he lived in retirement. In that year the Dominican convent in which he lived was confiscated by the government, and he was obliged to take refuge in a modest little home in which he died.

L'Année Dominicaine, April, 1907, 146; July, 1907, 289; *The Rosary Magazine*, XXX, 459.

JOSEPH SCHROEDER.

Monseigneur (from *mon*, "my" and *seigneur*, "elder" or "lord", like Lat. *senior*), a French honorific appellation, etymologically corresponding to the English "my lord", and the Italian *monsignore*. It is, after all, nothing but the French *monsieur*; but, while the latter has become current as applied to every man who is in good society, *Monseigneur* has retained its honorific force. In ecclesiastical usage it is reserved for bishops and archbishops, and is chiefly employed when speaking or writing to them. It is used before the name (thus abridged: Mgr Dupanloup). Formerly it was not prefixed to the title of dignity, but it is now, as "Mgr l'évêque de N . . ." The term *Monseigneur* is also used as the equivalent of the Italian *Monsignore*, and as the latter title is given to Roman prelates, some confusion results; in Italy, however, no inconvenience arises from this usage as in that country bishops have the title of *Eccellenza*, i. e., Excellency. In France, only the Archbishop of Reims, as *legatus natus*, has the title of Excellency (see *MONSIGNOR*).

HÉRICOURT, *Les lois ecclésiastiques de France*, E. V. 22.

A. BOUDINHON.

Monseigneur, WILLIAM, BARON EMLY, b. 21 Sept., 1812; d. at Tervoe, Co. Limerick, Ireland, 20 April, 1894. His father was William Monseigneur of Tervoe; his mother, Olivia, daughter of Sir John Walsh of Ballykilcavan. He was educated at Winchester (1826-1830) and Oriel College, Oxford, but he left the university without proceeding to a degree. As his father had died in 1822 he succeeded to the family estates on coming of age and was a popular landlord, the more so as he was resident. In 1836 he married Anna Maria Quin, daughter of the second Earl of Dunraven, but there was no issue of the marriage. After her death in 1855 he married Bertha, youngest daughter of the Comte de Martigny (1857), by whom he had one son and one daughter. In 1847 he was returned to Parliament as member for the County of Limerick in the Liberal interest and represented the constituency till 1874. In 1850 he became a Catholic and thereafter took a prominent part in Catholic affairs, especially in Parliament. As a friend of Wiseman, Newman, Montalambert, W. G. Ward, and other eminent Catholics, he was intimately acquainted with the various interests of the Church, and his parliamentary advocacy was often of great advantage to the hierarchy. In the House itself he was successful and filled many offices. He was clerk of the ordnance from 1852 to 1857; was appointed privy councillor in 1855; was vice-president of the board of trade in 1866; under-secretary for the colonies, 1868-1870; postmaster-general, Jan., 1871, to Nov., 1873. Finally he was raised to the peerage as Baron Emlý on 12 Jan., 1874. He lost much of his popularity in Ireland during his later years, owing to his opposition to the land league and to the Home Rule movement. His work being chiefly parliamentary, he wrote little, but published some articles in the "Home and Foreign Review" and a "Lecture on the Roman Question" (1860).

EDWIN BURTON.

Monsignor (*dominus meus; monseigneur, My Lord*).—As early as the fourteenth century it was the custom to address persons high in rank or power with the title Monseigneur or Monsignore. In the intercourse of seculars, either of equals or of superiors with inferiors, there was no fixed rule. Until the seventeenth century French nobles demanded from their subjects and dependents the title of Monseigneur. In international intercourse two titles gradually won general recognition, "Monsieur" as the title of the eldest brother of the King of France (if not heir presumptive) and "Monseigneur" for the Dauphin, or eldest son of the French king, who was also crown prince, or for whatever male member of the family was recognized as heir presumptive to the throne. Actually all Bourbon pretenders assume this title as a matter of course, e.g. the late Don Carlos Duke of Madrid, his son Don Jaime, the Count of Caserta, the Duke of Orléans, etc. Moreover, the custom often obtains, especially in Spain, France, and Italy, of extending by courtesy the title Monseigneur to the adult members of the Bourbons and closely allied families usually addressed as "Your Royal Highness". In official usage, however, this would scarcely be permissible. At present the title is no longer borne by other persons of civil rank, and, so far as the author of this article is aware, no one else lays claim to it. Among ecclesiastics the title Monsignore implies simply a distinction bestowed by the highest ecclesiastical authority, either in conjunction with an office or merely titular. In any case it bears with it a certain prescribed dress. To counteract a widely spread misconception we may state here that the pope does not bestow the title Monsignore, but a distinction of some sort to which this title is attached. Accordingly it is quite incorrect to say that any one has been appointed a Monsignor by the pope. If we may be permitted to use a comparison, Monsignor in the spiritual order corresponds to the word officer in the military. The highest general and the youngest lieutenant are equally officers, and the most venerable patriarch bears the title Monsignor as well as the simplest honorary chaplain. Thus among prelates, both higher and lower, it is no badge of distinction except as it denotes in a very general way an elevation above the ranks of the clergy. Those only bear the title of Monsignor, who are *familiares summi pontificis*, those who, by virtue of some distinction bestowed upon them, belong as it were to the family and the retinue of the Holy Father. These *familiares* are entitled to be present in the *cappella pontificia* (when the pope celebrates solemn Mass), and to participate in all public celebrations purely religious or ecclesiastical in character, at which the pope, the cardinals, and the papal retinue assist. It is assumed that they will appear in the robes corresponding to their respective offices.

Up to 1630, when Urban VIII reserved the title Eminence (*Eminentissimus*) for the exclusive use of cardinals, the latter bore the title Monsignor in common with the other prelates of high rank, and in France it is still customary to address a cardinal as Monseigneur. In all other languages this usage has completely disappeared, so that, practically speaking, cardinals are no longer to be counted among the Monsignori. All other prelates, from patriarchs down, who have received a papal distinction or are archbishops, bishops, or mitred abbots (among the secular clergy only), have a right to this title. The fact that it has lapsed in usage in many countries, so far as these are concerned, does not affect the question. Instead of addressing patriarchs as "Vostra Beatitude", archbishops as "Your Grace", bishops as

"My Lord", abbots as "Gracious Lord", one may without any breach of etiquette salute all equally as Monsignor. Following is a list of official and honorary prelates exclusive of those already mentioned: (1) the college of the seven official prothonotaries Apostolic *de numero participantium* (of the number of participants); (2) the supernumerary prothonotaries (*supra numerum*), including, (a) the prelate canons of the three patriarchal basilicas of Rome, (b) the prelate canons of certain cathedral churches, while in office; (3) prothonotaries Apostolic *ad instar participantium* (after the manner of participants), including, (a) prelate canons of certain cathedral churches, as above, (b) prothonotaries appointed *ad personam* (individually); (4) the College of the Auditors of the Sacra Rota Romana, these are official or delegated prelates; (5) the college of official clerics of the Apostolic Camera; (6) all other prelates not members of any of the above named colleges, the numerous domestic prelates scattered throughout the world. All the above-mentioned prelates are entitled to wear the mantelletta and rochet; (7) the private chamberlains constituting the official college of pontifical masters of ceremonies; (8) the official private chamberlains known as *participantes*; (9) the supernumerary private chamberlains (*camerieri segreti soprannumerari*), of whom there are several hundred in various parts of the Catholic world; (10) the honorary chamberlains in violet; (11) the honorary chamberlains *extra urbem* (outside the city), who are not received in their official capacity in the papal court when held at Rome; (12) the official college of private chaplains; (13) the honorary private chaplains; (14) the honorary chaplains *extra urbem* (see 11); (15) the private clerics; and (16) the official college of papal chaplains.

In the case of certain of the above-mentioned classes the honorary office (together with the corresponding title and distinctive dress) lapses at the death of the pope. This is particularly true with regard to the supernumerary private and honorary Chamberlains. The reason for this is self-evident. It is possible to be prothonotary of the Holy Roman Church or cleric of the Apostolic Camera, etc.; but one cannot be chamberlain to the Holy Roman Church, but simply chamberlain to a particular pontiff, whose death dissolves the relation between the two. Unless the newly elected pontiff renews the appointment the former chamberlain returns permanently to the general ranks of the clergy. Nor is there inconsistency in the fact that certain lay chamberlains continue in the papal service immediately after a papal election. Their services are necessary to the new pontiff and he naturally recognizes such persons, which amounts practically to a tacit appointment. It is regrettable that occasionally persons thus distinguished by the pope either assume a dress arranged according to their own notions or, being dissatisfied with the dress conceded, appropriate that of a higher office. The farther a country is from Rome, the more apt are such unfortunate things to occur. It should be noted that members of religious orders may use the title "Monsignor" only if they are bishops or archbishops. All other ranks of the prelacy are of course closed to them, if we except the Master of the Sacred Palace, who being always a Dominican, is one of the prelates, but may not be addressed as Monsignor. The custom introduced in the sixteenth century of giving the generals of religious orders the title "Monsignor" was of short duration.

PAUL MARIA BAUMGARTEN.

PIETÀ

BARTOLOMMEO MONTAGNA, VATICAN GALLERY, ROME

Monstrance. See OSTENSORIUM.

Monstrelet, ENGUERRAND DE, a French chronicler, b. about 1390 or 1395; d. in July, 1453. He was most probably a native of Monstrelet, a village situated in the present department of the Somme. His life was spent at Cambrai in the service of Philip, Duke of Burgundy, who was also Count of Flanders. The cartulary of the church of Cambrai proves that in 1436 Monstrelet was lieutenant of the *gavener*; as such it was his duty to collect in the Cambrésis the tax called "gavenne", which was paid to Philip by the tenants of the churches there in return for the protection which he gave them. From 20 June, 1436, to January, 1440, he was bailiff (*bailli*) of the chapter of Cambrai and he was provost (*prévôt*) of Cambrai from 1444 to 1446 (not until his death, as Dacier says); he became bailiff of Walincourt on 12 March, 1445, an office which he held till his death. Monstrelet, who lived during an agitated period, did not take personal part in the conflicts of the day. To him, perhaps, applies a letter of pardon granted in 1424 to a certain Enguerrand de Monstrelet by Henry IV of England, who then ruled a part of France: Enguerrand, according to this letter, had committed certain highway robberies, believing that he had a sufficient excuse because he robbed the Armagnacs, enemies of the Duke of Burgundy. However this may be, his attitude in his "Chronicle" is that of an impartial narrator. He speaks of himself but once, when he relates in the eighty-sixth chapter of the second book that he was present at the interview which Joan of Arc, taken prisoner before Compiègne, had with Philip of Burgundy; and with his usual sincerity and modesty he declares that he does not remember well the words of the duke.

The "Chronicle" of Monstrelet opens with a mention of the coronation of Charles VI, which took place in 1380; but its true starting-point is Easter-day, 1400, when the history of Froissart finishes, and it extends down to 1444. While Froissart confined himself almost entirely to events which took place in France, Monstrelet deals also with other countries, giving many documents. He treats not only of military history, but also gives interesting details of great religious events such as the Councils of Pisa, Constance, and Basle. We feel, moreover, that the ravages of war and the sufferings of the people therefrom cause him real pain, and he is not over-enthusiastic about great feats of arms. He is occasionally guilty of chronological errors and confusing proper names. Finally, the literary merit of the book is mediocre; the narrative is often heavy, monotonous, diffuse, and lacks the charm of Froissart. In the early editions of Monstrelet—of which the first, published at Paris towards 1470 in three folio volumes, goes back almost to the invention of printing—the chronicles contain a third book, relating the events which took place between April, 1444, and the death of the Duke of Burgundy in 1467. But the "Nécrologe des Cordeliers de Cambrai" and the "Mémoires" of Jean le Robert prove that Monstrelet died in July, 1453, so that all this book could not possibly have been written by him. Furthermore, the history of years 1444–53, given in this third book, is so bald that it contrasts singularly with the prolixity of the first two books. It is, besides, much more partial to the House of Burgundy than the first two, and, in contrast to these, scarcely contains a single document. Whereas the first two books are preceded by a preface, the third has none; finally, the historian, Matthieu d'Escouchy, in the prologue to his own chronicle, states that Monstrelet's "Chronicle" ends at 20 May, 1444. Modern scholars unanimously accept the statement of Matthieu d'Escouchy and hold that this so-called third book was not written by Monstrelet.

GEORGES GOYAU.

Montagna, BARTOLOMEO, Italian painter, chief representative of the Vicenza School, b. at Orzinuovi about 1450; d. at Vicenza, 11 October, 1523. Very little is known concerning his life. His work presents not a very original, but happy combination of the dual influence of Padua and Venice. The forms, draperies, grandeur, and often the energy of expression betray the action of Montagna, but the order of his altar-pieces, their harmonious symmetry, and the beauty of their colouring recall Giovanni Bellini or Carpaccio. Perhaps, he even surpassed these two masters as regards power of tone, and resembles Crivelli more closely. Two Madonnas in the gallery of Vicenza and a smaller one in the Lochis Gallery at Bergamo (1487) are characteristic of his early manner, which is not free from stiffness and a certain dryness. Here the artist still retains the old process of distemper. His best period was from 1490 to 1505, his years of work and travel, during which he was busily occupied throughout all the district. At Verona he painted house façades in fresco, and executed the graceful paintings, unhappily much damaged, of the Chapel of St. Blaise in the Church of Sts. Nazario and Celso (1493), of which Salconetto was the architect. There is little logic in the construction, but the details, despite the dilapidation of the whole, still present a charming effect. In the cupola there are two circles of panels with figures of angels under figures of saints between pilasters, and a frieze with a procession of Nereids. The whole, supported by the Evangelists painted on pendentives, is a brilliant example of the delightful inconsistency of the Renaissance. There are frescoes by Montagna in the Scuola del Santo at Padua. His best-known works are his altar-pieces, painted in oil in the manner of Bellini.

The large retable of the Brera (1499), the Madonna enthroned in a magnificent chapel with two saints on each side and three angels playing on the steps of the throne, is perhaps his masterpiece. Whether for its architecture, its dignity, the sweetness of its figures, or for the depth and power of its colouring, it is in all respects one of the most beautiful canvases produced at that period in Upper Italy. The "Pietà" of Monte Berico (1500) is of a quite different character: it is a startling picture of grief, the figures being of a violent, almost brutal naturalness. The Academy of Venice possesses some works in his later manner; the tone grows subdued, becoming brown and slightly hard and dull. Such is the "Madonna enthroned between St. Roch and St. Jerome". But there is still a deep sentiment of mystical adoration in the "Christ between St. Roch and St. Sebastian". Vicenza is especially rich in Montagna's works, no less than ten being found at the Academy, not to mention the frescoes of the Duomo of S. Lorenzo and some altar-pieces, such as that of Santa Corona. Nearly all are late works. Outside of Italy may be mentioned the "Ecce Homo" of the Louvre and especially the charming piece, as tender and delicate as a Carpaccio, the "Three Angelic Musicians"; a large and magnificent retable of 1500 at the Museum of Berlin; a beautiful bust of the Madonna at Bremen; a "Holy Family" at Strasburg and some other less important works in England (Butler, Farrer, and Samuelson collections, and at the home of Lord Cowper at Panshanger).

Bartolomeo had a son, Benedetto, who was chiefly notable as an engraver. As a painter he is little more than a feeble imitator of his father, as is proved by a Madonna at Milan and a "Trinity" in the Cathedral of Vicenza. He flourished from 1490 to 1541.

LOUIS GILLET.

Montagnais Indians, Quebec, French for "Mountaineers", the collective designation of a number of bands speaking dialects of a common language of Algonquian stock, and ranging along the shores of the St. Lawrence River and Gulf, from about the St. Maurice River to below Cape Whittle, and inland to about the main divide at the heads of the rivers. They are closely allied and considerably intermixed with the cognate Nascapée (q. v.), who wander generally farther inland in the interior of the Labrador Peninsula, but frequent the same trading and mission stations along the St. Lawrence. Among the Montagnais bands or tribes, when Champlain first met them at the mouth of the Saguenay, in 1603, were the Attikamegue, or "Whitefish", about the head of the St. Maurice; the Kakouchac, or "Porcupine", on Lake St. John; the Tadousac about the mouth of the Saguenay; the Bersamite, farther east; the Papinachois, north of the last-named; the Oumamiwek, farther east, along the St. Lawrence; the Chisedec, about the Bay of Seven Islands. They were without agriculture or pottery, subsisting entirely by hunting and fishing. Polygamy was common, with divorce at will, descent being held in the female line. Their dwellings, as well as their canoes, were of birch bark or brushwood. They were good tempered, patient, peaceable, honest, and musical under instruction.

The Montagnais obtained their first knowledge of Christianity at Tadousac, a French trading post. Regular missionary work was begun among them by the Recollet, Fr. Jean d'Albeau, in 1615. Ten years later the Jesuits were invited to help. Fr. Jean du Quen, S.J., established the mission at Tadousac in 1640; later, stations were erected by the Jesuits at Gaspé and Trois-Rivières. The Iroquois raids drove them from the St. Lawrence, and a smallpox epidemic, in 1670, greatly reduced them, practically destroying the Attikamegue. In consequence, the Montagnais began to resort to the mission at Sillery, near Quebec. The whole tribe is now civilised and Catholic, with the exception of forty-eight officially reported (1909) as Anglican. They still depend mainly on the fur trade for subsistence, but also work at lumbering and the making of canoes, snow-shoes, and moccasins. A few of them are successful farmers. Apart from drunkenness, they are moral, devout, industrious, and said to be "improving every year". Their largest settlements are at Pointe Bleue, on the west shore of Lake St. John, Bersimis, Seven Islands, Romaine, and Mingan. Their total number is probably at least 2500. Father Pierre Laure, S.J. (d. 1738), compiled a grammar, dictionary, and other works in the Montagnais language, most of which are still in manuscript.

Relations*: TRAWATTS ed. (Cleveland, 1896-1901).

JAMES MOONEY.

Montagnais Indians, a name given in error to the CHIPPEWAYANS, owing to a fancied resemblance to the above. The Chippewayans are really a Déné tribe, and derive their name from the Cree words *chipwaw* (pointed) and *weyan* (skin or blanket), alluding to the original form of the main article of their dress. Their habitat is Lakes Cold, Ile-à-la-Crosse, Heart, and Caribou, and the elevated land in the vicinity of Methy Portage and the English River. To the natives frequenting these localities may be added the Athabascans, who have for habitat Lake Athabasca, the basin of Slave River, and the outlying lands to the east of Great Slave

Lake. The total population of the two divisions is about 4000, the majority of whom are nomadic hunters, though not a few have of late taken to a more settled life, and cultivate potatoes. The tribe eagerly welcomed the first Catholic missionaries in 1845, and ever since they have been noted for their attachment to the Faith. They are practically all Catholics.

The Chippewayans, or Montagnais, are in reality the prototype of the entire Déné family, in that sense that they have given it their own name (*déné*, "men"). They were the first of the northern Dénés to come under the notice of the whites, through the travels and journal of Samuel Hearne. At the present day, the flourishing mission of Ile à La Crosse, where about one thousand Montagnais live happy and contented under the ægis of religion, is one of the best evidences of the civilizing power of the Catholic Church.

HEARNE, *A Journey from Prince of Wales Fort to the Northern Ocean* (Dublin, 1796); RICHARDSON, *Arctic Searching Expedition* (London, 1851). See also Father Petitot's works enumerated after the article on the Dénés.

A. G. MORICE.

Montaigne, MICHEL-ETYQUEN DE, writer, b. at the château of Montaigne, in Périgord, France, on 28 Feb., 1533; d. there, 13 Sept., 1592. His great-grandfather had been a Bordeaux merchant of wines, salt fish, etc., and it was he who purchased the estate of Montaigne. His father entered the army and married Antoinette de Louppes or Lopes, of Jewish origin, and for two years was mayor of Bordeaux. At an early age Michel had a German tutor, who was obliged to speak to him in Latin only. At the age of six and a half he was sent to the College of Guyenne at Bordeaux, where he remained seven years. Little is known of the ensuing years. It is believed that he studied logic and dialectics for two years at the Bordeaux Faculty of Arts, with Marc-Antoine de Muret as tutor. He afterwards studied law, possibly at Bordeaux, more probably at Toulouse. Having become counsellor at the Cour des Aides of Périgord, he was soon incorporated like his colleagues in the Parlement of Bordeaux. But the new counsellor had no liking for his profession, and he was often absent from the Parlement. From 1561 to 1563 he attended the court. From 1559 he knew La Boétie, his chosen friend, and like himself a counsellor in the Parlement of Périgord and his elder by six years; but death soon separated them (1563).

Two years later Montaigne married Françoise de la Chassaigne, the daughter of a parliamentary advocate. They had five daughters, only one of whom survived him. In 1570 at the age of thirty-seven he sold his post of counsellor, and in the following year retired to the château de Montaigne. There, from 1571 to 1580, he wrote his "Essays". The first edition of this work contained only two books. He then set out on a journey which lasted a year and a half, of which he has written in his "Journal". He went to Lorraine and Alsace, started for Switzerland, crossed Bavaria and came down to the Tyrol, saw Venice and reached Rome, the end of his journey, where he received letters of citizenship. During his absence he had been made mayor of Bordeaux, which office he held for four years (1581-85), his duties coming to an end when the pest broke out. Montaigne being absent from the town did not feel obliged to return to it. In 1588 he published a new edition of his "Essays", corrected and augmented by a third book. He continued to revise his work until his death. In 1595 Mlle de Gournay, the young woman who at the age of twenty-two became his enthusiastic admirer, and whom he called his daughter, issued a new edition, in which she inserted the revisions and additions which he had indicated in a copy in 1598.

It is impossible to analyse the "Essays". They are a long conversation in which the author sets forth in haphazard fashion his memories and his reflections.

His memories are the result of his personal experience and especially of his very extensive reading. According to his own expression he himself is "the subject of his book". But what excuses him is doubtless the fact that in depicting himself he often depicts human nature in general. He is a charming conversationalist, a writer full of pith and colour, artlessness, grace, and life. His literary merits add to the dangers of his book, which is deliberately lascivious and as a whole openly favourable to the Pyrrhonians. He has even written that it is "a slack ear for a shapely head". However, on the other hand, he thanked "our sovereign Creator for having stayed our trust on the everlasting foundation of His holy word". He also said that outside of the path pointed out by the Church reason "is lost, embarrassed, shackled". In a letter he relates in a Christian manner the Christian death of his friend La Boétie. He himself, as soon as he became ill, would not send for a priest, and in his last illness did not depart from this custom. Pasquier relates that he "caused Mass to be said in his chamber and when the priest came to the elevation the poor gentleman raised himself as well as he could in bed with hands joined and thus yielded his soul to God". He died therefore in a supreme act of faith.

GEORGES BERTRIN.

Montalcino, DIOCESE OF (ILCINENSIS).—Montalcino is a small town about twenty miles from Siena, some 1900 feet above sea-level and overlooking the valley of the Ombrone. In the neighbourhood are mineral springs and chalk quarries. In the ninth century it belonged to the abbey of San Antonio. In 1212 it was taken by the Siennese, but soon afterwards the inhabitants declared themselves in favour of Florence. In 1260, after the battle of Montaperti, it once more fell into the hands of the Siennese, who made it a stronghold. In 1525 it was besieged by the imperial troops; in 1555, when Siena was annexed by Tuscany, Pietro Strozzi with the aid of French troops endeavoured to set up a free republic at Montalcino, but in 1556 the French were obliged to retreat and the town submitted to Cosimo I. Earthquakes have not been unfrequent, the last being in 1909. Montalcino belonged originally to the Diocese of Arezzo; in the eleventh century the abbots of San Antonio had quasi-episcopal jurisdiction over it; in 1462 it was made a diocese and united with the See of Pienza, which, however, became in 1563 a separate diocese. Its first bishop was Giovanni Cinughi; Francesco Piccolomini (Pius III) administered the see at one time. The diocese is directly subject to the Holy See; it has 34 parishes and 39,130 souls, 1 convent for men and two for women.

CAFFARELLI, *Le Chiese d'Italia*, XVIII (Venice, 1857).

U. BENIGNI.

Montalembert, CHARLES-FORBES-RENÉ, COMTE DE, b. in London, 15 April, 1810; d. in Paris 13 March, 1870. His father, Marc René, had fought in the army of Condé, and had afterwards served in an English cavalry regiment; he was chosen by the Prince Regent of England to announce to Louis XVIII the

restoration of the French monarchy, and he became under the Restoration plenipotentiary minister to Stuttgart, and, later, to Stockholm. His maternal grandfather, James Forbes, belonged to a very old Scotch Protestant family and had made many important journeys to India, which he related in the four volumes of his "Oriental Memoirs", published in 1813; he also wrote in 1810 a volume entitled "Reflections on the character of the Hindus and the necessity of converting them to Christianity".

Montalembert's mother, converted by Abbé Busson and Père MacCarthy, made her abjuration of heresy to Cardinal de Latil in 1822. The early years of

Montalembert's life were passed in England; afterwards he studied at the Lycée Bourbon and at the Collège Sainte-Barbe at Paris, where out of twenty pupils in the sixteenth year of their age hardly one was a practical Catholic. At Sainte-Barbe young Montalembert made a friend of Léon Cornudet, who was also a Catholic, and the letters the boys exchanged in their seventeenth year have remained famous. At that early age Montalembert wrote: "Would it not be a splendid thing to show that religion is the mother of liberty!", a phrase which was to become the motto of his whole life. In 1829 he wrote to Rio: "my age, my tastes, my future call me to support the new ideal; but my religious beliefs and moral emotions cause me to lament bitterly the bygone days, the ages of faith and self-sacrifice. If Catholicism is to triumph it must have liberty as its ally and tributary subject". Soon after its establish-

ment in 1829 by Carné, Casales, and Augustin de Meaux, with the motto (borrowed from Canning): "Civil and Religious Liberty for the whole world", the review "Le Correspondant" had Montalembert as a contributor. In September and October, 1830, he travelled in Ireland, where he met O'Connell; he was thinking of assisting the cause for which O'Connell was struggling by writing a history of Ireland, when he learned that the House of Commons had passed the Irish Emancipation Act.

While he was in Ireland he received the prospectus of the new paper "L'Avenir" founded in October, 1830, by Lamennais. On 26 Oct., 1830, he wrote to Lamennais: "All that I know, and all that I am able to do I lay at your feet". On 5 November, 1830, he met Lamennais in Paris, and on 12 November at Lamennais's house he met Lacordaire. At times, Montalembert had to smooth over some of the risky things Lamennais allowed himself to be led into writing against the royalists in the paper; on the other hand he was engaged in controversy with Lacordaire, whose idea of aristocracy and the past glory of the French nobles he considered too narrow. It was Montalembert who, the day after the sack of St. Germain l'Auxerrois by the Parisian mob, published in "L'Avenir" an eloquent article on the Cross of Christ, "which has ruled over the destinies of the modern world." He especially distinguished himself in the "L'Avenir" by his campaigns in favour of freedom for Ireland and Poland, and for these he received the congratulations of Victor Hugo and Alfred de Vigny. In 1831 he thought of going to Poland and joining the

MICHEL-ETIENNE DE MONTAIGNE

insurgents. When the "Agence générale pour la défense de la liberté religieuse" (Central committee for the safeguarding of religious liberty), founded by the editors of "L'Avenir", had solemnly declared war on the monopoly of the French University by opening a primary school (9 May, 1831), Montalembert was indicted. As at this time by his father's death on 20 June, 1831, he became a peer of France, he demanded that he be tried by the House of Peers; and the famous "Free School Case" was heard before that assembly, 19 and 20 September, 1831.

The speech delivered by Montalembert on that occasion was a gem of eloquence. The trial ended in his condemnation to a fine of one hundred francs; but his eloquence succeeded in calling public attention to the question of freedom of teaching, which was destined not to be solved until 1850. When the last number of "L'Avenir" appeared (15 November, 1831), Montalembert accompanied Lacordaire and Lamennais to

CHARLES-FERDINAND-RÉNÉ, COMTE DE MONTALEMBERT

Rome. While in March, 1832, Lacordaire divined the wishes of Gregory XVI, and returned to France, Montalembert persisted in remaining in Rome with Lamennais, who insisted on a public decision by the pope concerning "L'Avenir". It was not until July that they left Rome, and the Encyclical "Mirari Vos", which overtook them at Munich, was a cause of great sorrow to them. Montalembert submitted at

once, and when early in 1833 Lamennais announced his intention of again taking up his editorial work, excepting the field of theology, and concerning himself only with social and political questions, Montalembert did all he could to dissuade him from so imprudent a step. When Gregory XVI by his Brief dated 5 October, 1833, found fault with the "long and violent preface", Montalembert had written for Mickiewicz's "Livres des Pèlerins Polonais" and when at the end of that same year Lamennais broke away from the Church, Montalembert passed through a period of much sorrow, during which the advice of Lacordaire helped him greatly. He tried in 1834 to dissuade Lamennais from publishing "Les Paroles d'un Croyant", and in vain besought him to submit to the Encyclical "Singulari nos" of 7 July, 1834. He submitted to all Gregory's decisions (8 December, 1834) and his correspondence with Lamennais ceased definitely in 1836.

In 1836 he published his "Vie de Sainte Elizabeth de Hongrie" which restored hagiography in France and brought back to Catholics a taste for the supernatural as shown in the lives of the saints. On 16 August, 1836, Abbé Gerbet blessed his marriage with Mlle de Mérode, daughter of the Felix de Mérode who had taken such an important part in the insurrection of the Belgian Catholics against the government of the Low Countries, and who was descended from Saint Elizabeth of Hungary. She was the sister of Xavier de Mérode, afterwards minister of Pius IX.

In the House of Peers, Montalembert took pride in presenting himself as a Catholic first of all, at a time when as he himself wrote, "to profess or defend the Catholic faith one had to face marked unpopularity". In May, 1837, he spoke in favour of the right of the

Church to own property; in Dec., 1838, when ecclesiastical burial had been refused to Montlosier by Bishop Féron of Clermont, he replied in the name of the liberty of the Church to those who assailed this purely ecclesiastical act. He seconded with all his influence the re-establishment of the Benedictines by Dom Guéranger, and of the Dominicans by Lacordaire, and in 1841 he obtained from Martin du Nord, Minister of Worship, permission for Lacordaire to wear his monastic dress in the pulpit of Notre Dame. "L'Univers Religieux", a daily paper founded in 1834 by Abbé Migne, owed its solvency in 1838 to pecuniary sacrifices made by Montalembert, and it soon passed into the hands of Louis Veuillot. In June, 1845 Montalembert questioned the government concerning the measures it was about to take against the Jesuits, and a few days later, when the concessions made by the Holy See to Rossi, whom Guizot had sent to Rome, had brought about the partial dispersion of the French Jesuits, he loudly expressed his surprise and sorrow. "You are our father, our support, our friend", wrote Père de Ravignan to him. In the House he, moreover, defended the interests of foreign Catholics; in 1845, at the time of the Lebanon massacres, he questioned Guizot as to what France was doing to protect Christians in the East; in 1846 he questioned him concerning the massacres committed by Austria in Galicia, and the cruelties practised against the Poles of that province; on 11 January, 1848, he enthusiastically praised the hopes Pius IX held out to the Italian people, and reproached the government of France for the lukewarm support it gave the new pope against Metternich; on 14 January, 1848 in a speech on the Sonderbund, the finest, perhaps, he ever uttered, he impeached European radicalism, and proclaimed that France, in the face of Radicalism, was "destined to uphold the flag and safeguard the rights of liberty". Never did a speech so carry men away, wrote Sainte-Beuve.

But it was especially to secure liberty of teaching (see FRANCE and FALLOUX DU Coudray) that Montalembert devoted his efforts. In 1839 he addressed an eloquent letter to Villemain, minister of public instruction, demanding that liberty; in 1841 under pressure from the episcopate, he compelled Villemain to withdraw a bill on education because it was not sufficiently liberal; in his pamphlet "Du Devoir des Catholiques dans la question de la liberté d'enseignement", published in 1843, he summoned the Catholics to take part in the struggle. On 16 April, 1844, in the House of Peers, he undertook the defence of the bishops who had attacked a second bill brought in by Villemain, and he replied to Dupin, who demanded the punishment of the bishops: "We are the sons of the crusaders; and we shall never yield to the sons of Voltaire"; then again he took an active part in the discussion of the bill, which owing to Villemain's mental infirmity was abandoned. Between 1845 and 1846 he solicited petitions among the laity in support of liberty of education, and he succeeded in having 140 supporters of educational liberty elected as deputies in 1846. In 1847 he renewed the attack on the bill introduced by Salvandy and declared it unacceptable. The July monarchy fell before the question was settled. The Revolution of 1848 respected the rights of the Church and Pius IX, 26 March, 1848, wrote to Montalembert: "We gladly believe that it is in part owing to your eloquence, which has endeared your name to your generous countrymen, that no harm has been done to religion or its ministers".

Under the Second Republic Montalembert, in reply to Victor Hugo, who criticised the sending of a French expedition to aid Pius IX, declared amid the applause of two-thirds of the Constituent Assembly that the Church is "a mother, the mother of Europe; the mother of modern society". Once more he took up the struggle for liberty of education; in 1849, together

with Dupanloup he was the chief instigator of the negotiations between the Catholics and a number of liberals such as Thiers, which resulted in spite of the sharp attacks of Louis Veuillot in the definitive grant of liberty of education by the Falloux Law. When in October, 1850, Montalembert went to Rome, Pius IX congratulated him, and caused him to be named *Civis Romanus* by the municipality of Rome. After the Coup d'Etat, 2 Dec., 1851, in an open letter to the "Univers", he invited the Catholics to rally to Louis Napoleon; this manifesto, which he afterwards regretted, was the result of an idea he had that it was unwholesome for Catholics to abstain from taking part in the life of the State. But when in 1852 he had appealed in vain to Louis Napoleon to abrogate the organic articles, to grant liberty of higher education, and freedom of association, he refused to enter the Senate. He was deputy for Besançon to the legislature of 1852-1857, but failed to be re-elected in 1857 owing to the defection of many Catholic voters. He cut himself off entirely from Louis Veuillot and the "Univers", which he thought accepted with too great complacency all the acts of the new government curtailing certain political liberties.

The break began in 1852 when Montalembert's pamphlet "Les Intérêts Catholiques au XIX^{ème} Siècle" was attacked by Dom Guéranger and Louis Veuillot; it became more marked in 1855 when Montalembert, taking from Lenormant's hands the management of the "Correspondant", which had at the time only 672 subscribers, made that review an organ of the political opposition, and took up the side known as "liberal" in contradistinction to the views supported by the "Univers". As an organ of the opposition "Le Correspondant" was often at odds with the imperial government: in 1858 an article Montalembert wrote entitled "Un débat sur l'Inde au Parlement anglais" led to his prosecution, and in spite of the defence set up by Berryer and Dufaure, he was sentenced to three months' imprisonment, which the emperor remitted. In 1859 his article on "Pie IX et la France en 1849 et 1859", in which he attacked the partiality of the empire towards Italy and all the opponents of the temporal power, caused some disquiet in court circles, and won for him the congratulations of Pius IX. His two letters to Cavour, Oct., 1860, and April, 1861, in which he attacked the centralising spirit of those who were bringing about Italian unity, and took up the defence of the Holy See, drew from Pius IX the enthusiastic exclamation of "Vivat, vivat! our dear Montalembert has surpassed himself". But the hostility between the "Correspondant" and the "Univers" was growing, and in the heat of the struggle Montalembert wished to profit by the Congress of Belgian Catholics at Mechlin (August, 1863) to pour out his whole soul concerning the future of modern society and the Church.

His first speech aimed to show the necessity of Christianising the democracy by accepting modern liberties. His second speech dealt with liberty of conscience, and the conclusion he drew was that the Church could be in perfect harmony with religious liberty and with the modern state which is founded on that liberty, and that everyone is free to hold that the modern state is to be preferred to the one which preceded it. The future Cardinal Pie, Bishop of Poitiers, the future Cardinal Ledochowski, Nuncio at Brussels, Mgr. Talbot, Chamberlain to Pius IX, Louis Veuillot, and the Jesuits who edited the "Civiltà Cattolica" were alarmed at these declarations. On the other hand Cardinal Sterck, Archbishop of Mechlin, the future Cardinals Guibert and Lavigerie, many well-known Paris Jesuits, such as Pères de Ponlevoy, Olivaint, Matignon, and especially Bishop Dupanloup of Orléans, supported him and took up his defence. At the end of March, 1864, he received a letter from Cardinal Antonelli finding fault with the Mechlin

speeches. When, on 8 Dec., 1864, the Encyclical "Quanta Cura" and the Syllabus were issued, Montalembert resisted the advice given him by the Protestant Léon de Malleville to protest publicly against these pontifical documents as a political measure; and the commentary on the Syllabus which Dupanloup published, and Pius IX approved of, 4 Feb., 1865, met with his joyous adhesion.

When the Vatican Council drew near he feared that the council would infer from the Syllabus and define as articles of faith certain affirmative propositions concerning liberty and touching on the State. He encouraged the authors of the Coblenz manifesto who raised doubts as to the opportuneness of the infallibility question, and he drew up under the heading "Questions au futur concile" a great number of disquieting grievances which he circulated among the bishops. The three hundred pages he wished to insert in the "Correspondant" on the causes of Spanish decadence, and in which he made a lively attack on the "Civiltà Cattolica", were refused by the "Correspondant", and so Montalembert broke off his connexion with that review.

His letter to the lawyer Lallemand, published in the "Gazette de France", 7 March, 1870, was intended to reconcile his former "ultramontanism" with his present state of feeling, which had been styled Gallicanism. In that letter he spoke of "The idol which the lay theologians of absolutism had set up in the Vatican". The impression left by this letter, which Abbé Combalot in the pulpit of San Andrea della Valle styled a "satanic work", was still fresh in the mind of Pius IX, when Montalembert died, 13 March, 1870. Pius IX refused to allow a solemn service to be held for him in the Ara Coeli; but a few days later he gave orders that an office should be sung in Santa Maria Transpontina, and he attended there himself in one of the barred galleries.

The letter (published very much later) which on 28 September, 1869, he wrote to M. Hyacinthe Loyson to dissuade him from leaving the Church, is in the opinion of M. Emile Ollivier "one of the most pathetic appeals that ever came from the human heart"; and the future Cardinal Perraud, when pronouncing the panegyric of Montalembert in the Sorbonne, could say that even his latest writings, however daring they might be, were filled with "a noble passion of love for the Church".

A member of the French Academy from 9 January, 1851, Montalembert was both an orator and a historian. As early as 1835 he had planned to write a life of St. Bernard. He was led to publish in 1860, under the title "Les Moines d'Occident", two volumes on the origin of monasticism; then followed three volumes on the monks in England; he died before he reached the period of St. Bernard. But he left among his papers, on the one hand, a manuscript entitled "Influence de l'ordre monastique sur la noblesse féodale et la société laïque jusqu'à la fin du XI^{ème} siècle", and on the other hand a work on Gregory VII and the conflict of investitures; and these two MSS., published in 1877 by his friend Foisset and his son-in-law the Vicomte de Meaux, made up the sixth and seventh volume of the "Moines d'Occident". His work on "L'Avenir politique de l'Angleterre", published in 1856, drew a brilliant picture of the parliamentary institutions of England, and rejoiced in the ascendant march of Catholicity in the British Empire.

Finally, Montalembert was one of the writers who did most to foster in Europe regard and taste for Gothic Art. His letter to Victor Hugo on "Vandalisme en France", published 1 March, 1833, made a strong impression everywhere, and helped to save many Gothic monuments from impending ruin. Auguste Reichensperger and the Catholics of Rhenish Prussia profited by the artistic lessons of Montalembert. In 1838 he addressed to the French clergy an

eloquent appeal, in which he praised the German school of Overbeck, and lamented that French Christian art was debased by pagan infiltrations. He interested himself in the dilapidated condition of the Cathedral of Notre Dame, and caused the House of Peers in 1845 to vote a sum of money to repair it. His speech on vandalism in works of art, before the same assembly, 27 June, 1847, denounced the demolitions and ignorant restorations carried on by government architects, and brought about a change for the better. It was partly due to him that in 1837 the Historical Committee of Arts and Monuments, for the preserving of works of art, was established; and on the other hand, churchmen laid such weight on his artistic opinions, that even from far-off Kentucky Mgr Flaget, Bishop of Bardstown, wrote to him asking him to draw up a plan for the cathedral he was about to build at Louisville.

Montalembert's "Speeches" have been published in three volumes; his "Polemics" in three volumes also.

LECANUET, *Montalembert* (3 vols., Paris, 1895-1905); DE MEAUX, *Montalembert* (Paris, 1900); FOLLIOLEY, *Montalembert et Mgr Paris* (Paris, 1906); OLIPHANT, *Memoir of Count de Montalembert* (2 vols., London).

GEORGES GOYAU.

Montalto, DIOCESE OF (MONTIS ALTI), in Ascoli Piceno. The situation of the little town of Montalto is very attractive. Originally (1074) under the jurisdiction of the abbots of Farfa, it was annexed in 1571 by Pius V to the Diocese of Ripatransone. In 1586 Sixtus V, a native of Montalto, made it an episcopal see. The first bishop was Paolo Emilio Giovannini; other bishops were Orazio Giustiniani (1640), later a cardinal, and Francesco Saverio Castiglioni (1800), who became pope under the name of Pius VII. The diocese has 33 parishes with 29,000 inhabitants; 79 secular and 4 regular priests; 1 religious house of men, and 1 of sisters.

CAPPARELLI, *Chiese d'Italia*, III (Venice, 1887).

U. BENIGNI.

Montana, the third largest of the United States of America, admitted to the Union 8 November, 1889; called the "Treasure State".

BOUNDARIES AND AREA.—Its northern boundary line, which divides it from Canada, extends along the forty-ninth parallel from meridian 27 west of Washington (104 west of Greenwich), its eastern boundary, to meridian 39—that is, 549 miles. Starting from the east, the forty-fifth parallel marks its southern boundary as far as meridian 34, where the line drops south to the crest of the main range of the Rocky Mountains, which, with the extreme summits of the Bitter Root and the Cœur d'Alène Mountains, divides it from Idaho on the southwest and west until meridian 39 is reached. This last meridian then becomes the western dividing line to the international boundary. The area of the state is 146,080 square miles.

PHYSICAL CHARACTERISTICS.—As its name suggests, the state is mountainous in character, being crossed from north to south by the system known collectively as the Rocky Mountains. Yet it would be erroneous to regard the state as everywhere mountainous. The eastern half of the state is an expanse of plain and prairie, though there are few places within it which do not reveal on the horizon elevations sufficiently imposing to be called mountains. The highest mountain in the state is Granite Peak, the elevation of which is 12,600 feet. The Northern Pacific railroad crosses the continental divide twenty miles west of Helena, at an elevation of 5573 feet; the Great Northern main line crosses at an elevation of 5202, and the Montana Central, a branch of the last-named system, near Butte, at an elevation of 6343. The eastern portion of the state has a mean elevation of from 2000 to 3000 feet. The state is blessed with many magnificent river systems. The Missouri and its tributaries drain

the eastern portion, and the confluents of the Columbia the western. The former is formed by the junction of the Jefferson, Madison, and Gallatin, the two last-named having their source in the Yellowstone National Park and the other in the mountains in the extreme south-western part of the state. The main tributary of the Missouri, the Yellowstone, likewise takes its rise in the park, in a lake of the same name. Another tributary of the Missouri, the Milk River, has its origin in the north-western section of the state, which is noted for its scenic beauty. From the summit of the mountains there one may overlook a country within which are the head-waters of three great continental river-systems—the Mississippi-Missouri, the Saskatchewan, and the Columbia. This region has lately been made a national reservation under the name of Glacier Park. The Missouri traverses the state from Three Forks, named from

its location at the confluence of the three rivers mentioned above, a distance of approximately 550 miles. The Yellowstone, following a course roughly parallel to the main stream, makes a waterway within Montana's borders 450 miles long. The Kootenai drains a portion of the extreme northwestern part of the state, but the great bulk of the western waters in that region comes south, by the Flathead, to meet with those from the southern portion which flow north and west to make the Missoula. These two streams unite to form the Clark's Fork of the Columbia. The Flathead feeds and empties, in its course, Flathead Lake, the largest fresh-water lake between the Mississippi and the Pacific.

The climate is very similar in character throughout the state, except, of course, on the lofty mountains, where snow lies perpetually or far into the summer—a providential condition, in consequence of which water for irrigation is supplied in comparative abundance in the period of drought. The extremes of temperature are not quite so great and rain falls somewhat more abundantly on the western slope of the mountains. The climate, except for brief periods in the winter season, is mild and agreeable. In the northern part of the state the severity of the colder months is tempered by an occasional warm west wind, known as the *chinook*, which tempers the climate without bringing excessive moisture. A very low temperature is endured with much less discomfort than in regions where the atmosphere is more dense, the humidity greater, and the sunshine less abundant. The mean temperature at Helena is 65° (Fahr.) for the months of June, July, and August; 44° for September, October, and November; 22° for December, January, and February, and 41° for March, April, and May. The mean annual rainfall for the entire state, based on reports for ten years, is 15.57 inches.

HISTORY.—The state has an interesting history. About a third of a century before the Revolution, in 1742, it was visited by a party of French explorers headed by two young sons of Pierre Gauthier de Varennes de la Vérendrye, on a quest for a river leading to the Pacific. They started from Fort La Reine, one of the most remote of a chain of posts, which the elder de la Vérendrye had established in the wilderness north and west of Lake Superior in an effort to reach the western sea. The wanderings of the youthful adventurers led them from Fort La Reine on the Assini-

SEAL OF MONTANA

boine, west of Winnipeg, to the village of the Mandans on the Missouri River, near the present city of Bismarck, North Dakota, whither their father had preceded them four years before. Thence, proceeding in a general southwesterly direction through the counties of Custer and Rosebud, they crossed the rivers falling into the Yellowstone until they reached the Big Horn Mountains, near or across the Wyoming line. Sixty-two years later, the expedition of Lewis and Clark gave to the world authentic information of the country. It followed the Missouri to the Three Forks, then ascended the Jefferson to its source in the Bitter Root range, and crossed the mountain barrier. Returning, the leaders travelled together until they reached the Big Blackfoot, a tributary of the Missoula. Here they parted, Lewis ascending that stream to its source and reaching the Missouri in the neighbourhood of Great Falls, whence he returned by the route the party had come. Guided by the Shoshone woman Sacajawea, whom the expedition picked up on the outward journey among the Mandans, whither she had been carried as a captive when a child, Clark pursued the route later followed in the construction of the Northern Pacific Railroad to the Yellowstone near Livingston, and, descending that stream, rejoined his companion at its mouth.

The Astor expedition, which set out for the mouth of the Columbia in 1811, purposed following the route which had been opened up by the Lewis and Clark party. But the fierce Blackfeet being on the war-path, they abandoned the river near the mouth of the Cheyenne and set out over the plains with the aid of horses purchased from the Indians. After proceeding some distance to the northwest, doubtless into Montana, they pursued a more southerly route and reached the headwaters of the Columbia as they issue from the Yellowstone National Park. The Astor project, in its commercial aspect, took form later in the organization of the American Fur Company. But it was anticipated by the daring Manuel Lisa of St. Louis, who as early as 1807 established a fort at the mouth of the Big Horn River. Clark the explorer, the brothers Chouteau, and others united with him in the organization of the Missouri Fur Company. In 1832 the steamboat "Yellowstone," owned by the American Fur Company, which had absorbed its rival, ascended the Missouri to Fort Union, near the mouth of the river after which the craft was named. The region east of the mountains was a part of the Louisiana Purchase, over which the United States acquired dominion by the treaty with Napoleon in 1803. The western slope constituted a part of that ill-defined district known as the "Oregon Country". The conflicting claims of the United States and Great Britain to this country were not settled until 1846. Meanwhile hunters and trappers bearing allegiance to both nations overran the country. A few homebuilders established themselves within the borders of the State in the late fifties, but the history of the development of the commonwealth begins with the discovery of gold at Gold Creek and Bannack in 1862. The Alder Gulch placers were discovered in 1863, giving rise to Virginia City, and those of Last Chance Gulch in 1864, bringing Helena into existence. The story of the fabulous wealth of these deposits attracted a great multitude, who made the journey either by ox-teams from Omaha, or came up the river by boat to Fort Benton, which was established in 1846. Every promising gulch in the state was quickly prospected, many of them proving very remunerative. The source of the placer deposits was soon sought in the ledges, and quartz-mining speedily began. The enormous price which food-stuffs commanded operated as an incentive to those having some skill in agriculture to engage in ranching, and the fertile valleys of the Gallatin, the Deer Lodge, the Bitter Root, and the Prickly Pear were subjected to tillage. The abundant nutritious grasses of the plains, that had

supported immense numbers of buffalo and antelope, and of the parks in the mountains, where deer and elk abounded, invited the pursuit of raising cattle, sheep, and horses.

Long before this period, however, as early as 1840, Father Peter J. De Smet, S.J., had come from St. Louis in response to an invitation conveyed by a deputation from the Flathead Indians to Christianize that tribe. He established St. Mary's Mission in the Bitter Root valley near the present town of Stevensville. In 1844 he founded the Mission of St. Ignatius in the midst of a beautiful valley, within what is now the Flathead Reservation. Father Nicholas Point preached to the Blackfeet in the winter of 1846-7, laying the foundations of St. Peter's Mission which however was not permanently established until 1859. Father A. Ravalli, who shares the veneration in which the memory of the founder of St. Mary's is held, came to that mission in 1845. The county in which it was located is named in his honour. The western part of the state was successively a part of Oregon Territory, Washington Territory, and Idaho Territory. The eastern portion became a part of the Louisiana Territory on the cession of the latter to the United States, and was attached to various territories organized out of that region. But there was no organized government anywhere. Even after the rush consequent upon the gold discoveries, though nominally subject in those parts to the government of Idaho Territory, the constituted authorities were so remote that the people themselves administered a rude but effective justice through miners' courts and vigilance committees. In 1864 the Territory of Montana was organized with boundaries identical with those which now define the limits of the state. Hon. Sidney Edgerton was appointed governor. The first legislative assembly convened at Bannack on 12 December, 1864. The next session was held at Virginia City in 1866, from which place the capital was moved to Helena in 1874, the migrations of the seat of government indicating to some extent the variations in the centres of population. General Thomas Francis Meagher was appointed secretary of the territory in 1865 and, in the absence of the governor, assumed, under the law, the duties of that office, which he continued to discharge until his unfortunate death by drowning in 1867. Samuel McLean was the first delegate to Congress from the territory. The state was admitted to the Union by proclamation of President Harrison on 8 November, 1889, pursuant to an Act of Congress approved on 22 Feb., 1889, the constitution having been meanwhile framed and adopted.

In 1880 the Utah and Northern Railroad Company, subsequently merged in the Union Pacific system, built into Butte from Ogden. Three years later the Northern Pacific completed its line across the territory aided by a grant made by Congress in 1864, by which it acquired every alternate section of land within forty miles of its line. The Great Northern was completed to the coast across Montana in 1891, and the year 1909 witnessed the construction of another transcontinental line crossing the state from east to west,—that of the Chicago, Milwaukee, and Puget Sound Railway Company. The Montana Central, since a part of the Great Northern system, was built in the very heart of the mountain country in 1887, to connect the mines at Butte with the smelters at Great Falls. Since the opening of the railroads, resulting in the extinction of the buffalo, the main reliance of the Indians for subsistence, the task of keeping them in check on the reservations has become comparatively simple. In the struggle with them theretofore, three events attain special prominence—the brush with General Sully at the Bad Lands in 1864, while escorting a party of 250 emigrants from Minnesota bound for the mines of Montana; the Custer Massacre in 1876, and the raid of Chief Joseph after the Battle of

the Big Hole and his masterly retreat, followed by his capture in the Bear Paw Mountains in 1877 by General Miles.

RESOURCES.—The industry which gave rise to the original settlement of Montana was mining. In 1863 gold valued at \$3,000,000 came from the sluices. The next year produced double that amount. The total production of gold up to and including the year 1876 is conservatively estimated at \$140,000,000. At about that time silver mining began to assume paramount importance, but about 1890 it yielded pre-eminence to copper, which is at present the chief metal produced. The copper mines are at Butte, while the smelters are located at Anaconda and Great Falls. A silver and lead smelter is in operation at East Helena. In 1907 there was produced copper to the value of \$44,021,758, silver \$6,149,619, and gold \$3,286,212. Montana's stores of coal are very great. Estimates made by the authorities of the United States Geological Survey give the area of bituminous and lignitic-bituminous coal at 13,000 square miles, and the lignite areas at from 25,000 to 50,000 square miles. Coal-mining is extensively carried on in the counties of Carbon, Gallatin, Cascade, and Fergus. Lumbering is an industry of the western portion of the state, where there are dense forests of pine, fir, larch, cedar, and hemlock. It is, however, by no means confined to that region, as all the mountains of any considerable height bear a more or less abundant growth of timber. Nearly 20,000,000 acres of the public lands within the state, of which there are about 50,000,000, are included within the national forest reserves.

Stock-raising early assumed an important place in the business life of the state. Vast herds of cattle, horses, and sheep were reared and matured on the open range with little or no provision for feeding even in the depth of winter. The appropriation of the public domain by settlers has progressed to such an extent, however, as to enforce a radical change in the method by which the business is carried on. Provision for feeding is now almost universally made, but, except in stormy weather, sheep especially thrive without much regard to temperature on the native grasses that cover the plains and foot-hills, cured by the hot sun of the summer season when comparatively little rain falls. The annual production of wool in the state is about 40,000,000 pounds, the clip of approximately five and a half million sheep. The number of cattle in the state is in excess of 600,000. Agriculture is undergoing a marvellous development, both as to the area under cultivation and the methods of farming. All the cereals yield bountifully. Recent immigration to the state has been markedly to the more promising agricultural sections which, within the past two years, have received an influx hitherto unknown. In earlier years irrigation was universally resorted to, but more recently great areas have been cultivated with marked success by the "dry farming" system. Eight great works of irrigation are being carried on, or have been completed by the government reclamation service. The state is directing others under the Carey Land Act, and private corporations are engaged in many similar enterprises. Montana produced in 1908: 3,703,000 bushels of wheat on 153,000 acres; 10,556,000 bushels of oats on 254,000 acres; and 875,000 bushels of barley on 25,000 acres. Fruit-raising is a profitable business in many parts of the state, particularly in the counties of Ravalli, Missoula, and Flathead, where it is extensively carried on. Apples are the staple fruit crop, the quality being excellent and the yield large. The culture of sugar beets has been stimulated by the construction of a factory at Billings, which has been in operation since 1896. It will be supplied (in 1910) with over 115,000 tons of beets. The abundance of sunshine and the character of the soil gives to the Montana beet an exceptionally high percentage of saccharine matter. Manufacturing is

still in its infancy, but is destined to a great growth owing to the extent of a available water-power. Three power dams now turn the flow of the Missouri River, and three more are in process of construction. Another large dam utilizes in part the energy of the Madison River. The Flathead River tumbles over seven miles of cascades, as it issues from Flathead Lake, offering stupendous opportunities for power development.

STATE INSTITUTIONS.—The capitol at Helena was erected in 1900 at a cost of \$350,000. The growth of the state is shown by the fact that additions were authorized by the last session of the legislature to cost half a million dollars. The funds for the original construction, as well as the work now to be undertaken, are derived from lands donated to the state on its admission to the Union by the general government. The state maintains a university at Missoula, an agricultural college at Bozeman, a school of mines at Butte, a normal school at Dillon, a soldiers' home at Columbia Falls, a deaf, dumb, and blind asylum at Boulder, a reform school at Miles City, and a penitentiary at Deer Lodge. The insane are cared for at a private institution at Warm Springs. The usual system of public schools prevails, and nearly all the towns of consequence maintain public libraries.

EDUCATION.—In 1908 there were enrolled 61,928 of the 77,039 children of school age. The total expense for all school purposes was \$2,178,322.90. The average monthly salary paid to male teachers was \$99, and to female teachers \$60. The educational interests of the state are under the direction of a state superintendent and a state board of education, consisting of that officer, the governor and the attorney-general, and eight other members appointed by the governor. County superintendents supervise the administration of the school system in the rural communities, and city superintendents in the municipalities. The chief revenues are derived from taxes collected by the county treasurer. The school fund consists of the revenues from grants of lands made by the general government, and other grants from the federal authority, the avails of escheated estates, and fines for violations of various laws. The fund must be kept intact and only the income used. The state university has a grant of 45,000 acres from the nation, which may be sold at not less than \$10 per acre. The avails constitute a fund the income of which only is subject to use. For the year 1909 there were appropriated for its support \$67,500, and it has other revenues amounting to about \$75,000 in all. Its corps of professors numbers twenty. In 1908 it had 184 students, exclusive of those doing special work and not including those taking the course at the biological station, which is maintained in connexion with it.

EARLY MISSIONARIES AND MISSIONS.—It is not improbable that Father C. G. Coquart, S.J., accompanied the Vérendyre brothers on their expedition into Montana. He was a member of the party when they set out from Montreal on their great enterprise and is quoted as saying that the Vérendyres on some of their excursions went beyond the great falls of the Missouri, and as far as the Gate of the Mountains near Helena. The establishment of the early missions has been mentioned. Besides those referred to, the Holy Family Mission among the Blackfeet, originally a dependency of St. Peter's, became a fixed establishment in 1885. St. Paul's, another offspring of St. Peter's, was established about the same time among the Gros Ventres and Assiniboines on the Fort Belknap Indian Reservation. St. Labre, the mission among the Cheyennes, dates from 1884, when Rev. Joseph Eyler came from Cleveland with six members of the Ursuline Sisterhood, with Mother Amadeus at their head in response to a call issued by Bishop Gilmore at the appeal of Bishop Brondel, lately appointed to the newly created See of Montana. St. Xavier's, among the Crows, dates

from 1887. Schools, as a matter of course, are maintained at all the missions, those at St. Ignatius particularly being models. The Ursulines have a convent at St. Peter's. The Jesuits were the pioneer missionaries to both Indians and whites in Montana. The ministrations of Father De Smet extended to all the tribes that have been mentioned, and he, as well as all of his associate "black robes", was held in the highest reverence by them. His labours were prodigious. In 1869 he induced five sisters of the community of Leavenworth to come to Helena, where they founded St. Vincent's Academy.

DIOCESES.—In the earlier territorial days, the western part of the state was included in the Vicariate of Idaho, and the eastern part in that of Nebraska. An episcopal visit was made to these then remote regions by Bishop James O'Connor of Omaha in 1877, and by Archbishop Charles J. Seghers of the Province of Oregon in 1879 and again in 1882. Upon the urgent recommendation of the last-named prelate, Montana was made a vicariate on 7 April, 1883, and the Rt. Rev. John B. Brondel, then Bishop of Victoria, Vancouver Island, was appointed administrator. On 7 March, 1884, the Diocese of Helena was created, embracing the whole of Montana, and Bishop Brondel was appointed to the see. He was at the head of its affairs until his death in 1903, when the diocese was divided, the eastern part of the state becoming the Diocese of Great Falls and the remainder continuing as the Diocese of Helena. The Rt. Rev. John P. Carroll, D.D., was then appointed bishop of the latter, and the Rt. Rev. Mathias Lenihan, D.D., of the former diocese.

CATHOLIC POPULATION.—The Catholic population of the Great Falls diocese is about 15,000; of the Helena diocese about 50,000. Thirty priests minister to the people of the new, fifty-three to those of the old diocese. No statistics are available giving the nationality or ancestry of either the Catholic population or that of the whole people of the state. Among the former, the dominant blood is probably Irish, a very large percentage of the adults being native Americans. But almost every Catholic country of Europe has contributed to the truly cosmopolitan citizenship of Montana. China and Japan have added to some extent to the population. In recent years Italians, Austrians, Bulgarians, and Servians have come in considerable numbers. Most of these are more or less closely attached to the ancient Faith.

CHARITABLE INSTITUTIONS.—Hospitals are conducted by sisters of various orders at Great Falls, Billings, Fort Benton, Lewistown, Helena, Anaconda, Butte, and Missoula. There are a House of the Good Shepherd and an orphanage at Helena, and academies at Lewistown, Miles City, St. Peter's, Helena, and Deer Lodge. The parochial schools enrolled 5536 pupils in 1908, not including those attending the mission schools on the reservations.

DISTINGUISHED CATHOLICS.—The spirit of religious intolerance has had scant encouragement in Montana, and many Catholics have occupied prominent positions in her industrial development and political history. Among those who have served in high official station are General Thomas Francis Meagher, acting governor from 1865 to 1867; Hon. James M. Cavanaugh, delegate in Congress from 1867 to 1872; Hon. Martin Maginnis, delegate in Congress from 1873 to 1885; Hon. Thomas H. Carter, delegate in Congress from March to November, 1889, and representative from the admission of the state to 1891; afterwards, from 1895 to 1901 United States Senator, and now serving his second term, having been again elected in 1905; and Hon. Thomas C. Power, United States Senator from 1889 to 1895. Among those who have written their names large in the industrial history of the state are Marcus Daly, Thomas Cruse, Peter Larson, and John D. Ryan, the latter being at present at the head of the Amalgamated Copper Company.

FREEDOM OF WORSHIP.—Freedom of religion is guaranteed by the following provision of the constitution: "Art. III, Sec. 4. The free exercise and enjoyment of religious profession and worship, without discrimination, shall forever hereafter be guaranteed, and no person shall be denied any civil or political right or privilege on account of his opinions concerning religion, but the liberty of conscience hereby secured shall not be construed to dispense with oaths or affirmations, excuse acts of licentiousness, by bigamous or polygamous marriage, or otherwise, or justify practices inconsistent with the good order, peace or safety of the state, or opposed to the civil authority thereof, or of the United States. No person shall be required to attend any place of worship or support any ministry, religious sect or denomination, against his consent; nor shall any preference be given by law to any religious denomination or mode of worship." The diversion of the public funds to the promotion of sectarian purposes is forbidden by the following: "Art. V, Sec. 35. No appropriation shall be made for charitable, industrial, educational or benevolent purposes to any person, corporation or community not under the absolute control of the state, nor to any denominational or sectarian institution or association."

OATHS.—Every court or officer authorized to take testimony or decide on evidence may administer oaths or affirmations, the witness being entitled to elect whether he shall be sworn or shall simply affirm.

SUNDAY OBSERVANCE, ETC.—Sunday is a holiday, as is Christmas, New Year's, and Columbus Day (12 October). If Christmas or New Year's Day falls on Sunday, the day following is a holiday. Whenever any secular act, other than a work of necessity or mercy, is appointed by law or contract to be done on a certain day, and it so happens that such a day is a holiday, it may be done on the day following with like effect as if done on the day appointed. It is a misdemeanour to keep open or maintain on Sunday any barber-shop, theatre, play-house, dance-house, race-track, concert saloon, or variety hall. It is likewise a misdemeanour to disturb any assembly of people met for religious worship by profane discourse or in any other manner. Neither blasphemy nor profanity is otherwise made punishable.

PRAYER IN THE LEGISLATURE.—The law provides for the election of a chaplain of each house of the legislature and the daily sessions are opened with prayer by that officer. The Bannack session seems to have had no chaplain, but Rev. Joseph Giorda, S.J., officiated in that capacity for both houses, apparently, at the second session held at Virginia City in 1866. Rev. L. Palladino, S.J., the historian of the Montana Missions, universally revered for his saintly life, who came to Saint Ignatius in 1867, acted in the same capacity at the ninth session.

SEAL OF CONFESSION.—Disclosures made in the confessional are held sacred by express statute. A clergyman will be neither compelled nor permitted to testify as to them.

INCORPORATION OF CHURCHES.—Special provision is made for the incorporation of religious bodies and congregations. The method is simple. At a meeting, trustees are elected and they are authorized by resolution to file articles with the county clerk or the secretary of state, according as the organization is to be local or general in its nature. The articles state the name of the corporation, its purpose, and the number of trustees. It then has continual succession, and the usual powers of a corporation. Another act provides for the organization of corporations sole "whenever the rules, regulations or discipline, of any religious denomination, society or Church, permit or require the estate, property, temporalities, and business thereof, to be held in the name of, or managed by a bishop, chief priest, or presiding elder, of such religious denomination, society or church." The passage of this

act was procured by Bishop Brondel who incorporated under the name of the "Roman Catholic Bishop of Helena".

EXEMPTION OF CLERGYMEN AND CHURCH PROPERTY.—All clergymen are exempt from jury duty. The constitution declares that "such property as may be used exclusively for agricultural and horticultural societies, for educational purposes, places for actual religious worship, hospitals and places of burial not used or held for private or corporate profit, and institutions of purely public charity may be exempt from taxation" (Art. XII, Sec. 2), and the statutes declare the exemptions in the same terms.

MARRIAGE AND DIVORCE.—Marriage may be contracted by mutual consent followed by a solemnization or public assumption of the marital relation. The marriageable age is eighteen in the case of males, and sixteen in females. Marriages between ancestors and descendants of every degree, between brothers and sisters of the half as well as the whole blood, and between aunts and nephews or uncles and nieces, are declared void *ab initio*. So likewise are marriages between a white person on one side, and a negro or a person part negro, or a Chinese or Japanese, on the other side. Marriages contracted without the state and valid where contracted are valid within the state. Licences are required to be issued by the clerk of the court of the county where the marriage is to be solemnized, and a return must be made by the officiating clergyman or officer. Licences cannot be granted to minors without the written consent of the parents or guardian. Marriage may be solemnized by a justice of the Supreme Court, judge of the district court, justice of the peace, priest or minister of any denomination, or mayor of the city, or by religious societies. It need not be solemnized at all if the parties make and file a joint declaration giving their names, the fact of marriage, the date of marriage, and that it has not been solemnized. Marriages licensed and not solemnized as provided by law are forbidden, but are expressly declared not to be void.

Divorces are authorized for six causes, viz. adultery, extreme cruelty, wilful desertion, wilful neglect, habitual intemperance, and conviction of felony. The constitution forbids the passage by the legislature of any special law granting divorce, or separation *a mensa et toro*, or decrees for separate maintenance, a power the early territorial legislatures freely exercised. Residence in the state one year by the plaintiff is a requisite of jurisdiction.

LIQUOR.—The sale of liquor is permitted under licences issued by counties and cities. Local option is authorized by law, but the traffic is not prohibited in any county. The employment of women in places where liquor is sold is forbidden, as is its sale in places of public amusement, or at any camp meeting, or near any cemetery. A law, known as the "Wine Room Law", makes it punishable to have in connexion with a saloon any room or apartment into which females are permitted to enter.

WILLS AND TESTAMENTS.—Wills may be made by any person over eighteen. If in his own handwriting it need be neither witnessed nor attested; if not, it must bear the signatures of two witnesses. A nuncupative will may be made orally disposing of an estate less than \$1000 in value, when the testator is in actual military service in the field, or doing duty on shipboard and in peril or fear of death, or when he is expecting death from injury received the same day. A wife has a dower right in her husband's real estate, but he has no interest in her property except that she cannot without his written consent deprive him by will of more than two-thirds of her estate. The will of an unmarried woman is revoked by her subsequent marriage, as is that of a man made before he marries by his subsequent marriage, unless his wife is provided

for by contract or in the will, or unless the will expressly excludes her from taking.

CHARITABLE BEQUESTS.—Charitable bequests contained in wills made within thirty days of the death of the testator are void. If the aggregate of such bequests in any will exceed in amount one-third the value of the estates, and the testator have legal heirs they are scaled down until their sum does not exceed such amount.

CEMETERIES.—A law applicable specially to that subject authorizes the incorporation of cemetery associations. Burial without a certificate of death is made punishable, as is violation of sepulture, defacing of graves or monuments, or neglecting to bury the bodies of dead kindred.

T. J. WALSH.

Montañés, JUAN MARTÍNEZ (d. 1649), a noted Spanish sculptor of the seventeenth century, sometimes called "the Sevillian Phidias". Like many of his countrymen, he confined himself almost exclusively to sculpture in wood. According to Palomino, he was born at Seville; according to Gordillo, his contemporary, at Alcalá la Real. He studied under Pablo de Rojas at Granada; and later settled at Seville where most of his works are to be found. One of the earliest is a charming Infant Jesus (cathedral sacristy, Seville) bearing the date 1607 and the sculptor's signature. In 1610 he modelled the head and hands of the statue of St. Ignatius Loyola—used in the religious celebrations of the beatification of the saint (chapel of the university, Seville). This image, clothed and coloured by Pacheco, is esteemed one of the truest and most æsthetic representations ever made of the soldier saint. The St. Francis Xavier in the same place is attributed to Montañés. In 1612 he executed for the Hieronymite monastery of S. Isidro del Campo, near Seville, the life-size penitent St. Jerome, one of his most masterly productions, and the *redos* and statues for the altar; in 1614 the famous large crucifix for the Carthusians of S. María de las Cuevas; 1617 to 1618 two *redos* in the lay choir of the same monastery, with statues of Our Lady, the two St. Johns, figures representing the theological virtues, and lovely reliefs of the Adoration of the Magi and Shepherds; the expressive St. Bruno, now in the museum, was made for the Carthusians in 1620. In 1635 the sculptor went to Madrid and spent seven months there modelling a portrait of Philip IV, which was to be used by Pietro Tacca for his equestrian statue of the king, finished in Florence, 1640, and now in Madrid (Plaza del Oriente). The likeness of Montañés by Velasquez (Prado Gallery), was probably painted at this time. As a reward for his services the king granted Montañés the rights in a merchant ship "whether in the fleet of the Continent or of New Spain" (America). This promise was fulfilled to the sculptor's widow and children after his death in 1649. Other works at Seville are the St. Dominic of heroic size in the museum, from the convent of Portaceli; a beautiful St. John Evangelist in the church of San Juan de las Palmas; the high altar of the church of San Lorenzo and a statue of the patron saint; and, at the cathedral (Seville), a very fine life-size Immaculate Conception, a large crucifix in the Sacristy of the Chalice, and that renowned "Christ bearing the Cross" carried in Holy Week processions, so vivid and sorrowful, the sculptor would station himself at the corners of streets to see it pass, "absorbed and wondering at the work of his own hands". Montañés is noted for the majesty and religious character of his types, his profound sense of beauty, and his elegant and correct

modelling. His child forms, infant and cherub, are peculiarly happy. He would not consent that any of his figures should be tinted except under his own supervision.

M. L. HANDLEY.

Montanists, schismatics of the second century, first known as Phrygians, or "those among the Phrygians" (οἱ κατὰ Φρύγας), then as Montanists, Pepuzians, and (in the West) Cataphrygians. The sect was founded by a prophet, Montanus, and two prophetesses, Maximilla and Prisca, sometimes called Priscilla.

CHRONOLOGY.—An anonymous anti-Montanist writer, cited by Eusebius, addressed his work to Abercius Marcellus, Bishop of Hieropolis, who died about 200. Maximilla had prophesied continual wars and troubles, but this writer declared that he wrote more than thirteen years after her death, yet no war, general or partial, had taken place, but on the contrary the Christians enjoyed permanent peace through the mercy of God (Eusebius, "Hist. eccl." V, xvi, 19). These thirteen years can be identified only with the twelve and a half years of Commodus (17 March, 180—31 December, 192). The wars between rival emperors began early in 193, so that this anonymous author wrote not much later than January, 193, and Maximilla must have died about the end of 179, not long before Marcus Aurelius. Montanus and Priscilla had died yet earlier. Consequently the date given by Eusebius in his "Chronicle"—eleventh (or twelfth) year of Marcus, i. e. about 172—for the first appearance of Montanus leaves insufficient time for the development of the sect, which we know further to have been of great importance in 177, when the Church of Lyons wrote to Pope Eleutherius on the subject. Again, the Montanists are co-ordinated with the martyr Thraseas, mentioned chronologically between Polycarp (155) and Sagaris (under Sergius Paulus, 166-7) in the letter of Polycrates to Pope Victor; the date of Thraseas is therefore about 160, and the origin of Montanism must be yet earlier. Consequently, Zahn, Harnack, Duchesne, and others (against Völter and Voigt, who accept the late date given by Eusebius, regard St. Epiphanius (Hær., xlviii, 1) as giving the true date of the rise of the sect, "about the nineteenth year of Antoninus Pius" (that is, about the year 156 or 157).

Bonwetsch, accepting Zahn's view that previously (Hær., xli, 1) Epiphanius had given the twelfth year of Antoninus Pius where he should have said M. Aurelius, wishes similarly to substitute that emperor here, so that we would get 179, the very date of the death of Maximilla. But the emendation is unnecessary in either case. In "Hæreses", xli, 1, Epiphanius clearly meant the earlier date, whether right or wrong; and in xlviii, 1, he is not dating the death of Maximilla but the first appearance of the sect. From Eusebius, V, xvi, 7, we learn that this was in the proconsulship of Gratus. Such a proconsul of Asia is not known. Bonwetsch accepts Zahn's suggestion to read "Quadratus", and points out that there was a Quadratus in 155 (if that is the year of Polycarp's death, which was under Quadratus), and another in 166, so that one of these years was the real date of the birth of Montanism. But 166 for Quadratus merely depends on Schmid's chronology of Aristides, which has been rejected by Ramsay and others in favour of the earlier chronology worked out by Waddington, who obtained 155 for the Quadratus of Aristides as well as for the Quadratus of Polycarp. Now it is most probable that

Epiphanius's authority counted the years of emperors from the September preceding their accession (as Hegesippus seems to have done), and therefore the nineteenth year of Pius would be Sept., 155-Sept., 156. Even if the later and Western mode of reckoning from the January after accession is used, the year 157 can be reconciled with the proconsulship of Quadratus in 155, if we remember that Epiphanius merely says "about the nineteenth year of Pius", without vouching for strict accuracy. He tells us further on that Maximilla prophesied: "After me there shall be no prophetess, but the end", whereas he was writing after 290 years, more or less, in the year 375 or 376. To correct the evident error Harnack would read 190, which brings us roughly to the death of Maximilla (385 for 379). But *ἐκαστον* for *διακονία* is a big change. It is more likely that Epiphanius is calculating from the date he had himself given. 19th of Pius = 156, as he did not know that of Maximilla's death; his "more or less" corresponds to his former "about". So we shall with Zahn adopt Scaliger's conjecture *διακονία ἐννεακαιδέκα* for *διακονία ἐννεήκοντα*, which brings us from 156 to 375 = 219 years. As Apollonius wrote forty years after the sect emerged, his work must be dated about 196.

MONTANISM IN ASIA MINOR.—Montanus was a recent convert when he first began to prophesy in the village of Ardabau in Phrygia. He is said by Jerome to have been previously a priest of Cybele; but this is perhaps a later invention intended to connect his ecstasies with the dervish-like behaviour of the priests and devotees of the "great goddess". The same prophetic gift was believed to have descended also upon his two companions, the prophetesses Maximilla and Prisca or Priscilla. Their headquarters were in the village of Pepuza. The anonymous opponent of the sect describes the method of prophecy (Eusebius, V, xvii, 2-3): first the prophet appears distraught with terror (*ἐν ταπεινώσει*), then follows quiet (*ἀδεια καὶ ἀφοβία*, fearlessness); beginning by studied vacancy of thought or passivity of intellect (*ἐκούσιος ἀμαθία*), he is seized by an uncontrollable madness (*ἐκούσιος μανία ψυχῆς*). The prophets did not speak as messengers of God: "Thus saith the Lord," but described themselves as possessed by God and spoke in His Person. "I am the Father, the Word, and the Paraclete," said Montanus (Didymus, "De Trin.", III, xli); and again: "I am the Lord God omnipotent, who have descended into a man", and "neither an angel, nor an ambassador, but I, the Lord, the Father, am come" (Epiphanius, "Hær.", xlviii, 11). And Maximilla said: "Hear not me, but hear Christ" (*ibid.*); and: "I am driven off from among the sheep like a wolf [that is, a false prophet—cf. Matt., vii, 15]; I am not a wolf, but I am speech, and spirit, and power." This possession by a spirit, which spoke while the prophet was incapable of resisting, is described by the spirit of Montanus: "Behold the man is like a lyre, and I dart like the plectrum. The man sleeps, and I am awake" (Epiphanius, "Hær.", xlviii, 4).

We hear of no false doctrines at first. The Paraclete ordered a few fasts and abstinences; the latter were strict *xerophagie*, but only for two weeks in the year, and even then the Saturdays and Sundays did not count (Tertullian, "De jej.", xv). Not only was virginity strongly recommended (as always by the Church), but second marriages were disapproved. Chastity was declared by Priscilla to be a preparation for ecstasy: "The holy [chaste] minister knows how to minister holiness. For those who purify their hearts [reading *purificantes enim corda*, by conjecture for *purificantia enim concordat*] both see visions, and placing their head downwards (!) also hear manifest voices, as saying as they are secret" (Tertullian, "Exhort." X, in one MS.). It was rumoured, however, that Priscilla had been married, and had left her hus-

band. Martyrdom was valued so highly that flight from persecution was disapproved, and so was the buying off of punishment. "You are made an outlaw?" said Montanus, "it is good for you. For he who is not outlawed among men is outlawed in the Lord. Be not confounded. It is justice which hales you in public. Why are you confounded, when you are sowing praise? Power comes, when you are stared at by men." And again: "Do not desire to depart this life in beds, in miscarriages, in soft fevers, but in martyrdoms, that He who suffered for you may be glorified" (Tertullian, "De fuga", ix; cf. "De anima", iv). Tertullian says: "Those who receive the Paraclete, know neither to flee persecution nor to bribe" (De fuga, 14), but he is unable to cite any formal prohibition by Montanus.

So far, the most that can be said of these didactic utterances is that there was a slight tendency to extravagance. The people of Phrygia were accustomed to the orgiastic cult of Cybele. There were doubtless many Christians there. The contemporary accounts of Montanism mention Christians in otherwise unknown villages: Ardabau on the Mysian border, Pepuza, Tymion, as well as in Otrus, Apamea, Cumane, Eumeneia. Early Christian inscriptions have been found at Otrus, Hieropolis, Pepuza (of 260), Trajanopolis (of 279), Eumeneia (of 249) etc. (see Harnack, "Expansion of Christianity", II, 360). There was a council at Synnada in the third century. The "Acta Theodoti" represent the village of Malus near Ancyra as entirely Christian under Diocletian. Above all we must remember what crowds of Christians were found in Pontus and Bithynia by Pliny in 112, not only in the cities but in country places. No doubt, therefore, there were numerous Christians in the Phrygian villages to be drawn by the astounding phenomena. Crowds came to Pepuza, it seems, and contradiction was provoked. In the very first days Apollinarius, a successor of St. Papias as Bishop of Hierapolis in the southwestern corner of the province, wrote against Montanus. Eusebius knew this letter from its being enclosed by Serapion of Antioch (about 191-212) in a letter addressed by him to the Christians of Caria and Pontus. Apollinarius related that Aelius Publius Julius of Debelum (now Burgas) in Thrace, swore that "Sotas the blessed who was in Anchialus [on the Thracian coast] had wished to cast out the demon from Priscilla; but the hypocrites would not allow it." Clearly Sotas was dead, and could not speak for himself. The anonymous writer tells us that some thought Montanus to be possessed by an evil spirit, and a troubler of the people; they rebuked him and tried to stop his prophesying; the faithful of Asia assembled in many places, and examining the prophecies declared them profane, and condemned the heresy, so that the disciples were thrust out of the Church and its communion.

It is difficult to say how soon this excommunication took place in Asia. Probably from the beginning some bishops excluded the followers of Montanus, and this severity was growing common before the death of Montanus; but it was hardly a general rule much before the death of Maximilla in 179; condemnation of the prophets themselves, and mere disapproval of their disciples was the first stage. We hear of holy persons, including the bishops Zoticus of Cumana and Julian of Apamea, attempting to exorcise Maximilla at Pepuza, doubtless after the death of Montanus. But Themison prevented them (Eusebius, V, xvi, 17; xviii, 12). This personage was called a confessor but, according to the anonymous writer, he had bought himself off. He published "a catholic epistle, in imitation of the Apostle", in support of his party. Another so-called martyr, called Alexander, was for many years a companion of Maximilla, who, though a prophetess, did not know that it was for robbery, and

not "for the Name", that he had been condemned by the proconsul Aemilius Frontinus (date unknown) in Ephesus; in proof of this the public archives of Asia are appealed to. Of another leader, Alcibiades, nothing is known. The prophets are accused of taking gifts under the guise of offerings; Montanus sent out salaried preachers; the prophetesses painted their faces, dyed their eyelids with stibium, wore ornaments and played at dice. But these accusations may be untrue. The great point was the manner of prophesying. It was denounced as contrary to custom and to tradition. A Catholic writer, Miltiades, wrote a book to which the anonymous author refers, "How a prophet ought not to speak in ecstasy". It was urged that the phenomena were those of possession, not those of the Old Testament prophets, or of New Testament prophets like Silas, Agabus, and the daughters of Philip the Deacon; or of prophets recently known in Asia, Quadratus (Bishop of Athens) and Ammia, prophetess of Philadelphia, of whom the Montanist prophets boasted of being successors. To speak in the first person as the Father or the Paraclete appeared blasphemous. The older prophets had spoken "in the Spirit", as mouthpieces of the Spirit, but to have no free will, to be helpless in a state of madness, was not consonant with the text: "The spirits of the prophets are subject to the prophets." Montanus declared: "The Lord hath sent me as the chooser, the revealer, the interpreter of this labour, this promise, and this covenant, being forced, willingly or unwillingly, to learn the gnosis of God." The Montanists appealed to Gen., ii, 21: "The Lord sent an ecstasy [*ἐκστασις*] upon Adam"; Ps. cxv, 2: "I said in my ecstasy"; Acts, x, 10: "There came upon him [Peter] an ecstasy"; but these texts proved neither that an ecstasy of excitement was proper to sanctity, nor that it was a right state in which to prophesy.

A better argument was the declaration that the new prophecy was of a higher order than the old, and therefore unlike it. It came to be thought higher than the Apostles, and even beyond the teaching of Christ. Priscilla went to sleep, she said, at Pepuza, and Christ came to her and slept by her side "in the form of a woman, clad in a bright garment, and put wisdom into me, and revealed to me that this place is holy, and that here Jerusalem above comes down". "Mysterics" (sacraments?) were celebrated there publicly. In Epiphanius's time Pepuza was a desert, and the village was gone. Marcellina, surviving the other two, prophesied continual wars after her death—no other prophet, but the end.

It seems on the whole that Montanus had no particular doctrine, and that his prophetesses went further than he did. The extravagances of his sect were after the deaths of all three; but it is difficult to know how far we are to trust our authorities. The anonymous writer admits that he has only an uncertain report for the story that Montanus and Maximilla both hanged themselves, and that Themison was carried into the air by a devil, flung down, and so died. The sect gained much popularity in Asia. It would seem that some Churches were wholly Montanist. The anonymous writer found the Church at Ancyra in 193 greatly disturbed about the new prophecy. Tertullian's lost writing "De Ecstasi", in defence of their trances, is said by Prædestinatus to have been an answer to Pope Soter (Hær., xxvi, lxxxvi), who had condemned or disapproved them; but the authority is not a good one. He has presumably confounded Soter with Sotas, Bishop of Anchialus. In 177 the Churches of Lyons and Vienne sent to the Churches of Asia and Phrygia their celebrated account of the martyrdoms that had been taking place. Eusebius tells us that at the same time they enclosed letters which had been written in prison by the martyrs on the question of the Montanists. They sent the same by Irenæus to Pope Eleutherius. Eusebius says only that they took

a prudent and most orthodox view. It is probable that they disapproved of the prophets, but were not inclined to extreme measures against their followers. It was not denied that the Montanists could count many martyrs; it was replied to their boast, that all the heretics had many, and especially the Marcionites, but that true martyrs like Gaius and Alexander of Eumeneia had refused to communicate with fellow-martyrs who had approved the new prophecy (Anon. in Eusebius, V, xvi, 27). The acts of Carpus, Papyrus, and Agathonice (the last of these threw herself into the fire), martyrs of Thyatira under Marcus Aurelius (about 161-9), may exhibit an influence of Montanism on the martyrs.

MONTANISM IN THE WEST.—A second-century pope (more probably Eleutherius than Victor) was inclined to approve the new prophecies, according to Tertullian, but was dissuaded by Praxeas (q. v.). Their defender in Rome was Proclus or Proculus, much revered by Tertullian. A disputation was held by Gaius against him in the presence of Pope Zephyrinus (about 202-3, it would seem). As Gaius supported the side of the Church, Eusebius calls him a Churchman (II, xxv, 6), and is delighted to find in the minutes of the discussion that Gaius rejected the Johannine authorship of the Apocalypse, and attributed it to Cerinthus. But Gaius was the worse of the two, for we know from the commentary on the Apocalypse by Bar Salibi, a Syriac writer of the twelfth century (see Theodore H. Robinson in "Expositor", VII, sixth series, June, 1906), that he rejected the Gospel and Epistles of St. John as well, and attributed them all to Cerinthus. It was against Gaius that Hippolytus wrote his "Heads against Gaius" and also his "Defence of the Gospel and the Apocalypse of John" (unless these are two names for the same work). St. Epiphanius used these works for his fifty-first heresy (cf. Philastrius, "Her.", lx), and as the heresy had no name he invented that of *Ἀλογοί*, meaning at once "the unreasoning" and "those who reject the *λόγος*". We gather that Gaius was led to reject the Gospel out of opposition to Proclus, who taught (Pseudo-Tertullian, "De Præsc.", lii) that "the Holy Ghost was in the Apostles, but the Paraclete was not, and that the Paraclete published through Montanus more than Christ revealed in the Gospel, and not only more, but also better and greater things"; thus the promise of the Paraclete (John, xiv, 16) was not to the Apostles but to the next age. St. Irenæus refers to Gaius without naming him (III, xi, 9): "Others, in order that they may frustrate the gift of the Spirit, which in the last days has been poured upon the human race according to the good pleasure of the Father, do not admit that form [the lion] which corresponds with the Gospel of John in which the Lord promised to send the Paraclete; but they reject the Gospel and with it the prophetic Spirit. Unhappy, indeed, in that, wishing to have no false prophets [reading with Zahn *pseudoprophetas esse nolunt* for *pseudopropheta esse volunt*], they drive away the grace of prophecy from the Church; resembling persons who, to avoid those who come in hypocrisy, withdraw from communion even with brethren." The old notion that the Alogi were an Asiatic sect (see ALOGI) is no longer tenable; they were the Roman Gaius and his followers, if he had any. But Gaius evidently did not venture to reject the Gospel in his dispute before Zephyrinus, the account of which was known to Dionysius of Alexandria as well as to Eusebius (cf. Eusebius, III, xx, 1, 4). It is to be noted that Gaius is a witness to the sojourn of St. John in Asia, since he considers the Johannine writings to be forgeries, attributed by their author Cerinthus to St. John; hence he thinks St. John is represented by Cerinthus as the ruler of the Asiatic Churches. Another Montanist (about 200), who seems to have separated from Proclus, was Æschines, who taught that "the Father is the Son", and is

counted as a Monarchian of the type of Noetus or Sabellius.

But Tertullian (q. v.) is the most famous of the Montanists. He was born about 150-5, and became a Christian about 190-5. His excessive nature led him to adopt the Montanist teaching as soon as he knew it (about 202-3). His writings from this date onwards grow more and more bitter against the Catholic Church, from which he definitively broke away about 207. He died about 223, or not much later. His first Montanist work was a defence of the new prophecy in six books, "De Ecstasi", written probably in Greek; he added a seventh book in reply to Apollonius. The work is lost, but a sentence preserved by Prædestinatus (xxvi) is important: "In this alone we differ, in that we do not receive second marriage, and that we do not refuse the prophecy of Montanus concerning the future judgment." In fact Tertullian holds as an absolute law the recommendations of Montanus to eschew second marriages and flight from persecution. He denies the possibility of forgiveness of sins by the Church; he insists upon the newly ordained fasts and abstinences. Catholics are the *Psychici* as opposed to the "spiritual" followers of the Paraclete; the Catholic Church consists of gluttons and adulterers, who hate to fast and love to remarry. Tertullian evidently exaggerated those parts of the Montanist teaching which appealed to himself, caring little for the rest. He has no idea of making a pilgrimage to Pepuza, but he speaks of joining in spirit with the celebration of the Montanist feasts in Asia Minor. The Acts of Sts. Perpetua and Felicitas are by some thought to reflect a period at Carthage when the Montanist teaching was arousing interest and sympathy, but had not yet formed a schism.

The following of Tertullian cannot have been large; but a Tertullianist sect survived him and its remnants were reconciled to the Church by St. Augustine (Hær., lxxxvi). About 392-4 an African lady, Octaviana, wife of Hesperius, a favourite of the Duke Arbogastes and the usurper Maximus, brought to Rome a Tertullianist priest who raved as if possessed. He obtained the use of the church of Sts. Processus and Martinianus on the Via Aurelia, but was turned out by Theodosius, and he and Octaviana were heard of no more. Epiphanius distinguished a sect of Montanists as Pepuzians or Quintillians (he calls Priscilla also Quintilla). He says they had some foolish sayings which gave thanks to Eve for eating of the tree of knowledge. They used to sleep at Pepuza in order to see Christ as Priscilla had done. Often in their church seven virgins would enter with lamps, dressed in white, to prophesy to the people, whom by their excited action they would move to tears; this reminds us of some modern missions rather than of the Irvingite "speaking with tongues", with which the Montanist ecstasies have often been compared. These heretics were said to have women for their bishops and priests, in honour of Eve. They were called "Artotyrites", because their sacrament was of bread and cheese. Prædestinatus says the Pepuzians did not really differ from other Montanists, but despised all who did not actually dwell at the "new Jerusalem". There is a well-known story that the Montanists (or at least the Pepuzians) on a certain feast took a baby child whom they stuck all over with brazen pins. They used the blood to make cakes for sacrifice. If the child died it was looked upon as a martyr; if it lived, as a high priest. This story was no doubt a pure invention, and was especially denied in the "De Ecstasi" of Tertullian. An absurd nickname for the sect was *Tasco-drugila*, from Phrygian words meaning peg and nose, because they were said to put their forefinger up their nose when praying "in order to appear dejected and pious" (Epiphanius, Hær., xlviii, 14).

It is interesting to take St. Jerome's account, written in 384, of the doctrines of Montanism as he be-

lieved them to be in his own time (Ep., xli). He describes them as Sabellians in their idea of the Trinity, as forbidding second marriage, as observing three Lents "as though three Saviours had suffered". Above bishops they have "Cenones" (probably not *nouveau*, but a Phrygian word) and patriarchs above these at Pepuza. They close the door of the Church to almost every sin. They say that God, not being able to save the world by Moses and the Prophets, took flesh of the Virgin Mary, and in Christ, His Son, preached and died for us. And because He could not accomplish the salvation of the world by this second method, the Holy Spirit descended upon Montanus, Prisca, and Maximilla, giving them the plenitude which St. Paul had not (I Cor., xiii, 9). St. Jerome refuses to believe the story of the blood of a baby; but his account is already exaggerated beyond what the Montanists would have admitted that they held. Origen ("Ep. ad Titum" in "Pamph. Apol.", I fin.) is uncertain whether they are schismatics or heretics. St. Basil is amazed that Dionysius of Alexandria admitted their baptism to be valid (Ep., clxxii). According to Philastrius (Hær., xlix) they baptized the dead. Sozomen (xviii) tells us that they observed Easter on 6 April or on the following Sunday. Germanus of Constantinople (P. G., XCVIII, 44) says they taught eight heavens and eight degrees of damnation. The Christian emperors from Constantine onwards made laws against them, which were scarcely put into execution in Phrygia (Sozomen, II, xxxii). But gradually they became a small and secret sect. The bones of Montanus were dug up in 861. The numerous Montanist writings (*βιβλία ἀνερτοι*, "Philosophumena", VIII, xix) are all lost. It seems that a certain Asterius Urbanus made a collection of the prophecies (Euseb., V, xvi, 17).

A theory of the origin of Montanism, originated by Ritschl, has been followed by Harnack, Bonwetsch, and other German critics. The secularizing in the second century of the Church by her very success and the disappearance of the primitive "Enthusiasmus" made a difficulty for "those believers of the old school who protested in the name of the Gospel against this secular Church, and who wished to gather together a people prepared for their God regardless alike of numbers and circumstances". Some of these "joined an enthusiastic movement which had originated amongst a small circle in a remote province, and had at first a merely local importance. Then, in Phrygia, the cry for a strict Christian life was reinforced by the belief in a new and final outpouring of the Spirit. . . . The wish was, as usual, father to the thought; and thus societies of 'spiritual' Christians were formed, which served, especially in times of persecution, as rallying points for all those, far and near, who sighed for the end of the world and the *excessus e seculo*, and who wished in these last days to lead a holy life. These zealots hailed the appearance of the Paraclete in Phrygia, and surrendered themselves to his guidance" (Harnack in "Encycl. Brit.", London, 1878, s. v. Montanism). This ingenious theory has its basis only in the imagination, nor have any facts ever been advanced in its favour.

JOHN CHAPMAN.

Montauban, DIOCESE OF (MONTIS ALBANI), suffragan of Toulouse, comprises the entire department of Tarn and Garonne. Suppressed in 1802 and divided between the three neighbouring dioceses of Toulouse, Agen, and Cahors, Montauban was re-established by imperial decree of 1809, but this measure was not approved by the Holy See. Re-established by the concordat of 1817, it was filled only in 1824.

In 820 the Benedictine monks had founded the Abbey of Montauriol under the patronage of St. Martin; subsequently it adopted the name of its abbot St. Theodard, Archbishop of Narbonne, who died at the abbey in 893. The Count of Toulouse, Alphonse Jourdan, took from the abbey in 1144 its lands on the heights overlooking the right bank of the Tarn, and founded there the city of Montauban; a certain number of inhabitants of Montauriol and serfs of the abbey formed the nucleus of the population. The monks protested, and in 1149 a satisfactory agreement was concluded. Notwithstanding the sufferings of Montauban during the Albigensian wars, it grew rapidly. John XXII, by the Bull "Salvator" (25 June, 1317), separated from the ecclesiastical province of Narbonne, the See of Toulouse, made it an archiepiscopal see, and gave it as suffragans four dioceses created within its territory: Montauban, St.-Papoul, Rieux, Lombes. Bertrand de Puy, abbot at Montauriol, was first Bishop of Montauban. Montauban counts among its bishops: Cardinal Georges d'Amboise (1484-1491), minister of Louis XII, and Jean de Lettes (1539-1556), who married and became a Protestant. Despite the resistance of Jacques des Prés-Montpezat (1556-1589), a nephew of Jean de Lettes who succeeded him as bishop, the Calvinists became masters of the city; in 1561 they interdicted Catholic worship; the destruction of the churches, and even of the cathedral, was begun and carried on until 1567. In 1570 Montauban became one of the four strongholds granted the Protestants and in 1578, 1579, and 1584 harboured the synods held by the députés of the Reformed Churches of France. For a short time, in 1600, Catholic worship was re-established but was soon suppressed; Bishop Anne Carrion de Murviel (1600-1652) withdrew to Montech during the greater part of his reign and administered thence the Church of Montauban. In spite of the unsuccessful siege of Montauban by Louis XIII (August-November, 1621), the fall of La Rochelle (1629) entailed the submission of the city, and Richelieu entered it on 20 August, 1629. Other bishops of note were: Le Tonnellier de Breteuil (1762-1794), who died during the Reign of Terror in the prison of Rouen, after converting the philosopher La Harpe to Catholicism; the future Cardinal de Cheverus (q. v.), 1824-26.

The Church of Moissac, whose portal built in 1107 is a veritable museum of Romanesque sculpture, deserves notice; its cloister (1100-1108) is one of the most remarkable in France. Legend attributes to Clovis the foundation of the Abbey of Moissac in 506, but St. Amand (594-675) seems to have been the first abbot. The abbey grew, and in a few years its possessions extended to the gates of Toulouse. The threats and incursions of the Saracens, Hungarians, and Northmen brought the monks of Moissac to elect "knight abbots" who were laymen, and whose mission was to defend them. From the tenth to the thirteenth century several of the counts of Toulouse were knight-

abbots of Moissac; the death of Alfonso II (1271) made the King of France the legitimate successor of the counts of Toulouse, and in this way the abbey came to depend directly on the kings of France, henceforth its "knight-abbots". Some of the abbots were saints: St. Ausbert (663-678); St. Léotadius (678-691); St. Paternus (691-718); St. Amaranthus (718-720). The union of Moissac with Cluny was begun by Abbot Stephen as early as 1047, and completed in 1063 under Abbot Durand. Four filial abbeys and numerous priories depended on the Abbey of Moissac. Among the commendatory abbots were Louis of Lorraine, Cardinal de Guise (1556-1578); Charles of Lorraine, the Cardinal de Vaudemont (1578-1590). In 1618 Moissac was transformed into a collegiate church which had, among other titulars, Cardinal Mazarin (1644-1661), and Cardinal de Loménie de Brienne, minister of Louis XVI (1775-1788). On 25 July, 1523, fifteen inhabitants of Moissac, after they had made a pilgrimage to Compostella, grouped themselves into a confraternity "à l'honneur de Dieu, de Notre Dame et Monseigneur Saint Jacques". This confraternity, reorganized in 1615 by letters patent of Louis XIII, existed for many years. As late as 1830 "pilgrims" were still seen in the Moissac processions. In fact Moissac and Spain were long closely united; a monk of Moissac, St. Gérard, was Archbishop of Braga from 1095 to 1109. The general synod of the Reformers held at Montpelier, in May, 1598, decided on the creation of an academy at Montauban; it was opened in 1600, was exclusively Protestant, and gathered students from other countries of Europe. In 1632 the Jesuits established themselves at Montauban, but in 1659 transferred the Academy to Puylaurens. In 1808 a faculty of Protestant theology was created at Montauban and still exists.

The principal pilgrimages of the diocese are: Notre Dame de Livron or de la Délivrance, visited by Blanche of Castille and Louis XIII; Notre Dame de Lorm, at Castelferrus, dating from the fifteenth century; Notre Dame de la Peyrouse, near Lafrançaise. Before the application of the law of 1901 as to associations, the diocese counted Jesuits, Redemptorists, Marianists, and various orders of School Brothers. Among the congregations of women which originated in the diocese we mention: Sisters of Mercy, hospitalers and teachers, founded in 1804 (mother-house at Moissac); Sisters of the Guardian Angel, hospitalers and teachers, founded in 1839 at Quillan in the Diocese of Carcassonne by Père Deshayes, Superior of the Daughters of Wisdom, whose mother-house was transferred to the château of La Molle, near Montauban in 1858. At the beginning of the twentieth century the religious congregations had charge of: 1 crèche, 24 day nurseries, 10 girls' orphanages, 1 refuge (*œuvre de réhabilitation*), 2 houses for the relief of the poor, 11 hospitals or asylums, 30 houses for the care of the sick in their own homes. In 1908 the Diocese of Montauban counted 188,563 inhabitants, of whom 7000 were Protestants; 31 parishes; 296 succursals parishes; 58 vicariates.

GEORGES GOYAU.

Montault, XAVIER BARBIER DE, b. at Loudun, 6 February, 1830; d. at Blaslay, Vienne (France), 29 March, 1901. He came of a noble and large family, and, when only eight years old, was confided to the care of his great-uncle, Mgr Montault des Isles, Bishop of Angers. He studied theology at the Seminary of St. Sulpice, and went to Rome to continue his studies in theology and archæology at the Sapienza

and the Roman College. After four years his health obliged him to return to France (1857), where he was appointed historiographer of the Diocese of Angers. He searched the archives of the diocese with great diligence, studied its inscriptions and monuments, and founded a diocesan museum, a project in which de Caumont took a lively interest. Another sojourn of fourteen years in Rome (1861-75) enabled him to augment his already extensive knowledge of liturgy and Christian antiquities. Meanwhile he was of great service to different French bishops as canonical consultant, and at the Vatican Council acted as theologian to Mgr Desflèches, Bishop of Angers. His first archaeological study appeared in 1851 in the "Annales archéologiques", and Didron assigned him the task of making an index for this publication. Mgr Barbier de Montault was one of the most prolific contributors to the "Revue de l'art chrétien" from the inception of this periodical, his articles continuing to appear until 1903 (two years after his death). He also wrote numerous articles for other reviews as well as several separate works on iconography, ecclesiastical furniture, liturgy, canon law, etc. In 1889 he began to reprint his scattered works, classifying them according to subjects. This publication was to comprise sixty volumes, but went no further than the sixteenth, and is to be recommended more for its erudition than for its critical value. Works: "Œuvres complètes" (unfinished): I. "Inventaires ecclésiastiques"; II. "Le Vatican"; III. "Le Pape"; IV-V. "Droit papal"; VI-VIII. "Dévotions populaires"; IX-XVI. "Hagiographie" (Rome, 1889-1902); "Traité d'iconographie chrétienne" (2 vols., Paris, 1890); "Collection des décrets authentiques des ss. congrégations romaines" (8 vols., Rome, 1872).

HELIG, *Mgr Xavier Barbier de Montault in Revue de l'art chrétien*, (1901), 357-60; GIBON, *Mgr X. B. de Montault, bio-bibl.*, Hommes (1910).

R. MAERE.

Montboissier, PETER OF (better known as PETER THE VENERABLE), BLESSED, born in Auvergne, about 1092; died at Cluny, 25 December, 1156. His mother, Blessed Raingarde, offered him to God in the monastery of Sauxillanges of the Congregation of Cluny, where he made his profession at the age of seventeen. He was only twenty years old when he was appointed professor and prior of the monastery of Vézelay, and he discharged his duties in that house, and later in the monastery of Domène, with such success that at the age of thirty he was elected general of the order. The order, which then counted not less than 2000 houses throughout Europe, was in need of reform. The abbot had begun this work when his predecessor, the Abbot Pontius, who had been deposed by the pope, attempted to be reinstated in his office by violence. Our saint had to face other attacks made on his order by St. Bernard himself, who did not fail however to acknowledge the eminent virtue of Peter and was the first to call him Venerable. Peter resisted the attacks with both firmness and meekness, and took occasion of them to write the rules of the Congregation of Cluny, one of the most complete and perfect codes of religious life. He was prominent in resisting the schism caused by the Antipope Anacletus II, after the death of Honorius II (1130). With St. Bernard, he was the soul and the light of the General Council of Pisa (1134), and having encouraged Innocent II to stand firm in the midst of persecutions, he predicted the end of the schism, which happened in 1138.

During a visit to Spain (1139) he became interested in Mohammedanism and had the Koran for the first time translated into Latin. He made several journeys to Rome, where the popes entrusted him with delicate missions, and he accompanied Eugene III to the Council of Reims (1147), where the doctrines of Gilbert de la Porée were condemned. Kings and emperors came to him for advice and in the midst of his

labours he found time to write numerous letters, valuable theological works on the questions of the day, the Divinity of Christ, the Real Presence, against the Jews and the Mohammedans, and concerning the statutes and the privileges of his order, besides sermons and even verses. Theologians praise the precision of his teaching. When Abelard's doctrine had been condemned at Soissons, Peter opened his monastery to him, reconciled him with St. Bernard and with the pope, and had the joy of seeing him spend the rest of his life under his guidance. He died on Christmas Day, according to his wish, "after a sublime sermon to his brethren on the mystery of the day". Honoured as a saint both by the people and his order, he was never canonized; Pius IX confirmed the cult offered to him (1862).

Petri Venerabilis opera in P. L., CLXXXIX: RODULPHUS, Vita Petri Venerabilis in P. L., CLXXXIX, 5-27; MARIE and DUCHESNE, Bibliotheca Cluniacensis, 589-618; MARTENE, Amplissima Collectio, VI, 1187-1202; Gallia Christiana, IV, 1137-1140; PIGNOR, Histoire de l'ordre de Cluny, III, 49-509; DEMI-MUID, Pierre le Vénérable et la vie monastique au XII^e siècle (Paris, 1895).

A. FOURNET.

Montcalm-Gozon, LOUIS-JOSEPH, MARQUIS DE, a French general, b. 28 Feb., 1712, at Candiac, of Louis-Daniel and Marie-Thérèse de Lauris; d. at Quebec 14 Sept., 1759. He was descended from Gozon, Grand Master of Rhodes of legendary fame. The warlike spirit of his ancestors had given rise to the saying: "War is the tomb of the Montcalms." Though less clever than a younger brother, a prodigy of learning at seven, Louis-Joseph was a classical scholar. A soldier at fifteen, he spent his leisure in camp reading Greek and German. He served successively at the sieges of Kehl and Philipsbourg, and became a knight of St. Louis (1741) after a campaign in Bohemia, and was appointed colonel of the Auxerrois regiment (1743). He received five wounds at the battle of Piacenza. In 1736 he had married Angélique-Louise Talon de Boulay, grand-niece of the famous intendant of that name. Of this union were born ten children. In 1755 he succeeded the ill-fated Dieskau, in the command of the French army in Canada, under governor Vaudreuil. The dissonance of character between the two chiefs was to cause much friction during this trying period. Unlike his superior, Montcalm was quick in conception, fearless, generous and impulsive, self-reliant and decisive in action. Intendant Bigot's unscrupulous dishonesty, the apathy of the French court for the "few arpents of snow", an impoverished colony, an ill-fed, ill-clad and badly provided army, all this enhances Montcalm's heroic courage and faithfulness to duty. He was ably seconded by the skilful, prudent and brave chevalier de Lévis. The disproportion in numbers and resources between the belligerent forces rendered more arduous the problem to be solved. Yet it was only after a record of three brilliant victories that he was to end his glorious career on the Plains of Abraham. First in order of time comes the capture of Chouaguem (Oswego), an undertaking wherein all the odds were against the besiegers. Overcoming all diffidence, Montcalm succeeded (14 Aug., 1756), thereby winning the region of Ontario to the domination of France, and with a few badly armed troops taking 1600 prisoners, 5 flags, 100 guns, at the cost of only 30 killed and wounded. Attributing his success to God, he raised a cross with the inscription: "In hoc signo vincunt." In connexion with a later triumph, the capture of Fort William Henry (9 Aug., 1757), Montcalm has been accused of tolerating the massacre by the Indians of the English prisoners. Yet, even Bancroft admits that he exposed himself to death to stop the savages infuriated by the rum given them by the English contrary to his orders. The last and greatest of Montcalm's victories, shared by Lévis and Bourlamaque, was at Carillon (Ticonderoga), a battle which was to result either in the salvation or destruc-

tion of New France. Although a first encounter (5 July, 1758) had proved disastrous to the French, the death of the valiant young Lord Howe, the real head of the English troops, deprived Abercromby of his chief support. On the 8th the onslaught of the entire Anglo-American army was rendered impossible by the earthworks and complicated barricade of felled trees protecting Fort Carillon; while a deadly fire decimated the assailants. When the fray was over 2000 English soldiers lay killed or wounded, while the French losses were only 104 killed and 248 wounded; 3800 men had repulsed 15,000. In thanksgiving to the God of Hosts, Montcalm raised a cross with an inscription.

After arresting the invasion by land, Montcalm had to face the attack of the naval forces. During the siege of Quebec by Wolfe, Montcalm with Lévis won a first victory at Montmorency Falls, with a loss of 450 to the English (31 July, 1759). But the final act was drawing nigh, which was to seal the fate of New France. On 13 Sept. the enemy stealthily scaled the Heights of Abraham, and at early morn was ranged in battle. Montcalm, thunderstruck by the unexpected tidings, hurried from Beauport and arrayed his troops. Though about equal in numbers, they were doomed to defeat for several reasons, including surprise, hardship, privation, fatigue, and a disadvantageous position. Both generals fell, Wolfe dying on the battle-field, and Montcalm the next morning. This battle, considered in its results, was one of the greatest events of the eighteenth century. It saved Canada from the French Revolution and heralded the dawn of American Independence. Montcalm was a brave and generous commander, a high-minded and disinterested patriot; a faithful Christian giving to God the glory of his victories. His memory is cherished in the Old and the New World. In Canada he shares the honours awarded to his victor, as the following inscription on their joint monument testifies:—

Mortem virtus

Communem famam historia

Monumentum posteritas dedit.

—a tribute duly anticipated by the French Academy in the last words of the hero's epitaph in the chapel of the Ursuline monastery:—

Galli lugentes deposuerunt et generosæ hostium fidei commendarunt.

(The French mourned and buried him and commended him to the enemies' generosity).

LIONEL LINDSAY.

Monte Cassino, ABBEY OF, an abbey *nullius* situated about eighty miles south of Rome, the cradle of the Benedictine Order. About 529 St. Benedict left Subiaco, to escape the persecutions of the jealous priest, Florentius (see BENEDICT OF NURSIA, SAINT). Accompanied by a chosen band, among them Sts. Maurus and Placid, he journeyed to Monte Cassino, one of the properties made over to him by Tertullus, St. Placid's father. The town of Cassinum (Cassino), lying at the foot of the mountain, had been destroyed by the Goths some thirty-five years earlier, but a temple of Apollo still crowned the summit of the mountain, and the few remaining inhabitants were still sunk in idolatry. Benedict's first act was to break the image of Apollo and destroy the altar, on the site of which he built a church dedicated to St. John the Baptist, and an oratory in honour of St. Martin of Tours. Around the temple there was an enclosing wall with towers at intervals, the *arx* (citadel) of the destroyed city of Cassinum. In one of these towers the saint took up his abode, and to this fact its preservation is due, for, while the rest of the Roman *arx* has been destroyed, this tower has been carefully pre-

served and enclosed in the later buildings. Outside the existing monastery, however, there still remains a considerable part of a far more ancient enclosure, viz. a cyclopean wall some twenty-six feet high and fourteen and a half feet in thickness, which once ran down the mountain side enclosing a large triangular space that contained the Cassinum of pre-Roman times. Once established at Monte Cassino, St. Benedict never left it. There was written the Rule whose influence was to spread over all Western monachism; there he received the visit of Totila in 542, the only date in his life of which we have certain evidence; there he died, and was buried in one tomb with his sister, St. Scholastica. After the saint's death, the abbey continued to flourish until 580, when it was pillaged and burned by the Lombards, the surviving monks fleeing to Rome. Here, welcomed by the pope, Pelagius II, and permitted to establish a monastery beside the Lateran Basilica, they remained for a hundred and thirty years, during which time Monte Cassino seems not to have been entirely deserted, though nothing like a regular community existed there. To this period also is assigned the much discussed translation of St. Benedict's body to Fleury in France, the truth of which it seems almost impossible to doubt. (See FLEURY, ABBEY OF.)

The restoration of Monte Cassino took place in 718, when Abbot Petronax, a native of Brescia, was entrusted with this task by Gregory II. Aided by some of the monks from the Lateran monastery, Petronax restored the buildings at Monte Cassino and built a new church over the tomb of St. Benedict. This was consecrated in 748 by Pope Zachary in person, who at the same time confirmed all the gifts made to the monastery and exempted it from episcopal jurisdiction. The fame of the abbey at this period was great, and, among the monks professed, may be mentioned Carloman, the son of Charles Martel, Rachis, brother of the great Lombard Duke Astolf, and Paul Warnefrid (usually called Paul the Deacon), the historian of the Lombards. Towards the middle of the ninth century the Saracens overran this part of Italy and Monte Cassino did not escape. In 884 Abbot Bertharius and some of his monks were killed, the rest fleeing to Teano. Within two years the restoration of Monte Cassino was begun, but Teano retained the

Abbot Desiderius, who ruled from 1058 until 1087, when he was elected pope under the title of Victor III (q. v.). Under this abbot, the most famous of all the series after St. Benedict himself, the number of monks rose to over two hundred, and the school of copyists and miniature painters became famous throughout the West. The buildings of the monastery were reconstructed on a scale of great magnificence, artists

CLOISTER OF THE STATUES AND FAÇADE OF THE ABBEY CHURCH, MONTE CASSINO

being brought from Amalfi, Lombardy, and even Constantinople to supervise the various works. The abbey church, rebuilt and decorated with the utmost splendour, was consecrated in 1071 by Pope Alexander II, who was assisted by ten archbishops, forty-four bishops, and so vast a crowd of princes, abbots, monks, etc. that, the enthusiastic chronicler declares, "it would have been easier to number the stars of heaven than to count so great a multitude." A detailed account of the abbey at this date exists in the "*Chronica monasterii Cassinensis*" of Leo of Ostia (see Pertz, "*Mon. Germ. Hist. Scriptores*", VII).

From this date a decline set in. The unsettled condition of Italy and the great strategical value of Monte Cassino involved the abbey in the constant political struggles of the period. In 1239 the monks were driven out of their cloister by Frederick II, but returned thither under Charles of Anjou. In 1294 Celestine V endeavoured to unite Monte Cassino to his new order of Celestines (q. v.), but this scheme collapsed on his abdication of the papacy. In 1321 John XXII made the church of Monte Cassino a cathedral, the abbot becoming bishop of the newly constituted diocese, and his monks the chapter. There is no doubt that this was done with the best of intentions, as an additional honour to the great abbey; in practice, however, it proved disastrous. The bishops of Monte Cassino, nominated at Avignon, were secular prelates who never visited the diocese, but who appropriated the income of the abbey to their personal use. The number of monks thus dwindled, the observance declined, and utter ruin became a mere question of time. In view of this danger Urban V, who was a Benedictine monk, proclaimed himself Abbot of Monte Cassino, collected monks from other houses to reinforce the community, and in 1370 appointed Andrew of Faenza, a Camaldolese, as superior. The revival, however, was short-lived; in 1454 the system of commendatory abbots was reintroduced and lasted until 1504, when Julius II united Monte Cassino to the recently established Congregation of St. Justina of Padua (see BENEDICTINES), which was thenceforth known as the Cassinese Congregation. In 1799 the abbey was taken and plundered by the French troops who had invaded the Kingdom of Naples, and in 1866 the monastery was suppressed in common with all other Italian religious houses. At

CHOIR-STALLS, ABBEY CHURCH, MONTE CASSINO

bulk of the community until 949, when Abbot Aligernus effected the return. The autograph copy of St. Benedict's Rule, which had been preserved till now through all the vicissitudes of the community's existence, perished in a fire during the stay at Teano. The high state of discipline at Monte Cassino about this time is vouched for by St. Nilus, who visited it in the latter half of the tenth century and again by St. Odilo of Cluny some fifty years later. The abbey's reputation reached its zenith, however, during the reign of

the present day Monte Cassino is the property of the Italian Government, which has declared it a national monument; the abbot, however, is recognized as Guardian in view of his administration of the diocese. The reigning abbot is Dom Gregorio Diamare (elected 1909); the community (1909) consists of thirty-seven choir monks and thirty lay brothers. The vast buildings contain, besides the monastery, a lay school with 126 boarders and two seminaries, one open to all and the other reserved for the Diocese of Monte Cassino with 76 and 50 pupils respectively. In the management of these institutions the monks are assisted by a number of secular priests.

The present buildings form a vast rectangular pile externally more massive than beautiful. The ancient tower of St. Benedict, now a series of chapels elaborately decorated by monastic artists of the Beuron school, is the only portion dating back to the foundation of the abbey. The entrance gate leads to three square court-yards opening out of one another with arcades in the Doric order. These date from 1515 and are attributed, on somewhat slight evidence, to Bramante. From the middle court-yard an immense flight of steps leads to the atrium or forecourt of the basilica. This quadrangle has an arcade supported by ancient columns taken from the basilica of Abbot Desiderius, and probably once in the destroyed temple of Apollo on the site of which the present church stands. The existing church, the fourth to occupy the site, is from the designs of Cosimo Fansaga. It was begun in 1649, and was consecrated in 1727 by Benedict XIII. In richness of marbles, the interior is said to be surpassed only by the Certosa at Pavia, and the first impression is certainly one of astonishing magnificence. On closer inspection, however, the style is found to be somewhat decadent, especially in the plasterwork of the ceiling, while the enormous profusion of inlaid marble and gilding produces a slightly restless effect. Still it is undoubtedly the finest example of Florentine mosaic work in Europe, and the general colour scheme is excellent. The church is cruciform in plan, with a dome at the crossing, beneath which is the high altar. Behind this altar is the choir with its elaborately carved stalls. The tomb of St. Benedict is in a crypt chapel beneath the eastern portion of the church, but it is extremely doubtful whether any relics of the saint now remain there. This chapel has recently been decorated with mosaics from designs by Luca Giordano in the church above. The sacristy contains the ancient pavement of *opus alexandrinum*, which was formerly in the basilica of Abbot Desiderius. In the left transept is the monument of Pietro di Medici, son of Lorenzo the Magnificent, and brother of Leo X. This tomb, which is by the great architect Antonio di Sangallo, is unquestionably the most beautiful and dignified work in the whole building. The great west door, a bronze piece of the twelfth century, is engraved with the names of all the parishes in the Diocese of Monte Cassino. The kitchens are approached from the ground-floor by a long covered passage on an inclined plane, large enough for two mules laden with provisions to pass. This curious structure dates from the twelfth century and is lit by an exquisite marble window of four arches in the style known as Cosmatesque. The buildings as a whole produce an effect of great dignity and magnificence, all the more unexpected from the inaccessible position of the monastery and the extreme severity of the exterior. The view from the "Loggia del Paradiso" or forecourt, is one of the most famous in Southern Italy.

The archives (*archivium*), besides a vast number of documents relating to the history of the abbey, con-

tains some 1400 manuscript codices chiefly patristic and historical, many of which are of the greatest value. The library contains a fine collection of modern texts and *apparatus criticus*, which is always most courteously put at the disposal of scholars who come to work on the manuscripts. When the abbey was declared a national monument, orders were given to transport the whole collection of manuscripts to the National Library at Naples; but, owing to the personal intercession of Mr. Gladstone, then Prime Minister of England, the order was reversed, and instead one of the community was appointed as Archivist with a salary from the Government, an arrangement which still continues.

The Diocese of Monte Cassino includes most of the Abruzzi, and is one of the most extensive in Italy. It was formed by uniting seven ancient dioceses, a fact which is borne in mind by the interesting custom that, when the abbot sings pontifical High Mass, he uses seven different precious mitres in succession. As ordinary the abbot is directly subject to the Holy See, and the choir monks take rank as the chapter of the diocese, of which the abbatial basilica of Monte Cassino is the cathedral. The conferring of sacred orders, blessing of Holy Oils, and administration of the Sacrament of Confirmation are the only pontifical functions which the abbot does not exercise. The vicar-general is usually one of the community.

G. ROGER HUDLESTON.

Montefeltro, DIOCESE OF (FERETRANA), in the province of Urbino, in the Marches, Central Italy. The earliest mention of it, as Mons Feretri, is in the diplomas by which Charlemagne confirmed the grants of Pepin the Short to the Holy See. Montefeltro was then the seat of counts, who became imperial vicars in 1135, and Counts of Urbino in 1213. Their rule was interrupted from 1322 to 1375, when Ederigo I of Montefeltro and Urbino lost possession of the city. This prince and his successors made several attempts to recover Montefeltro, from which Cardinal Albornoz (1359) again expelled them in the person of Nolfo. The elder Guido of Montefeltro, a famous Ghibelline captain, finally became a Franciscan, and died in 1298.

The first known bishop of Montefeltro was Agatho (826), whose residence was at San Leo; other bishops were Valentino (1173), who finished the cathedral; Benvenuto (1219), deposed as a partisan of Count Ederigo; Benedetto (1390), a Benedictine monk, rector of Romagna and Duke of Spoleto; the Franciscan Giovanni Seclani (1413), who built the episcopal palace of Calamello; Cardinal Ennio Filonardi (1549); Giovanni Francesco Sarmani (1567), founder of the seminary of Pennabilli, thenceforth residence of the bishops, the episcopal see having been transferred to that town from San Leo, an important fortress of the Pontifical States. Under Bishop Flaminio Dondi (1724) the see was again transferred to San Leo, but later it returned to Pennabilli. This diocese is suffragan of Urbino, and has 120 parishes, 173 secular priests, 30 regulars, 60,350 Catholics, 91 religious houses of men, 9 of women, 2 educational institutes for male students, and 3 for girls.

CAPPILLETTI, *Le Chiese d'Italia*, III (Venice, 1857).

U. BENIGNI.

Montefiascone, DIOCESE OF (MONTIS FALISCI), in the province of Rome. The city is situated nearly 2000 feet above sea-level, on a tufa mass that overlooks the Lake of Bolsena; it is famous for its wine. The town is of Etruscan origin and was called Faliscodunum. Some believe that it is the ancient Fanum Voltumnæ. For the Faliscans, and later for the popes, it was a most important strategic position; Gregory IX fortified it in 1235 against Frederick II, but the town surrendered to that prince in 1240, and thenceforth never regained its earlier importance. The castle, now in ruins, was restored by Leo X. The cathedral is the work of Sammicheli (1519). Outside the city, on the road to Bolsena, is the famous double basilica of San Flaviano, the lower portion of which dates from 1030, while the upper basilica, dating from 1262, presents the interesting feature of alternating ogive and round arches. There also is the tomb of that famous drinker whom the wine of Montefiascone brought to his death (Est, Est, Est), and who, contrary to report, was neither a canon nor one of the Fugger family of Augsburg. Montefiascone is the birthplace of the poet Giambattista Casti, who died in 1802. This city, originally in the Diocese of Bagnorea, was made an episcopal see in 1369; its first bishop was the French Augustinian Pierre d'Anguiscen (1376), a partizan of the antipope Clement VII. In 1435 the see was united with that of Corneto; and so remained until, in 1854, Corneto became a part of the Diocese of Civitavecchia.

Among its bishops were Alessandro Farnese (1499), later Paul III; the two brothers and cardinals Paolo Emilio Zacchia (1601) and Ludovico Zacchia (1605), both of whom did much for the building of the cathedral; Cardinal Paluzzio Albertoni Altieri (1666), founder of the seminary and restorer of the cathedral, which was damaged by a fire in 1670; the learned cardinal M. Antonio Barbarigo (1687), who was transferred later to Padua; he gave great assistance after the earthquake of 1695; Cardinal Pompeo Aldobrandini (1734); the learned Giuseppe Garampi (1776), who gave its library to the seminary, and Cardinal Giovanni Sifredo Manzy (1794); the attitude of this prelate towards Napoleon was not imitated by his clergy, who therefore suffered imprisonment and exile. The diocese is directly dependent on the Holy See; it contains 13 parishes, 74 secular priests, 21 regulars, 26,147 inhabitants, 3 religious houses of men, 14 of women, and 3 convent schools for girls.

CAPPELLETTI, *Le Chiese d'Italia* (Venice, 1887); DE ANGELIS, *Commentario storico-critico su l'origine e le vicende di Montefiascone* (Montefiascone, 1841).

U. BENIGNI.

Montemayor (MONTEMÔR), JORGE DE, writer, b. at Montemôr, province of Coimbra, Portugal, about 1520; d. at Turin, 26 February, 1561. Although of Portuguese birth, Montemayor occupies a prominent place in the history of Spanish letters. Little is known of his life. We are informed, however, that he was not a man of university training, being not even acquainted with Latin.

The work which has given him fame is his pastoral

novel "La Diana", published, according to common report, at Valencia, in 1542, but thought by others, from allusions in the work itself, to have been published after 1554, probably in 1558 or 1559. This book, which for a long time served as a model for novels of its kind, is written in good Spanish, and in it the author describes certain incidents in his own life, among others an unfortunate love affair. The portions written in verse are not as meritorious as those written in prose. The author promises a sequel which never appeared. Three other "Dianas" appeared, however, which purported to be continuations of Montemayor's. One by Alonzo Perez, a physician of Salamanca, who claimed that Montemayor had entrusted to him his plans for finishing the work, appeared in 1564 and was a failure. The two others, by Gaspar Gil Polo in 1564 and by Jerónimo de Tajada in 1627, were more deserving of praise.

PALACE OF THE PRINCE, CETINJE, MONTENEGRO

The "Diana" enjoyed great popularity and led to many imitations by famous authors, notably "La Arcadia" of Lope de Vega, and "La Galatea" of Cervantes, and it is said that Shakespeare based his "Two Gentlemen of Verona" upon an episode in "La Diana". It went through many editions both in and out of Spain. There are six French, two German, and one English translation of the book, the latter the work of Bartholomew Young (London, 1598). Montemayor has also left a number of lyric poems, published in 1554 under the title of "Cancionero", and reprinted in 1562, 1572, and 1588. These are also written in Spanish, but are not of any particular merit.

Revue Hispanique (Paris, 1895); FYTMAURICE-KELLY, *A History of Spanish Literature* (New York, 1906); TICKNOR, *A History of Spanish Literature* (Boston, 1886).

VENTURA FUENTES.

Montenegro, a kingdom in the Balkan Peninsula, on the east coast of the Adriatic Sea; the territory was in ancient times a portion of the Roman province of Dalmatia. Emperor Diocletian made Southern Dalmatia a separate province, Prævalis (Dioclea, Dioclitia) with Dioclea as its capital. From the seventh century the north-western portion of the peninsula began to be invaded by Slav tribes; one of these, the Serbs, settled in the territory which they still possess, and founded there several principalities (Zupanate), the most southern of which was called Zeta, or (after the ancient Dioclea) Duklja. From Zeta sprang the Nemanjiden family, under whose autocracy the Servian Empire attained its greatest power (see SERVIA). Stefan I Nemanja was recognized as Chief Zupan by Emperor Manuel I, in 1165; having reduced into submission the stubborn lesser Zupans, he embraced the Orthodox Faith, and then began to organize the Servian Church. His youngest son, Sawa, or Sabas, after being appointed first Orthodox Archbishop of Servia in 1221, founded a see for Zeta in the monastery of St. Michael near Cattaro. In the Empire of the Serbs, each heir apparent to the throne was first appointed administrator of the Province of Zeta. However, under King Stefan Dušan (1331-55) a member of the Balcsicz family was named Governor

of Zeta. From 1360 to 1421 this family ruled in Zeta, notwithstanding the constant opposition of the Cernojević family, settled in Upper Zeta. On the destruction of the Great Serbian Empire by the Turks after the battle of Amfeld in 1389 Zeta became the refuge of the most valiant of the Serbs, who refused to submit to the Turkish yoke.

At the beginning of the fifteenth century, the Venetians established a settlement on the eastern coast of the Adriatic, and conquered a portion of the Serbian Empire in spite of the opposition of the people. As vassal of the Venetians, Iwan Cernojewić, the son of Stefan (brother-in-law of Skanderbeg), secured for himself sovereign authority. He founded the monastery of Cetinje about 1478 or 1485. It was during this period that the land received the name of Crnagora, or Montenegro. Under Iwan's son, George (1490—), the first Slav liturgical books were printed at Obod (1493-5). In 1516 he abdicated and the people invested the bishop (vladika), who was also

superior of the monastery at Cetinje, with supreme secular authority. Subsequently the bishop, who until 1697 was always chosen by the National Assembly, was both spiritual and temporal ruler of the little state, although he named a secular governor to conduct war and administer justice. The Turks made repeated attacks during the fifteenth century on the freedom of the mountain kingdom. The Montenegrins, notwithstanding their heroic opposition, were finally forced to make their submission, and from about 1530 had to pay tribute to the Sanjak of Scutari. In domestic affairs, however, they remained independent, and the sovereignty of the Porte was mostly of a purely nominal character. Frequently the little nation, which (according to the description of the Italian Mariano Bolizza in 1611) then contained 90 settlements and 8027 armed men, engaged in war with the Turks, being often assisted with money and arms by the Venetians.

In 1696 Danilo Petrović, of the Njegoš family, was elected vladika, and made the episcopal dignity hereditary in his house, the vladika, who as bishop could not marry, being succeeded on his death by his nephew or brother. As prince of a nation recognizing the Orthodox Church, Danilo inaugurated closer relations with Russia, which held the same religious beliefs, and Peter the Great undertook the protectorate of Montenegro in 1710. Since that date the Montenegrins have always shown themselves the faithful allies of Russia in its wars against the Turks, although at the end of these wars they usually reaped no advantages. The Russians, however, often made large contributions of money to their poor allies: in 1714 Peter I contributed 10,000 rubles towards the relief of those whose property had been burnt and for the rebuilding of the destroyed monasteries; in 1715 he assigned an annual contribution of 500 rubles and other presents to the monastery of Cetinje; and in 1837 Emperor Nicholas I assigned to the prince a fixed annual income of 9000 ducats.

The most prosperous era of Montenegro opened

with the reign of Vladika Peter I Petrović (1777-1830), who repelled unaided a fierce attack of the Turks in 1796 and rendered valuable aid to the Russians against the French during the Napoleonic wars. Because of his glorious reign, Peter was proclaimed a saint by the people in 1834. He was succeeded by Peter II Petrović (1830-51), who was educated at St. Petersburg; this monarch, who was a distinguished poet, rendered valuable services to his country by raising its intellectual and commercial condition. Having abolished the office of governor, which had been too frequently the occasion of strife, he took into his own hands the secular administration, founded schools, instituted a system of taxation, organized a guard as the nucleus of a standing army, and established a senate of twelve members. His successor and nephew, Danilo (1851-60), changed Montenegro into a secular state, dispensed with episcopal consecration, and undertook the administration as a secular prince. At a national assembly held at

NATIONAL COSTUMES, CETINJE, MONTENEGRO

Cetinje on 21 March, 1852, the separation of the spiritual and secular powers of the vladika was decreed, and the supreme ecclesiastical authority entrusted to the archimandrite of the monastery of Ostrog. In the same year Russia and Austria recognized Montenegro as an hereditary, secular, and independent state. The Porte, however, which still regarded the country as "a portion of its Rajahs temporarily in revolt", refused its recognition and sent an expedition of 60,000 men against it.

When the land seemed about to be overwhelmed by such huge forces, Austria interfered in its behalf, and compelled the Porte to discontinue the war. The political position of the land, however, remained still undefined. In 1858, when the Turks attacked Montenegro without any declaration of hostilities, the European Great Powers, especially France and Russia, came forward as its protectors, and a commission of the Powers fixed the frontiers of the country, whose territory was increased by a few districts.

In 1860 Danilo was shot by a Montenegrin deserter, and, as he left behind only a daughter two years old, his widow secured on 14 August, 1860, the election of the youngest son of Danilo's brother, who still reigns. Montenegro's participation in the insurrection of Herzegovina led in 1862 to a war with Turkey, during which the Turks invaded the land and occupied Cetinje. The Peace of Scutari conceded to the Turks various fortresses along the road leading from Herzegovina through Montenegro to Scutari. In 1870, however, the Porte surrendered its right to occupy these fortresses. In 1875, when the insurrection occurred in Bosnia, Nikita, who controlled an army of 15,000 well-armed troops, formed an alliance with the Bosnians against the Turks, and prosecuted the war with success until 1878. Not only did he repel all the Turkish attacks, but he even succeeded in capturing Antivari (thus securing a long-desired maritime outlet for his country) and Dulcigno in 1878. At the Congress of Berlin Turkey recognized the political independence of Montenegro (13 July, 1878),

the territory of which was now more than doubled. According to Article 29 of the Treaty of Berlin, however, Montenegro might neither keep ships of war, nor fortify the coast, and was obliged to recognize the right of Austria to police the coast. It was only in 1909 that the country secured a release from these conditions. When Austria-Hungary annexed Bosnia and Herzegovina in October, 1908, and thereby annihilated the dreams of Montenegro and Servia of a United Servian Empire, Montenegro protested in common with Servia and, encouraged by Russia, demanded from Austria the annulment of Article 29 of the Treaty of Berlin and the evacuation of Spizza. In April, 1909, Austria agreed to the abrogation of Article 29, but refused to surrender Spizza, and secured the retention of that portion of the Berlin Treaty, which forbade the transformation of Antivari into a naval station. In 1905 Nikita granted the country a constitution and a national assembly elected by popular suffrage. Although the economical resources of the land are small, and its cultural conditions, notwithstanding the great progress made in the last fifty years, leave much to be desired, it occupies a position of increased consideration and importance with regard to the Balkan politics of the European powers on account of the ability of its ruler and its intimate relations with Russia, Italy, and Servia. In 1900 Prince Nikita received the title of Royal Highness, and in August, 1910, with the consent of all the powers he had himself crowned king. On that occasion Russia gave expression to the ancient friendship existing between the countries by naming the new king General Field-Marshal, the heir-apparent Major General, and Prince Mirleo Lieutenant Colonel of the Russian Army.

Montenegro has an area of 3630 sq. miles and a population of 250,000 inhabitants, of whom the great majority are of unmixed Serb stock. About 223,500 belong to the Greek Orthodox Church; 12,900 are Catholics (mostly Albanians), and about 14,000 are Mohammedans. The capital is Cetinje. The earlier plenary power of the prince has not been substantially lessened by the Constitution of 6 (19) December, 1906. The members of the popular assembly (Skupstina) are elected by public direct suffrage every four years; the assembly includes twelve ex-officio members, among whom are the Orthodox metropolitan, the Catholic Archbishop of Antivari, the Mufti of Montenegro, the president of the Supreme Court of Justice, etc. The state religion is the Greek Orthodox; all other religious bodies recognized by the State are at liberty to practice their religion, but every attempt on their part to gain converts from among the Orthodox is forbidden. The Orthodox Church of Montenegro is autocephalous, i. e., independent of the Patriarch of Constantinople; its spiritual head, who bears the titles of Metropolitan of Skanderia and Parathalassia, Archbishop of Tsetinia, etc., is chosen by the National Assembly from the ranks of the native unmarried secular clergy or monks, and is consecrated by the Russian Holy Synod at St. Petersburg. He resides at the monastery of St. Peter at Cetinje. In 1877 a second see, that of Brda and Ostrog, was erected. The protopresbyterates number 17, and the parishes about 160. The priestly office is as a rule hereditary, since each priest trains his son for the priesthood: the office of protopresbyter is similarly in the possession of certain families.

Since the convention between the Holy See and the Prince of Montenegro of 18 August (ratified 8 October), 1886, the Catholic Church enjoys the official recognition of the State. Its head is the Archbishop of Antivari, who is immediately subject to the Holy See. There are 13 secular priests, 10 regular priests, 27 churches and chapels, and eleven elementary schools. The number of parishes is thirteen, but a law recently passed by the Skupstina, in contraven-

tion of the Convention and without consulting the Roman authorities, reduced the number to seven. The archiepiscopal see is at present (1910) vacant, its administration being carried on by Don Metodio O.S.F. Negotiations concerning the filling of the see and the alteration of the Convention are being carried on between the Holy See and the Montenegrin Government (1910).

Montepulciano, DIOCESE OF (MONTIS POLITIANI), in the province of Siena, in Tuscany. The city is built on the summit of Monte Poliziano. It is the

PALAZZO PUBBLICO, MONTEPULCIANO
XIV Century

ancient Etruscan city of Nocera Alfaterna, which in 308 B. C. made an alliance with Rome against the Samnites. In the Middle Ages it acknowledged the suzerainty of Florence, but was conquered by Siena in 1260. The cathedral was built in 1619, from plans by Scalo; until the eighteenth century it held the tomb of Bartolomeo Arragazzi, secretary of Martin V, a work of Michelozzo. The church of the Madonna di San Biagio is a notable structure planned by Antonio da Sangallo (1518-37). The façades of the church of

Saint Agostino and of the Oratorio della Misericordia are worthy of mention. Among the civic buildings are notable the Tarugi palace, like the Mercato a work of Pignola; the Contucci palace designed by Sangallo, and the fourteenth-century Palazzo Municipale, which contains a small gallery of Sienese and of Umbrian art. The most famous men of Montepulciano are Cardinal Bellarmine, Pope Marcellus II, Cervini, Angelo Ambrogini, better known as Poliziano (1454-1494), and the humanist Bartolomeo of Montepulciano. St. Agnes of Montepulciano died in 1137.

The city belonged originally to the Diocese of Arezzo, and had a collegiate church, whose archpriest became a mitred abbot in 1400; in 1480 it became a *prelatura nullius*, and in 1561 was made the seat of a bishop. Its first bishop was Spinello Benci (1562); among the others the following are well known: Talento de' Talenti (1640), a great savant; Antonio Cervini (1663), who did much for the cathedral and the episcopal palace; Pietro Francesi (1737) opposed the novelties of the Council of Florence in 1787; Pellegrino Maria Carletti (1802), author of several works and of eighteen letters on the National Council of Paris of 1810, at which he assisted. The diocese is immediately dependent on the Holy See, and has 18 parishes, 15,879 inhabitants, two religious houses of men, and two of women. CAPPELLETTI, *Le Chiese d'Italia*, XIII (Venice, 1857).

U. BENIGNI.

Monterey and Los Angeles, DIOCESE OF (MONTEREYENSIS ET ANGELORUM), comprises that part of the State of California which lies south of 37° 5' N. lat. and covers an area of 80,000 square miles. It thus embraces eighteen of the twenty-one Indian missions which made California famous. Originally the whole state with the peninsula of Lower California formed the Diocese of Both Californias whose first bishop was the Rt. Rev. Francisco García Diego y Moreno. On his arrival in Upper California he established his residence at Santa Barbara Mission. On 1 May, 1850, the pope organized the Diocese of Monterey and named Rt. Rev. Joseph Sadoc Alemany, O.P., its first bishop, but Lower California was not withdrawn from his jurisdiction until 21 Dec., 1851. In 1853 the peninsula was placed under the administration of the Metropolitan of Mexico. When on 29 July, 1853, the Archdiocese of San Francisco was erected, the boundaries of the Monterey Diocese were drawn as they exist at present. Archbishop Alemany on 29 July, 1853, was promoted to the See of San Francisco, and on the same date Rt. Rev. Thaddeus Amat, C.M., was appointed Bishop of Monterey. The new bishop resided at Santa Barbara, however, until 9 July, 1859, on which date the pope permitted him to remove his residence to Los Angeles, but with instructions to retain the old title.

Around the former missions and the four military garrisons in the course of time immigrants from almost every part of the world took up their abode and founded cities, but the names of the saints under whose invocation the Indian missions had been estab-

lished were retained, and thus it is that so many of the towns, rivers, and mountains still bear the names of various saints. The most noted among the early missionaries were the holy and energetic Fr. Junípero Serra, the founder of the missions; Fr. Francisco Palóu, his biographer and the historian of the early missionary period; Fr. Fermín de Lasuen, the wise and firm successor of Fr. Serra; Fr. Luis Jayme, the first martyr; Fr. Juan Crespi, one of the discoverers of San Francisco and Monterey Bays and author of a lengthy description of the expedition; Fr. Buenaventura Sitjar, author of a dictionary of the Telame language (New York, 1861); Fr. Geronimo Boscana, author of "Chinigchinig", an account of the Indian character and customs (New York, 1846); Fr. Felipe Arroyo de la Cuesta, author of a dictionary of 2884 words and expressions in the Mutsun language (New York, 1862); Fr. Vincente de Sarriá, first *comisario-prefecto* and eminent for learning and piety; Fr. Mariano Payeras, author of an Indian catechism; Fr. Narciso Duran; Fr. Magin Catalá; Fr. Francisco Dumetz; Fr. José Seán; Fr. Estévan Tapis; and Fr. José María González Rúbio, administrator of the diocese after Bishop Diego's death. The first bishop of both Californias, Rt. Rev.

CATHEDRAL, MONTEPULCIANO

Francisco García Diego y Moreno, O.F.M., was consecrated 4 October, 1840, and died 30 April, 1846, at Santa Barbara Mission, where his remains were interred on the Epistle side of the altar. During his administration the first seminary for the education of secular priests on the western coast was opened 4 May, 1844, at Mission Santa Inez; Fr. José Joaquín Jimeno, O.F.M., was the first rector. Very Rev. José María González Rúbio, O.F.M., was administrator from 1846 to 1851 when Bishop Alemany arrived. Fr. Rúbio was later proposed for a diocese but declined the mitre. While in charge of the See of Monterey, which included both Californias, he enjoyed the privilege of administering the sacrament of Confirmation. Unable to procure priests to replace the old missionaries who were fast dying away, Fr. Rúbio in 1849 invited the Jesuit Fathers to come to California and found a college in the territory. They consented and opened their college in 1851. He was born at Guadalajara, Mexico, in 1804, and entered the Franciscan Order at Zapópan in 1824. In 1833 he arrived in California and was given charge of Mission San José. In 1842, at the request of the bishop, he removed to Santa Barbara, and lived there continuously until his death 2 November, 1875. His remains were buried in the vaults of the mission church.

Rt. Rev. Thaddeus Amat, C.M. (q. v.), after his consecration at Rome, 12 March, 1854, reached California in 1855. In 1856 he called the Sisters of Charity (Vincentians) to the diocese. They founded and still conduct the orphan asylums at Los Angeles, Santa Barbara, and Santa Cruz, and an academy at Hollister. He also brought the Lazarists or Vincentian Fathers to Los Angeles where they erected St. Vincent's College. At his request the Sisters of the Immaculate Heart of Mary came from Spain to California, 30 August, 1871, and opened schools for girls at Los

Angeles, San Luis Obispo, and San Bernardino. In 1871 Bishop Amat laid the cornerstone for the cathedral at Los Angeles, and placed it and the diocese under the patronage of St. Vibiana (Bibiana), virgin and martyr. The building was completed and dedicated 30 June, 1876. In 1870 he attended the Vatican Council. Owing to constant ill-health he asked for a coadjutor who was given him in the person of Rt. Rev. Francis Mora. Bishop Amat died 12 May, 1878. His remains lie buried in the cathedral which he erected.

Rt. Rev. Francis Mora was born at Vich, Catalonia, Spain, 25 Nov., 1827; he attended the seminary of his native city; in 1855 he accompanied Bishop Amat to California, and was ordained priest at Santa Barbara 19 March, 1856. From July of that year to the end of 1860 he was stationed at the Indian mission of San Juan Bautista, and from September, 1861, to July, 1866, he had charge of Mission San Luis Obispo. After that he resided at Los Angeles. On 20 May, 1873, Father Mora was consecrated Bishop of Mosynopolis *in partibus infidelium* and made coadjutor of Bishop Amat. At the death of the latter he succeeded to the See of Monterey and Los Angeles. In 1894 he asked for a coadjutor, who was appointed in the person of Rt. Rev. George Montgomery. On 1 February, 1896, Bishop Mora resigned, and when Rome, 20 June, accepted his resignation he returned to Spain. He died at Sarria, Catalonia, 3 August, 1905. During his administration the Sisters of St. Joseph and of St. Dominic were invited into the diocese to open schools. Bishop Mora was remarkable for his financial ability, and succeeded in paying off many of the important debts of the diocese, and by his careful investments left it in a splendid financial condition.

Rt. Rev. George Montgomery was born in Daviess County, Kentucky, 30 December, 1847, and was ordained priest at Baltimore, 20 December, 1879. He held the post of Chancellor of the Archdiocese of San Francisco until his consecration as titular Bishop of Tumi 8 April, 1894, when he became coadjutor to Bishop Mora. Two years later he succeeded to the see and at once displayed remarkable energy. At this period immigrants from the eastern States began to flock to southern California in great numbers. Los Angeles more than doubled its population. New needs arose which it was the endeavour of the bishop to meet by building churches and schools, and by calling to his aid more priests and religious. In season and out of season Bishop Montgomery insisted on the necessity of educating children in Catholic schools. It was his fearless attitude which compelled the Commissioner of Indian Affairs to recognize the right of Indian parents and guardians to send their children to the schools of their choice independent of the reservation agent. Subsequently this same view was adopted by the Government, and made the rule for all the Indians in the United States. The bishop thus in every way manifested a watchful solicitude for the spiritual and temporal welfare of the diocese. His personality won friends for the Church on all sides, whilst his vigorous defence of Catholic doctrine, as well as his clean-cut, outspoken advocacy of American rights and duties, gave to the Church in southern California a great onward movement and prepared the way for Bishop Conaty's administration. In 1903 Bishop Montgomery was appointed Archbishop of Osino *in partibus* and made coadjutor to the Archbishop of San Francisco. He died 10 January, 1907, sincerely lamented by all classes, especially by the poor. During his administration the following congregations of religious were received into the diocese: Christian Brothers, Sisters of Mercy, Sisters of the Holy Cross, Sisters of the Holy Names, Sisters of Notre Dame, Sisters of the Presentation, and the Ursuline Sisters.

Rt. Rev. Thomas James Conaty was born in Kilna-

leck, County Cavan, Ireland, 1 August, 1847, and came to America with his parents in 1850. He attended the home schools of Taunton, Mass., graduated from Holy Cross College, Worcester, Mass., in 1869, was ordained priest at Montreal Seminary 21 December, 1872, was made assistant at St. John's Church, Worcester, Mass., 1 January, 1873, and pastor of the church of the Sacred Heart, Worcester, 10 January, 1880. During these years he was actively engaged in the cause of total abstinence and education. He was president of the Total Abstinence Union of America, and for several years president of the Catholic Summer School at Cliff Haven. At different times he was elected to public positions of trust in the city of Worcester. On 10 January, 1897, he was appointed Rector of the Catholic University, Washington, D. C., by Leo XIII. On 1 November, 1897, he was made domestic prelate, and 14 July, 1901, named titular Bishop of Samos, and was consecrated at the cathedral, Baltimore, 21 November, 1901, by Cardinal Gibbons. On 27 March, 1903, he was appointed Bishop of Monterey and Los Angeles to succeed Bishop Montgomery. The influx of immigrants from the East, especially into the city of Los Angeles, has been phenomenal. From his arrival in the latter part of 1903 to the latter part of 1910 twelve new parishes have been added to the episcopal city, and nine parish schools have been erected in various parts of the diocese for 2500 additional pupils. The number of priests has increased from 101 in 1903 to 206 in 1910, 73 of whom belong to eight different religious orders. The character of the Catholic population numbering 100,000, of whom 60,000 live in Los Angeles, is cosmopolitan. The percentage of Catholics to the inhabitants of the diocese is about one-sixth. Besides the English-speaking races, there are large colonies of Spaniards or Mexicans, Germans, Italians, Portuguese, Poles, Slavonians, French, Basques, Lithuanians, and Syrians. Churches and priests are caring for the spiritual interests of these different nationalities. One feature of the diocesan work is the care of the Indians, most of whom are descendants of the former Mission Indians. About 4000 are cared for by seven priests who devote themselves entirely or to a great extent to their spiritual needs, speaking to the young people in English and to their elders in Spanish, which is generally understood by the natives. Churches have been built for them at all reservations. A church and parochial residence have also been erected near the Government Indian School at Sherman, and a priest acts as chaplain for the Catholic children of that institution. The Catholic Indian Bureau maintains a large boarding school for Indian children at Banning which is in charge of the Sisters of St. Joseph. As the diocese annually receives its share of the Pious Fund of Mexico, it has been able to provide for many of the religious necessities of the Indians, but there are many demands calling for diocesan help. The rapidly growing population of the diocese impelled Bishop Conaty to call to his assistance the following additional religious orders and congregations: Benedictine Fathers for the Basques, Fathers of the Society of the Divine Saviour for the Poles, Sons of the Immaculate Heart of Mary for the Mexicans, Jesuit Fathers, Redemptorist Fathers, Sisters of the Good Shepherd, Little Sisters of the Poor, Missionary Sisters of the Immaculate Heart (Italian), and Sisters of St. Francis.

STATISTICS.—Besides the items already mentioned above, there are 166 churches and chapels, 43 stations without churches, 33 ecclesiastical students, 1 seminary for Franciscan Fathers, 2 colleges for young men with 407 students, 1 college and 16 academies for girls and young ladies, 29 parochial schools with (including the pupils of the academies) 5424 children, 9 orphan asylums with 1048 inmates, 1 Catholic Indian boarding school with 118 pupils, 2 Government Indian schools with 355 Catholic pupils, 5 hospitals and 3

homes for the aged. A new cathedral is contemplated which will be worthy of the city of Los Angeles.

ZEPHYRIN ENGELHARDT.

Montesa, MILITARY ORDER OF.—This order was established in the Kingdom of Aragon to take the place of the Order of the Temple, of which it was in a certain sense the continuation. It derived its title from St. George of Montesa, its principal stronghold.

A KNIGHT OF MONTESA

The Templars were received with enthusiasm in Aragon from their very foundation (1128). Berenger III, Count of Barcelona, wished to die in the habit of a Templar (1130). King Alfonso I, "The Fighter", having no direct heir, bequeathed his dominions to be divided among the Templars, the Hospitalers, and the Canons of the Holy Sepulchre, but naturally this bequest was annulled by his subjects (1131). The Templars had to be contented with certain castles, the

chief of which was Monzon. Although the Aragonese branch of the order was pronounced innocent at the famous trial of the Templars, Clement V's Bull of suppression was applied to them in spite of the protests of King James II (1312). By way of compensation, however, this monarch obtained from Pope John XXII authority to dispose of the possessions of the Templars in his Kingdom of Valencia in favour of a military order not essentially differing from that of the Templars, which should be charged with the defence of his frontier against the Moors and the pirates. It was affiliated to the Order of Calatrava, from which its first recruits were drawn, and it was maintained in dependence upon that order. The first of the fourteen grand masters, who ruled the Order of Montesa until the office was united with the Crown by Philip II in 1587, was Guillermo d'Eril.

CH. MOELLER.

Montesino, ANTONIO, Spanish missionary, date of birth unknown; d. in the West Indies, 1545. Of his early life little is known. He entered the Order of St. Dominic and made his religious profession in the convent of St. Stephen, Salamanca, where in all probability he studied. He was noted for his exemplary piety, his love of strict observance, his eloquence, and moral courage. In September, 1510, under the leadership of Pedro de Cordova, he landed with the first band of Dominicans in Hispaniola. He was the first, in 1511, to denounce publicly in America the enslavement and oppression of the Indians as sinful and disgraceful to the Spanish nation. Being censured for this, he was cited to Spain in 1512, where he pleaded the cause of the Indians so successfully that the king took immediate measures towards ameliorating their condition.
